The final blow was given when the city was occupied by the Saracens in 1291 A.D.; since that time it has sunk to its present miserable state of ruin. The island Dr. Robinson describes as "now unoccupied, except by fishermen as 'a place to spread nets upon.' . . . The present city (*Sûr*) stands upon the junction of the island and isthmus, . . . nothing more than a market-town, a small seaport, hardly deserving the name of a city. . . . The houses are for the most part mere hovels. . . . The streets are narrow lanes, crooked and filthy." Dr. Thomson observed at the extreme northern end of the island a vast stone nearly seventeen feet long and six and a half thick, which was no doubt a portion of the ancient wall. He speaks also of granite columns and of the ruins of a superb temple, possibly the remnant of the celebrated temple of Heracles. Referring to the apparent blending in the prophecies of the continental and insular city, he says that there is "a propriety in their joining together continental and insular Tyre. The same people, guilty of the

same vices, they deserved and received the same judgments, though in different degrees and at various times. The one was totally destroyed, never to rise again; the other repeatedly overwhelmed, but again partially reviving, just as the whole drift of the prophecies would lead us to expect." He thinks that there was some junction between the two cities, even in Solomon's time, and that "continental Tyre extended along the shore from Ras el'Ain (a fountain) to the island." The measurement would then "agree with the statement of Pliny that Tyre was nineteen miles in circumference, including old Tyre, but without it about four." He adds: "With but few exceptions, it is now a cluster of miserable huts, inhabited by about three thousand five hundred impoverished Metawelies and Arab Christians, destitute alike of education, of arts and of enterprise, carrying on with Egypt a small trade in tobacco from

cordingly, the Synod of Tyre was held under the imperial sanction, and charges were trumped up against Athanasius. He was accused of incontinency, arraigned as a magician and indicted for cutting off the hand of a bishop named Arsenius that he might use the dried and salted member for purposes of incantation. Arsenius himself, with both hands uninjured, was produced before the council, and a woman brought forward to convict him of impurity was shown to be a vile impostor. But his judges were determined not to permit the great champion of orthodoxy to escape. He was said to have deported himself in a violent and disorderly manner when visiting a certain church in the neighborhood of Alexandria; and the council agreed to send into Egypt a deputation, consisting exclusively of hostile bishops, to investigate the transaction. When Athanasius saw that none of his friends were to be put on the commission, he resolved to proceed directly to the emperor and present his appeal. As Constantine passed through the streets of Constantinople, Athanasius attempted to approach him, but he was repelled by the guards. The stranger, nothing daunted, announced himself to be the bishop of Alexandria, and earnestly pleaded for an opportunity of explanation. The sovereign, impressed by his tone and bearing, listened to his address, and was so far moved by his statements that he summoned the members of the Synod of Tyre, by whom the Egyptian bishop had in the mean time been deposed, to appear before him and to account for their proceedings. His accusers now shifted their ground, alleging that the fleet which brought supplies of grain from Alexandria to Constantinople had been detained by the influence of Athanasius. This was a point on which the emperor was peculiarly sensitive, as he was aware that his own popularity in New Rome depended much on the regular arrival of the corn-ships from Egypt. But though no proof was adduced, Constantine deemed it prudent to banish Athanasius into Gaul. The triumph of the Arian party did not end here; Arius was brought to Constantinople, and Alexander, the orthodox bishop, was required to readmit him to communion. Destitute of the decision of the Egyptian metropolitan, Alexander retired to his church and prayed that either Arius might be taken out of the way, or that he himself might not be spared to participate in the scandal about to be perpetrated. Arius died suddenly on the eve of the day on which he was to be restored to fellowship. Some attributed his death to poison, whilst others recognized it as the finger of a rebuking Providence; but it is probable that the excitement proved too much for a body weighed down by age and debilitated by years of contention.

After the death of Constantine (A.D. 337), Athanasius was permitted to return to Alexandria; but Constantius, the emperor of the East, was a virulent Arian, and the old influence still aimed at his destruction. By a council held at Antioch, A.D. 341, he was deposed on the ground that he had returned to his see without ecclesiastical warrant. Accordingly, he fled to Rome, where he enjoyed the sympathies of Julius, the bishop of the Western metropolis; and a later synod declared the condemnation of the Fathers of Antioch unjust and invalid.

**TYRUS** (tyr'ns), Jer. xxv. 22, and **TZOR** (tzor), Josh. xix. 29, margin, identical with Tyre.

## U.

**UBIQUITARIANS** (eu-bik-we-ta're-anz). This term has been applied to a school of divines which arose in Germany, who promulgated the doctrine that the body of Christ is everywhere, by reason of its union with the divine nature, and that thus it is present in the eucharist. Luther is said to have held this view for two years, recognizing it as a mode of reconciling transubstantiation with reason; but there is no doubt that if he ever held it he afterward repudiated it. Brentzen, a canon of Wittenberg (A.D. 1525), is held to be the propounder of this view, which was not embodied in any public document until the "Formula of Concord" was drawn up at Bergen in A.D. 1577, when it became recognized as a doctrine of the Confession. Melancthon opposed it with great energy. The doctrine became a subject of controversy early in the seventeenth century, the divines of Tübingen supporting and the divines of Giessen opposing it with determined vigor.

**UCAL** (eu'kal), one of the persons, otherwise unknown, to whom Agur addressed his maxims, Prov. xxx. 1.

**UCKEWALLISTS** (uk-wal'istz), a sect which derived its denomination from Uke Walles, a native of Friesland, who published his sentiments in 1637. He entertained a favorable opinion of the eternal state of Judas and the rest of Christ's murderers. His argument was this: that the period of time which extended from the birth of Christ to the descent of the Holy Ghost was a time of deep ignorance during which the Jews were destitute of divine light, and that of consequence the sins and enormities which were committed during this interval were in a great measure excusable, and could not merit the severest displays of the divine justice. This denomination strictly adhered to the doctrine of the Mennonites.

**UDAL** (en'dal), **EPHRAIM**, a loyal puritan, was educated at Emmanuel College, Cambridge, where he graduated in 1609. His only preferment in the Church appears to have been the rectory of St. Augustine's, Watling street, London. He was sequestered in 1643, because, although he was a preacher of Puritan principles, he exerted himself to oppose the designs of the republican party, and even declared openly for episcopacy and the liturgy, and published a learned treatise against sacrilege, entitled "A Coal from the Altar." He died in 1647.

**UDALL** (u'dal), **JOHN**, was a learned writer among the English nonconformists who became eminent as a writer of sermons. His book entitled "A Demonstration of the Truth of that Discipline which Christ hath Prescribed," published in 1588, brought him into trouble. It was declared seditious, and he was sentenced to be hanged. He was confined in prison for the space of three years, and he sank under his hard fate, dying in 1592. He was the author of a "Commentarie on the Lamentations of Jeremy, 1593." He is worthy of note as having prepared the first grammar of Hebrew which ever appeared in the English language, although it did not appear under that title, being called a "Key of the Holy Tongue." It was published in 1593 at Leyden, and it went through several editions.

**UEL** (eu'el), one who had married a foreign wife, Ezra x. 34.

**UGHELLI** (ug-ghel'le), **FERDINAND**, an ecclesiastical historian, was born at Florence, in 1595, and after pursuing his studies with great credit entered among the Cistercians, and was appointed abbot of Trois Fontaines at Rome, procurator in his province and counselor to the congregation of the Index. He died at Rome in 1670.

**UKNAZ** (uk'naz), 1 Chr. iv. 15, margin. See **KENAZ**, 3. The word Uknaz is Kenaz with a

**ULAM** (eu'lam). 1. One of the descendants of Manasseh, 1 Chr. vii. 16, 17. 2. A Benjamite, it would seem of the family of Saul, 2 Chr. viii. 39, 40.

**ULLA** (ul'la), a chieftain of Asher, 1 Chr. vii. 39.

**ULPHILAS** (ul'fi-las), or **ULFILAS** (ul'fi-las), bishop and apostle of the Goths in the fourth century, probably sprang from a Christian family of Cappadocia, his ancestors having been carried off by the Goths in one of their incur-

LOIS INSTRUCTING TIMOTHY IN THE SCRIPTURES.

copulative conjunction prefixed. Perhaps a previous name was accidentally omitted.

**ULAI** (eu'li), a river of Susiana on the banks of which Daniel had one of his visions, Dan. viii. 2, 16. It would seem to be the Euleus of the Greeks, and is believed to be a river or artificial channel which connected the *Kerkhah* (Choaspes) and the *Kârin* (Pasatigris). The ancient channel may yet be traced, though now there is but a small runner of water in it. And as the Euleus is said to have surrounded the citadel of the Susians, the *Kerkhah* and this old channel were the two streams intended. This explains the words of Daniel, "between the two banks of Ulai"—i.e., between the two streams.

sions into that province. The chronology of his life is involved in obscurity; in general he appears to have begun his pious labors among the West Goths in the reign of Constantine, and to have continued them through great part of the reign of Valens. He won the love and confidence of his people by his blameless life and religious earnestness, and did them important service not only by his teaching and ministrations, but by successfully conducting important negotiations between them and the Roman empire. In doctrine he appears at first to have held with the orthodox, but through his later intercourse with the empire and the Arian bishops was led to embrace the Arian creed. The most memorable service rendered to his countrymen by Ulphilas

was the translation of the Bible into their language, for which he had first to devise an alphabet. He omitted the four books of the Kings, lest their warlike spirit should excite too much the naturally fierce spirit of the people. A volume containing the four Gospels of this Gothic version, very imperfect, was discovered in a monastery near Cologne, and after singular fortunes found a permanent rest in the University of Upsal. The version of Ulphilas possesses very high interest and importance as the most ancient monument of the Teutonic family of languages.

**ULTRAMONTANISTS** (ul-tra-mon'tan-istz), those who recognize the papal claim of supremacy over every part of the Church of Christ as well as over every sovereign within its boundaries, and also that of the pope's personal infallibility. Ultramontanism dates from Gregory VII. (Hildebrand, A. D. 1073-85), who propounded the following claims: "Quod solus papa possit uti imperialibus insignis; quod solus papa pedes

THE DATE-PALM.

omnes principes deoseculentur; quod illi liceat imperatores deponere; quod a fidelitate irriquo- rum subjectos potest absolvere" (that the pope only may lawfully use imperial insignia; that all princes should kiss the feet of the pope; that to him it appertains to dethrone rulers; that he has power to absolve subjects from allegiance to their wicked rulers). These views are principally maintained in the Italian peninsula. They were formerly resisted by the French clergy, who contended for what was known as the "Gallican liberties;" but for a considerable time past Ultramontanism has spread extensively in France, and the manner in which the decree of the Vatican Council has been received in that country is a fair index of the views of the modern bishops and clergy. Though Ultramontanism took its rise under Hildebrand, it did not attain its full development until the fifteenth century. An assertion of authority so incompatible with Catholic liberty aroused opposition in the Gallican and German Churches as well as in the Swiss cantons; but works in defence of national liberties and ecclesiastical independence have usually obtained a place

in the "Index Expurgatorius;" and the Ultramontane tone of the present day is far in advance of the Romanist writers of the Reformation period. Bellarmine was the great theologian who advanced the cause of Ultramontanism in his day; but in modern times the man who of all others has given a scientific cast to these claims is Möhler, whose great work, the "Symbolik," appeared in 1832. Möhler prepared the way for the different steps which have been taken under the reign of Pius IX., until now, with the exception of the "Old Catholic" party, the Romish Church appears to have quietly submitted to all the claims which Ultramontane advocates have ever propounded.

**UMMAH** (um'mah), a city of Asher, Josh. xix. 30.

**UNBLOODY SACRIFICE** (sak're-fize), all oblations which do not involve the mactation or killing of a victim. The term is used in Romanist theology to designate "the sacrifice of the altar," in which it is held that the body of Christ is offered up as a sacrifice without the shedding of blood, that this offering is made for the sins of the living and the dead, and that it is expiatory in its influence and value. Such is the Romish mass. The term "mass" is said by Nicod, who follows Baronius, to be derived from the Hebrew *missach*—i. e., that which is offered—or from the Latin *missa*, *missorum*; because in former times the catechumens and those who were excommunicated were sent out of the church, not being permitted to remain while the eucharist was celebrated. After the sermon and the reading of the epistle and the gospel, all these persons were dismissed by the deacons, who said, "*Ite; missa est*."—"Go; the dismissal is now," or "has arrived;" and Menage derives the word from *missio*, "dismissing," and others from *missa*, "sending." The term "mass" has a very wide application. Thus, there is a high mass, when the eucharist is celebrated with music and the full complement of ministers and ceremonies of the Church. This is often called "solemn mass." There is low mass, a performance by a single priest and a server; mass for the dead, when "the offering" is made on behalf of the souls of the faithful departed, the chief features being the absence of the "Gloria in excelsis," the "Pax" and of incense, the omission of the "Gloria Patri" and the substitution of "Requiescat in pace" in the "Agnus Dei." Then, again, there is a mass of judgment, by which a person seeks to clear himself of any calumny; a mass of security, said at the examination of catechumens as to their fitness for baptism; the mass of the Holy Ghost, which is generally said at the opening of a General Council, at the election of a pope or bishop and in local synods. There is the mass of the pre-sanctified, where the priest goes through no service of consecration, but uses "reserved host," or wafers which had already been consecrated. Then, again, there is the pontifical mass which is celebrated by a bishop. In England a bishop used to be assisted by seven deacons, sub-deacons and acolytes in Saxon and Norman days. In modern Western use, the bishop, when celebrating pontifically, is attended by an assistant priest and two deacons of honor, besides the attendants required to minister the mitre, pastoral-staff, book and candle, gremial veil and other vestments. Other masses have been named from the countries in which they were used, such as the Gothic in Spain, the Ambrosian, the Gallic and the Roman. See **TRANSUBSTANTIATION**.

**UNCIALS** (un'sh'alz), letters of a size between capital letters and small characters which were used in ancient manuscripts. They were so called either from a wrong reading of the word *initiales*—that is, "initials"—or from *uncialis*, the twelfth part of an inch, or from *uncial*, weighing an ounce. When uncials were used, all the letters were of capital shape; they followed each other closely without the modern punctuation of commas, semicolons or other stops, as may be seen in mas, semicolons or other stops.

**UNCIRCUMCISION** (un-ser-kum-sizh'un), THE, Rom. ii. 26, 27, a term used to designate Gentiles, or the heathen.

**UNCLEAN** (un'kleen). See **CLEAN** AND **UNCLEAN**. A person who had contracted ceremonial uncleanness was, according to the Mosaic law, deprived for a time of social privileges and cut off from sacred functions. Thus the priests who were defiled must not eat of the holy things, Lev. xxii. 2-9, and one of the people generally, if unclean, must not take part in sacrificial offerings, Lev. vii. 20, 21, or hold his position as one of the congregation of the Lord. There were three degrees of uncleanness measured by time, and the kind of purification necessary, viz., that which lasted till even—such as contact with dead animals; that which defiled for seven days—such as resulted from the touching of the human corpse, Num. xix. 11; that which was occasioned by certain diseases or infirmities—leprosy, for example—by the menstrual flux and child-birth; these classes of uncleanness lasted as long as the morbid state continued. Purification from the first named was received by washing the clothes, from the second by the use of the water of separation, Num. xix. 9, from the third by specified sacrifices. It is impossible to enter here into the details of personal uncleanness, but let it be noted that the disabilities and propagation of it marked in the most telling way the loathsomeness of sin and the hatred which God had for everything which defileth.

**UNCTION** (unk'shun). See **ANOINTING**. The word is used in 1 John ii. 20 in a spiritual sense as denoting a gracious divine communication, compare Rev. iii. 18.

**UNCTION**. 1. The rite of anointing used in the Romish Church in baptism, confirmation and other offices. In coronations of sovereigns anointing is used symbolically to indicate consecration to office. 2. Extreme. In the Romish Church the rite of anointing is performed on the approach of death, and it is then designated "extreme unction." On this subject the canons of the Council of Trent are express, as the following extracts testify: "Canon 1. If any shall say that extreme unction is not truly and properly a sacrament instituted by our Lord Jesus Christ and declared by the blessed apostle James, but only a rite received from the Fathers, or a human invention, let him be accursed. Canon 2. If any shall say that the holy anointing of the sick does not confer grace, nor remit sin, nor relieve the sick, but that it has ceased as if it were only the grace of healing, let him be accursed. Canon 3. If any shall say that the rite and usage of extreme unction which the holy Roman Church observes is contrary to the sentence of blessed apostle James, and therefore should be changed, and may be despised by Christians without sin, let him be accursed." The authority for this ordinance is

stated by the council to be found in Mark vi. 13 and James v. 14, 15. Now, Mark says, "They east out many devils, and anointed with oil many that were sick, and healed them;" not that the persons were dying, and that they had to be anointed so as to have their "sins remitted" before they departed. James says: "Is any sick among you? let him call for the elders of the Church; and let them pray over him, anointing him with oil in the name of the Lord; and the prayer of faith shall save the sick; and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him;" showing very clearly that the praying and anointing were in order to recovery from sickness as well as forgiveness; and neither of these passages intimates or gives any countenance to the idea that oil was to be applied to dying persons of whose life no expectation was entertained, or that the anointing was done in expectation that the process would "remit sins."

The Greek Church observes the ordinance of anointing in sickness, but does not confine it to cases of supposed mortal illness, and the oil used in the Greek Church may be consecrated by a common priest. In the Greek Church it is obvious that the original idea of recovery is not yet lost, as may be seen by the words of the prayer used by the administrator of the ordinance: "O holy Father, the physician of our souls and bodies, who didst send thy only begotten Son, our Lord Jesus Christ, to heal all diseases, and to deliver us from death, heal thy servant from the bodily infirmity under which he now labors, and raise him up by the grace of Christ."

**UNDERGIRD** (un'der-gerd). The ship in which St. Paul sailed to Italy is said to have been undergirded, Acts xxvii. 17—that is, some turns of a cable were passed round the hull.

**UNDERSTANDING** (un-der-stand'ing), the faculty of perceiving things distinctly.

**UNIATES** (u'ne-ates), Eastern Christians in external communion with the see of Rome, some being seceders from the orthodox Eastern Churches and others from the Nestorian and Jacobite communities. After the Council of Trent a very vigorous effort was made by the Jesuits to unite Eastern and Western Christendom, and the work was commenced with great zeal in Poland and in the border-land which separated the two communions. Considerable progress was made, especially in Lithuania, and eventually the Church was divided into two communions, each retaining the rites and doctrines of Eastern Christendom, but one acknowledging for its patriarchal head the patriarch of Constantinople, the other the bishop of Rome. This division of the Church continued in full force until the partition of Poland in the year 1772. At that time between two and three millions of the Uniates gave up their allegiance to Rome and returned to full communion with the orthodox Eastern Churches. In 1839 two millions more were reconciled, but there are still about three hundred thousand in Russia and three millions in Austria.

**UNICORN** (eu'ni-korn), the word by which the Hebrew *re'em* is rendered in our translation, Num. xxiii. 22. But it is clear that the animal intended had more than a single horn; for, though our version has "horns of unicorns," Deut. xxxiii. 17, yet in the margin we find "an unicorn," the word being really in the singular number.

This fact renders it unlikely that either the rhinoceros or the animal like a horse with a single long curved horn growing out of the forehead discovered in Thibet can be meant. Some would understand the *Oryx leucoryx*, a large species of antelope, and certainly the Arabic name by which it is known corresponds with the Hebrew *re'em*. But this animal may be tamed. Others, with much greater probability, fix upon the *Bos bubalus*, otherwise *Bubalus bubalus*, or Oriental buffalo, which is still very common in Palestine. Mr. Carey has examined the question with a great deal of care. He finds that the animal, whatever it is, is respectively associated and placed in parallelism with bulls or bullocks; he infers the high probability, therefore, that it was of the bovine species. He thinks, further, that the mention made of the *re'em* in Job xxxix. 9-12 is decisive of its being a wild ox. It is spoken of in relation to the stall, ploughing, harrowing and carting, also in connection with other wild animals, certain species of which have been domesticated. "The analogy, then," he proceeds, "of the context would lead us to suppose that such as the wild goat, or the stag that is removed from the haunts of man, or the wild ass, is to the common goat and stag and ass respectively, such is the *re'em* to the common or domesticated ox. Besides which, it is described . . . as being manifestly an untamable animal, and one useless to man for any agricultural purpose. Judging from his outward appearance, anatomy, etc., we might have supposed him (such is God's intimation here) capable of ploughing, harrowing, etc., but experience shows that such is his disposition that he cannot be brought under the yoke. In short, whilst in all outward appearance he is an ox, yet in untamableness of disposition he shows himself to be the wild ox."

**UNIGENITUS** (eu-ni-jen'i-tus), the bull issued by Clement XI., in 1713, against the translation of the New Testament by Quesnel, the Jesuit. It was protested against in France, many of the bishops appealing against it to a general council. The conduct of the Jesuits and their aims in seeking to have the writings of Quesnel condemned may be clearly understood by consulting the "Provincial Letters" of Pascal, who was a Romanist, and who thoroughly mastered the objects and policy of the party who so virulently sought to overthrow the celebrated house of Port Royal.

**UNION** (eun'yun), **HYPOSTATICAL** (hi-pos-tat'i-kal), is the union of the human nature of Christ with the divine, constituting two natures in one person. Not consubstantially, as the three persons in the Godhead; nor physically, as soul and body united in one person; nor mystically, as is between Christ and believers; but so as that the manhood subsists in the second person, yet without making confusion, both making but one person. It was miraculous, Luke i. 34, 35; complete and real—Christ took a real human body and soul—and not in appearance; inseparable, Heb. vii. 25.

**UNITARIANS** (eu-ni-ta're-anz). The term Unitarian may be used by all who, while denying the distinctions of persons in the Godhead, affirm that they only hold in its true sense the "monarchia," the unity of God. Modern Unitarians, the school of Priestley, who are principally of England and America, are the successors rather than the

lineal descendants of the Socinians. The separate congregations of Socinians in England, which were never numerous, died out by the end of the seventeenth century. The Unitarian sect was formed out of the Arianism floating in the Church and in dissent; this Arianism sprang from the Dutch Remonstrant theology, which was largely studied in England. In 1691 Dr. Bury's book, the "Naked Gospel," appeared. It was publicly burnt, and the writer was expelled from the University of Oxford. Then, in 1708, Whiston published his "Essay on the Apostolical Constitutions" to prove that the Arian doctrine was the primitive faith of the Church. Four years later Clarke published his "Scripture Doctrine of the Trinity," and the controversy then began in real earnest, the writers on the side of Clarke being Whitby and Emlyn, while his opponents were Welchman, Nelson, Bennet and Waterland. The controversy raged among the dissenters also. It began among the ministers of Devonshire and Cornwall, who proposed to ascertain by a test the views of the

THE DOUM PALM.

brethren about our Lord's divinity. Pierce and Hallet of Exeter were the persons aimed at; and Pierce was ejected in 1719, when the matter was laid before the whole body of dissenting ministers, which met at Salter's Hall, and it was carried by four votes that there should not be a particular declaration of faith in the Holy Trinity "in the advices under consideration for Exeter." Several dissenting ministers were dismissed by their congregations, and an effort was made without success to allow Arianism and Socinianism in the Church. Several of the ministers left the Church; Lindsey resigned Catterick in 1773 and opened a chapel in Essex street; Jebb resigned and became a physician; Disney resigned Swindley in 1782 and became Lindsey's colleague in Essex street; and from the formation of the Essex street congregation the Unitarianism of England may be dated. Priestley and Belsham did for the system what Faustus Socinus did for Socinianism. Priestley, whose parents were orthodox dissenters, became an Arian, then a Socinian, and finally a Unitarian. Belsham also was of a dissenting family, and he appears to have stepped down at once

from Calvinism into Unitarianism. Priestley was but a sciolist in history and criticism, but Belsham was more cautious in his statement of doctrines. Still, his "Improved Version of the New Testament," which was published in 1808, was shown by Nares, Rennell and Lawrence to be full of mistakes and falsifications. His "Calm Inquiry," published in 1811, is the ablest work on modern Unitarianism, and may be taken as a standard of Unitarian doctrine.

Unitarians reject out of the Socinian creed, the miraculous conception of our Lord and his personal ascension into heaven after his baptism, to be instructed in his office and his worship. They utterly reject the atonement, and they hold that Jesus died merely as a martyr. They allow that he was raised from the dead, and in some undefined sense he is to judge the world. In short, their religion is a system of ethics without a sense of the "sinfulness of sin" and without a Saviour. The Unitarianism of the United States is largely in agreement with that of England, just as the Arianism of this country was in accord with the same system in Europe, individual differences existing among different persons, but the main features of the creed being identical.

**UNITED BRETHREN, or MORAVIAN CHURCH.** This Church, the correct designation of which is *Unitas Fratrum*, literally "The Unity of the Brothers," but popularly rendered The United Brethren, is better known, outside of its own brotherhood, by the appellation of The Moravian Church. The Brethren's own account of their origin as a Church is that, in the ninth century, two monks of the Greek Church, Methodius and Cyrilus, were instrumental in converting the kings and many of the people of Moravia and Bulgaria to the faith of the gospel, and these kings and their subjects were received into the communion of the Greek Church. Methodius became the first bishop of the infant Church, and Cyrilus translated the Scriptures into the Slavonic dialect for their use. In process of time many of them were led to submit to the Roman Church, but a considerable number adhered to their mother Church. As early as 1170 we find them, in association with the Waldenses, sending missionaries abroad to preach the gospel. In the fifteenth century the great Bohemian pre-Reformation Reformer, John Huss, commenced and carried on his wonderful work, drawing many converts from the Roman Church into the gospel light, which burned the brighter after the 6th day of July, 1415, when Huss died a martyr at the stake, having been adjudged a "heretic" by the Council of Constance. At his death a large number declared themselves Hussites. Soon afterward disturbances began in Bohemia, and the followers of the martyr found themselves in trouble when four hundred and fifty-two of their number were cited to appear before the council for signing a protest against the murder of Huss. Speedily, however, a serious division appeared in their ranks. One section was called Calixtins, from *calix*, "chalice," because they demanded the cup for the laity in the eucharist, and a party who went much farther in their views of reform were designated Taborites, from a mountain (Tabor) where Huss had preached, and where they had been accustomed to meet. In 1418 Martin V. issued a bull calling for the chastisement of the followers of Huss and Wycliffe. In 1420 the pope invited a crusade against them, to which the emperor promptly responded. The imperial army of one hundred and forty thousand men

threw themselves against the Hussites, and were signally defeated at the memorable battle of Witkow, and the war went on, the Bohemians covering themselves with glory under the renowned chieftain John of Ziska, until his death, in 1424. Three papal crusades were directed against these sternly-determined people, and all in vain. Army after army was hurled back in ignominious defeat by their prowess. Treachery did its utmost, and thus, through varied scenes, the struggle went on until their numbers decreased; many perished, some submitted to Rome, others joined the Lutheran ranks, and a faithful few found their way into the Church of the United Brethren. That any portion of a race so warlike as the Taborites should pass over into a communion so entirely different as that of the United Brethren can only be accounted for by the fact that, notwithstanding all their warlike struggles, they had in their hearts a loving regard for the word of God and a willingness to frame their lives by its precepts.

The Moravian and Bohemian bishops having all submitted to Rome, the Brethren found themselves without chief pastors. They chose three of their priests, whom they sent to Stephen, bishop of the Waldenses in Austria, by whom they were consecrated to the episcopal office, and these three on their return consecrated ten others. Thus the Church was reorganized and fitted for fresh labors. In 1523 the Brethren opened a friendly correspondence with Luther and others of the leaders of the Reformation. This, becoming known, brought on them a fierce persecution. After having been alternately protected and persecuted, they were at length subjected to a persecution under Ferdinand, beginning in 1621, which threatened their entire suppression and extermination. But among the mountains of Bohemia a few refugees kept alive the faith of their fathers, while in Poland there survived two bishops of the Church. In the midst of this persecution some of the Brethren fled to other lands. One colony of these, who retained in purity their original principles and practice, was in 1722 conducted by a brother named Christian David, from Fulneck, in Moravia, to Upper Lusatia, where they put themselves under the protection of Nicholas Lewis, count of Zinzendorf, and built a village on his estate, at the foot of a hill called Huberg, or "Watch Hill." They called their settlement Herrnhut, "the watch of the Lord." The count showed every kindness to the emigrants; but being a zealous member of the Lutheran Church, established by law, he endeavored to prevail upon them to unite themselves with it. This they declined; and the count, on a more minute inquiry into their ancient history and distinguishing tenets, not only desisted from his first purpose, but became himself a convert to the faith and discipline of the United Brethren. Through the Polish bishops the episcopal succession was transmitted to the Church of the Brethren at Herrnhut.

The synod which, in 1570, put an end to the disputes which then tore the Church of the Brethren into factions, had considered as non-essentials the distinguishing tenets of their own society, of the Lutherans and of the Calvinists. In consequence, many of the Reformers of both these denominations had followed the Brethren to Herrnhut and been received by them into communion; but not being endued with the peaceable spirit of the Church which they had joined, they started disputes among themselves which threatened the destruction of the whole establishment. By the indefatigable exertions of Count Zinzen-

dorf these disputes were allayed, and brotherly love and union were again established; no schism has since disturbed the Church of the United Brethren.

In 1735 the count, who, under God, had been the instrument of renewing the Brethren's Church, was consecrated one of their bishops. Dr. Potter, then archbishop of Canterbury, in England, congratulated him upon this event, and promised his assistance to a Church of confessors, of whom he wrote in terms of the highest respect, for their having maintained the pure and primitive faith and discipline in the midst of the most tedious and cruel persecutions.

This Church, like many others, has been most shamefully misrepresented. It must, however, be acknowledged that some of their converts, having previously imbibed extravagant notions, propagated them with zeal among their new friends in a phraseology extremely reprehensible, and that Count Zinzendorf himself frequently adopted the language of these fanatics, whom he wished to reclaim from their errors to the soberness of truth; but much of the extravagance and absurdity which has been attributed to the count is not to be charged to him, but to those who, writing his *extempore* sermons in short-hand, printed and published them without his knowledge or consent.

This eminent benefactor to the United Brethren died in 1760, and it is with reason that they honor his memory as having been the instrument by which God restored and built up their Church. But they do not regard him as their head, nor take his writings, nor the writings of any other man, as the standard of their doctrines, which they derive immediately from the word of God. In questions of importance, or of which the consequences cannot be foreseen, neither the majority of votes nor the unanimous consent of all present can decide, but recourse is had to the lot after mature deliberation and fervent prayer.

At every synod a kind of executive board is chosen, called the Elders' Conference of the Unity. It consists of ten elders, and is divided into four committees or departments. 1. The Missions' Department, which superintends all the concerns of the missions. 2. The Helpers' Department, which watches over the purity of doctrine and the moral conduct of the different congregations. 3. The Servants' Department, to which the economical concerns of the Unity are committed. 4. The Overseers' Department, of which the business is to see that the constitution and discipline of the Brethren be everywhere maintained. No resolution, however, of any of these departments has the smallest force till it be laid before the whole Elders' Conference and have the approbation of that body. The powers of the Elders' Conference are, indeed, very extensive; it is possessed of the supreme executive power over the whole body of the United Brethren, but is responsible to the Synod. Besides the General Conference of Elders which superintends the affairs of the whole Unity, there is a Conference of Elders belonging to each congregation which directs its affairs, and to which the bishops and all other ministers, as well as the lay members of the congregation, are subject. This body is called the Elders' Conference of the Congregation. The Elders' Conference of each congregation is answerable for its proceedings to the Elders' Conference of the Unity.

Their ministry comprises bishops, priests and deacons. A bishop can discharge no office but by the appointment of a synod, or of the Elders' Conference of the Unity. Presbyters or priests can

perform every function of the bishop, except ordination. Deacons are assistants to the presbyters, and deaconesses are retained for the purpose of privately admonishing their own sex, and visiting them in their sickness; but though they are solemnly blessed to this office, they are not permitted to teach in public, and far less to administer the sacraments. No marriage takes place without the consent of the board of elders of the congregation. Upon due application this consent is signified to the parties; whereupon they are solemnly betrothed, in presence of the elders and nearest connexions, and the marriage then takes place according to the forms prescribed by law. The education of youth receives the greatest attention.

But what characterizes the Moravians most, and holds them up to the attention of others, is their missionary zeal. In this they have been excelled by no other Church. They have earnest missionaries laboring in almost every country in the world. As to the tenets of the Moravians, though they acknowledge no other standard of truth than the sacred Scriptures, they adhere in the main to the Augsburg Confession. They believe that the kingdom of Christ is not confined to any particular party, community or church, and they consider themselves, though united in one body, or visible church, as spiritually in the bond of Christian love to all who are taught of God, and belong to the universal church of Christ, however much they may differ in forms, which they deem non-essentials.

As before intimated, the Church of the "United Brethren" is episcopal, and the order of succession in their bishops is traced with great exactness in their history, yet they allow to them no elevation of rank or pre-eminent authority, their Church having from its first establishment been governed by synods, consisting of deputies from all the congregations, and by other subordinate bodies, which they call conferences. The Church is divided into four provinces—two American, one British and one Continental. The government of each province is administered by a synod, and the affairs of the Church at large are administered by a general synod which convenes in Europe every ten years.

Their ritual is simple. Music holds a prominent place in their services. The festivals of Epiphany, Christmas and Easter are observed. On a Sunday morning they read a liturgy of their Church, after which a sermon is preached and an exhortation given to the children. In the afternoon they have private meetings, and public worship in the evening. Previous to the holy communion, which is administered once a month and on Maunday Thursday, every person intending to communicate converses with one of the elders on the state of his soul. The celebration of the communion is preceded by a love-feast, and on Maunday Thursday by a solemn washing of each others' feet, after which the kiss of charity is bestowed. On Easter Sunday they attend the church or the burial-ground, where they read a special liturgy and call over the names of all their members who have died in the preceding year. And every morning in Easter week they meet to read the harmonies of the gospel on the crucifixion, etc.

The first colony of members of this Church came over to this continent with General James Oglethorpe in 1733, and settled in Georgia. Others followed shortly, and soon still others, who settled in Pennsylvania. In 1749 the Parliament of Great

Britain passed an act recognizing the Moravian Church as an "Ancient, Evangelical Episcopal Church," and inviting its members to settle in the British Colonies of America. A settlement, small at first, at Bethlehem, Pennsylvania, soon became the leading one of the brethren on this continent. The Church has grown steadily, and been blessed by God in its work both in the home and foreign fields.

Though not so large in members as some others, the Moravian Church is in a healthy and flourishing condition, and its members command the respect of all classes, and the love of all fellow-Christians of every name, by their quiet earnestness and unostentatious piety.

**UNITED PRESBYTERIAN CHURCH.** See PRESBYTERIAN CHURCH.

#### UNITED SOCIETY OF BELIEVERS, or SHAKERS.

This society took its rise in Manchester, England, and its originators were a man named James Wardley and his wife (Jane) and a man and wife named Townley. Notwithstanding strong opposition, or in consequence of it, the number of their followers became quite considerable. Among the first proselytes was Ann Lee (or Ann Stanley), the daughter of a blacksmith and the wife of Abraham Stanley, also a blacksmith, by whom she had four children, who all died in early childhood. It was in 1753 that she united with the society; in 1770 she was imprisoned on the charge of desecrating the Sabbath, and on her release told of a wonderful vision she claimed to have had during her incarceration. This led to her soon being recognized as the leader of the society, shortly after which she discovered the sin-

fulness of marriage, and testified against it by resuming her maiden name, but she acquired the sobriquet of *Mother Ann*. She called herself "Ann the Word," signifying that in her dwelt the Word; and to this day her followers say that "the man who was called Jesus, and the woman who was called Ann, are verily the first two pillars of the Church, the two anointed ones," etc.

She made such rapid progress in the development of her sect that the people of Manchester placed her in a mad-house, where she was confined some weeks. On being released, she and seven others came to America, landing in New York in May, 1774. In the spring of 1776 she went to Albany, and thence to Niskenna, now Water-Vliet, eight miles from Albany. Here she and her followers lived unknown a few years, holding their meetings in private.

Mother Ann taught her followers that in her

person the Divinity dwelt as truly as in Jesus Christ, and even more gloriously; that in her was verified the second coming of Christ to judge the world, in order to qualify her for which she declared herself endowed with the gifts of miracles and tongues, and the power of discerning spirits, and of searching hearts; she even claimed the power of bestowing the same gifts on others. She also asserted that she was not liable to the assaults of death, and that when she left this world she should ascend in the twinkling of an eye to heaven. Nevertheless, she died at Water-Vliet, July 21, 1784, but the system did not die with her. As many of her followers had believed her to be immortal, her death did somewhat to check the onward progress of the cause, but several men had joined them before her decease, who became lead-

HOSEA BALLOU, THE AUTHOR OF MODERN UNIVERSALISM.

ers, and they contributed much to continue the sect and to advance the settlement. These persons drew up what they published as the fundamental principles of the system, in seven articles.

Their worship is peculiar in the extreme, an important element being jumping or dancing, in which they mingle their joy with cries and singing. In addition to jumping, they have a singular art of turning round on their heels with surprising rapidity and for a considerable time.

Those who unite with this body must do it freely, and not as the result of persuasion. Married persons must entirely separate themselves from their companions; all debts and obligations must be discharged before the establishment can be entered; all are required to engage in labor for the benefit of the whole. The whole affairs are managed by a body called the ministry, and by trustees appointed to hold the property. Per-

sons may unite with them in faith and worship who do not reside with the society. Finally, they abstain from all wars, party politics and intemperance, and have a high reputation for chastity, cleanliness, honesty, industry and benevolence. They employ their time in farming and various mechanical employments, such as the manufacture of wooden ware, brooms, etc. The profits arising from their business transactions are devoted to a common fund for the support of the whole community.

**UNITY OF THE SPIRIT**, Eph. iv. 3, 13, the holy fellowship in which the divine Spirit unites believers. See **COMMUNION**.

**UNIVERSALISTS** (eu-ni-ver'sal-ists). The distinguishing characteristic of this denomination is the belief in the final holiness and happiness of the whole human family. Some of them believe that all punishment for sin is endured in the present state of existence, while others believe it extends into the future life; but all agree that it is administered in a spirit of kindness, is intended for the good of those who experience it, and that it will finally terminate, and be succeeded by a state of perfect and endless holiness and happiness.

The "Profession of Belief," adopted by the General Convention of Universalists in the United States, at the session holden in 1803, has never been altered, and is perfectly satisfactory to the denomination: "Art. I. We believe that the Holy Scriptures of the Old and New Testaments contain a revelation of the character of God, and of the duty, interest and final destination of mankind. Art. II. We believe that there is one God, whose nature is love; revealed in one Lord Jesus Christ, by one Holy Spirit of grace, who will finally restore the whole family of mankind to holiness and happiness. Art. III. We believe that holiness and true happiness are inseparably connected; and that believers ought to be careful to maintain order and practice good works, for these things are good and profitable unto men."

Universalists claim that the salvation of all men was taught by Jesus Christ and his apostles. It was also taught and defended by several of the most eminent Christian Fathers, such as Clemens Alexandrinus, Origen and others. In the third and fourth centuries this doctrine prevailed extensively. It was condemned by the fifth General Council, A. D. 553; after which we find few traces of it until it revived at the period of the Reformation, and since that time it has found many able and fearless advocates. At the present day Universalism prevails more extensively than elsewhere in England, Germany and the United States.

In the United States, Universalism was little known until about the middle of the last century; and afterward it found but few advocates during several years, until the arrival of Rev. John Murray, in 1770. Mr. Murray labored almost alone until 1780, when Rev. Elhanan Winchester embraced Universalism, though on different principles. About ten years afterward Rev. Hosea Ballou embraced the same doctrine, but on principles different from those advocated by Mr. Murray or Mr. Winchester. To the efforts of these three men is to be attributed much of the success which attended the denomination in its infancy. Although they differed widely from each other in their views of punishment, yet they labored together in harmony and love.

For some years their ministry was chiefly re-

plenished from that of other denominations, but recently they have established several flourishing theological and collegiate institutions, and consequently their growth has been more rapid.

As before remarked, within the denomination there are two parties—the one who believe punishment terminates at death, the other that it extends beyond death, but only for a limited season. In 1831, however, a considerable number of ministers and members seceded from the Universalists and formed a distinct sect under the designation of—

**UNIVERSAL RESTORATIONISTS**.—These believe that all men will ultimately become holy and happy, that the probation of man is not confined to the present life, but extends through the mediatorial reign, and that, as Christ died for all, so, before he shall have delivered up the kingdom to the Father, all shall be brought to a participation of the knowledge and enjoyment of that truth which maketh free from the bondage of sin and death; that punishment is a means employed by Christ to humble and subdue the stubborn will, and prepare the mind to receive a manifestation of the goodness of God which leadeth the sinner to true repentance.

According to the Restorationists, theirs were the tenets of the entire Universalist body prior to 1818; they claim that the very terms Universalist and Restorationist were used interchangeably as synonymous; that up to 1818, when Hosea Ballou first advanced it, the doctrine that all retribution is confined to this world had not been promulgated among the Universalists.

The Restorationists denounced the doctrine as a corruption of the gospel. But a majority of the convention had espoused Ballou's sentiments. The Restorationists resolved to obey the apostolic injunction by "coming out from among them" and forming an independent association. Accordingly, a convention met at Mendon, Massachusetts, August 17, 1831, and formed themselves into a distinct sect, and took the name of Universal Restorationists. Since the organization of this association they have had numerous accessions. Their societies are principally in Massachusetts, though there are societies in Providence, Rhode Island, New York city, etc. The largest societies are those of Boston and Providence.

**UNIVERSITY** (eu-ni-ver'se-te). The name is derived from the Latin word *universitas*, which means the whole or entire of anything, and it is used to designate a seminary or place of learning of the highest character, where all the leading branches of learning are taught, and where degrees of literary standing are conferred. In the Middle Ages the Latin term *universitas* included the whole body of students and teachers assembled in a place of education with corporate rights and under by-laws of their own; and in later times, also, the term is held to imply that all branches are taught in an institution which is entitled to the name of a University. It is generally understood, that the authorization of the sovereign power in the State is necessary to enable such an establishment to confer degrees; and in most European countries there are various offices and professional situations for which a person is qualified, by having taken a certain degree at one of these establishments. Hence Universities, although in most instances they have been founded and maintained by private munificence, have been regarded as national institutions.

The University of Paris was long celebrated as

one of the most ancient of these institutions during the Middle Ages, and in its details it largely served as a model for other educational institutions. About A. D. 1200 it was composed of a union of the various schools of Rhetoric, Theology and Philosophy with which that city abounded, under one head, styled the Rector. That University was divided into four nations—French, Picard, Norman and English; to the first were attached the students from Italy and Spain, and to the last the students from Northern Europe generally. The subjects taught were arranged under faculties—viz., Theology, Law, Medicine, and that of the several liberal arts—Rhetoric, Logic, Grammar, Geometry, Arithmetic, Astronomy and Music. See **TRIVIAL**. These faculties were corporate, and elected each a dean, and these last, with the procurators of the nations, represented the University. The lowest degree was that of Bachelor; the next, Licentiate; the third, Magister, which corresponded with that of Doctor at Bologna. The Colleges connected with the University were private or royal foundations for the benefit of poor students, whose board was in certain instances found for them, and who received stipends or other emoluments. The Faculty of Theology at Paris was well known by the name of the Sorbonne. See **SORBONNE**. This old and splendid University, founded by Charlemagne, which had done honor to Paris and France for ages, may be said to have been entirely done away with at the Revolution, and at present the institution which goes by that name is, properly speaking, only a Board of Education, composed of nine members, who are presided over by the Minister of Public Instruction as Grand Master, with twenty-two inspectors of general studies under them. The French Academy, with its five Faculties and a numerous staff of professors, has been substituted for the old University, so far as teaching is concerned, and the University has come to be mainly a board of examiners. Still, the departments of the Academy are so numerous, and they are so amply provided with professors, that the whole curriculum of knowledge is fully recognized, and the instruction is minute and thorough.

In England the two great Universities of Oxford and Cambridge date from a very venerable antiquity. As there was a University for the eastern part of England in the seventh century, it is not improbable that one should have existed in the central kingdom of Mercia by the eighth century, and it is fair to have the name and munificence of Alfred recognized as a liberal patron of learning at Oxford. Ethelbald, the king of Mercia, is held to have created the University, for in 740 he had several Inns built for the use of students. In its early progress the term *school* was applied to the institution on the Isis. The University existed before the Colleges, and was the teaching institution, having also its well-known powers of granting degrees. The Colleges which grew up around the University were at first merely *hostels*, or boarding and lodging-houses for the students, which sprung up in Oxford after the Conquest, and in a short time they were very numerous. University Hall, which was on the site of the present University College, was attributed to Alfred, and hence that College claims to have existed for a thousand years. But it is more than probable that the earliest of the institutions which had the privileges of the Colleges as they now exist was St. George's College, in A. D. 1149. Many of the hostels changed their names, became incorporated with others or ceased to exist, and the others at length became

regularly organized in their present condition. The Colleges were endowed by private munificence, the founders stipulating in the charters the manner in which they were to be governed. In the course of years the funds of the Colleges were increased by endowments given by persons of wealth who had studied in them, and thus the most ample provision has been made for their support. Generally, a College is presided over by a Master (this is the usual term in Cambridge), Rector, President or Principal, and associated with him are a number of Fellows, who reach this position of dignity by proficiency in scholarship, and who are endowed out of the funds which constitute the foundation. Formerly these Fellowships were attainable by the students of the Col-

lege or refectory, usually called "the Hall," and the residences of the Fellows and the Masters or Rectors are generally well appointed. The Masters or heads of the Colleges are associated together and are incorporated, thus forming the governing authorities of the University. In the Colleges the students study under the tutors and Fellows, but they appear before the University officers for examination with a view to a degree. In Oxford and Cambridge there are University professors who lecture in almost every department of Language, Philosophy, Art and Science, as well as in Theology. Although the Colleges and the University have been indebted to private liberality for their lands and funds, Parliament has often interfered with the Colleges and

Baliol, king of Scotland. Merton dates from 1264, but only from 1274 in Oxford, for it had existed ten years at Maldon, in Surrey. It was founded by Walter de Merton, Bishop of Rochester. Exeter was founded in 1314 by Stapledon, Bishop of Exeter; and Oriel by Adam de Brome, Almoner to Edward II, in 1326. Philippa, Queen of Edward III, at the suggestion of Robert Eggesfield, her confessor, founded Queen's College in 1340; and New College, the splendid work of William of Wykeham, was established in 1386. Richard Fleming, Bishop of Lincoln, founded Lincoln College in 1427; and Magdalene was founded by William of Waynflete in 1456. Brasenose had joint founders, William Smith, bishop of Lincoln, and Sir Richard Sutton, and their College dates

BLOWING THE TRUMPETS FOR THE FEAST OF THE NEW MOON.

leges only in which vacancies occurred, and often the preference was given, according to the views of the founders, to the descendants of the founders of the Fellowships, but of late years great changes have been made by Parliamentary legislation, so that candidates may apply from any College in case of a vacancy, and the position is filled by literary competition. Endowments are also provided for "Scholars," who receive their appointment by competition, and who enjoy the benefit of their scholarship during their undergraduate course. Formerly no students were entered at Oxford or Cambridge who did not "reside" in a College; but now in Oxford they may, if they please, reside in lodgings and have their names entered in the University. In Cambridge students may reside in lodgings, but they must enter their names in some College and attend to College rules. Each College has its library, chapel, dining-room

the Universities, and a few years ago they were "opened" so as to admit Dissenters to enjoy privileges from which they had been excluded since the reign of Charles II. In Oxford, including five Halls, which are minor Colleges, there are at present twenty-five Colleges engaged in the tuition of undergraduates, who are prepared to pass their examinations in the University. There are five hundred and forty-eight Fellowships and two hundred and forty-seven Scholarships in the Colleges of Oxford, besides the great staff of organists, librarians, choristers and the band of professors in the University.

The antiquity of the Colleges in Oxford may be seen by the fact that University College claims to have been in existence in A. D. 872, though its statutes date only from 1280. Baliol appears to have been founded between 1263 and 1268 by John de Baliol of Barnard Castle, father of John

from 1509. Richard Fox, Bishop of Winchester, was the founder of Corpus Christi in 1516, just as the Reformation was dawning in Germany, and the name of this College indicates the earnest zeal of its founder to perpetuate a doctrine which he felt to be in danger of rejection. Christ Church, the greatest of them all, was the project of Cardinal Wolsey (see **FRIDSWIDE** and **WOLSEY**), which he began in 1525, but not until 1546 was its permanence ensured. Trinity College dates from 1554, when Sir Thomas Pope endowed a new Foundation, although Edward III, Richard II, and the priors and bishops of Durham had severally attempted to establish this important house. St. John's College was founded in 1557 by Sir Thomas White, a merchant tailor in London; and Jesus College, at the instigation of Hugh Price, was founded in 1571 by Queen Elizabeth. Nicholas Wadham and his wife Dorothy founded

Wadham College in 1613, and Pembroke, originally Broadgate Hall, was founded in 1624, while Worcester, which was originally Gloucester Hall, was refounded as a College in 1714 by Sir Thomas Cookes of Bently, in Somersetshire. The Halls are five in number, St. Mary's dating from 1325, Magdalen from 1487, New Inn from 1360, St. Alban's from 1547, and St. Edmund's dates from 1269, being the most ancient of them all.

The only modern College founded in Oxford was commenced in 1868, exactly two hundred years after the erection of Wadham College. It is erected by subscription in memory of the late Rev. John Keble, of Hursley, in Hampshire, who had been professor of Poetry in the University.

In Cambridge there are seventeen Colleges under the University, and the arrangements are similar in most of their details to those in Oxford. The University professors are so numerous as to provide lecturers in all departments, and the Colleges have three hundred and forty-nine Fellows and five hundred and thirty-four Scholars, together with exhibitioners, chaplains and a large staff of endowed officers. As an illustration of the munifi-

one College under it—i. e., Trinity College—with Provost, senior and junior Fellows, Scholars and Sizar. These institutions are usually considered to be better endowed than any other educational establishment in the British empire. The Queen's University, in Ireland, is merely a board of examiners entitled to confer degrees, and the students from the three Queen's Colleges of Cork, Belfast and Galway graduate in that institution.

The Universities of Germany were framed on the model of that of Paris. Prague was founded in 1348 and Vienna in 1365, and Germany has now a far more numerous list of Universities than any other country. The collegiate system never prevailed in Germany. The four faculties are retained, and professors in the different departments are appointed by the government. These form the Senate, at the head of which is the Proctor, who is chosen annually or biennially. Besides these, there are extraordinary professors, who receive small salaries, and an inferior class of licensed teachers or licentiates, who receive none. The professors give public lectures in the branch of study to which they are appointed, but they,

at Oxford and Cambridge; and in the London University and King's College, in London, the arrangements are similar to those which prevail in Scotland. In Spain the Universities are modeled on the plan which prevails in England, the students being entered as residents in the different Colleges which are attached to each of them.

In the United States the term University is loosely and improperly applied to many institutions which have no faculties in the departments of Law, Medicine or Theology. Many of these institutions are only in a formative state; and when they pass out of their elementary condition, it is to be hoped that they will attain to such a magnitude, and enjoy such ample provision, as may enable them to exhibit a character and an efficiency which would justify the name. Already, Harvard, Yale, Princeton and the Universities of Pennsylvania, Virginia and Michigan take rank with the famous institutions of older lands. In no country, and in no age, has a greater love of learning and a liberality on a more magnificent scale been displayed for the dissemination of knowledge, than in the United States. In this country the higher educational arrangements differ from those of Scotland and of England. The tendency is to secure residence of the students in the educational establishment, thus differing from Scotland and from the Queen's Colleges in Ireland; but yet at our great centres there is not an accumulation of Colleges as at Oxford and Cambridge; for each of our Colleges exercises University privileges both in teaching and conferring degrees, thus differing from the Oxford and Cambridge Colleges, which only teach and then pass their students on to the authorities of the University for graduation and for all further progress in degrees. With us also the tendency is evident to separate Theological Colleges, or Seminaries, as they are called, from Colleges which are devoted to the culture of Languages, Philosophy and pure and applied Science; and the influences which have led to this separation will no doubt continue to prevail. Residence is generally required in our institutions, and so far they must be collegiate; but there is no prospect that a number of these institutions shall grow up around any centre in our land as at Oxford and Cambridge, and therefore our Colleges will no doubt continue as hitherto to exercise University functions in the bestowal of degrees.

**UNNI** (un'ni). 1. A Levite said to be one of the porters who was appointed to play on the psalter, 1 Chr. xv. 18, 20. 2. A Levite after the return from captivity, Neh. xii. 9.

**UPFOLD** (up'fold), GEORGE, D.D., was born in 1796, at Guilford, Surrey, England. When only six years of age, he was brought to the United States, and his education at first was conducted with a view to the medical profession, and he actually graduated in medicine. He resolved, however, to consecrate himself to the work of the ministry, and he was ordained in 1818. He held the position of rector of St. Luke's Church, New York, from 1819 until 1827, when he was removed to St. Thomas' Church in the same city. In 1830 he became rector of Trinity Church, Pittsburg, and in 1849 he was raised to be bishop of Indiana. He devoted his life almost exclusively to pastoral work and episcopal oversight. His only published works were a "Review" of the events of one hundred years, published as a lecture in 1845, and a "Manual of Devotions," published in 1863. He died in 1872.

ANCIENT AMPHITHEATRE AT POMPEII.

cence of the founders and endowers of these Universities, it may be stated that they own three hundred and nineteen thousand seven hundred and eighteen acres of land, of admirable quality, in England and Wales. There are great numbers of Church livings owned by the Universities and Colleges, to which the Fellows may retire, if they prefer parochial to tutorial life. There are tithe charges, which bring them in a yearly income of four hundred and fifty-three thousand five hundred and seventy dollars. From houses, they get two hundred and seventy thousand seven hundred and twenty-five dollars in a yearly income, and they receive three hundred and six thousand six hundred and ninety dollars from stocks and shares. In 1871 the income of these two Universities was no less than three million seven hundred and twenty-two thousand and twenty-five dollars. A large part of this sum goes to the heads of Houses, Fellows, Scholars and Exhibitioners. The Chapels absorb twenty times as much as the Libraries, and only the sums of thirty-three thousand four hundred and ninety dollars at Oxford and five thousand three hundred and fifty-five dollars at Cambridge go to the payment of professors.

In Ireland, the University of Dublin has only

as well as the other two classes, may give also private lectures on whatever subject they please, and from the fees of attendance at these lectures their principal income is derived. Generally, the student is left at liberty to attend what lectures he pleases; for the course in the lower seminaries is so extensive that the University is considered to be of value chiefly in giving a final determination to the peculiar bent of the student's mind, and to perfect him for the course of life on which he determines to enter. In Prussia, licenses to practice in various professions, and benefices in the Church, are only given to those who have studied a prescribed time in the University. The constitution of the Scotch Universities has a great resemblance to those of Germany. In each there is a Principal, with professors in the different faculties, who deliver lectures to their students and carry them through an extensive course. The Scottish institutions are real Universities, as they have faculties in Arts, Law, Medicine and Theology, and they recognize the fact that no institution has any right to confer a degree in any branch of learning that has not a teaching body of professors in that branch. The students in Scottish Universities do not "reside" in College, as is the case

**UPHAM** (up'ham), EDWARD, was born in 1709, at Malden, Massachusetts. He received his degree in 1734. In 1740 he became pastor of a small Baptist church in West Springfield, but after eight years' faithful labor he was obliged to resign the place because of inadequate support. He removed to Newport, Rhode Island, and became the successor of the Rev. John Callender in the First Baptist Church in that place. In 1771 he retired from Newport to his abode at West Springfield, where he continued to minister to the members of his old flock whom he collected together again. He died in 1797, being eighty-seven years of age. He was an early and zealous friend of Rhode Island College, and he acted as a trustee and a Fellow of the College from 1764 until 1789. He engaged in a controversy with the Rev. Dr. Lathrop on the subject of Baptism. His theological views verged toward Arminianism, and in his mode of preaching he differed from the custom of his brethren, inasmuch as he brought his manuscript with him into the pulpit.

**UPHAM**, THOMAS COGGSWELL, D.D., was born in 1799, at Deerfield, New Hampshire. He graduated at Dartmouth College in 1818, after which he spent three years for his theological course at Andover. He became assistant to Professor Stuart in the Hebrew class, and he translated Jahn's "Biblical Archaeology." In 1823 he was chosen colleague-pastor in the Congregational church at Rochester, New Hampshire; but he entered on the duties of the chair of mental philosophy and ethics at Bowdoin College in 1825, and he added the task of instruction in Hebrew. He continued to labor with great zeal and success in this office until July, 1867. In 1839 he published his "Elements of Mental Philosophy," and in 1850 he published his "Treatise on the Will." In the department of mind he also issued a work entitled "Outlines of Imperfect and Disordered Mental Action," a very peculiar work, which displayed great critical power. He has also been a voluminous author of works which are of a theological character, such as "Principles of Interior or Hidden Life," "Life and Experiences of Madame de la Mothe Guyon and Fénelon," "Treatise on Divine Union," "Religious Maxims," "Life of Faith," "A Method of Prayer," "Manual of Peace," an "Essay on the Congress of Nations," etc. Dr. Upham has been one of the most successful professors of mental science in our age, and his works have been received as text-books in many of our leading colleges and schools.

**UPHARSIN** (eu-far'sin), Dan. v. 25. See MENE.

**UPHAZ** (u'faz), Jer. x. 9; Dan. x. 5, probably identical with Ophir.

**UPPER ROOM.** See HOUSE.

**UR**, the father of one of David's heroes, 1 Chr. xi. 35. But in 2 Sam. xxiii. 34 the same person apparently is called Ahasbai.

**UR**, a city or place which has always the addition "of the Chaldees," where Abraham's family resided, and from which he with his father Terah and other relatives went forth to Haran, Gen. xi. 28, 31; Neh. ix. 7.

There are discordant opinions as to the locality of Ur. Some have identified it with Edessa, the modern *Orfah*, and some with a Persian fort-

ress, so called, between Dura on the Tigris and Nisibis. Others suppose it to be *Warka*. But this is more probably the ancient Erech. On the whole it may be most reasonably imagined to be *Mugeyer* or *Umgheir*, where considerable ruins exist. Dr. Kalisch, indeed, whose authority is deservedly high, disagrees with this opinion, and believes Ur to be the name of a province to which Haran belonged. But his only reason is that Abraham, as he interprets the text, was at Haran when the divine summons came to him, Gen. xii. 1, whereas God is elsewhere said to have brought him from Ur. This can hardly be reason sufficient.

*Mugeyer* is unquestionably very ancient. It is situated on the right bank of the Euphrates near the marshes which the confluence of the *Shat-el-Hic* and the *Shat-el-Kahr* with the Euphrates has formed, and in periods of inundation the ruins are surrounded by water. They are of an oval shape, and measure about half a mile from north to south. The name *Mugeyer* is said to signify "place," or "mother, of bitumen," which is the cement used in the remarkable temple here built in stages, two

He removed the papal seat from Avignon to Rome. The sixth was pope from 1378 to 1389. His rule was so obnoxious that the French party in the College of Cardinals elected the antipope Clement VII. The seventh, elected September 15, 1590, whose pontificate lasted thirteen days. The eighth, in whose pontificate, lasting from 1623 to 1644, Jansenius, bishop of Ypres, promulgated the well-known Jansenist doctrines, which were condemned by the pope. See JANSENIUS.

**URBANE** (ur-ba'nay), or **URBAN**, a disciple at Rome and one of Paul's companions in labor, Rom. xvi. 9. Nothing is known of him, but his name shows him to have been a Roman.

**URI** (en'ri). 1. The father of Bezaleel, one of the skilled workmen employed in the construction of the tabernacle, Ex. xxxv. 30. He was himself of the tribe of Judah and the son of Hur. 2. The father of one of Solomon's commissariat officers—Geber, 1 Ki. iv. 19. 3. A gatekeeper of the temple, and one of those who had married foreign wives, Ezra x. 24.

INTERIOR OF A POMPEIIAN MANSION.

of which remain. This temple is in the form of a parallelogram one hundred and ninety-eight by one hundred and thirty-three feet. The lower story is supported by thick buttresses, and the height of the whole is seventy feet. The exterior is faced with red kiln-baked bricks, and the interior is constructed of bricks burnt or sun-dried. The name of Uruk, an early king, 2230 B.C., has been found upon the bricks, and the place was probably the capital of this monarch. The temple was dedicated to the moon-god Hurki; hence perhaps the town derived its name. The rest of the ruins are for the most part tombs.

**URBAN** (ur'ban). There were several popes of this name, as follows: The first, who suffered martyrdom at Rome on May 25, 230. The second, whose pontificate extended from 1088 to 1099, presided at the Council of Clermont in 1095, and proclaimed the first Crusade. The third reigned from 1185 to 1187. The fourth, in whose pontificate, which extended from 1261 to 1264, the festival of Corpus Christi was instituted, excommunicated the usurper Manfred, and offered the crown of Sicily to St. Louis, who refused, and afterward to Charles d'Anjou, who accepted it. The fifth was elected in 1362 and died in 1370.

**URIAH** (eu-ri'ah). 1. One of the distinguished officers of David's army. He is called "the Hittite;" possibly born of Hittite race, he or some ancestor had become a Hebrew proselyte. He was husband of Bathsheba, with whom David formed an adulterous connection while Uriah was in the field under Joab. David's discreditable attempts to conceal his crime, and, on their failure, cold-blooded murder of Uriah, are faithfully narrated by the sacred historian. Uriah is represented as a brave and high-minded man, 2 Sam. xi. See **URIAH**, 1. 2. A priest, father of that Meremoth who was one of those who weighed the vessels brought by Ezra, Ezra viii. 33. See **URIAH**, 3.

**URIAS** (cu-ri'as), Matt. i. 6, the same as Uriah, 1.

**URIAS**, 1 Esd. ix. 43, the same as Urijah, Neh. viii. 4.

**URIEL** (eu-ri'el). 1. A Levite, chief of the Kohathites in the time of David, and one of those who took part in the bringing up of the ark from the house of Obed-edom, 1 Chr. xv. 5, 11. 2. The father of Maachah, wife of Rehoboam; he is called Uriel of Gibeon, 2 Chr. xiii. 2. 3. A Kohathite

Levite, son of Tahath, but of whom nothing more is recorded, 1 Chr. vi. 24.

**URIJAH** (eu-ri'jah). 1. A high-priest in the reign of Ahaz. He weakly complied with the order which the king sent him to make an altar like that used for idolatrous worship at Damascus, and to sacrifice upon it instead of on the one which Solomon had constructed after the divine pattern, 2 Ki. xvi. 10-16. He is also called Uriah, Isa. viii. 2. 2. The son of Shemaiah of Kirjath-jearim who prophesied against Judah and Jerusalem in the reign of Jehoiakim. The king was enraged, and resolved to put him to death. Urijah, however, fled into Egypt; but as Jehoiakim was Pharaoh's nominee, he had no difficulty in seizing the prophet there. Urijah was brought

DOORWAY OF A POMPEIAN MANSION.

back to Jerusalem and executed, Jer. xxvi. 20-23. 3. A son of the family of Koz and father of Meremoth, Neh. iii. 4, 21. Perhaps it was the same who stood by Ezra when he read the law, Neh. viii. 4.

**URIM** (eu'rim) **AND THUMMIM** (thum'-mim). Few matters connected with the ancient Hebrew ritual have excited more curiosity than the Urim and Thummim. The Scripture gives no description of the things meant. In the directions communicated to Moses for the high-priest's garments it is simply said that the Urim and Thummim are to be put into the holy breastplate, to "be upon Aaron's heart when he goeth in before the Lord," Ex. xxviii. 30. But it is observable that, whereas certain skilled artists made the robes and the furniture of the tabernacle, with the tabernacle also, there is no mention of any

making of Urim and Thummim; it is Moses himself who, when all is finished and Aaron arrayed, put these into the breastplate, Lev. viii. 8. By means of Urim and Thummim counsel from the Lord was to be delivered, Num. xxvii. 21; and the possession thereof was the crowning glory of the priestly tribe, Deut. xxxiii. 8. In after times we find this mode of consulting God exercised, 1 Sam. xiv. 18, 19; xxii. 2, 6; and subsequent to the Babylonish captivity we have the impossibility noticed of discriminating the right descent of some who claimed the priesthood until there stood up a priest with Urim and Thummim, Ezra ii. 63. The most, then, that we can gather seems to be that the Urim and Thummim were no work of art, that they were connected with the breastplate of the high-priest's ephod, and that they were put in after this breastplate with its rows of precious stones was completed.

The origin of Urim and Thummim has been traced to Egypt. The meaning of the words is "lights" and "perfections," and it would seem that symbols of light and truth were worn by the Egyptian priesthood, an image representing truth, and the mystic scarabæus or beetle, which denoted light. But, even granting that this notion were a just one, little progress would be made in elucidating Urim and Thummim, and in discovering how the divine response was obtained thereby.

The view adopted by Archbishop Trench is curious and well worth attention. He sets out with the principle that, whatever the Urim and Thummim might be, two distinct things were not meant; they were two names for one and the same thing; hence Urim alone is repeatedly spoken of, Num. xxvii. 11. Now, the breastplate was doubled, Ex. xxviii. 16—that is, it was a bag, or purse, adorned with costly jewelry and of elaborate workmanship. It was made to contain something; and as the outer case was so magnificent, that which was placed in it must have been more precious still. What was there which was of rarer value? The archbishop believes that, among the stones on the breastplate externally, one was wanting, the one far more lustrous and perfect than all others—that priceless gem, the diamond. What if this were placed inside? What if thereon were engraved the ineffable Name? When the apocalyptic seer would describe the priestly dignity to which the faithful ones should be advanced, he says that each shall have a white stone—not dead milky white, but a sparkling colorless brilliant—on which there should be a secret name, Rev. ii. 17. It might be there was a reference intended to the Urim. If such a stone, inscribed with the great Name, were enfolded in the breastplate, none but the high-priest could read or know that name.

But if this were so, how was the divine response obtained? Was it that by gazing on the brilliant the priest's thoughts were concentrated and raised so that the words he uttered were not his own? It might be so, provided we do not suppose he was thrown into an ecstatic state in which personal consciousness was lost. Such a notion must not be entertained for a moment. And if an argument against it were wanting, the address of Saul to Abiah, "withdraw thine hand," 1 Sam. xiv. 19, would be decisive. But here the matter must be left; it is shrouded with an awful veil.

**URSINUS** (ur-se'nus), **ZACHARIAS**, one of the early Reformers, was born at Breslau, in Silesia, in 1534. He studied at Wittenberg, where he acquired the friendship of Melancthon, whom he accompanied to the conference at Worms. He afterward became master of the school at Breslau, then went to Heidelberg, where he obtained a professorship, and died, professor of divinity, at Neustadt, in 1583. The celebrated Heidelberg Catechism was compiled by Ursinus, who also wrote a commentary on it.

**URSULINES** (ur'su'-lines), an order of nuns, founded originally by St. Angela, of Brescia, in the year 1537, and so called from St. Ursula, to whom they were dedicated. At first these nuns did not live in community, but abode separately in their fathers' houses; and their employment was to search for the afflicted, to comfort them; for the ignorant, to instruct them; and for the poor, to relieve them; to visit the hospitals and to attend upon the sick; in short, to be always ready to do acts of charity and compassion. In 1544 Pope Paul III. confirmed the institution of the Ursulines. St. Charles Borromeo brought some of them from Brescia to Milan, where they multiplied to the number of four hundred. Pope Gregory XIII. and his successors, Sixtus V. and Paul V., granted new privileges to this congregation. In process of time the Ursulines, who before lived separately, began to live in community and embrace the regular life. The first who did so were the Ursulines of Paris, established there in 1604, who entered into the cloister in the year 1614 by virtue of a bull of Pope Paul V. The foundress of the Ursulines of France was Madame Frances de Bermond, who in 1574 engaged about twenty-five young women of Avignon to embrace the institute of St. Angela of Brescia. The principal employ of the Ursulines, since their establishment into a regular order, was to instruct young women, and their monasteries were a kind of schools where young ladies of the best families received their education.

**URWICK** (ur'wik), **WILLIAM**, D.D., was a native of England. He was educated for and ordained in the ministry of the Congregational denomination. He was called to a church in Dublin, where for a long and powerful ministry he held a prominent place, being distinguished for his vigor and eloquence, his evangelical matter and unusual ability as a pulpit orator. Among his published works may be enumerated "The Value and Claims of the Sacred Scriptures," "The Nature of Christ's Person and Atonement," "The Second Advent of Christ," "Connection between Religion and the State," "The Ordinance of Baptism" and "The Triple Crown or Power of the Papacy."

**USE**. This word has a particular signification in ecclesiastical terminology; it means the custom and mode of conducting public worship, especially the mass, in any particular diocese. Thus the ritual system which prevailed at Sarum, York and Hereford are spoken of as the "Hereford use," the "York use." See **SARUM USE**.

**USHER**, or **USSHER** (ush'er), **JAMES**, archbishop of Armagh, was born at Dublin, in 1580. He belonged to an old Irish family, and was educated at Dublin University, of which he was one of the first three scholars. His father, Arnold Usher, was a man of erudition, and held a

position in the Court of Chaucery; while his uncle, Henry Usher, who had entered the Church, rose to be Archbishop of Armagh and Primate of all Ireland. His mind was developed at an early age, and he had a great thirst for learning; consequently, in 1593, when he was only in his thirteenth year, he was admitted as a student of Trinity College. He applied himself with great earnestness to Greek and Hebrew, in both of which he excelled, and he easily mastered the science and philosophy which were taught in that age. So also he distinguished himself by his ardent application to study, particularly of the early writings of the Church, and when only eighteen accepted the challenge of a learned Jesuit to discuss the principles of Protestantism. His preparation for this discussion afterward bore good fruit, as it enabled him to produce his admirable treatise entitled an "Answer to a Jesuit," which is a wonderful storehouse of learning and a fine specimen of acute reasoning. It is one of the most valuable treatises of that age. He had before this commenced the formation of chronological tables, which formed the foundation of important works in his later years. In consequence of his high standing he was appointed proctor of the university in 1600, and his erudition secured him the position of catechetical lecturer also. He was ordained priest in 1601, and elected professor of divinity in 1607, in which year also he was raised to the chancellorship of St. Patrick's Cathedral, and having reached this elevation, he passed over to England for the purpose of becoming acquainted with the eminent men of Oxford and Cambridge, and of maturing his mind by study in the great University libraries. An effort was made in 1610 to induce him to accept the provostship of his college in Dublin, but he declined the dignity, and three years afterward he presented to James I. his first treatise, entitled "De Ecclesiarum Christianarum Successione et Statu" ("On the Succession and Standing of the Christian Churches"), which was received as the first fruit of the University of Dublin. In 1615 he was honored by being entrusted with the task of drawing up Articles of Religion for the Irish Church, and as the doctrinal parts were Calvinistic, an attempt was made by his enemies, who knew the peculiar weaknesses of James I., to injure him in the estimation of that monarch, but without success; for in 1620 he was made bishop of Meath by King James, and in 1626 was promoted to the archbishopric of Armagh. Being driven to England by the rebellion in Ireland in 1640, he took the side of the king on the outbreak of the civil war, and preached at Oxford against the Parliamentary party. He was appointed by Charles I. to the bishopric of Carlisle, but the ascendancy of the Puritans prevented his exercising the duties of the see. He took up his residence in London in 1647, and was elected preacher by the benchers of Lincoln's Inn, which post he retained to his death. His remains were honored, by Cromwell's order, with a state funeral in Westminster Abbey. He wrote several learned works on Church history, etc., but is best known by his "Chronologia Sacra" and "Annals of the Old and New Testament."

Usher's System of Chronology is founded on the authority of the Hebrew text of the Bible, and is now rejected by all scholars as far too contracted, inconsistent with the records and monuments of

other nations, and even with the history of the Jews. It was introduced into our English Bibles, but by whose authority is not known.

**USHER, JOHN**, was descended from a respectable family who had emigrated from England and settled at Boston. His grandfather was a Freeman at Cambridge in 1639, and a representative in the General Court. His father was also a Freeman, and he was made lieutenant-governor of New Hampshire in 1692. His son John received the benefit of an early education, and he took his degree in Harvard in 1719, and after a course of theology he went to England, where he was ordained; and he returned to the colony as a missionary of the Society for the Promotion of the Gospel in Foreign Parts. He settled at Bristol, Rhode Island. He labored here with great fidelity until his death,

PERISTYLE OF THE CHURCH LA MADELEINE, AT PARIS.  
A fine imitation of the Roman style.—See ROMAN ARCHITECTURE.

in 1775, at the age of eighty-six. His son John was a remarkable man. He was a lawyer, but a devoted, godly member of the Church; and on the death of his father he collected the members of the church, kept them from wandering, read prayers with them, and a sermon, and thus he continued for eighteen years, until Bishop Seabury ordained him in 1793. He served as rector of the parish until 1800, and in 1804 he died, having displayed through life an earnest, heartfelt piety, great good sense and indomitable purpose in carrying out every duty.

**USTICK** (eus'tik), **THOMAS**, was born in 1753, in the city of New York. He was of English descent, as his grandfather emigrated from Cornwall and settled in New Jersey. Although the family had belonged to the Episcopal Church, Thomas made a profession of faith and joined the Baptist denomination when he was thirteen years

of age, much to the annoyance of his relatives. Having resolved on preaching the gospel, he entered Warren Academy, Rhode Island; and when the academy was incorporated as a college and established at Providence, he continued as a student until 1771, when he graduated. In 1776 he settled and was ordained at Ashford, Connecticut, and in 1779 he removed to Grafton, Massachusetts, where he remained three years; after which he was taken to Philadelphia, where a great work was accomplished by him in saving the congregational property, which had been attempted to be carried off by a number of the congregation who had embraced Universalist principles; and he was equally favored in seeing the cause of sincere religion prospering in his hands. He labored in the city with great faithfulness during the prevalence of the severe attack of yellow fever in 1793; and

though several members of his family were attacked, he and they were mercifully spared. From 1801 his health began to decline, and he died in 1803, in the fiftieth year of his age, leaving behind him the character of a faithful, earnest laborer and a truly pious man.

**USURY** (eu'zheu-re), the gain exacted above the principal, or what was lent, in consideration of the loan, now commonly understood as excessive profit. Lending for profit was forbidden among the Hebrews, though to a stranger it was allowed, Ex. xxii. 25. See **LOAN**.

**UTA** (eu'ta), 1 Esd. v. 30.

**UTHAI** (eu'thi). 1. A descendant of Judah, 1 Chr. ix. 4. 2. One of those who went from Babylon with Ezra, Ezra viii. 14. This name appears as Uthi in 1 Esd. viii. 40.

**UTOPIANS** (u-to'pe-anz), those who have described Utopias, or perfect states. Sir Thomas More, in his "Utopia," declares against all persecution for religious opinions, and allows only spiritual power to the clergy.

**UZ**, the name of certain persons several times mentioned in the Old Testament. Three persons bear the name Uz: 1. A son of Aram, Gen. x. 23. 2. A son of Nahor, brother of Abraham, Gen. xxii. 21. 3. A descendant of Esau or Seir, Gen. xxxvi. 28.

**UZ**, a country famous as being the land of Job, Job i. 1; mentioned again Jer. xxv. 20. It is not easy to fix accurately its position, nor to decide from which, if from any, of the persons referred to above, it may have derived its name. Two of them belong to the Aramean branch of the Semitic race and one to the Arabian. Allusions to the

by the line of the Euphrates on the east. Eastern tradition places Job's residence in the Hauran, where a monastery was erected to his memory and bearing his name.

**UZAI** (eu'zi), the father of one who repaired the wall of Jerusalem, Neh. iii.

**UZAL** (eu'zal), the sixth son of Joktan in the genealogy of Gen. x. 27. There is a general agreement as to the destination and settlement of this portion of the Joktanite race, since the name evidently appears in Auzal, the older name of Sanaa, the capital of Yemen. This has been from very remote times one of the most flourishing cities in Arabia, and little less important than Seba. It stands on an elevated position, is well supplied with water for a town in such a region, and is one of the best-built and most pleasantly situated places in Arabia. But except incidentally from its very

punished by the immediate death of Uzzah, 2 Sam. vi. 3-8. See 1 Chr. xiii. 7-11, where the name is given as Uzza.

**UZZEN-SHERAH** (uz'zen-she'rah), a town founded by Sherah, the daughter or descendant of Ephraim, 1 Chr. vii. 24.

**UZZI** (uz'zi). This is an abbreviated form of Uzziah, and appears as the name of various persons, none of whom attained to any celebrity. A son of Bukki, of the family of the high-priest, 1 Chr. vi. 5; a son of Tola and grandson of Issachar, 1 Chr. vii. 2, 3; a son of Bela, a Benjamite, 1 Chr. vii. 7; and several other priests and Levites, 1 Chr. ix. 8; Neh. xi. 22; xii. 19, 42.

**UZZIA** (uz'zi'a), one of David's thirty heroes, called the Ashterathite, probably from being a native of one of the Astaroths, 1 Chr. xi. 44.

**UZZIAH** (uz'zi'ah), otherwise called **AZARIAH**, a king of Judah who began to reign B. C. 809, at the age of sixteen, and reigned fifty-three years, being, with the sole exception of Manasseh's, the longest reign in the Hebrew annals. In the first half of his reign Uzziah behaved well, and was mindful of his true place as viceroy of the divine King. He accordingly prospered in all his undertakings. His arms were successful against the Philistines, the Arabians and the Ammonites. He restored and fortified the walls of Jerusalem, and planted on them engines for discharging arrows and great stones; he organized the military force of the nation into a kind of militia, divided into bands liable to be called out in rotation; for these he provided vast stores of all kinds of weapons and armor—spears, shields, helmets, breast-plates, bows and slings.

Nor were the arts of peace neglected by him; he loved and fostered agriculture; and he also dug wells, and constructed towers in the desert, for the use of the flocks. At length, when he had consolidated and extended his power, and developed the internal resources of his country, Uzziah fell. His prosperity engendered the pride which became his ruin. In the twenty-fourth year of his reign, incited probably by the example of the neighboring kings, who united the regal and pontifical functions, Uzziah, unmindful of the

fate of Dathan and Abiram, dared to attempt the exercise of one of the principal functions of the priests by entering the holy place to burn incense at the golden altar. But in the very act he was smitten with leprosy, and was thrust forth by the priests. He continued a leper all the rest of his life, the public functions of the government being administered by his son Jotham as soon as he became of sufficient age, 2 Ki. xv. 27, 28. Of others bearing this name we know little, 1 Chr. vi. 24; Ezra x. 21; Neh. xi. 4; 1 Chr. xxvii. 25.

**UZZIEL** (uz'zi'el). 1. A son of Kohath and grandson of Levi, Ex. vi. 18, 22. 2. A Simeonite captain, 1 Chr. iv. 42. 3. A Benjamite, son of Bela, 1 Chr. vii. 7. 4. One of the sons of Heman, the Levite musician, 1 Chr. xxv. 4, perhaps the same with Azareel, 1 Chr. xxv. 18. 5. A Levite, descended from Jeduthun, in the reign of Hezekiah, 2 Chr. xxix. 14. 6. One who helped to repair the wall of Jerusalem, Neh. iii. 8.

## V.

**VAGRANTS** (va'grants). In the early Church the practice of vagrancy was forbidden to monks, clergy and others. The imperial laws of Justinian were to the same effect. That a man must live upon his labor was a maxim of the monks; and hence, while the friars begged and wandered about, the monks were great agriculturists, some being famed for their farming and others for their wool-growing, while they frequently had great fairs at their monasteries.

**VAHEB IN SUPHAH**. See Num. xxi. 14, margin, and following verses. The following seems to be the sense of this passage: "From Vahab in Suphah, and the torrents of Arnon, even the effusion of the torrents, which goeth down to the dwelling of Ar, and lieth for the boundary of Moab; even from thence to the well (which is the well of which Jehovah spake unto Moses, Gather the people, and I will give them water. Then sang Israel this song, Spring up, O well! Answer ye to it. The well, princes digged it; even nobles of the people digged it, by a decree, upon their borders); and from the wilderness (or the well, as in the Septuagint) to Mattanah, and from Mattanah," etc. The whole of this, from verse 14 to 20, is a fragment from "the book of the wars of Jehovah," probably a book of remembrances or directions written by Moses for the use of Joshua, and describes the several boundaries of the land of Moab. This rendering removes every obscurity and obviates every difficulty, while it does no violence to the original.

**VAIL**. See TEMPLE.

**VAJEZATHA** (va-je-za'tha), one of the sons of Haman, Esth. ix. 9.

**VALDES** (val'des), or **VALDESSO** (val-des'so), **JUAN DE**, one of the small band of Spanish Reformers, was born at Cuenca, about 1495, of a noble and wealthy family. He was early introduced at the court of Ferdinand and Isabella, where he profited by the influence and example of Cardinal Ximenes and other enlightened and liberal men. Juan was for a time in the service of Pope Adrian VI., and then of the emperor Charles V. Sympathizing with and aiding in the temporary movement of free thought and liberal policy, he fell under the suspicion of the Inquisition, and to avoid persecution retired to Naples. The rest of his short life was passed in retirement, study and the society of a small circle of congenial friends. They spent their Sundays together at Juan's country-house, reading in the morning the Scriptures, inquiring and discussing, and afterward enjoying discourse on less grave matters. But it was not permitted him long to enjoy so calm a life. He died about the close of 1540. The influence of Valdes had been powerful enough to attract the notice of the pope, and to attach his name as leader of a sect to his opinions; and in 1542 "Valdesianism" was attacked in Naples by a special inquisitor. Many of his friends were proscribed and put to death, and his writings narrowly escaped destruction. He wrote the "Hundred and Ten Considerations," the "Dialogue on the Spanish Language." Valdes, though a Reformer, was not a Lutheran, nor did he question any Church doctrine. The position he held of a *religious meditator*, who saw more in spiritual fellowship with Christ than in

any forms either of word or observance, exposed him to the angry denunciation of both the Romish and the Reformed Churches.

**VALDO** (val'do), or **WALDO**, **PETER**, reputed founder of the sect of the Vandois, or

OUR LORD, WITH THE BOOK.

This engraving is from the original in the Trastevere, Rome. It is of metal, inlaid with small pieces of glass, and though scarcely as fine a specimen of work, it is peculiar in the commanding spirituality and the wonderful appearance of life in its expression.

Waldenses, in the twelfth century, was born at Vaux, in Dauphiny, and acquired a fortune as a merchant of Lyons. The sudden death of a friend had such an effect on his mind as to induce him to sell his property, give the produce of it to the poor and devote the remainder of his life to acts of piety. He translated portions of the New Testament into French for the bene-

fit of the common people, which was the earliest translation made into a modern language. Like the Quakers, he taught that the laity might conduct the offices of religion without the intervention of the priests, but a heresy so obnoxious to the ecclesiastics soon met with direct persecution. Valdo and his followers fled to the mountains of Dauphiny and Piedmont; and the Waldenses were everywhere exterminated, except in the valleys of Piedmont, where a remnant of them still exists. Valdo died in 1179. See the article WALDENSES.

**VALENS** (va'lens), **FLAVIUS**, Roman emperor, was born about A. D. 330. He was admitted to a share of the imperial authority by his brother Valentinian in 364, and became emperor of the East. He was baptized an Arian, and entered upon a vigorous persecution of all who held different views. During his reign paganism in the East was wellnigh crushed to death; but it suffered chiefly on account of its political delinquencies, as a rebellion which threatened to subvert the authority of Valens, and in which almost all the leaders of the heathen party were understood to be implicated, provoked him to treat them with excessive severity. Valens was a feeble prince, but cruelty is often displayed by weak rulers. He defeated the Goths, but allowed them to settle in Thrace; and they again made war upon him, defeated his forces and burnt the emperor in his tent, in 378.

**VALENTINIANS** (va-len-tin'yanz), a sect of early Gnostics, taking their origin from Valentinus, about the middle of the second century. They are spoken of by Tertullian, writing about A. D. 200, as being numerous, and he attributes the popularity of their heresy to the fables with which their theology abounded and to the air of mystery which they threw around it.

Valentinus was a contemporary of Justin Martyr, flourishing, says Tertullian, in the reign of Antoninus Pius (A. D. 138-161). As Justin Martyr mentions the sect of the Valentinians in his "Dialogue with Trypho," which was written about A. D. 158, it is probable that it had been in existence some years before that date. He does not name Valentinus, however, though he mentions Simon Menander and Marcion, whom he twice refers to in his first apology, which was written about twenty years earlier. Tertullian says Valentinus was a man of ability; but being offended by the promotion of another man, he left the Church in disgust, and formed a system, not new indeed, but founded on some opinions already current. Valentinus went from Alexandria, where he had been a priest, to Rome, about A. D. 140. Here he was excommunicated, and he removed to Cyprus, where he died about A. D. 160.

Saturninus at Antioch, Basilides at Alexandria and Marcion, Cerdon and Valentinus at Rome were the chiefs of these errorists; and the Christian literature of more than a century is, to a great extent, occupied with the task of their refutation.

The system of philosophical theology which he propounded appears even to uneducated persons in our day as fraught with strange absurdities; and even when we hear of it from such men as Irenæus, Hippolytus, Tertullian and Clement of Alexandria, who might be charged with being his

A MODERN SYNAGOGUE.

name in the Old Testament would lead us to infer that the country lay somewhere on the border-land between these two great branches, and was partly inhabited by both. For Job is styled one of the "children of the East," a name chiefly applicable to Arabs, but given also to Arameans of Mesopotamia, Gen. xxix. 1. His property is described as exposed to the Sabæans—i. e., Arabs—on one side, Job i. 15, and to the Chaldeans on the other, Job i. 17. Further, some of his three friends seem to belong to Edomite—that is, Arabian—tribes, Job ii. 11, while Elihu, the fourth interlocutor, must be taken for an Aramean, Job xxxii. 2. Again, in Lam. iv. 21, the Edomites are described as dwelling in Uz, while on the contrary it is said, Jer. xxv. 20, as a state to be independent and ruled by its own princes. Uz was thus the name of a region on whose soil the three families of Syrian-Arameans, Babylonian-Arameans and Arabs all met each other. Such a locality must have lain in the space bounded by the Damascus-Syrians on the north, by the Edomites on the south, and

remote connection with a member of Joktan's family, its past history and present state have no bearing on the interpretation of Scripture.

**UZZA** (uz'za). 1. The name of a man in whose garden Manasseh and Amon, kings of Judah, were buried, 2 Ki. xxi. 18, 26. This garden retained the name of its former owner, but had become a royal property. 2. A Levite of the family of Merari, 1 Chr. vi. 29. 3. A Benjamite, 1 Chr. viii. 7. 4. 1 Chr. xiii. 7-11. See UZZAH. One whose descendants, Nethinim, returned from Babylon with Zerubbabel, Ezra ii. 49.

**UZZAH** (uz'zah), a son of Abinadab, in whose house at Kirjath-jearim the ark of God had rested. When David desired to bring it to Jerusalem, Uzzah and Ahio his brother guided the carriage on which the ark was placed. And when the oxen stumbled or shook it, Uzzah presumptuously put out his hand to lay hold upon it. This, as contrary to the divine command, Num. iv. 15, was

enemies, there is yet such an agreement in their statements that there can be no doubt but that the following may be taken as a fair statement of its leading characteristics.

An unoriginated, invisible, eternal and incomprehensible absolute Being dwells in height ineffable, living in a state of profound tranquillity. This Supreme Existence he represented to be of a dual nature, as all the gods were held to be in the ancient mythologies. On the one side was abyss or profundity of self-existence, to which he gave the name of *Bythos*, and on the other hand was an eternal, silent consciousness, to which he gave the name of *Sigē*—i. e., silence. The dual being thus imagined, Bythos originated all phenomenal existence, while yet *Sigē* becomes the mother of all things by conjunction with him. From this first *duad* three other *duads* or *eons* emanated, and from the third emanated a fourth. An idea of these *eons* and of their arrangement may be ascertained from the following apposition of the masculine and feminine. Thus, from Profundity (mas.) and Silence (fem.) were derived Mind (mas.) and Truth (fem.); from these came Word or Logos (mas.) and Life (fem.), and from them emanated Man (mas.) and Church (fem.).

YORK CATHEDRAL.—See THOMAS OF BAYEUX.

The full knowledge of the first cause was imparted only to Mind ("nous"), whose desire to communicate it was counteracted by *Sigē*, but a new being was developed, an abortive image of true wisdom; and this being carried the germ of life to matter, and so the universe, including mankind, was created. In the universe thus created there are three kinds of existences—the spiritual, the animal or psychical and the material. Corresponding to these were three types of men, the carnal represented by Cain, the animal by Abel, and the spiritual by Seth, the first being doomed to perdition, the last to salvation, and the second depending on the exercise of free-will. Out of this maze of mystery and nonsense arose the profligate Antinomian morality of the Gnostics; for the spiritual class being sure of salvation, they might do as they pleased. Strange to say, Valentinus attempted to bring some Christian ideas into this wild dogmatic system. He associated the second and third persons of the Trinity with his Mind ("nous") and Truth ("aletheia"); and he held that the body of Jesus was created, yet not as an ordinary body, to be the means of salvation, whatever might be the idea he attached to that word. The body of Jesus he held was placed in the Virgin, but did not partake of her substance, and issued forth from her as it had been placed within her. At the baptism in

the Jordan the "Christ" descended on Jesus, and abode with him until the crucifixion, and then it ascended, leaving only the body of Jesus to suffer. When the age of man's probation is completed, the spiritual will be received into the Pleroma or fullness of being above, the animal who have worked out their salvation will be received into a middle region, and those who were only base will be annihilated. It would appear that Valentinus really aimed at effecting an impossibility, viz., forming a theosophy which would be harmonious and complete, in which were combined the elements of Christian truth with the philosophy and theogonies of the Greeks and the Orientals. For a time he had his admirers and supporters, who recognized him as a master, but his system founded on the mere assertions of a dreamer had the fate which has befallen other systems that in later times were believed to be all-powerful and certain to annihilate the creed of the Church.

**VALESINIANS** (va-le'zh'anz), a community of ascetics mentioned by Epiphanius and others after him. They are traced to Valens, of Bactria, Mitroecia, an episcopal city, the site of which is not now known. Epiphanius and Nicetas speak of it as in "Arabia beyond Jordan." They were charged with Gnostic opinions. St. John of Damascus says they were profligate Antinomians; but the principal fact recorded about them is that they practiced self-mutilation, and they enforced the custom on all their adherents.

**VALESINIANS**, disciples of Valesius of Arabia (A. D. 250), who taught the unlawfulness of marriage, abandoned themselves to the lusts of the flesh, and justified themselves in their course by affirming that man could not resist concupiscence even by the help of grace.

**VALESIUS** (va-le'zh'us), also called **DE VALOIS** (deh val-wah'), HENRY, was a celebrated French critic and scholar, born in 1603, at Paris, and educated under the Jesuits at Verdun, Paris and Bourges. He devoted himself, with singular zeal and application, to the study of history and antiquities, and recommended himself to the clergy of the diocese of Toulouse as a suitable person to edit the ancient ecclesiastical historians, which he accordingly did. On the publication of "Eusebius" he received from the king the appointment of historiographer of France. His notes appended to his edition of Eusebius are of much value. He also published an edition of Ammianus Marcellinus, with valuable notes.

**VALID BAPTISM** is usually defined the administration of the sacrament of baptism with the proper matter and the proper words, by whatsoever person, whether clergyman or layman. A distinction has been made between an *orderly* and a *valid* dispensation.

**VALLANCEY** (val-lan'se), CHARLES, LL.D., was born in England, in 1722. He rose to be a general in the engineer department. He resided for many years in Ireland, and he became an earnest student of Irish antiquities. He mastered the Irish language, wrote a grammar of that tongue, a work on the antiquity of the language, and "Ancient History of the Britannie Isles," a

"Dictionary of the Ancient Irish, comparing it with the Language of the Cuthi or Ancient Persians, with the Hindustanee, the Arabic and the other Chaldaean Languages." He thus anticipated much of the learning which has in the present day been given to the world on philology by Max Muller of Oxford. His work on the "Round Towers of Ireland" was much prized until their real origin and history were made known by Petrie. See PETRIE, GEORGE, LL.D. He died at Dublin in 1812, leaving behind him the character of an exceedingly learned, estimable man.

**VALLEY** (val'le). Valleys, in the proper sense of the term, the hollow tracts between parallel ranges of hills, are seldom found in Palestine. Ravines and those hollows through which streams flow in winter, while in summer their beds are almost or entirely dry, and which are now called *wadies* by the Arabs, occur from the structure of the country much more frequently. But our translators have unfortunately used the word "valley" with little discrimination, not only for these, but also for what might more accurately be called plains. Thus they have termed the extensive district of low land between the mountains of Judah and the Mediterranean coast, in which the Philistine cities stood, the "vale" or the "valley," Deut. i. 7; Josh. ix. 1. Several other words are also translated valley. *'Emek*, implying "deep," most nearly corresponds with our valley. This term is used to describe the valleys of Achor, Ajalon, Baca, Elah, Jezreel, Succoth, etc. *Ge*, signifying a "bursting" or a "flowing together"—that is, where waters congregate—is applied to a deep, narrow ravine. Thus we have the word designating the ravines or glens of the son of Hinnan, of Salt, etc. This is the name given also to the secluded spot in Moab in which Moses was buried, Deut. xxxiv. 6. *Nahhal* is the term which describes the course of a stream, the modern *wady*, as above remarked. Sometimes the torrent itself is so designated, and sometimes, when it dries up, the bed through which it flowed. Our translators, therefore, have occasionally been uncertain in what way to render it, as in Num. xiii. 23, 24, compare margin. Such *wadies* were Cherith, Eshcol, Sorek, Zered, etc. There is another word, *bi'kdah*, which properly means a "cleft" of the mountains, and often designates a wide plain, bounded, however, by mountains. The "valleys" of Jericho, Megiddo, etc., are described by this word.

**VALLOMBROSIANS** (val-lom-bro'zh'anz), the monks and nuns of the Order of Vallombrosa, a branch of the Benedictines.

**VALPY** (val'pe). There have been a number of eminently learned men of this name, all of whom excelled in the department of classics. EDWARD, D.D., who was educated in Trinity College, Cambridge, and a clergyman at Norwich, published an edition of the Greek New Testament, with theological and philological notes. RICHARD, D.D., was educated in Pembroke College, Oxford. He became rector of Stradishall, in Suffolk, and he is well known as the author of nearly twenty works of great value, in Greek and Latin. His son, the Rev. F. E. J. Valpy, was equally celebrated, and ABRAHAM JOHN, a brother of the latter, was still more famous. Among the twenty works connected with his name is a "Thesaurus" of the Greek language, which has held a deservedly high reputation.

**VAN HARLINGEN** (van har'ling-gen), JOHANNES MARTINUS, was born in 1724, near New Brunswick, New Jersey. He was descended from an ancient family in Holland, and he deserves a place in this work because of the fact that he was one of the fathers of the Reformed (Dutch) Church, who did a great work in connection with the descendants of the Dutch settlers in New Jersey. He was educated at Princeton, and he studied theology in Holland. He was ordained at Amsterdam, and on his return to this country he was settled at New Shannick and Sourland, in Somerset county, New Jersey, in 1762. He labored for thirty-two years with great faithfulness until his death. He was eminent for his ability as a preacher and for his faithfulness as a pastor, as well as for his sound learning. He was named as a trustee of Queen's College in the charter granted by George III. in 1770.

**VAN HARLINGEN**, JOHN M., was born in 1761, at Millstone, New Jersey. He entered Queen's College, New Brunswick, and graduated there in 1783, but his theological education was conducted chiefly under his uncle Johannes M. Van Harlingen. In 1786 he was licensed to preach by the classis of New Brunswick, and in 1787 he was settled as the pastor of the united churches of Six-Mile Run and Millstone. He retired from this charge in 1797, and devoted himself to the thorough study of theology, and in 1812 he was elected to the chair of Hebrew and ecclesiastical history in the theological seminary at New Brunswick. He was only permitted to labor in this sphere for a year, as he was suddenly and unexpectedly removed by death in 1813. He left behind him a translation from the Dutch of Van der Kemp's sermons on the Heidelberg Catechism, which were published in 1810. He was a scholar rather than a preacher, of undoubted piety and great excellence of character.

**VANIAH** (va-ni'ah), one who had married a foreign wife, Ezra x. 36.

**VANINI** (va-ne'ne), LUCILIO, an atheistical writer, was born at Taurosano, in the province of Otranto, in 1585, and studied at Naples, Rome and Padua. He afterward traveled in Germany, France and England, and in the last-mentioned country he held disputations in favor of the Roman Catholic faith, and was imprisoned forty-nine days for it. He afterward taught philosophy at Genoa, whence he went to France, where he published "The Admiration of Nature." This work was condemned by the Sorbonne to the flames. In 1617 he went to Toulouse, where he was arrested by order of the parliament of that city, and in February, 1619, he was condemned to be burnt as a professed atheist.

**VANISTS** (van'ists). This name was given by Baxter to the Antinomians of New England, but whether Sir Henry Vane, who was governor of the colony when they sprang up there, was really associated with them may be doubted.

**VAN MILDERT** (van mil'dert), WILLIAM, D.D., was born in 1765, at London. He was educated in Oxford, at Queen's College, and in 1795 he became rector of Braddon, in Northamptonshire. In the next year the rectory of St. Mary

le Bow, in London, was given to him; and in 1812 he became vicar of Farmingham and preacher at Lincoln's Inn. Next year the regius professorship of divinity at Oxford was conferred on him, and in 1819 he was raised to the see of Llandaff. The following year saw him made dean of St. Paul's, in London, and in 1826 he reached the richly-endowed see of Durham. As Boyle lecturer he published an "Historical View of the Rise and Progress of Infidelity;" and as Bampton lecturer he published, in 1815, an "Inquiry into the General Principles of Interpretation of Scripture." His "Lincoln's Inn Sermons," to the number of fifty, were published, and in 1838 his "Charges," together with a number of occasional sermons and a "Life," appeared. He stood high among the prelates of the Church in his day. He died in 1836.

**VANNESST** (van-nest'), PETER, was born in 1759, in Bethlehem township, Huntingdon county, New Jersey. In early life he went to Philadelphia to reside, and here he came under deep religious impressions. He went to England, and in Bristol he

A REMARKABLE DEVICE IN YORK MINSTER SYMBOLIZING THE TRINITY.

was brought to see himself in the light of God's word, and led to call on God for mercy. Having joined a class, he was after three years' experience appointed a leader in the village of Bedminster. In 1796 he returned to his native country, was received by the Philadelphia Conference, and was appointed to the Salem circuit, New Jersey. From that time until 1821 (when he became a supernumerary) he preached through New Jersey, New York, Upper Canada, laboring in the work of the gospel in about twenty circuits. During the declining period of his strength he was able to write several articles for the "Christian Advocate and Journal," and thus he continued diligently serving his Master until his death, in 1850, in the ninety-second year of his age.

**VAN RENSSELAER** (rens'se-läre), CORTLANDT, D.D., was a son of Stephen Van Rensselaer of Albany, at which place he was born in 1808. In 1827 he graduated at Yale College, and in 1830 he was admitted to the bar as a lawyer. He began to feel that he had a higher vocation, and accordingly, in 1835, he was ordained to the ministry of the Presbyterian Church. Next year

he was settled as pastor at Burlington, New Jersey. He took a deep interest in the education of the colored race in the Southern States, for whom he did a great work until the close of his life. In 1846 he was appointed secretary to the Board of Education of the Presbyterian Church; and here his breadth of view, his great diligence and liberal use of his own means endeared him to all the ministry, by whom he was greatly and deservedly beloved. He was the editor of the "Presbyterian Magazine," "The Home, the School and the Church," or the Presbyterian Education Repository." He was the author of reports, sermons and many documents of great value, and after his death a selection of his works was published in 1861. He died in 1860, regretted by the whole Church. For benevolence, liberality, gentleness, love of truth, excellence as a preacher and earnest zeal in his Master's work he stood pre-eminent.

**VAN SANTVOORD** (van sant'voord), CORNELIUS, was a native of Holland, where he was educated and ordained. He came to this country in 1718 to take charge of the Dutch and French churches on Staten Island; and as he was master of Dutch and French, he preached in both languages. During his residence in Staten Island he translated the "Commentaries of Marck on the Book of Revelation," and he added a translation of the "Dissertation by Marek on the Slaughter of the Infants." After twenty-two years' service on Staten Island, he removed to the pastorate of the Dutch church in Seleneetady, and he remained in this charge until his death, in 1752. He had suffered from paralysis for some time before the close of his life. He was a well-read theologian and a solid preacher, justly esteemed for his earnestness in the work of the ministry.

**VARDEMAN** (var'de-man), JEREMIAH, was born in 1775, in Wythe county, Virginia. His father and paternal grandfather were natives of Sweden. By his mother's side he was of Welsh descent. His grandfather, who was an Episcopalian, lived to be one hundred and twenty-five years old. The family had much to suffer because of dangers from the Indians; and when the res-

idence was changed from Virginia to the neighborhood of Crab Orchard, in Kentucky, the danger was not lessened. The circumstances in which he was placed were unfavorable for education, but he acquired the elements of an ordinary English training; and when he was about seventeen years of age, he was brought under very serious impressions, and after due examination he united with the Cedar Creek Baptist Church, in Lindon county. Forthwith he felt that he should dedicate himself to the preaching of the gospel, and he yielded to a spirit of frivolity which endangered his spiritual life for a considerable time. At length, in 1799, he was so powerfully impressed by a sermon from the Rev. Mr. Hansford that his future life was decided. He began to preach, and his words had unusual power. Large meetings were held and sinners were greatly affected, and ere long he was recognized as an earnest, effective preacher. In 1810 he was called to the monthly pastorate of David's Fork Church, in Fayette county, and he resided here until he removed, in 1830, to Missouri. His ministrations in Kentucky were greatly blessed, and precious results followed his sermons which he

was accustomed to deliver during extensive tours which he made through Kentucky and Tennessee. After his removal from Kentucky, he settled in Ralls county, Missouri; and here he still continued to labor, collecting churches in destitute places. He was instrumental in leading his Baptist brethren in the State to adopt concerted measures for benevolent works, and he presided in a convention called to promote the great work of home missions. He died in 1842, after a life of unusual labor and of remarkable success in bringing sinners to the Saviour.

**VARIANT** (va're-ant), a diversity of reading in the Bible, whether in Hebrew, Greek or a translation.

**VASHNI** (vash'ni). This is given as the name of the elder son of Samuel in 1 Chr. vi. 28, but in 1 Sam. viii. 2 it is Joel, and this also reappears in 1 Chr. vi. 33, so that in all probability the Vashni of ver. 28 is a corruption for Joel.

BACK VEIL.—See VEIL.

**VASHTI** (vash'ti), the wife of Ahasuerus, king of Persia, whose refusal to present herself unveiled before the compotators of the king led to her degradation, and eventually to the advancement of Esther, Esth. i. 9-12.

**VATABLUS** (va-ta'bloos), FRANCIS, an eminent Hebrew scholar, was born at Gamache, a village in Picardy. He first distinguished himself in Greek literature; and when Francis I., in 1531, founded some royal professorships at Paris, Vatablus was appointed regius professor of Hebrew. He gave brief and clear explanations of the literal meaning of the texts, which, being taken down in notes by some of his hearers, were collected and added to Leo Juda's Latin version of the Bible printed in a column on one side, with the Latin Vulgate on the other. These notes were condemned by the theological faculty of the Sorbonne; but the University of Salamanca was more favorable, and caused the text and notes of this Bible to be reprinted in Spain. They have since been generally approved by men of learning. Vatablus is said to have been a staunch Romanist and

averse to the discipline and opinions of the Calvinists. He died in 1547.

**VATER** (va'ter), JOHN SEVERINUS, a distinguished philologist and theologian, was born at Altenburg, in Saxony, in 1771, and received his education at the University of Jena. In 1792 he went to the University of Halle, where he became an academical teacher. In 1796 he returned to Jena, where he was appointed professor extraordinary in the theological faculty. In 1800 he was appointed professor of theology and Oriental literature at Halle, where he devoted much of his time to the critical examination of the earlier books of the Old Testament and of ecclesiastical history. In 1809 he was appointed professor of theology and librarian to the University of Königsberg. In 1820 he returned to Halle as professor of theology, and was chiefly engaged in ecclesiastical history and the exposition of the New Testament. He died in 1826.

**VATICAN MANUSCRIPT.** See MANUSCRIPTS.

**VAUDOIS.** See WALDENSES.

**VAUGHAN** (vaw'n), CHARLES JOHN, D.D., was born in 1817, and after a good preparation at Rugby he entered Trinity College, Cambridge, where he greatly distinguished himself. He became senior classic and chancellor's medalist, and eventually he attained to a Fellowship, which he held for several years. The living of St. Martin's, in Leicester, was given to him, and from 1844 until 1859 he was master of Harrow, where he was recognized as exceedingly successful. In 1860 he declined the see of Rochester, but in 1869 he became vicar of Doncaster and master of the Temple. He also holds the chancellorship of York Cathedral, and he is one of the chaplains to the queen. He has been one of the most voluminous writers of the modern English clergy, as there are not fewer than thirty-five distinct works which have appeared from his pen, among which are his sermons at Harrow, London, Doncaster and elsewhere; his "Commentaries on the Epistles to the Romans, Philipians, Revelation of St. John," and "Lectures on the Acts of the Apostles." He belongs to the Broad Church party in the Establishment, and has shown himself to be a man of great vigor and earnestness.

**VAUGHAN**, ROBERT, D.D., was born in 1795, and educated at Bristol, in England. He became pastor of the Independent Chapel at Kensington, in London, and for some years he held the office of professor of ancient and modern history in London University. From 1842 until 1857 he was president of the Lancashire Independent College at Manchester. He originated the "British Quarterly Review" in 1845, and from the beginning he was editor and a prolific contributor to that eminent quarterly. He wrote a "Life of Wycliffe," "Memorials of the Stuart Dynasty," "Causes of the Corruption of Christianity," "The Protectorate of Oliver Cromwell," "Congregationalism," "History of England under the House of Stuart," "The Age of Great Cities," "Revolutions in English History," "English Nonconform-

ity," "Ritualism in the English Church," "Essays on History, Philosophy and Theology," and several other works which show the great range and fertility of his mind. He died in 1868.

**VEDAN** (ve'dan). This word does not occur in our version, but we find it in the original of Ezek. xxvii. 19, where our translators render "Dan also." Dan is here so manifestly out of place that critics are pretty generally agreed in considering the whole word a single name, instead of taking it as the Hebrew copulative, "and," "also." Vedan, then, may be said to be an Arabian city whence iron and cassia and calamus were brought to Tyre. Gesenius and others are disposed to identify this city with the modern *Aden*, more especially because Aden appears to have traded in the very articles mentioned by Ezekiel. Aden, in the province of Yemen, is now a British possession, with an increasing commerce.

**VEDAS**, the sacred books of the Hindoos. See HINDOISM.

**VEIL.** Several words so rendered in our version rather mean cloaks or shawls. See DRESS. It is indisputable, however, that veils, properly so called, were not unfrequently used among the Hebrews. Thus it was a "veil" with which Moses covered his face, Ex. xxxiv. 33-35. The word rendered "mufflers," Isa. iii. 19, designates a light veil. There is another term translated "locks," Song Sol. iv. 1, 3; vi. 7; Isa. xlvi. 2, which may reasonably be believed to mean a veil worn by a female when fully dressed. It is more doubtful whether the "kerchiefs," Ezek. xiii. 18, 21, were veils; some scholars of repute would decide in the affirmative. See KERCHIEFS.

But the face was frequently veiled by covering it with the fold of another garment. This probably was the case with Rebekah, Gen. xxiv. 65, and Tamar, Gen. xxxviii. 14, 19; they wrapped themselves altogether in a large mantle or shawl. It was evidently not the custom in ancient times for the Hebrew women and those of the neighboring nations to veil their faces, except on occasions, as in the case of Rebekah just referred, compare Gen. xxix. 25, when natural modesty would prompt it, or for concealment, as Tamar, or for special ornament. This is sufficiently proved by such passages as Gen. xii. 14; xxix. 10; 1 Sam. i. 12; Prov. vii. 13. The veil, moreover, is not found in the Assyrian or Egyptian monuments. It is true that St. Paul reproves the females who attended and prayed or prophesied in Christian assemblies with uncovered heads, 1 Cor. xi. 4-16, but this does not necessarily imply that their faces ought to be concealed by veils. The covering of the head was the decent token of subjection; a woman who threw off this seemed to proclaim herself independent, and so dishonored her head—that is, her husband, the man being the head of the woman, 1 Cor. xi. 3.

It is hardly necessary to say that in the East it has become a habit to veil the face, it being often deemed less indecent to expose almost any part of the person than the face. Some of the face-veils worn by ladies are highly ornamented and embroidered. They are made of white muslin, or occasionally black crape, and are often thrown over the horn worn in Syria.

**VEILING** (vayl'ing) **THE CROSS**, a custom in Lent, in which purple or black crape is placed over the cross or crucifix as a sign of mourning.

**VEIL OF THE TABERNACLE** or **TEMPLE**, the rich curtain which screened off the holy of holies. See TABERNACLE, TEMPLE. It was rent at the crucifixion, Matt. xxvii. 51. This was a type of the fact that access into God's presence, previously allowed only to the priest, was now obtained for all men by the great sacrifice.

**VELUM QUADRAGESIMALE** (vel'um kwa'dra-jes-e-ma'lay), a violet veil which in Lent is drawn over pictures, images and at the back of the altar. Veils were sometimes drawn between the nave and the choir and between the choir and altar in Lent; and, indeed, when such a principle of symbolism is admitted into worship under the Christian dispensation, there is no limit that could be set to such additions and innovations, as the fancy or the taste of men would then be the rule and limit of all observances.

**VENANTIUS** (ve-nan'sh'us), a Christian poet of the sixth century, was a native of Italy, and studied at Ravenna. He applied himself to rhetoric, grammar, poetry and jurisprudence, but he was most attached to rhetoric and poetry, and was honored by Hilduinus, the abbot of St. Denis, with the title of *Scholasticissimus*. He died about 609. His works consist of eleven books of poetry, mostly of the elegiac kind, and hymns adapted to the services of the Church.

**VENERABLE** (ven'er-a'b'l). 1. A title given to dignitaries of cathedrals of the old foundation, but now monopolized by archdeacons. See OLD FOUNDATION CATHEDRALS. 2. The lowest grade of canonization in the Romish Church.

**VENIAL** (ve'ne-al) **SIN** has been defined to be "that kind of sin which is not mortal or deadly, and does not place the doer out of a state of grace;" and yet all sin being the transgression of God's holy, righteous law, and therefore rebellion against God, it must follow that all sin is deadly and mortal unless its guilt be washed away by that blood which hath been shed for remission of sin.

**VENN**, HENRY, born in 1725, a divine of great learning and piety who held the highest place amongst the evangelical ministers of his day, wrote "The Complete Duty of Man" and other religious works. He was vicar of Huddersfield and rector of Yelling. He died in 1797.

**VENNER** (ven'ner), THOMAS, a wine-cooper, who turned fanatic, and proclaimed that human government was to cease upon earth; that Cromwell and Charles II. were alike usurpers, and that Christ himself was about to establish a "fifth monarchy." He was the leader in several riots, and was seized and executed with several of his followers in 1661.

**VENNING** (ven'ning), RALPH, born in 1620, was a divine who lectured in St. Olave's, Southwark, but was expelled in 1662 for nonconformity. He was the author of "Helps to Piety" and a treatise on "Paradoxes." He died in 1673.

**VENTURA** (ven-teu'ra), GIACCHINO, one of the finest preachers of his time, called deservedly "The Italian Bossuet," was born at Palermo, in 1792. Of high birth, and educated at the Jesuits' College of his native city, he joined the order of Theatines, and devoted himself to religious philosophy and to preaching. Some works, writ-

ten while yet young, gave him a reputation, and he was made censor of the press and member of the royal council of public instruction. On the death of Pius VII. he pronounced his funeral oration, which at once marked him the greatest pulpit orator of the day. Leo XII. promoted him to the chair of ecclesiastical law at Rome. He had, too, the good fortune to reconcile the pope and Châteaubriand. In 1830 he was elected general of his order, and for many years he engrossed public attention as a writer and a preacher. Placed at the head of the moderate reformers, he endeavored to induce Pius IX. to adopt his views; and in the midst of the political agitations of the time, he delivered the funeral oration on O'Connell and on the victims at the siege of Vienna, both of which produced extraordinary sensation. Failing to induce the pope to grant the people a constitution, he remained in Rome after the flight of Pius to Gaeta, endeavoring to calm the agitation, while he pronounced equivocally in favor of separating the spiritual from the temporal power, yet refusing

**VERGERIO** (ver-je'ri-o), PIER PAOLO, a bishop of the Romish Church, was a vigorous opponent of the principles of the Reformation, but while examining some of the writings of the Reformers for the purpose of refuting them became so impressed with their arguments that he was converted to Protestantism, and induced his brother, also an eminent ecclesiastic, to adopt the same course. He died in 1565.

**VERGIL**, or **VIRGIL** (ver'jil), POLYDORÉ, a very learned Italian divine and a great friend of Erasmus, was born at Urbino in 1470. In 1503 he was sent to England by Alexander VI. to collect the "Peter's pence," and he remained there till 1550, having several valuable preferences in the Church. Of the works which he wrote while in England the most important is the "History of England." He died in 1555.

**VERMIGLI** (ver-meel'ye), PIETRO MARTIRE, one of the early Protestant Reformers, a

RUINS OF THE TEMPLE OF VENUS, POMPEII.

place. On the French intervention he left Rome in 1849, and went to Montpellier, and in 1851 settled at Paris, where his preaching drew crowds of admirers. He died of dropsy at Versailles in 1861. His works, in Italian and French, display great powers of eloquence.

**VENUS** (ve'nus) was a Roman goddess generally regarded as identical with the Greek Aphrodite. In the "Iliad" she is represented as the daughter of Jupiter and Dione. Hesiod says she sprang from the foam of the sea and reached the island of Cythra, whence she went to Cyprus, where grass grew beneath her feet, and love and desire attended her. The Grecian sculptors and painters vied with each other in forming her image as the ideal of beauty. She was the Astarte of the Phenicians. Her images were usually nude, or but slightly draped.

**VERGER** (ver'jer). 1. The official who carries a verge or mace before a dignitary and fills some office connected with the corporation to which he belongs. 2. The official who takes care of the interior of the fabric of a church.

man of great learning and piety, was born in Florence in 1500. In his sixteenth year he entered the order of Augustines, which caused his father to disinherit him. He distinguished himself as a preacher, and by his lectures in literature and philosophy in various towns in Italy. Being sent to Naples, he became acquainted, through a Spaniard, with the writings of Bucer, Zwingle and Melancthon, with which he was much impressed; and on his return to Lucca he avowed his change of views, and was obliged to take refuge in Switzerland, whence he went to Strasburg, where he was appointed professor of divinity. In 1547 he went to England, and was appointed to lecture at Oxford, but on the death of Edward VI. he returned to his chair at Strasburg, which he left in 1556 to take that of Hebrew and theology at Zurich, where he remained till his death, in 1562. He wrote numerous learned commentaries on the Scriptures, which are still held in high esteem.

**VERMILION** (ver-mil'yun), Jer. xxii. 14. See COLORS.

**VERSCHOORISTS** (ver-shoor'ists), a Dutch sect which took its name from James Verschoor, of Flushing, who, about 1680, produced a party who adopted a mixture of the tenets of Cocceius and Spinoza. His followers were called Hebrews because of the attention which they gave to the study of the Hebrew language.

**VERSE.** With regard to our modern divisions of chapters and verses, the following appears to be briefly the history. About the middle of the thirteenth century Cardinal Hugo de Sancto Caro, or Hugh de St. Cher, having projected a concordance to the Latin Vulgate, distributed the Old and New Testaments into chapters; they are those we now have. He also distinguished smaller sections or verses (following in the Old Testament the Masoretic divisions), placing the letters A, B, C, D, E, F and G in the margin for facility of reference. A Hebrew concordance on the same plan was compiled by Rabbi Mordecai Nathan, a celebrated Jewish teacher, in the fifteenth century, who retained the cardinal's divisions, substituting Hebrew numeral figures for the marginal Roman letters. The Latin version of the Bible published by Xantes Pagninus at Lyons, in 1528, is the first in which verses are throughout marked by Arabic numerals. In the Hebrew Pentateuch, Megilloth and Haphtaroth, printed at Sabionetta, in 1557, every fifth verse was distinguished by a Hebrew numeral. Each verse of the Hebrew text in the Antwerp Polyglot of 1569-1573 has an Arabic numeral. In the New Testament, however, there were no Masoretic verses, and therefore Robert Stephen undertook the minuter subdivision, which he accomplished while on a journey from Paris to Lyons. He printed the first Greek Testament with his verses at Geneva in 1551. The English New Testament divided into both chapters and verses appeared at Geneva in 1557; and the first whole English Bible so divided is that executed at the same place by William Whittingham, Anthony Gilby and Thomas Sampson, published in 1560, and the same divisions have been adopted generally ever since.

It cannot be denied that the divisions in our ordinary Bibles are sometimes unskillful and erroneous. But it is more easy to point out the fault than to amend it. Attempts have been made to construct paragraph Bibles, so as to exhibit more clearly the connection and sense of Scripture. The motive deserves all praise, but the success of the attempts hitherto made is more than doubtful. And there is but too much reason for the grave censure of Dr. McCaul: "The sacred text has been either cut up into shreds with a separate heading, or a number of chapters welded together into one unmanageable mass, so as to perplex and weary the reader, especially as, from want of verses, these portions present one dull and disheartening mass of type, unpleasant to look at."

**VERSICLES** (ver'si-k'lz), short verses or texts said by the officiating priest or person, to which the people reply in another verse or text called a response.

**VERSIONS** (ver'sh'uns). Many translations have been made of the Holy Scriptures in both ancient and modern times. They are of the greatest service for both critical and hermeneutical purposes. They tend to show us the readings of the text which the translator used, and indicate the sense he put upon the words before him. The older the version, the more important obviously is

its critical value, as it leads us to the state of the text so much closer to the time of its original composition, the evidence in this respect being near akin to that furnished by ancient manuscripts. And then, as there are many words, especially in the Old Testament, which occur but once, of which the signification is to us dubious, we learn from ancient versions how they were interpreted at a time when, peradventure, the original language had not ceased to be a living tongue. As to modern versions, now so greatly multiplied, it cannot but be a cause of thankful joy that the various tribes of the earth may read in their own tongues the wonderful works of God.

It is proposed to give here a compendious account of the principal versions of the Scriptures; those of the most importance shall be described as fully as the limits of this work will allow; others can only be named. Of the first class there are of ancient translations the Chaldee Paraphrases or Targums, the Greek, including the Septuagint and other versions, the Syriac, the Latin, both the old Latin and the Vulgate, and of modern the English.

**THE TARGUMS.**—Targum is a Chaldee word which appears to signify "version" or "explanation."

BRACKETS IN YORK CATHEDRAL.

The captivity had necessarily an influence upon the national speech of the Jews. For though they brought back with them from Babylon their own Hebrew, which they had kept during a much longer time while they were in Egypt, yet their ears had been accustomed to another tongue, and their diffusion through the Assyrian and Babylonian provinces bringing them into contact with divers nations—far different from that Egyptian pressure which had kept them compacted in Goshen—introduced naturally other forms, till by degrees the language in which their ancient books were written was changed, and for common use lost. The law, however, and afterward other parts of Scripture, continued to be publicly read. But to make it intelligible it had to be expounded; and as interpretation became more and more needful, in process of time a body of interpreters sprang up, distinct from the public readers. And though at first their interpretations were oral, yet at length they were committed to writing, and thus the Targums have come down to us.

There are Targums to nearly the whole of the Old Testament. 1. The first to be mentioned is that which bears the name of Onkelos, and is on the Pentateuch. See ONKELOS. It is a pretty close version of the Hebrew text, clear and well adapted for its purpose; and it is noteworthy that

it interprets only two places, Gen. xlix. 10; Num. xxiv. 17, of the Messiah. The language is a pure Chaldee. 2, 3. There are two other Targums on the Pentateuch. One is generally known as the Pseudo-Jonathan, so called because it has been untruly fathered on Jonathan Ben Uzziel, the other as the Jerusalem Targum. The last named is fragmentary in its interpretation. These two are only different recensions of the same work, of Palestinian origin, the Jerusalem being the first, intended, perhaps, as notes and corrections to Onkelos, the other filling up and completing after the same manner what the earlier had left undone. This work is stored with legendary tales. It cannot be prior to the seventh or eighth century. 4. A Targum on the former and later prophets—i. e., Joshua, Judges, the books of Samuel and Kings, Isaiah, Jeremiah, Ezekiel and the twelve minor prophets—is ascribed to Jonathan Ben Uzziel, a disciple of Hillel the Elder. This is much in the style of Onkelos, and critics have supposed that one was acquainted with the work of the other, and have disputed which had the priority. Perhaps this of Jonathan was somewhat later; but as it is doubtful whether there ever was an individual Onkelos, so it may be doubted whether this was the work of the real Jonathan. Possibly something that he did write may have formed a groundwork, and have been afterward with other materials gathered in the third or fourth century at Babylon by some one person into the whole now existing, in which allegories, parables and legends are embodied. 5, 6. Targums on Job, Psalms and Proverbs, and on the *megilloth*—i. e., Ecclesiastes, Song of Solomon, Ruth, Lamentations and Esther—have been ascribed to Joseph the Blind, in the third century after Christ. They are probably by different hands of a far later date, some critics being inclined to place them as late as the tenth or eleventh century. 7, 8. There are two or more late Targums on Esther, heretofore supposed to be three; but of the three two are but different recensions of the same work. 9. A Targum on Chronicles is of comparatively modern discovery, being first edited in 1680. It is of late date, of Palestinian origin. 10. There is also a Targum on Daniel, probably of the twelfth century. And it may be added that there is a Chaldee translation of some of the apocryphal additions to Esther.

**GREEK.**—From the time of the first captivity and onward colonies of Jews were settled in Egypt. These had a temple of their own erected at Leontopolis, in the Heliopolitan nome, by Onias, son of the high-priest Onias, who, despairing of the pontifical dignity himself, fled into Egypt in the time of Antiochus Epiphanes, and obtained permission from Ptolemy Philometor to raise a temple and to consecrate priests and Levites for its service, under the plea that such an establishment had been predicted, Isa. xix. 18-21. A rallying-point was thus formed. The Egyptian temple was after the fashion of that at Jerusalem, and the rites were similar. Connection, however, with Palestine was by no means broken off; and a natural result of the residence of so many Jews in Egypt under the dominion of the Greek-speaking Ptolemies was the translation of their sacred books into Greek.

1. The principal Greek version is called the Septuagint. The history of this is involved in much obscurity. The popular account is contained in a letter said to be written by Aristæus, an officer of the court of Ptolemy Philadelphus. Seventy-two persons, at that monarch's request, in

order to furnish his library with the Hebrew sacred books, were commissioned by Eleazar, the high-priest at Jerusalem. These, on their arrival at Alexandria, were shut up in the island of Pharos, and accomplished their translation in seventy-two days. From the number of the interpreters the name "Septuagint" was derived. This story has been repeated with more or less embellishment, and was for long implicitly believed. But critical research has exposed its falsehood. The letter of Aristæus, though unquestionably of old date, is now admitted to be spurious. There is a more trustworthy authority, that of Aristobolus, who, writing in the second century before Christ, says that the Pentateuch was translated very early, for he supposes Plato to have drawn from it, and that Demetrius Phalereus, under Ptolemy Philadelphus, was the means of promoting the translation of the rest of the Old Testament. Without implicitly following this author, we may substantially accept his testimony; and we have corroboration of the fact that a translation of the entire Hebrew Scriptures was early in existence in the second prologue to Ecclesiasticus, written probably about 130 B. C. It is clear from an examination of the version itself that it was made in Egypt, for we find several Coptic words, and ideas purely Hebrew are rendered in the Egyptian manner. Moreover, from the observable differences of style and of acquaintance with the original language, different individuals, probably at different times, must have been engaged in the work; and sifting the whole matter, we may fairly conclude that the version made at Alexandria was begun in the time of the early Ptolemies, perhaps 280 or 285 B. C., and that the law alone was first translated, the other books following at uncertain intervals. There is, besides, no improbability in believing that a copy had its place in the royal library; but whether the version originated with the Jews, rendered necessary by the reading of the law and the prophets in their synagogues in a tongue they could understand, or whether one of the Egyptian kings, Soter or Philadelphus, commanded the translation, is more in doubt. Considering, however, the attachment of the Jews to their own tongue, and considering how long a language is often preserved for ecclesiastical use after it has ceased to be the medium of common intercourse, it may be thought on the whole most probable that the version was produced, in some measure at least, by the sovereign's desire. It grew into high consideration; and we may well suppose that the object of the pretended letter of Aristæus was to exalt its credit. Philo believed in its inspiration; Josephus generally used it, as also the earlier Christian Fathers. Its alleged miraculous origin is mentioned in the Talmud; and there is reason to conclude that it was read not only in Egyptian synagogues, but in those of Palestine and elsewhere. But some time after Christ the Jews, pressed by the arguments from prophecy, began to question and to deny the faithfulness of the Septuagint to the Hebrew original; they instituted a fast on the 8th of their month Tebeth to show their sorrow for its having been made, and ultimately adopted in preference the literal version of Aquila.

It has been already hinted that some of the Septuagint translators were but imperfectly acquainted with Hebrew. There are many mistakes, therefore; and there is a singular connec-

tion not yet fully explained between this and the text of the Samaritan Pentateuch. The Pentateuch is best rendered; the poetical portions are generally inferior to the historical. Of the prophets Jeremiah is the best given; yet there are remarkable variations in the version from the original; and generally many important predictions are obscured in the Septuagint. The translation of Daniel, supposed for long to be lost, but discovered and published at Rome in 1772, was considered so erroneous that that of Theodotion was substituted for it. Still, with all the errors, variations, misconceptions and corruptions of the Septuagint, it is of inestimable value for both the criticism and the interpretation of the sacred book. It is evident that the translators had before them a text differing from that of our oldest manuscripts, and some corrections may be obtained from it which we cannot hesitate in pronouncing just ones. And then its language is the pattern of that of the apostles and evangelists. Hebrew idioms appear in a Greek form; and we are led therefrom to understand the sense in which many words and phrases of the New Testament are used. The theological student who would fully under-

CAPITALS OF COLUMNS IN YORK CATHEDRAL.

stand the original of the New Testament must give all diligent attention to the Septuagint version of the Old.

By the frequency of transcription many errors crept into the Septuagint text. Origen, therefore, in the early part of the third century, undertook to collate it with the Hebrew and with other Greek versions, so as to produce a new and accurate recension. It is said that he spent twenty-eight years on this great work, which was called variously *Tetrapla*, *Hexapla*, *Octapla* and *Enneapla*. The Tetrapla comprised in four columns the translations of Aquila, Symmachus, the Septuagint and Theodotion; the Hexapla had two additional columns, the Hebrew text, and the same in Greek characters. Other columns were subsequently added for two other Greek versions of some parts of the Bible; hence the name Octapla, which, augmented by an additional translation of the Psalms and minor prophets, was ultimately the Enneapla. But it is not very probable that Origen himself edited more than the Tetrapla and Hexapla. He adjoined special marks and signs to indicate the variations of the Septuagint as compared with other versions and the Hebrew.

Two editions or exemplars of the Septuagint have been distinguished since Origen's time—that called the common text, such as it was before his

collation, and the hexaplaric text, that produced by his corrections. Numerous errors being introduced by copyists, three recensions were undertaken at nearly the same time. Eusebius and Pamphilus, about 300 A. D., published the hexaplaric text with Origen's critical marks; these, however, by transcription, became confused, and were afterward omitted. This edition was adopted by the churches in Palestine. Lucian, a presbyter of Antioch, martyred 311 A. D., and Hesychius, an Egyptian bishop, conducted other recensions, it is not agreed whether independently of Origen's labors, or whether the hexaplaric text, amended after the Hebrew, was the basis of both. They obtained acceptance, and were used, the first by the churches of Constantinople, Asia Minor and Syria, the other in Egypt. From these three principal recensions existing manuscripts and printed editions of the Septuagint are derived. That called the common text is the basis of the Vatican manuscript, while the Alexandrine has more of a hexaplaric character. Of printed editions there are reckoned four standards, the Complutensian, 1514, the Aldine, 1518, the Roman or Vatican, 1586, and the Alexandrine, 1707-9-19-20.

2. Aquila, a Jewish proselyte of Sinope, made a translation for the use of the Jews about the middle of the second century of our era. It is literal even to barbarism.

3. Somewhat later Theodotion, a Jewish proselyte of Ephesus, produced another version. It is a kind of revision of the Septuagint, holding a middle place between the servile closeness of Aquila and the freedom of Symmachus.

4. Symmachus, an Ebionite, who lived about 200 A. D., executed a free version, expressing the sense rather than the words of the original.

5, 6, 7. Three other ancient translations of parts of the Bible there were, of which the authors are not known. They are entitled the "fifth," "sixth" and "seventh," from the order in which Origen (if it were he) placed them in his columns.

8. There is yet another called the Venetian, because the manuscript of it was preserved in St. Mark's library, Venice. It is uncertain when it was made. The manuscript is considered to be of the fourteenth century, but it is not the original, merely a copy. It comprises the Pentateuch and several other books. This is a singular version; the style is a mixture of pure Attic with barbarisms, while the Chaldee of Daniel is rendered in Doric.

**SYRIAC.**—Christianity was early preached in Syria; naturally, therefore, several versions of Scripture were made into the language of that country.

1. The most celebrated of these is the *Peshito*, or Literal, so usually called on account of its close adherence to the original text. That of the Old Testament, which appears not to have comprised the apocryphal books, was probably executed by a Christian at Edessa, about the middle of the second century after Christ. Perhaps the version of the New Testament was made about the same time and at the same place. But the Revelation, 2 Peter, 2 and 3 John, Jude, John vii. 53 to viii. 11, also 1 John v. 7, are not found in the *Peshito*. It is a translation greatly and very justly valued. The New Testament was first printed at Vienna in 1555; the Old Testament appeared, not in a

very perfect state, in the Paris Polyglot in 1645, and was reprinted with the addition of some apocryphal books of a later version in Walton's Polyglot, 1657. The whole Bible was published under the care of Professor Lee, London, 1816-1823. Various recensions of this standard translation were made in process of time; that called the Nestorian exhibits little more than some variations in the points. Another is the Karkuphensian, because it is said to have been executed toward the close of the tenth century by David, a monk of the convent of St. Aaron, on Mount Sigara, in Mesopotamia, *karkupho* signifying the "summit of a mountain." It does not differ much from the ordinary Peshito text.

2. Among the Syriac manuscripts now in the British Museum, brought from the Nitrian monasteries, there is one containing large portions of the four Gospels in a version differing, as to the character both of the text and of the translation, from any Syriac version previously known. It is unquestionably of the highest antiquity. And there are linguistic differences in the different Gospels, that of St. Matthew varying from the rest. Hence it has been suggested by those who believe that the apostle wrote in Hebrew or Syro-Chaldaic that the version was made immediately from that original. It was published by the Rev. Dr. Cureton in 1857.

3. A Syriac translation of the New Testament was executed in 508 A. D. by Polycarp, at the suggestion of Philoxenus or Xenaias, bishop of Hierapolis or Mabug. It is called the Philoxenian version, and was revised about a century later by Thomas of Harkel, or Heraclen, also bishop of Hierapolis. Philoxenus would seem to have commissioned Polycarp to translate the Psalter likewise, but no translation of the entire Old Testament was made by any of the three persons just named. About the same time, however, that Thomas of Harkel was revising the Philoxenian, Paul, bishop of Tella, in Mesopotamia, at the instance of Athanasius, Monophysite patriarch of Antioch, made a very literal Syriac version of the Old Testament from the Greek hexaplaric text. A deacon, Mar Thoma, whom some have believed identical with Thomas of Harkel, is said to have been associated with Paul in his work. Portions of this translation have been lost; the rest has been printed at various times, with the exception of the apocryphal parts. The Philoxenian New Testament was published by Professor White, 1778-1803.

4. There is a lectionary in the Vatican library at Rome containing a Syriac version of some portions of the Gospels. These follow the order of the festivals on which they were read, some occurring more than once, other parts being wanting, either as not included in the ecclesiastical order of reading or as now defective in the manuscript. The dialect of this version is peculiar, and has been thought to resemble that of the Jerusalem Targum; hence it has been called the Jerusalem Syriac. It is uncertain when it was executed, possibly between the fourth and sixth centuries. It is of considerable critical value, but only a few fragments have been published.

5. It was noted above that some portions of the New Testament were not found in the Peshito. There have, however, been translations made of them, at times not well ascertained. The Revelation was published in 1627 by De Dieu at Leyden, from a manuscript in the university library of that city. The four catholic epistles were

printed also at Leyden by Poccoke from a manuscript in the Bodleian.

There are some other Syriac translations or recensions, of which but little is known.

**LATIN.**—It is certain that there existed in the second century a Latin version of the Scriptures, made in Africa and used by the African Fathers. It exhibited the characteristics of the Latin dialect of the Libyan province, and was probably the result of the fragmentary labors of different individuals. As a Latin translation became needed in other regions, this was more widely diffused. It can scarcely indeed be said that there was a standard text, for variations were introduced, and revisions seem to have been made in different churches. Yet there was but one acknowledged

AN ANCIENT ROMAN BRONZE FIGURE.—See SCULPTURE.

version, and copies, however much they disagreed, were but subordinate varieties of the single translation. This is proved by the peculiar words found in the citations of writers of far-distant provinces. The same staple of the text must have been everywhere in use. Yet the recension of Italy appears to have been the best, and to this the term *Itala* would seem to have been appropriated. The version of the Old Testament was made from the Septuagint, and it included some of the apocryphal pieces. That of the New Testament, on the other hand, did not probably at first comprise all the canonical books. But this fact is a corroboration of the high antiquity of the version.

In the course of time the text of the Latin version had become greatly confused and corrupted. To remedy the growing evil, Jerome, at the re-

quest of Damasus, bishop of Rome, undertook a systematic revision. He began with the New Testament about 382 A. D., and in two years presented Damasus with the four Gospels, which chiefly required a correcting hand. He afterward hastily revised the Psalter, producing what is called the Roman Psalter, because it was adopted at Rome. At a later period he corrected it again according to the hexaplaric text; this is termed the Gallican Psalter, being received by the Churches in France. In a similar way he revised other books by comparison with the Greek. But most of his work perished, he himself says by fraud. The two Psalters and Job alone are extant. Flaminio Nobili professed to gather fragments of the Old Latin, which he printed in 1588. Sabatier published them more accurately and more completely at Rheims, in 1743, and at Paris, 1749-1751. Some supplements have appeared since. Portions also, in various forms of text, are found in manuscripts, and several of these have been printed. The remains of Jerome's revised text are in editions of his works.

As Jerome proceeded with his task of revising the old version he was so strongly impressed with the inaccuracy of the Old Testament text as derived from the Septuagint that he resolved, urged too by friends, to translate it anew from the Hebrew. On this he was engaged from perhaps 385 to 405 A. D. He issued first the books of Samuel and Kings, to which he prefixed the *Prologus galileus*, in which he gave an account of the Hebrew canon. The other books followed, some of the apocryphal ones not being translated. It was only by degrees that this version gained its place in public estimation; there was great opposition to it at first, and much hostile criticism, but at length, by the approbation of Gregory I., it acquired such authority that since the seventh century, with some mixture of other ancient translations, it has been exclusively adopted (the Psalter, as above noted, excepted) in the Western Church, and has borne the name of the "Vulgate," or current text. By the Council of Trent it was ordained that the Vulgate alone should be esteemed authentic in the public reading of the Scriptures, in preaching and in expounding, and that no one should dare to reject it under any pretext whatever.

But prior to this, corruption had again crept in. By the multiplication of copies, and errors of successive transcribers, the text—a mixture, as has been just said—was in a very unsatisfactory state. Various scholars, as Alcuin, Lanfranc, Cardinal Nicholas and others, attempted to correct it, but it still needed revision when it was first printed, without place or date, in 1455. This edition is the famous Mazarin Bible, one of the noblest exemplars of typography. Another edition succeeded at Mayence, 1462. The Council of Trent ordered that an amended edition should be prepared. And after much delay this was published, under the sanction of Sixtus V., in 1590. It was soon, however, discovered to be very inaccurate, and another authentic Vulgate appeared in 1592, under Clement VIII. It was followed by the edition of 1593, in which a few alterations were made; and this is the standard of the Roman Church. It is unfortunate for that Church that the Sixtine and Clementine vary so remarkably. But with all its imperfections, the Vulgate is a noble version of Scripture, and can never be neglected by the theological student.

The very briefest notice must be taken of other

ancient translations. They will be arranged in alphabetical order.

The ANGLO-SAXON, ARABIC and ARMENIAN versions will be found under their respective heads.

**EGYPTIAN.**—There are three Egyptian dialects—the Coptic or Memphitic in Lower Egypt, the Sahidic or Thebaic in Upper Egypt, and the Bashmuric or Oasitic, also called the Ammonian, prevailing probably in an eastern district of the Delta. There is reason to believe that versions of the Scriptures existed in both Upper and Lower Egypt in the third or fourth century, made from the Septuagint. Wilkins published the Memphitic New Testament at Oxford in 1716, and the Pentateuch in 1731; the Psalter appeared first at Rome in 1744; the minor prophets were printed by Archdeacon Tattam in 1836, Job in 1846 and the greater prophets in 1852. Bardell published Daniel in 1849. Schwartz edited the Gospels at Leipsic, 1846-1847, and after his death Boetticher put forth the rest of the New Testament. A beautiful edition of the New Testament appeared in 1848-1852, under the Society for Promoting Christian Knowledge. Of the Thebaic and Bashmuric only fragments have been printed.

**ETHIOPIAN.**—The Ethiopic version of the Bible was made from the Greek. It probably dates from the fourth century, and may have been executed, in part at least, by Frumentius of Tyre, the first bishop of the country. The Psalter and Song of Solomon were published at Rome in 1513, and the New Testament at the same place in 1548-1549. A revised text was edited by Platt in 1826-1830.

**GEORGIAN.**—A Georgian translation in the ecclesiastical dialect of the country was executed from the Septuagint and the original Greek of the New Testament in the sixth century. The whole Bible, corrected from the Slavonic, was printed at Moscow in 1743.

**GOthic.**—This version was made from the Greek of both Testaments by Ulphilas. He subscribed the Arian confession; and here and there, especially in Phil. ii. 6, his theological views tinged his translation. The Gospels of this version were first published at Dort in 1665 from the *Codex Argenteus*, a manuscript most probably of the sixth century, now preserved in the university library at Upsal. The researches of Knittel and of Cardinal Mai brought almost all the Epistles and some fragments of the Old Testament to light. All the portions discovered of the Gothic version have been published by Gabelentz and Loebe in 1836-1845, by Massman in 1855-1856, and by Stam in 1858.

**PERSIC.**—The Scriptures were doubtless early translated into Persian, but the ancient version does not exist. A translation of the Pentateuch appeared at Constantinople in 1546. It was the work of Jacob Ben Joseph, surnamed Tawosi or Tusi, and has been thought to be only of the sixteenth century. There are other portions of the Bible in Persian, some yet unprinted.

**SLAVONIC.**—The Slavonians settled in Great Moravia received Christianity in the ninth century, mainly through the missionary labors of two brothers, Cyril and Methodius of Thessalonica. These translated perhaps only the New Testament and the Psalter into the Slavonian language, but the version of the Old Testament was afterward completed. Portions were printed at an early date, and the whole Bible at Ostrog in 1581. Some account must now be given of modern translations.

**ENGLISH.**—The Anglo-Saxon versions of Scripture.

ture have been briefly noticed above. When the language of the people began to assume the shape of what might be called English, the desire of having the gospel in it began soon to manifest itself. Metrical paraphrases of portions of the Bible were made; and in the earlier part of the fourteenth century Richard Rolle of Hampole appears to have executed a version of the Psalms, and translations or paraphrases of other parts of Scripture followed; and ere long the illustrious Wyclif, in conjunction with Nicholas Hereford, resolved to translate the whole Bible. Their work is said to have been revised by Richard Purvey about 1388; and there cannot be a doubt that, in spite of the attempts made to suppress it, it was repeatedly copied and widely circulated. The New Testament was printed in 1731 by Lewis, in 1810 by Baber, and the entire translation by Forshall and Madden at Oxford in 1850.

Early translations were based on the Vulgate. To Tyndale belongs the honor of first resorting to the original texts as the source of any satisfactory version. He printed the Gospels of Matthew and Mark at Hamburg in 1524, and the whole New Testament at Cologne and Worms in 1525; and many other editions followed, while he was laboring upon the Old Testament, of which he printed portions in 1530-1531. The entire English Bible first appeared in 1535, executed by Coverdale. This was in some respects retrograde, for it was based on Latin and German versions, with a certain use of Tyndale's. That of Matthews succeeded in 1537. The name of Matthews was assumed; the real editor was John Rogers, martyred in Queen Mary's reign. The whole of the New Testament, and the beginning of the Old to the end of 2 Chronicles, with parts of the prophetic books, were Tyndale's version; the rest was supplied from Coverdale with sundry corrections. Part of this book was printed abroad, the rest in London. It was brought under the notice of Cranmer, and had his warm approval, and by him through Cromwell the king's license was obtained, and an order issued that a copy should be provided for every parish church. This, therefore, was the first authorized English Bible. Others followed, as those called Cranmer's and Taverner's, both appearing in 1539. They were little more than revisions of Matthews'. The accession of Mary of course checked the circulation of the Scriptures in England. But there were English exiles who heartily carried on the work abroad. Whittingham, with Gilby, Sampson and others, produced a version of which Tyndale's was the basis. This was called the Geneva Bible; the New Testament, the first in which the verses are marked by numerals, appeared in 1557, the entire Bible in 1560. This translation was frequently reprinted. When the Protestant faith was restored in England, Archbishop Parker promoted another version. This, called the bishops' Bible, because eight of those engaged on the work were bishops, was avowedly based on Cranmer's, and was published in 1568.

But these various versions and editions did not give entire satisfaction. At the Hampton Court Conference, in 1604, the objections were produced by the Puritans to the bishops' Bible. And King James I. yielded to the demand and sanctioned a new translation. The most learned men in the kingdom were to be engaged on it, and fifty-four were selected, but some of these died or were prevented by other causes; only forty-seven, therefore, actually labored in the work. The bishops' Bible was to be the basis, but other translations

were to be followed when more conformable to the original. Suggestions were invited from every quarter, and any scholars might be consulted and every means adopted that the whole might faithfully set forth the true word of God. The translators were divided into various companies, who met at Cambridge, Oxford and Westminster. Andrews, then dean of Westminster, Barlow, dean of Chester, and the king's professors of Hebrew and Greek at the two universities were appointed directors, and the final revision was entrusted to Bilson, bishop of Winchester, and Miles Smith, afterward bishop of Gloucester; the last named wrote the dedication and preface. The work was begun in the spring of 1607, and was completed at press in 1611. This is our present authorized version, which, whatever imperfections

BRONZE STATUE OF MINERVA.—See SCULPTURE.

may be imputed to it, is one of the noblest in existence.

It may be added that the Roman Catholics printed an English translation of the New Testament at Rheims in 1532, and one of the Old at Douay in 1609-1610.

**FRENCH.**—Jacques le Fèvre of Etaples published a French version of the Bible in consecutive portions between 1512 and 1530. Olivetan's appeared first in 1535; having been revised, it was printed in 1588 as the "Geneva Bible;" corrected editions of which were put forth by Martin, 1696-1707, and by Ostervald, 1724.

**GAELIC.**—In 1767 the New Testament was translated and printed by James Stuart of Killin, whose son Dr. John Stuart, and Dr. Smith, translated the Old Testament. This was published in portions, 1783-1801, and a revised edition issued in 1807.

**GERMAN.**—The first German version from the Vulgate was printed in 1466. Luther's Testament appeared 1522, and his translation of the Bible was completed in 1530.

**IRISH.**—The New Testament was printed in 1602 by William Daniel, or O'Donnell, archbishop of Tuam, assisted by Mortogh O'Ciongá or King. With the same person's help, Bishop Bedell completed a version of the Old Testament in 1640, and printed in 1635.

**ITALIAN.**—The earliest Italian translation is that of Malermi or Malherbi, printed at Venice in 1471. That of Brucioli appeared 1532, Diodati's in 1607.

**LATIN.**—Several scholars put forth corrected editions of the Vulgate, as Clarius, in 1542, Paul Eber, 1565, Andrew Osiander the elder, 1522, Luke Osiander, 1574-1586, Andrew Osiander the younger, 1600. The version of the Pagninus was published in 1528. Protestant translations are those of Munster, 1534-1535, Leo Juda, 1543, Castalio, 1551, Junius and Tremellius, 1575-1579 (the New Testament appeared afterward), Schmidt, 1696, Erasmus translated the New Testament in 1516, Beza in 1556.

**MANX.**—Bishop Wilson commenced a translation, and St. Matthew's Gospel was printed in 1748. Bishop Hildesley carried on the work, and the New Testament appeared in 1767, the Old in 1772.

**SPANISH.**—The Old Testament, translated by Spanish Jews, was printed at Ferrara in 1553. A version in the Valencian dialect had previously been set forth at Valencia in 1478. In Castilian the earliest edition was the New Testament of Enzinas, printed at Antwerp in 1543. The entire Bible by Cassiodoro de Reyna appeared in 1569.

**WELSH.**—A Welsh Testament, chiefly translated by Salesbury, was printed in 1567. Dr. Morgan, afterward bishop of St. Asaph, published the whole Bible in 1588. A revised edition by Bishop Parry appeared in 1620.

The influence of missions in modern times in promoting translations of the Scriptures has been exceedingly great, for wherever the gospel has been carried by Protestant missionaries a vigorous effort has always been made to give the Word of God in a language that can be understood, to the people among whom they have been laboring. Hence it has come to pass that in nearly all the languages, and in many even of the dialects of Asia, Africa, America and the scattered islands of the ocean, as well as in the tongues of European nations, the Scriptures may be read in admirable translations which have been executed with great care and learning. A list can only be given here of the languages, without attempting a statement of the extent of territory in which they prevail and of the number of people respectively by which they are spoken.

The First Class is monosyllabic, and includes the Chinese, and under the Indo-Chinese the following, viz.: Burmese, Arakanese, Siamese, Peguese, Karen, Manipora, Khassee; and under the Thibetan branch, the Thibetan and the Lepcha.

The Second Class is Semitic, and includes Hebrew, Samaritan, Syriac, Chaldee, Syro-Chaldaic, Modern Syriac, Arabic, Carlsun, Mogrebbin, Gheez, Tigre, Amharic.

The Third Class: the Indo-European, including the Medo-Persian, which comprehends Persian, Pushtos or Afghan, Beloehee, Kurdish, Ossetian, Ancient Armenian, Modern Armenian, Ararat Armenian; and the Teutonic branch, which comprehends Gothic, Alemanic or old High Ger-

man, German, ancient Low Saxon, Anglo-Saxon, English, Dutch, Flemish, Swedish, Danish, Faroese. The Sanscrit branch comprehends Sanscrit, Pali, Magadha, Hindustani or Urdu, Hinduwee, and under it the dialect Brúj, Canoj, Kousulu, Bhojopora, Hurriana, Bundelcundee, Bughelcundee. In Central Indian dialects: Oojein, Harrotee, Oodeypoor, Marwar, Juyapoor, Shekawutty, Bikaneera, Buttancee, Bengalee, Tirhitiya, Assamese, Orissa, Coutehee, Sindhee, Moultan, Punjabee, Cashmerian, Nepalese, Parbutti, Palpa, Gurwhal, Kumaon, Gujerattee, Mahratta, Kunkuna, Romanly or Gipsy, Cingalese, Maldivian. Of the languages of the Deccan: Tamul, Telinga, Karnata, Tulu, Malayalim. The Greco-Latin branch includes Albanian, Greek, Romaic or modern

STATUE OF VESTA.

Greek, Latin, Catalan, dialect of Toulouse, Provençal, Vaudois, Piedmontese, Romanese, Italian, French, Normanian dialect, Burgundian, Spanish, Judeo-Spanish, Curaçoa, Portuguese, Indo-Portuguese, Daco-Romana or Wallachian. The Slavonic branch includes ancient Slavonic, Russian, Servian, Croatian, Bosnian, Bulgarian, Carniolan, Bohemian, Polish, Judeo-Polish, Lithuanian, Samogitian, Lettish, Upper Wendish, Lower Wendish, Hungarian Wendish. Celtic branch: Irish, Gaelic, Manks, Welsh, Cornish, Breton or Armorican.

The Fourth Class embraces the Finnish, Carelian, Olonetzian, Dorpat Esthonian, Revel Esthonian, Laponese, Norwegian Laponese, Tseheremissian, Mordvinian, Zirian, Wotagian, Hungarian or Magyar, Wogulian, Ostiaean. The Euskarian branch comprises French Basque, Span-

ish Basque. The Tungusian includes Mantehu and Tungusian proper. The Mongolian includes Mongolian proper, Calmuc, Buriat; and the Turkish branch comprehends Turkish, Karass or Turkish Tartar, Orenburg Tartar, Crimean Tartar, Trans-Caucasian Tartar and Tschuwasschian. Ancient and modern Georgian belong to the Caucasian branch, while the Samoide belongs to the Hyperborean branch.

The Fifth Class, or the Polynesian or Malayan, comprehends, under the first branch, Malay, Formosan, Batta, Javanese, Bima, Bugis, Macassar, Malagasse and Dajak. The Further Polynesian branch comprises Maori or New Zealand, Samoan, Tahitian, Rarotongan, Hawaiian, Marquesan, Tonga, Feejeean, Aneiteum, New South Wales.

The Sixth Class begins with the Egyptian branch, under which are Coptic, Sahidic; and under the Libyan branch are Berber and Ghadamsi. The Mandingo branch has Woloff or Jalloof, Suso, Bullom, Sherbro-Bullom, Bassa, Grebo, Aecra, Fantee, Ashantee; and Dewalla, with Ediyah, Yebu, Isubu, Howssa, belongs to Western Nigritia. The Caffrarian or Nilo-Hamitic stock comprehends Kaffir, Sechuana, Sidlapi, Sisuta, Dammara, Zulu; and on the Zanzibar coasts, Kiswaheli, Kikambi, Kinika and Namaqua; while Galla or Ormo belongs to the Afric-Abyssinian branch.

The Seventh Class is American, and Esquimaux and Greenland constitute the Northern tongues. The Algonquin branch comprises Cree, Ottawa, Chippeway, Ojibway, Pottawattomie, Mohawk, the Eastern dialects being Miemac and Abenaki; while along the Atlantic were the Massachusetts, Virginian, Mohegan, Delaware, Shawanoe. The Seneca belonged to the Iroquois branch, and to the Sioux or Dakota were the Dakota and the Iowa. To the Appalachian belongs Choctaw and Cherokee, while Pawnee belonged to the Panis-Arrapahoes branch. The Karif or Carib and the Arawack are classed under the Carib-Tamanaque branch, and the Mosquito was distinct. Mayan also is a branch of itself, and under Mexican is comprehended Aztec, Misteca, Zapoteca, Tarasco and Otomi. The Peruvian has Quichna or Peruvian, and the Guarani branch comprises Guarani proper and Brazilian or Tupi.

This long catalogue is given as an evidence of the extent of the work undertaken by the missionaries of the Gospel, whose zeal has carried them to the widely-scattered nations of the earth who have been dwelling in darkness; and also to show that their main object is to make the heathen understand what the message of peace is by showing it to them in the word of God, instead of merely proselytizing them by teaching them the doctrines and commandments of men.

**VERT** (vayr), DOM CLAUDE DE, a learned Benedictine, was born at Paris in 1645, and entered the congregation of Cluni at the age of sixteen. He was afterward sent to Avignon to study philosophy and theology at the Jesuits' College. In 1676 he was elected treasurer of the abbey of Cluni, and was nominated with another monk to the office of reforming the Breviary of the order. In 1690 he published a letter to the Calvinist minister Jurieu, who had treated the ceremonies of the Romish Church with contempt, and his services procured for him the dignity of vicar-general to the cardinal de Bouillon, and a promotion to the priory of St. Peter at Abbeville. He is chiefly known by his "Exposition of the Ceremonies of the Church." He died in 1708.

**VESEY** (ve'ze), WILLIAM, was born in 1674, in Braintree, Massachusetts. He was educated in Harvard, where he graduated in 1693, and his theological study was conducted by the Rev. Samuel Myles, of King's Chapel, Boston. In 1695 he was laboring before his ordination at Hempstead, Queen's county, New York, and he there commended himself to the leading men who aimed at erecting a new church in New York. Governor Fletcher granted a charter for churchwardens and vestrymen, the church to be known as Trinity Church, and the parties elected under the act of 1693 were designated as the civil vestry and those under the charter granted by Fletcher were known as the church vestry. They called Vesey, who embarked in 1697 for England with a view to ordination, and on the 16th of August in that year he was ordained by Dr. Henry Compton, the bishop of London. Governor Fletcher also, in addition to many benefactions to the church, granted a tract of land called "The King's Farm;" but his successor, the earl of Bellmont, prevailed on the king to annul the grant. As the bishop of London had appointed Mr. Vesey his commissary, he found his hands filled with work; but he was a man of undoubted energy, and accordingly he called in the aid of schoolmasters and catechists, whose salaries were provided by the Society in London; and he brought into the ministry a considerable number of assistants who rendered him efficient aid. So diligent was he in his work that he was able to report the fact that he had twenty-two churches which were in a flourishing condition in his jurisdiction.

He died in 1746, in the seventy-second year of his age, having held a prominent place in the Church, and being recognized as an able, zealous administrator, who gave a great stimulus to the cause of the Church in the city of New York.

**VESICA PISCIS** (ves'ka pis'sis), a symbolical figure made by two intersecting segments of circles. The formation may be seen in the illustration on page 393. Windows of that shape were often placed in the upper part of the gables of churches in the Early English period. They are known as "fish-windows," and they were used as an emblem of our Lord, derived from an acrostic of our Lord's name and offices contained in the Greek word *ichthus*, "fish"—i. e., Jesus, Christ, Son of God, Saviour.

**VESPASIAN** (ves-pa'zh'an), TITUS FLAVIUS SABINUS, Roman emperor, was born A. D. 9, of obscure parentage, and entering the Roman army, passed through various grades to high office, and obtained great military renown. He held command in Britain A. D. 43, and subdued Vectis, now the Isle of Wight. He was sent by the emperor Nero, A. D. 66, to conduct the war against the Jews, and commenced the siege of Jerusalem, but was recalled A. D. 69 to assume the seat of empire, and left the war to be carried to completion by his son Titus. His rule was beneficial to Rome, and his personal character was

high, but he has been accused of parsimony, without sufficient foundation. He died A. D. 79.

**VESTA** (ves'ta) was a Roman goddess, the same as Hestia among the Greeks. The family hearth where the members of the household assembled was considered sacred, and both Greeks and Romans held that it was under the guardianship of this deity. She was the daughter of Saturn and Rhea, and instead of marriage Jupiter gave

TEMPLE OF VESTA.—See article.

her to sit in the middle of the mansion and to be honored in all the temples of the gods. The temple of Vesta was round; it contained no statue of the goddess, but a sacred fire was kept burning in it, attended by six virgin priestesses, called vestals.

**VESTMENT** (vest'ment). 1. Any priestly garment. 2. In old inventories the vestment means the whole set of eucharistic robes—amice, alb, girdle, maniple, stole and chasuble; and sometimes it includes also the deacon's and subdeacon's vesture and the altar frontal.

**VESTRY** (ves'tre). 1. A room attached to a church where the vestments are kept and where the clergy dress themselves. 2. The assembly of the whole parish, met together in some convenient place for the despatch of parish business, is thus called in England. Such meetings were customarily held in the vestry attached to the church, and hence the name.

**VETHAKE** (veth'a-ke), HENRY, LL.D., was a native of Essequebo, in British Guiana, South America. He was brought to this country in his childhood, educated in Columbia College, New York, and afterward began the study of law. He taught mathematics in Columbia College for a short time, and in 1813 he removed to Rutgers College, New Brunswick, where he was professor of mathematics and natural philosophy. From 1817 until

1821 he acted as professor of mathematics, natural philosophy and chemistry in the College of New Jersey, at Princeton. He was next called to Dickinson College, Carlisle, where he acted as professor of mathematics and natural philosophy; and again he was removed to a similar chair in Princeton. In 1832 he was transferred to the University of New York; after which he was professor for some time of intellectual and moral philosophy in Lexington College, Virginia, of which institution he

COIN OF VESPASIAN.

in that year he became professor of the higher mathematics in the Polytechnic College of Philadelphia. He was an admirable scholar and an eminent teacher, deserving a place in this work because of the influence which he exerted on the education of our country and his high literary standing and great personal worth. His lectures on political economy have had a great circulation; and in addition to many pamphlets and essays on the different departments of education, he wrote the greater part of the fourteenth volume of the *Encyclopædia Americana*. He died in 1866, aged seventy-four years.

**VEYSEY** (vi'ze), JOHN, was an eminent prelate in the English Church at the beginning of the sixteenth century. He was born at Sutton Coldfield; and having entered the Church, he rose from one preferment to another, until at length, in 1519, he succeeded Oldham in the see of Exeter. Oldham had been associated with Bishop Fox in founding Corpus Christi College, in Oxford, and these men were all famed for their distinguishing qualities. Veysey was so much esteemed by Henry VIII. that the king appointed him governor and tutor to his eldest daughter Mary. In 1551 Edward VI. called on him to surrender his see, and as a reward for his compliance he granted him a liberal annuity. On the accession of his pupil Mary he was restored again, but he only lived a year afterward. On the very day when he resigned his see to Edward VI. the celebrated

such scenes and among such men Veysey lived until he had reached the advanced age of one hundred and three years. He was buried at the church of Sutton Coldfield, his native place.

**VIAL**, 1 Sam. x. 1, a flask. The same word is rendered "box" in 2 Ki. ix. 1, 3. Golden vials are spoken of in Rev. v. 8; xv. 7. See CENSER.

**VIA MEDIA** (ve'ah mā'de-ah). 1. In doctrine the term is used to indicate a middle course in which there is no tendency to carry theological tenets to extremes. 2. It is often applied to the Church of England to indicate the idea that it occupies a middle position between the Romish Church and other Protestant denominations.

**VIATICUM** (ve-at'e-kum). 1. Provision for

ual, by the authority and under the direction of the bishop—as visitation, correction of manners, granting institutions and the like, with a general inspection of men and things, in order to the preserving of discipline and good government in the Church.

**VICAR OF CHRIST**. 1. An ancient title of bishops. 2. A title claimed by the bishop of Rome.

**VICARAGE**. 1. The spiritual living of a vicar. 2. The official house in which he lives.

**VICARIOUS** (vi-kā're-us), substitution of one person for another, as of Christ when he was made sin for sinners, expiating guilt and suffering death in their stead.

**VICARS** (vik'arz), JOHN, born in 1582, a Presbyterian zealot who, in the time of the civil wars, denounced alike king and commonwealth. He was the author of several treatises of a religious character, collected under the title of "The Parliamentary Chronicle." He died in 1652.

**VICARS CORAL** (kor'al), priests or laymen who are members of a cathedral choir.

**VICARS OF THE POPE**, bishops on whom, either for the eminence of their sees or their personal merits, the pope bestowed certain prerogatives and jurisdiction, of which the pallium was the distinctive badge. See PALLIUM.

**VICTOR** (vik'tor), the name of a line of popes. The first succeeded Eleutherius in 193. He had a controversy with the churches of Asia respecting the proper time for celebrating Easter. He died about 197. Some say that he suffered martyrdom. He was succeeded by Zephyrinus. The second succeeded Leo IX. in 1055. He was an active pontiff, and earnestly devoted himself to the reformation of his clergy. He died in 1057, and was succeeded by Stephen IX. The third was elected after the death of Gregory VII., in 1086. In August of the following year he held a council at Beneventum, in which he anathematized the antipope Guibert, who was supported by the emperor Henry IV. He died in 1088, and was succeeded by Urban II. The fourth, or antipope, was set up after the death of Adrian IV. in 1159 by a small faction of cardinals, supported by the emperor Frederick I. in opposition to Alexander III. He died in 1164.

**VICTORIAN PERIOD** (vik-to're-an peer'yud), a cycle of five hundred and thirty-two years invented by Victorinus of Aquitaine, at the end of which any given day will fall on the same day of the year, month, moon and week as the selected day.

**VICTORINUS** (vik-to-re'nus) is held to have promoted the heresy of Praxeas by the author of the work against all heresies appended to Tertullian's well-known work on the "Heretics." Nothing is known about him, but Fabricius and Ehler conjecture that it must have been Victor, bishop of Rome when Praxeas was there, to whose name the last two syllables of his successor's name, Zephyrinus, have been added by a careless scribe.

**VIEL** (ve-ayl'), CHARLES MARIA DE, a converted Jew, was a native of Metz, in Lorraine, and first embraced the Roman Catholic faith and

took orders. His "Commentary on Mark and Luke" gave such satisfaction that he was desired to write against the Protestants, which, however, had the effect of opening his eyes to the errors of popery. He then went to Holland, and thence to London, where he was received into the Established Church. He next turned Baptist. He died in 1700.

**VIENNE** (ve'ong) was one of the most celebrated of the early Christian churches in the South of France. An account of the persecutions of the members of this church and of the church at Lyons, in A. D. 177, written at the time and preserved in Eusebius, is worthy of note, as exhibiting the constancy of the followers of the Saviour and the savage cruelty of the relentless heathen who persecuted them. Antoninus Pius had treated the Christians with forbearance, but his successor, Marcus Aurelius, became a cruel persecutor, though in other respects an exemplary ruler. He was a lover of literature, but he mistook the constancy and attachment of the Christians to their faith as obstinacy and rebellion to his authority. He encouraged spies and informers, and he used the most awful forms of suffering to oblige the Christians to recant. Formerly, when any one confessed himself a Christian, he was at once condemned to death; but now torture was employed to induce him to withdraw his confession. Humanity shudders at a recital of the hellish devices. Sometimes a delicate female was tossed by a wild bull until ready to expire, and then offered life on condition of apostasy; sometimes starvation was employed; and in other cases a prisoner was placed on a heated iron chair and threatened with being roasted alive should he not renounce the gospel. The memorial which has been preserved from this church shows that the treatment of Christians in the reign of Marcus Aurelius contains some of the most revolting details of human suffering to be found in the annals of Christian martyrdom.

**VIEYRA** (ve-i'ra), ANTONIO, a Portuguese missionary, was born at Lisbon, in 1608. He was early taken by his father to Brazil, where he became a Jesuit, and applied himself to theology with such zeal that he was made professor of theology at Bahia. Being sent to Portugal in 1641, Juan IV. was so impressed with his learning and ability that he entrusted him with missions to England, Holland, France and Naples, and with difficulty was induced to permit his return to evangelize the native Indians of America. He again visited Portugal, to be received with honor, and finally returned to Bahia, where he spent the rest of his life. His death occurred in 1697.

**VIGAND** (ve'gand), or **WIGAND**, JOHANN, a Lutheran divine, was born in 1523. He took part in the production of a voluminous work, entitled "The Centuries of Magdeburg." He was made president of the churches in Pomerania. His death took place in 1587.

**VIGIL** (vij'il), the day before a feast of the Church. To be a vigil, however, it should, properly speaking, be a fast. There are now exceptions to this rule; for example, the vigil of Ascension day, which is a day of abstinence, not a fast; and in the Western Church the vigils of several saints' days have been abrogated, and the Wednesdays and Fridays in Advent kept instead of them.

**VIGILIUS** (vi-jil'e-us), an African bishop, flourished toward the close of the fifth century, and wrote several works against the heresies of his time.

**VIGILIUS, POPE**, was by birth a Roman, and elected in 537, at the instance of the empress Theodosia, to succeed the deposed pope, Silverius, after whose death, in 538, he was universally acknowledged. At first he sanctioned the doctrine of Anthimus, but subsequently censured him, and provoked the anger of Theodosia. In the affair of "The Three Chapters" he refused to condemn the writings of the three bishops, and was in consequence banished to Proconnesus, from which he was recalled in 554. He died in 555.

**VINCENT, NATHANIEL**, a celebrated English nonconformist of the seventeenth century. He was educated at Oxford, and settled in the parish church of Langley-Mareh, in Buckinghamshire, from which he was ejected in 1662. He was the author of several works well known for their great spirituality and fervor of tone, among which may be mentioned "The Conversion of a Sinner," "The Spirit of Prayer," "A Hell or Heaven upon Earth, or a Treatise upon Conscience," "The True Touchstone," "The Good of Afflictions," "The Cure of Distractions." He published several sermons also, and he contributed to the "Philosophical Transactions," for he was a learned man; and he acted as editor of "The Morning Exercises against Popery." He died in 1697.

RUINS OF TEMPLES IN NUBIA.

Miles Coverdale was placed in it; but ere long, on the accession of Mary, he was ejected and sent to prison. After being confined eighteen months, he was released, and at the earnest solicitation of the king of Denmark he was permitted to emigrate to that country. When Mary died, he returned to England; but by that time his views of Church order had been modified, and he refused to be reinstated. He had been an Augustinian monk in early life, but as he advanced in knowledge he embraced the doctrines of Protestantism, and he became one of the most ardent translators of the Scriptures. When in prison, he was one of those who, with Ferrar, bishop of St. David's, Taylor, Philpot, Bradford, Hooper and other martyrs, drew up and signed a confession of their faith, dated May 8, 1554. He died in his eighty-first year, and was buried in St. Bartholomew's Church, the earl of Bedford, the duchess of Suffolk and other eminent persons attending his funeral. In

a journey. 2. The term has been applied to the eucharist when given to dying persons, inasmuch as it has been viewed as preparing the recipients for their journey from time to eternity.

**VICAR** (vik'ar), the minister of a parish in which the predial tithes are appropriated or held by another person, or by a chapter or religious house; and the person who discharges the parochial duties receives only the small tithes or a stipulated salary, and he is called a vicar.

**VICAR APOSTOLIC** (a-pos-tol'ik), a missionary bishop or priest in the Romish Church who has power delegated to him by the pope, and not by any metropolitan.

**VICAR GENERAL** (jen'er-al), the official assistant of a bishop or archbishop, the exercise and administration of whose jurisdiction is spirit-

RUINS OF TEMPLES IN NUBIA.

**VILLAGE** (vil'lag). The term is used to denote the unwall'd suburbs outside walled towns, as well as in the sense in which we employ it, Lev. xxv. 31, 34; Esth. ix. 19; Ezek. xxxviii. 11. According to the Talmud, a village was a place where there was no synagogue.

**VINCENT** (vin'sent) OF LERINS, an ecclesiastic of the fifth century, was a Gaul by birth, and originally followed the military profession; but feeling a vocation to quit the world and adopt a religious life, he retired to the monastery of Lerins, in Provence, where he entered into priest's orders. He obtained a high reputation for piety and learning; and after his death he was canonized by the Romish Church. This honor was conferred upon him chiefly on account of a work entitled "A Warning against Heretics."

**VINCENT, DE PAUL, SAINT**, the eminent French philanthropist, was born at Ranquines, in the department of the Landes, April 24, 1577. After studying in a convent of the Cordeliers, he went to the University of Toulouse, and in 1600 was ordained priest. On a voyage from Marseilles to Narbonne he was captured by pirates and sent to Tunis, where he was in slavery for two years under three masters, the last of whom he reconverted to Christianity, and escaped with him to France, in 1607. He soon after settled at Paris, devoting himself to works of charity. He was named almoner to Margaret of Valois, held for a short time the cure of Cliehy, and in 1613 became tutor to the sons of Philippe de Gondi, one of whom was afterward celebrated as the cardinal de Retz. In 1616 he began the course of labors as a missionary which occupied so large a part of his life, and

the next year he founded the first brotherhood of charity, model of so many others afterward established. His next great task was the reform of the condition of criminals condemned to the galleys; for which great service he was appointed almoner-general of the galleys. This unwearied philanthropist founded, in 1623, the Congregation of the Mission, which was constituted by royal letters patent, and approved by the pope. In 1634 he instituted the "Sisters of Charity," the most widely known perhaps of all his foundations. But the charitable institutions which owed their origin to him are too numerous to be even named here. He attended Louis XIII. on his deathbed, took part in the controversy between the Jesuits and the Jansenists, against the latter; and died in the convent of the Lazarists, September 27, 1660. He left several theological writings, and was canonized by Pope Clement XII. in 1737.

TEMPLE OF BUDDHA, JAPAN.

**VINCENT, THOMAS**, was an English non-conformist clergyman, brother to Nathaniel Vincent. He was also educated at Oxford, and settled at St. Mary Magdalene's, in London, whence he was ejected in 1662. Being cast out of his church, he commenced the formation of a congregation at Hoxton, near London, and he preached here until his death. His works include—1. "God's Terrible Voice in the City by Plague and Fire;" 2. "Christ's Certain and Sudden Appearance to Judgment;" 3. "Fire and Brimstone;" 4. "Explicatory Catechism;" 5. "True Christian Love of the Unseen Christ." All these works are remarkable for their great spirituality, their depth of experimental knowledge and their clear views of evangelical truth. He was famed for his services during the plague in London, and his work on that visitation is characterized by great power, and is quite above the ordinary treatises which deal with the providences of God, and it is still sought after by those who know the rarest gems of that age. He died in 1678.

**VINCENT, WILLIAM, D.D.**, was born in 1739, at London. He passed through Westminster School, and was sent to Trinity College, Cambridge, where he became a distinguished scholar and reached a Fellowship in 1761. He returned to Westminster School in 1762 as usher, and in 1771 he became second master. He was made rector of All Hallows the Great and Less, in London, in 1778, and in the same year he rose to be master of Westminster School. In 1801 a prebendal stall in Westminster was given to him, and he was raised to be dean in 1802, in consequence of his valuable work on "Public Education." His "Sermons on Faith, on Doctrines and Duties" appeared in 1817, after his death. His classical publications and his treatises on important subjects connected with the "Trade, Navigation, Discoveries and Settlements of the Ancients" are exceedingly valuable. He died in 1815.

**VINE, THE**, with its fruit, the grape, as well as wine, is very frequently mentioned in Scripture, as might be expected from its being a native of the East, well known to ancient nations, and highly esteemed. It was one of the most valuable products of Palestine, and of particularly fine quality in some of the districts. Those of Esheol, Sorek, Jibmah, Jazer and Abel were particularly distinguished. The men sent from Kadesh-barnea to explore the Promised Land brought back as a sign of its fertility—what would be sure to be appreciated by men who had been sojourning in the desert—a bunch of grapes from Esheol, near Hebron, which they carried between them on a stick, probably to prevent its being bruised, but no doubt also on account of its great size.

A fruitful vine is often adduced as an emblem of the Hebrew nation, and also the vine that was brought out of Egypt. A period of security and repose is figured by every one sitting under his own vine and fig tree; and prosperity by "Judah, a lion's whelp, binding his foal to the vine and his

ass's colt to the choice vine," both indications of Eastern manners, where sitting in the shade is most pleasant, and tying cattle in similar situations a common practice. Of the vine there were no doubt several varieties, as of all cultivated plants, but that of Sorek is especially distinguished, Gen. xlix. 11; Jer. xi. 21. Rosenmüller supposes this to be the variety called *serik* or *sorik*, which is cultivated in Syria, Arabia and the North of Africa. It appears to be the variety called *kishmish*, or the Persian *bedana*, which signifies "without seed."

The vine must have been cultivated in very early times, as we are informed in Gen. ix. 20 that Noah planted the vine immediately after the deluge, and bread and wine are mentioned in Gen. xiv. 18. In Egypt also we have early notice of it, Gen. xl. 9, 10, as Pharaoh's chief butler saw in a dream a vine with three branches; and the Israelites complain, Num. xx. 5, that Moses and Aaron had brought them out of Egypt into that dry and barren land, where there were neither figs nor vines. The wines of Syria were in early times also highly esteemed; and though the growth of the vine has much decreased, from the diminished population and the Mohammedan rule, yet travellers still speak with enthusiasm of some of the wines, as of the vino d'oro of Lebanon.

**VINE OF SODOM.** In Deut. xxxii. 32 it is said of the enemies of Israel that "their vine is the vine of Sodom." This has been supposed to refer to some natural production, and the so-called apples of Sodom have been generally regarded as the production referred to. What these were is very uncertain, but on this question we need not enter here, for it is wholly improbable that a fruit in shape and appearance resembling an apple should be called a vine. The vine of Sodom, if there was any such plant, must have been a trailing or creeping plant resembling a vine, probably one of the gourd species. But it is more than doubtful whether any natural production is referred to in the passage quoted. It is more probable that, as in Ps. lxxx. 8, 14; Isa. v. 2, 7; Hos. x. 1, the people as such are called a vine; so here the enemies of Israel represented by a vine are described as so depraved and reprobate that they are as the people of Sodom.

**VINEGAR.** See WINE.

**VINES (vinz), RICHARD**, who became exceedingly eminent as a preacher, was born at Bladon, in Leicestershire, and educated in Magdalen College, Cambridge. He was settled at Weddington, in Warwickshire, whence he was removed to St. Clement Danes', London, and he held the vicarage of St. Lawrence Jewry. He served as one of the divines in the Westminster Assembly, and in 1645 he was made master of Pembroke College, Cambridge. This position and his vicarage he resigned in 1650 because of "The Engagement," which he refused to sign. He was one of the great preachers of the age, and a zealous Presbyterian. His works have appeared in the form of sermons, in quarto, some volumes containing twelve, some twenty, some thirty-two; and thus a great amount of theology was published by him. Dr. Jacomb has properly said of him, "He was a burning and a shining light, mighty in the Scriptures, and an interpreter one of a thousand." He died in 1655.

**VINET (vi'net), ALEXANDRE RUDOLPHE**, a distinguished Swiss theologian and

historian of French literature, was born at Lausanne in 1797. He was professor of French literature at the gymnasium of Basel for twenty years, only quitting it in 1837, on his appointment to the professorship of practical theology at the Academy of Lausanne. He had been a minister of the Protestant Church since 1819, and on his settlement at Lausanne took an active part, as member of the government commission, in preparing a new constitution for the Church; but a change in his views induced him in 1840 to secede from the Church, and at the same time to quit the chair of theology. Thenceforth he was known as the earnest but temperate advocate of entire freedom of religious worship, and of the separation of Church and State. Vinet's writings are very numerous, and are partly theological and partly literary. Among the former is his eloquent "Essay on the Separation of Church and State." The year before his death he prepared and got adopted a constitution for the free church of the canton of Vaud. He died May 10, 1847.

**VINEYARD.** See VINE.

**VINTAGE.** See SEASON, VINE.

**VINTON (vin'tun), FRANCIS, D.D.**, was born in 1809, at Providence, Rhode Island. He was educated at West Point, where he distinguished himself very highly. He studied law at Harvard University, after which he went through a course of theology in the General Theological Seminary, New York. From 1830 until 1839 he served as a lieutenant of engineers in the United States army, and he acted as an engineer on several railroads. In 1839 he was ordained to the ministry of the Protestant Episcopal Church. He settled as rector of Grace Church, Brooklyn Heights, in 1847, in which year he declined the bishopric of Indiana. In 1855 he became assistant minister of Trinity Church, New York. He was appointed professor of ecclesiastical polity and law in the Episcopal General Theological Seminary in New York in the year 1869. He is the author of sermons, pamphlets, "Lectures on the Evidences of Christianity" and orations on literary subjects. He died in 1872. His brother, **ALEXANDER H., M.D., D.D.**, has risen to be one of the most eminent men in the ministry of the Protestant Episcopal Church in the United States. His mental power, his great acquirements, his admirably clear mode of expression and luminous style have made him a celebrated preacher. He was settled in Boston, whence he was removed to Holy Trinity Church, Philadelphia, from which he was transferred to St. Mark's Church, in the city of New York. In addition to several volumes of sermons, he has published "Lectures on the Evidences of Christianity." After a very successful ministry in New York he was again settled in Boston as the rector of Emmanuel Church.

**VIOL (vi'ol), Amos vi. 5.** See MUSICAL INSTRUMENTS.

**VIOLET (vi'o-let), Esth. i. 6, margin.** See COLORS.

**VIPER (vi'per), Matt. iii. 7.** See ADDER.

**VIRET (ve-ray'), PETER**, an eminent assistant in the Reformation, was born in 1511, at Orbe, in the canton of Berne, and studied at Paris, where he became acquainted with Farel, whose conditor

he was in propagating the Reformed doctrine in several towns in Switzerland. He accompanied him to Geneva in 1534, and ably assisted him in his efforts for the abolition of popery in that city. Lausanne having embraced the Reformation in 1536, Viret was invited to exercise the ministry there, in which office he gave great satisfaction. From Lausanne he was called to serve the churches of the Reformed at Nîmes and Montpellier; and at length he settled at Lyons, where he fulfilled his minis-

try of inhabitants in a place as a female, so the "daughter" of a land (the people) is said to be a virgin, Isa. xxiii. 12; xlvii. 1; Jer. xviii. 13. The term is also used to indicate moral purity, Rev. xiv. 4.

**VISION.** See PROPHECY.

**VISITATION (viz-it-a'shun)**, an inspection by a higher authority for the government of the

"THE VIRGIN WITH THE CARNATION."

This celebrated Madonna by Correggio is in the Vatican at Rome.

terial duties with zeal and fidelity during the difficulties arising from civil war and pestilence, till he was obliged to quit his station in consequence of the edict of Charles IX. in 1563, prohibiting his subjects of the Reformed religion from having ministers not born in the kingdom. He died in 1571. His principal work is "An Exposition of the Doctrine of the Christian Faith."

**VIRGIN (ver'jin)**, the Virgin Mary. See MARY, 1. In respect to the prophecy that a virgin should conceive, Isa. vii. 14, see IMMANUEL. The Hebrews were in the habit of personifying the

church and the correction of offences. Visitations of parishes and dioceses were instituted in the ancient Church so that all possible care might be taken to have good order kept in all places.

**VISITATION OF THE SICK**, an office used in the house of sick persons. The Romish form includes the seven penitential psalms, versicles, responses, collects, an exhortation to repentance, examination of the sick persons, faith, confession and absolution. The service in the Prayer-Book of the Protestant Episcopal Church is substantially the same, though shortened.

**VISITOR** (viz'it-or), an officer external to a corporate body to whom belongs the right of inquiring into all charges of malversation or breach of rules and of examining into the general efficiency of the society. Thus all the colleges of Oxford have visitors, and they may be called in to examine and decide in matters of dispute or neglect in the government and administration of the different houses.

**VITALIAN** (ve-tahl'yun), **POPE**, a native of Signia, succeeded Eugenius I. in the see of Rome, in 657. In 666 a controversy took place between Vitalian and Maurus, archbishop of Ravenna, who refused to acknowledge the supremacy of the see of Rome. They both appealed to the emperor Constans II., who decreed "that the church of Ravenna should be ever after independent of every other ecclesiastical authority, and especially of that of the patriarch of old Rome." In 668 Vitalian consecrated Theodore of Tarsus as archbishop of Canterbury and sent him to England to establish and enforce unity of discipline in the

PEARL MOSQUE, AGRA, INDIA.

churches of Britain—an object which Theodore effected, though not without much difficulty, at the Council of Hertford, A. D. 673. Vitalian died in 672, and was succeeded by Deodatus II.

**VOET** (vo'et), or **VOETUS** (vo-e'tus), was born in 1593, at Heusden. He became a distinguished Dutch theologian who opposed the Arminians with great vehemence. He wrote with great zeal against Cocceius and the philosopher Descartes, whom he accused of being a Jesuit. He was professor of theology and Hebrew and other Oriental languages at Utrecht. His followers were called Voetians in opposition to the Cocceians, who followed Cocceius. He died in 1677. His works are fallen into oblivion.

**VOIGHT** (voit), **JOHN LEWIS**, was born in 1731, in Mansfield, a town in Prussian Saxony. He received a regular education for the ministry, and for a number of years he was engaged as a teacher in the Orphan House at Halle, in which institution he rose to be inspector. His high attainments led him to be chosen as a missionary to this country. He was ordained, left Prussia for London, whence he sailed to Philadelphia, which

he reached in April, 1764. Germantown, Providence and New Hanover were the spheres of his labors, but eventually he was settled at Germantown, and the church at Barren Hill was annexed to his charge. He continued in this field until the close of 1765, when he removed to the Trappe Church, at the same time serving the church at New Hanover. In a short time he assumed the duties of the church at Vincent (the modern name of this place being Phoenixville), and he labored in this region to the close of his life. He was greatly esteemed for his simplicity of manners, his great piety and earnestness in his work, and among his brethren he was recognized as a valuable coadjutor in building up the Lutheran Church in Eastern Pennsylvania. He died in 1800, in the seventieth year of his age.

**VOLANUS** (vo-la'nus), **ANDREAS**, a Polish Protestant who acquired great celebrity by his controversy with the Jesuits, was born in 1530, in the province of Posen, and was pastor of the Reformed church at Vilna, where he died in 1610.

He wrote against the Socinians and the Lutherans, but he failed in his efforts to bring about a union between the Augustan and the Helvetian confessions in Poland.

**VOLTAIRE** (vol-tayr'), **FRANCOIS MARIE AROUET DE**, the celebrated French deist, was born at Chatenay, February 20, 1694. He was educated by the Jesuits, and in early life gave indications of his future celebrity as an atheistical champion. He was put to the law, but preferred literature, and produced a considerable number of dramas, miscellaneous writings and poems. His life and talents were spent in assailing the Christian religion and all its representatives with boundless virulence, all the while blind to the holy light of it, seeing nothing but books, institutions and official persons, having no deep, original word to say against them, but only repeating and popularizing what had been said for generations past. All Voltaire did or could do, being what he was, was to deny and to destroy. To affirm and build up is the task of men that see and love truth for its own sake, and in its service forget themselves. He was warmly patronized for a time by Frederick the Great of Prussia, but

the temporary friendship resulted in a quarrel of equal vehemence. The end of Voltaire's career was remarkable and singularly appropriate. At the age of eighty-four, yielding to the importunities of his niece, who grew sick of the dull monotony of Ferney, where he had been residing, he once more visited Paris, and his whole journey and his reception there was one continuous splendid triumph. He was everywhere attended by crowds, occupied the director's seat at the academy, was crowned at the theatre, and then, exhausted by the excitement and loss of sleep, took opiates, and after great sufferings fell into a lethargy, and so died, May 30, 1778. The curé of St. Sulpice refused the rites of burial, and the body of the "great" mocker was interred by night in the abbey of Sullyères, whence it was removed at the revolution and deposited in the Pantheon. The works of Voltaire, in the most complete edition, fill seventy volumes, and range over almost all subjects.

**VOLUME.** See MANUSCRIPTS, WRITING.

**VOMERES** (vo'me-res). The hot bars were so called upon which, in the olden time, persons walked, who thereby undertook to prove their innocence of such charges as were made against them.

**VOPHSI** (vof'se), father of the spy chosen from Naphtali, Num. xiii. 14.

**VORST**, **CONRAD**, an eminent German theologian, was born of a Roman Catholic family at Cologne, in 1569. With his father and the rest of the family he became a Protestant, studied at Dusseldorf and Cologne, and later at Herborn. He graduated as doctor of divinity at Heidelberg in 1594, visited Switzerland and gave lectures at Geneva, and in 1596 accepted the post of professor at a new theological college at Steinfurt. He acquired a wide reputation, but suspicions of his orthodoxy were spread, and he had to defend himself before the theological faculty of Heidelberg. In 1610 he published his "Tractatus Theologicus de Deo," which at once brought a storm of persecution on him as an adherent of Arminius. He was the same year called to succeed Arminius as professor of theology at Leyden; and notwithstanding the bitter opposition of the Gomarist party, he accepted the chair. But he was beaten. The book was intolerable to the Calvinists; it was denounced even by James I. of England, and by his order burned at London, Oxford and Cambridge. Vorst had to appear before the states, then to flee the country, and after the Synod of Dort to hide himself and his family, and in 1622 he took refuge in Holstein. But he died there the same year, and was buried at Friedrichstadt.

**VOSSIUS** (vos'she-us). The name of two eminent Dutch theologians. 1. **GERARD**, was born near Heidelberg, in 1577, and was educated at Dort and the University of Leyden. He became director of the College of Dort, and in 1614 director of the theological college at Leyden. The latter office he had to resign in consequence of suspicions arising as to his theological views. He was the warm friend of Grotius, and had published a history of Pelagianism, and was therefore supposed to favor the doctrinal system of Arminius, which was condemned by the Synod of Dort. Vossius accepted the chair of eloquence and chronology, and was soon conditionally restored to his

theological rectorship. He was twice invited to England, and through the influence of Laud was made prebendary of Canterbury. On a visit to that country in 1629 he was created doctor of laws at Oxford. In 1633 he was called to the chair of history in the gymnasium of Amsterdam, and there spent the rest of his days. His most important writings are "Aristarchus" and a treatise on grammar. The manner of his death was singular. He fell from a ladder in his library, and was found dead, 1649.

2. **ISAAC**, son of the preceding, was born at Leyden, in 1618, and possessing great natural talents, very early acquired a high reputation among the learned. He went to Sweden in 1648, and spent ten years at the court of Queen Christiana. He returned to his own country, and in 1670 he went to England, and obtained from Charles II. a canonry of Windsor, and the degree of doctor of laws from the University of Oxford. He died in 1688. His works are numerous and erudite. He was rude in his manners and skeptical in his religious notions, but so credulous in other matters that Charles II. said, "He is a strange man for a divine, for there is nothing which he refuses to believe except the Bible."

**VOTIVE TABLETS** (vo'tiv tab'letz), an offering made to a church in thanksgiving for mercies received, such as a model of a ship in case of preservation from shipwreck.

**VOW** is represented by a Hebrew word which signifies to "promise," and may therefore be defined as a religious undertaking, either, 1. Positive, to do or perform; 2. Or negative, to abstain from doing or performing a certain thing. The morality of vows we shall not here discuss, but merely remark that vows were quite in place in a system of religion which so largely consisted of doing or not doing certain outward acts with a view of pleasing Jehovah and gaining his favor. The Israelite, who had been taught by performances of daily recurrence to consider particular ceremonies as essential to his possessing the divine favor, may easily have been led to the conviction, which existed probably in the primitive ages of the world, that voluntary oblations and self-imposed sacrifices had a special value in the sight of God. And when once this conviction had led to corresponding practice, it could not be otherwise than of the highest consequence that these sacred promises, which in sanctity differed little from oaths, should be religiously and scrupulously observed. Before a vow is taken there may be strong reasons why it should not be made; but when it is once assumed, a new obligation is contracted which has the greater force because of its voluntary nature; a new element is introduced which strongly requires the observance of the vow, if the bonds of morality are not to be seriously relaxed.

Vows, which rest on a human view of religious obligations, assuming as they do that a kind of recompense is to be made to God for good enjoyed, or consideration offered for good desiderated, or a gratuity presented to buy off an impending or threatened ill, are found in existence in the antiquities of all nations, and present themselves in the earliest Biblical periods, Gen. xxviii. 20; Jud. xi. 30; 1 Sam. i. 11; 2 Sam. xv. 8. With great propriety, the performance of these voluntary undertakings was accounted a highly religious duty,

Jud. xi. 35; Eccles. v. 4, 5. The words of the last vow are too emphatic, and in the present day too important, not to be cited: "Better is it that thou shouldest not vow, than that thou shouldest vow and not pay," compare Ps. lxxvi. 13; lxxvi. 11; cxvi. 18. The views which guided the Mosaic legislation were not dissimilar to those just expounded. Like a wise lawgiver, Moses, in this and in other particulars, did not attempt to sunder the line of continuity between the past and the present. He found vows in practice; he aimed to regulate what it would have been folly to try to root out, Deut. xxiii. 21, 22. The words in the 22d verse are clearly in agreement with our remarks: "If thou shalt forbear to vow, it shall be no sin in thee."

**VULGATE** (vul'gate), the Latin version of the Bible authorized by the Romish Church. A combination of the old Italic, which translates

Latin usage, and he only corrected when the former translation misrepresented the sense. Thus he dealt with the Gospels, and next he began with the Psalter, at first following the common text of the Septuagint, but afterward that in the *Hexapla* of Origen. He then set himself to revise all the books of the Old Testament, following the *Hexapla* text, and he went through Job, the writings of Solomon and the Chronicles.

These efforts led on to his undertaking the gigantic work of translating the entire Old Testament from the Hebrew. He began with the books of Kings, and then in succession he issued the prophets, the writings of Solomon, Job, the Psalms, Ezra, Nehemiah, Chronicles, the Pentateuch, Joshua, Judges, Ruth and Esther. In the books of Esther, Jeremiah and Daniel he retained the apocryphal additions, though he did not himself approve of them. In this great work he was engaged for twenty years, from A. D. 385 until 405.

MODERN ORIENTAL PALACE AT ALLAHABAD, INDIA.

literally from the Septuagint, and the amended version of Jerome forms the Vulgate of the Council of Trent. The last authentic edition of the Vulgate was published in 1592 by Clement VIII. The Vulgate has exerted the same influence on Latin or Western Christendom which the Septuagint did on the Eastern Church.

In consequence of the ignorance, the carelessness and unskillful emendation, the old Italic Version had become so corrupted that it became generally and strongly felt that something should be done to rescue the Latin churches from the evils to which they were exposed, and to secure for their use a more correct version of the holy Scriptures. At the request of the Romish bishop Damasus, but with considerable hesitancy, Jerome was induced to undertake the work. He saw how many thoughtless would be likely to assail his work, and he began with caution. He selected Greek codices which did not differ much from the

In such places as he found the Septuagint correct he adhered to the rendering of that version, but generally he translated directly from the Hebrew.

Though he prosecuted his work under the leading authorities in the Church, his labors were not viewed with cordiality by the Christian community. He loudly complained of this, but after his death the prejudices with which he had been viewed began to disappear; and in the time of Gregory the Great, about the end of the sixth century, it was used along with the old version, which it gradually superseded, and from the middle of the seventh century it may be recognized as the authorized version of the Western Church. It has received its name *Vulgate* from the fact that it was the version in "vulgar" or common use in Western Christendom.

**VULTURE.** See EAGLE, GLEDE, KITE.

## W.

**WADDEL** (wad'del), JAMES, D.D., was born in 1739, at Newry, in the county of Down, Ireland. His parents emigrated to this country and settled at White Clay Creek, in the southeastern part of Pennsylvania. He was educated in the famous school of Dr. Finley, at Nottingham, and here he came under the deepest religious impressions. He attained to such proficiency in classics that Dr. Finley took him as an assistant for a time; and he also acted in the same capacity in the academy of Dr. Robert Smith, at Pequea, in Lancaster county, Pennsylvania. Removing to Virginia, he heard the eminent preacher Samuel Davies, and under his influence he turned his attention from medicine to theology, and in 1761 he was licensed to preach by the Old Presbytery of Hanover. His first charge was formed by the united churches of Lancaster and Northumber-

magnificent in his wonderful, flexible and yet powerful voice, impassioned in his temperament and yet thoroughly master of all his powers. James Waddel, "the blind preacher," was one of the most eloquent of men. He caused all his manuscripts to be destroyed. He died in 1805, leaving a name behind him that has been precious in the Church and in the State of which he was one of the brightest ornaments.

**WADDEL, MOSES, D.D.**, was born in 1770, in Iredell county, North Carolina. His parents had emigrated from Belfast, in Ireland, and after a short stay in Charleston, they removed to the South Yadkin River, before the birth of their famous son. He was tender and feeble in his early years, but he was able to attend an academy opened in the neighborhood by the Rev. James

**WADDELL, HOPE MASTERTON**, was born in the county of Monaghan, in the province of Ulster, Ireland. He was educated for the ministry of the Secession branch of the Irish Presbyterian Church, and he was among the first of the Presbyterian ministers of the Irish Church to recognize the claims of the heathen. He offered himself to the Scottish Missionary Society; and being accepted, he settled in Jamaica, where he labored with great zeal among the slave population. Here he had great success; and being eventually persuaded that the claims of the African continent were paramount to those of any West Indian island, he removed to Old Calabar, in Upper Guinea, where he labored to the close of his life. His reports from the mission-field were fraught with great interest, and did much to awaken a missionary spirit. His largest work, which was published in 1863, was entitled "A Review of Missionary Work and Adventures, from 1829 until 1858." It is filled with much that is interesting, but the matter is loosely arranged.

**WADDING** (wad'ding), LUKE, was born in 1588, at Waterford, in Ireland. He became celebrated in the Order of St. Francis as founder of the College of St. Isidore, in 1625, and in 1630 he was made procurator of the order. In 1645 he rose to be vice-commissary; and having refused a cardinal's hat, he died in 1657, leaving an immense number of works behind him, most of them bearing on the incidents and details which were of note among the members of his order.

**WADDINGTON** (wad'ding-tun), GEORGE, D.D., was born in 1793, and educated at Cambridge, in Trinity College, where he became a Fellow. In 1840 he was made dean of Dublin. He was the author of a work on Greece, of "Lectures on Education," but his most important contribution to literature was the well-known "History of the Church from the Earliest Ages to the Reformation." It was published in 1833; and in 1841 he published in three volumes "The History of the Reformation on the Continent." He died in 1869.

**WADSWORTH** (wadz'wuth), BENJAMIN, was born in 1669, at Milton, Massachusetts. He graduated in Harvard College in 1690, and then entered on the study of theology. In 1693 he was invited to preach once a month in the First Church, in Boston, and in 1696 he was inducted as colleague in this church with the Rev. Messrs. Allen and Baily. In 1725 he was chosen president of Harvard, a position which he accepted, but he often preached in his former charge. His health declined after he entered on his collegiate duties, but by great care he was able to attend with regularity to all the weighty engagements of his charge; and after twelve years of a successful presidency, he died in 1737, in the sixty-eighth year of his age. His publications were in the form of sermons, published separately, and as many as forty of these were printed from year to year.

**WADSWORTH, THOMAS**, who was well known in his day as an English nonconformist divine, was born in 1630. He was minister of Newington-Batts and of St. Lawrence, Pountney. His chief works are—"Faith's Triumph over the

ANCIENT SYRIAN WARRIOR AND HIS ARMOR-BEARER.—See WAR.

land, in Virginia; but owing to continued attacks of remittent fever, he resigned his charge and removed to the valley of the Shenandoah in the year 1776. He next preached to the churches at Tinkling Spring and Staunton, and in 1785 he removed to an estate which he had purchased on the east of the Blue Ridge; and here he preached at several places where the gospel was not enjoyed by the growing population. Shortly after his removal to this place he began to suffer from cataract, and eventually he lost his sight altogether. His preaching became all the more impressive from the circumstances in which he was thus placed; and as his faculties continued vigorous, he was enabled to enter fully into theological discussions and to discharge the functions appertaining to ministerial life. Few men have ever possessed a more wonderful power than this blind preacher did when he occupied the pulpit. He was evangelical in matter, lucid in style, correct in diction, rhetorical in the form of his sentences,

Hall, and after encountering the difficulties connected with the Revolutionary war, he eventually succeeded in reaching Hampden-Sidney in 1790, where he remained only about nine months; and he was licensed to preach by the Hanover Presbytery in May, 1792. He taught for several years in Columbia county, Georgia, whence he removed to Willington, near Vienna; and in 1819 he accepted the presidency of the University of Georgia. For ten years he displayed great vigor in this position, and he raised the institution to great eminence. His preceptorial life continued for forty-five years; but he continued to preach after he had ceased the labors of an instructor. He died in 1840, leaving behind him a reputation that had grown brighter and brighter from his youth. He was a close student, and he enjoyed the honor of preparing upward of four thousand pupils, of whom many entered the ministry, and of the others many rose to the chief places of civil life.

Fears of Death, 1670;" the "Immortality of the Soul Explained and Proved by Scripture and Reason, 1670;" and "Sermons on 1 Pet. iii. 18-20;" together with a few short treatises which were printed after his death. His work on the "Immortality of the Soul" is a most admirable performance. He died in 1676.

**WAFER** (wa'fer), Ex. xvi. 31; Lev. ii. 4; Num. vi. 15, 19, a thin cake. See BREAD.

**WAFER**. The bread which is used in the eucharist by Romanists and Lutheran Protestants is so called. It is made in the form of round thin cakes resembling large wafers. In the primitive Church the bread used at the eucharist was leavened, and it was taken from the oblations of common bread and wine which the faithful were accustomed to make at every service. About the twelfth century, however, when such offerings began to decline in frequency, the priests began to provide for the service of the Lord's Supper; and Cardinal Bona holds that a change was then made from leavened to unleavened bread, and that a change also took place in the form, from a loaf that might be broken to that of a thin wafer formed like a *denarius*, or penny, to represent the coin for which our Lord was betrayed. This wafer was not leavened, and it is still used in the Romish Church as the established form of eucharistic bread.

**WAGES**. The wages first mentioned were paid in kind, or by the gift of a daughter in marriage, Gen. xxix. 15-20; xxx. 28; xxxi. 7, 8, 41. Money-wages occur in the New Testament, Matt. xx. 1-14. Strict injunctions were given by the Mosaic law as to the punctual payment of wages, Lev. xix. 13; Deut. xxiv. 15. And there were judgments threatened against those that disregarded these commands, Jer. xxii. 13; Mal. iii. 5; compare Luke x. 7; James v. 4. See HIRELING.

**WAGON** (wag'un). This word does not often occur in our version. It is the rendering in several passages, Gen. xlv. 19, 21, 27; Num. vii. 3, 7, 8, of the word elsewhere generally translated "cart." This was for peaceful purposes. But there is one place, Ezek. xxiii. 24, where it represents another Hebrew word, and where it must be understood to denote the war-chariot. See CART.

**WAGSTAFFE** (wag'staf), THOMAS, a learned nonjuring divine, was born in Warwickshire in 1645, and educated at New Inn, Oxford. He was ordained in 1669, and was instituted to the rectory of Martins-Thorpe, in the county of Rutland. In 1684 he was presented by Charles II. to the chancellorship of the cathedral of Lichfield, together with the prebendary of Alderwas, in the same cathedral. At the Revolution, being deprived of his preferments for not taking the new oaths, he practiced medicine for several years in London. In 1693 he was consecrated bishop by the bishops of Norwich, Ely and Peterborough, at the latter's lodging at Southgate. He died in 1712. He published few sermons, but wrote many able pieces in defence of the constitution both in Church and State, according to the tenets of the nonjurors.

**WAHAB** (wa'hab), ABDEL, the founder of the sect of Wahabees, was a Mohammedan sheikh of Arabia. He studied divinity at Bosrah, made pilgrimages to Mecca and Medina, was a strict observer of religious ordinances, and conceived

the idea of reforming the abuses of Mohammedanism. Marrying the daughter of Ibn Saud, the latter became his disciple, and aided in the propagation of the reformed faith, which differed little from pure deism. It spread widely and rapidly among the Arabs; and the Wahabites, a warlike and zealous sect, have made frequent incursions through the Turkish provinces. He died in 1787.

**WAIL, WAILING**. See MOURNING.

**WAINWRIGHT** (wane'rite), JONATHAN M., D.D., was born in 1792, at Liverpool, in England. His father and mother, who were English, had settled in this country and returned on a visit to their native land, and thus the future divine was born in Liverpool. He was educated at Ruthin, in Wales, at Sandwich Academy, Massachusetts, and at Harvard, where he graduated in 1812. In 1816 he was ordained a deacon in the Protestant Episcopal Church. Christ Church,

organizations. In addition to the matter of the controversy already alluded to, his publications are chiefly sermons which were published at intervals. These, a work on the Holy Land and two or three biographical memoirs were all that he left behind him, as his life was a continued devotion to parochial care.

**WAKE**. 1. A feast held on the eve or on the anniversary of the dedication of a church. 2. A funeral feast. Wakes were usually observed with feasting and rural sports, and often they did not tend to promote godliness. When churches were dedicated, they received the name of some saint, and the feast of the saint thus became the festival of the church. Gregory the Great advised that Christian festivals should be introduced in the place of the heathen Roman festivals, and that booths of branches should be erected around the churches, in which the people might be merry, and yet with innocence. Feasting came to be abused

ORIENTAL CHIEF ADDRESSING HIS MEN.—See WAR.

Hartford, Connecticut, was his first charge, and here he was instituted rector in 1818. Next year he became an assistant minister of Trinity Church, New York, as successor to the Rev. T. C. Brownell. Here he remained until 1821, when he accepted the rectorship of Grace Church, New York; and in this charge he spent thirteen years of his active life. In 1834 he was induced to accept the rectorship of Trinity Church, in Boston, a position which in three years' time he resigned to return to Trinity Church, New York, again. At this time he took part in an interesting controversy with the Rev. Dr. Potts, of New York, on the subject of episcopacy, and in 1852 he attended the celebration in Westminster Abbey at the close of the third jubilee of the venerable Society for the Propagation of the Gospel in Foreign Parts. In the same year he was chosen provisional bishop of the diocese of New York, to which office he was consecrated on the 9th day of November. His episcopate was brief, as he was attacked by fever, and died in September, 1854, greatly regretted. He was prominent in the Church as a trustee or manager or director of most of the Episcopal

even to intemperance, and consequently in England many of these "wakes" were discontinued, especially in the East and West; but even yet there are remnants of them in the northern counties among the villagers and the country people, who assemble for amusement and rural games.

**WAKE, WILLIAM**, an eminent English prelate, was born in 1657, at Blandford, in Dorsetshire, and educated at Christ Church, Oxford. He was successively preacher to the Society of Gray's Inn, chaplain-in-ordinary to King William and Queen Mary, dean of Exeter, bishop of Lincoln and archbishop of Canterbury. He was distinguished as a theological and controversial writer, and was the author of "An English Version of the Genuine Epistles of the Apostolic Fathers." He died in 1737.

**WAKEFIELD** (wake'feeld), GILBERT, an eminent scholar and critic, was born at Nottingham, in 1756, and educated at Jesus College, Cambridge. On entering into orders, he held a curacy at Stockport, in Cheshire, and next at Liverpool;

but he grew dissatisfied with the doctrines of the Church of England, and left it to become classical teacher in the academy at Warrington. In 1790 he removed to the dissenting college at Hackney, his connection with which he ended in about a year. Soon after this he published a pamphlet against public worship which startled many of his most ardent admirers, and was answered chiefly by Dissenters. He wrote some pamphlets against the government, of which no notice was taken, until his letter to the bishop of Llandaff appeared, when the attorney-general instituted a prosecution against him and the publisher. He was sentenced to be imprisoned two years in Dorchester jail, was liberated in May, 1801, but died of a fever in September following. The principal of his works are a "Translation of the New Testament" and an "Inquiry into the Opinions of the Christian Writers of the Three First Centuries concerning the Person of Jesus Christ."

ANCIENT WARFARE.—See WAR.

**WAKEFIELD, ROBERT**, a learned and eminent divine, was born in the North of England, and was educated at the University of Cambridge, whence he went abroad to study the Oriental languages. He made considerable progress in Hebrew, Chaldee and Syriac, and taught those languages at Paris and in Germany. In 1519 he was made Hebrew professor at Louvain; but in a few months he returned to England and became chaplain to Dr. Pace, then dean of St. Paul's. When the controversy relating to Henry VIII's divorce commenced, Wakefield is said to have been of the queen's party, and thought the divorce unjustifiable; but he was afterward induced to be of the king's opinion, and wrote a work in favor of the divorce. In 1530 the king sent him to Oxford and made him public professor of Hebrew. In 1532 he was made a canon of Wolsey's College. He died in 1537.

**WAKEMAN** (wake'man), JOHN, was the last abbot of Tewkesbury and chaplain to King Henry VIII. He was made the first bishop of

the see of Gloucester, being appointed on the 3d of September, 1541. This was one of the six sees founded by Henry VIII. out of the confiscations of the religious houses, and they are usually called the sees of the "new foundation." Wakeman was eminent for his learning. He was one of the men appointed to inspect and prepare the translation of the New Testament, the Revelation of St. John being the portion assigned to him. He was succeeded in the see by the unfortunate Hooper, who was consecrated in 1550 by Archbishop Crammer and the bishops of London and Rochester.

**WALÆUS** (wa-le'us), ANTHONY, an eminent Protestant divine, was born in 1573, at Ghent. He officiated as pastor at different places, declared in favor of the counter-remonstrants, and was one of those who drew up the canons of the Synod of Dort. He became afterward professor of divinity at Leyden, and died in 1639. The greatest part

of the Flemish translation of the Bible, made by order of the States, and which first appeared in 1637, was executed by him, and almost the whole of the New Testament.

**WALCHER** (wal'cher) is the name of a bishop of Durham in the time of William the Conqueror. The bishop and clergy of Durham had to flee to Lindisfarne island to escape the vengeance of William, but in time the clergy returned to Durham, and at the hands of William they received Walcher as their bishop. He was of a noble family in Lorraine, and he purchased the earldom of Northumberland from William, and thus the see became a palatinate, the bishop being a civil prince as well as an ecclesiastical ruler. His double honors brought him more trouble than they were worth; for the people, being accustomed to look on their bishop with veneration, became disgusted when they saw him carrying out legal severities in civil matters. At length they became so enraged that on the 14th of May, 1080, they rushed suddenly upon him at Gateshead and mur-

dered him while engaged in the discharge of his civil jurisdiction.

**WALDENSES** (wal'den-sez). Of the various religious bodies that have been known as opponents of the dominant power of the clergy since the twelfth century, the Waldenses are the most celebrated, not only on account of the purity of their moral character and their freedom from errors, but for their sufferings for their faith. Many disputes and endless questions have been raised about the connection between the Vaudois of Piedmont and the ancient Waldenses of Southern France—about the origin of the name, its meaning also, and about the antiquity of the people to whom it has been applied. Some contend that as a denomination, sect or Church the Waldenses date from the time and originated in the labors of Peter Waldo of Lyons, who about the year 1160 employed a priest named Stephanus de

Evisa to translate the Gospels and other portions of the Scriptures from the Latin into French; and on perceiving the teaching of the word of God to be so exceedingly different from that of the Romish Church, he abandoned his mercantile pursuits, surrounded himself with persons who had adopted his views, and in 1180 commenced to labor as a public teacher. There can be no doubt, however, that the Waldenses did not derive the views of divine truth which they held from Peter Waldo. Reinerius Waldo, the inquisitor, admits that the Waldenses flourished five hundred years before Waldo. Robinson holds that the word Waldenses signifies "inhabitants of the valleys," and that it applies to those who, because they resisted the oppressions which they had to bear from the tyranny of the growing power of Rome, were obliged to flee for asylum to the valleys of the Alps and the Pyrenees. Gilles, Perrin, Leger, Sir Samuel Morland and others hold the same view; and Dr. Allix, in his "History of the Churches of Piedmont," says "that for three hundred years or more the bishop of Rome attempted to subju-

gate the church of Milan under his jurisdiction; and at last the interest of Rome grew too potent for the church of Milan, planted by one of the disciples, inasmuch that the bishop of the people, rather than own their jurisdiction, retired to the valleys of Lucerne and Angrogne, and thence were called 'Vallenses,' 'Wallenses,' or 'the people in the valleys.'"

They claim for themselves a high antiquity. It has even been maintained that their Church was founded by the apostle Paul, and that they alone

Turin, who took the side of the Iconoclasts in the time of Charlemagne, but there is no historical evidence of any such association; and his opposition to images was the one point that Claudius had in common with the Waldenses. All these accounts are but partial statements of what no doubt was the fact—that there were a people in the valleys of the Alps who held the primitive forms of doctrine and Church order centuries before the time of Waldo, and that they only received an impulse from him and from his fol-

tain fastnesses they held to that faith, while in Italy and elsewhere the work of transition was going on. In Rome, in the plains of France, in Spain and elsewhere doctrines were added, superstition advanced apace, but our fathers, with a death-grasp, held to primitive simplicity and purity. Tyranny drove adherents to the mountains from the plains; and thus these "witness-bearers" amid the snows and rocky fastnesses of the Alps are the descendants and representatives of the people who in apostolic times, in Northern

ANCIENT WARFARE.—See WAR.

have preserved primitive faith and discipline through the corruptions of the Dark and Middle Ages up to the present time. Another account of their origin is that when Constantine established and endowed the Church under Sylvester, bishop of Rome, the inhabitants of these valleys, headed by one Leon, from whom they were called Leonists, rejected the unholy alliance, and kept themselves aloof from the rest of the Latin communion, remaining unknown in their obscure valleys and mountain-passes until attention was drawn to them in the twelfth century. They have, moreover, been associated with Claudius, bishop of

lower. It is well known that mountaineers are eminent for the tenacity with which they cling to opinions and customs; they have a strong regard for the faith and manners of their ancestors. The Waldenses are particularly eminent in this respect. They point to Christianity as it is portrayed in the Scriptures and as it is professed and held by themselves, and they point to the doctrines and the complicated ritual which grew up in the Romish communion, and which became what the world now sees in the lapse of ages. They say Christianity as it is exhibited in the Scriptures was received by our fathers, and in their moun-

Italy and Southern France, were the first recipients of the Christian faith.

As to the name, it may be observed that in the Provençal language "val" was a valley, which in oblique cases assumed the form of "van"—in the plural "vaux," where it would be impossible for the "d" to get in. As a matter of fact, there was a tribe of Vallenses in the Graian Alps, but they were called by the French Les Vallais. The name of Vaudois or Waldenses must have been derived from the fact that the people of the valleys had sympathized in doctrine with a man so remarkable as Waldo was, or possibly, as in the

case of the Pays de Vand, in Switzerland, from the forest or woodland character of their country. Reinerius derives the name from Waldo, and Beza was the first to trace it to the "vallées" in which they reside.

Peter Valdo, or Waldo, was a merchant of Lyons. It has been thought that he was called Valdo because he was born in Valdum, in the marquisate of Lyons; or again, from the district of Walden; but probably Waldo was his real surname. He had led for some time an ordinary secular life, when the sudden death of a companion at a meeting for devotion made a powerful impression upon him, and induced him to consecrate himself to the cause of religion. He gave up his large property to the relief of the poor,

the duties of the clergy. When they further pressed for permission, they were coldly referred to their own clergy; but had the pope acted otherwise, Waldo might have anticipated St. Francis and founded an order of preaching itinerants within the Church. Still, as doctrine was then recognized, and as the hierarchy ruled, the proceedings of such preachers would soon have been brought to an end. The archbishop of Lyons now formally prohibited their preaching; but Waldo replied that they ought to obey God rather than man, and he continued to act as before. The charge against them was that, being laymen, they continued to preach; but their reply was that the pope had not forbidden them. Under the following pope, Lucius III.—a pontiff, it may be ob-

having also a right faith in all the things of God and the articles of the creed, though they only reviled the Church of Rome and the clergy. The errors ascribed to them afterward range themselves under three heads—those against Rome and the clergy, those against the sacraments and the saints, and those against ecclesiastical customs.

They threw off the authority of the pope and the Romish bishops generally. Those of Italy, indeed, allowed that Rome was a Church, but corrupt; those of France maintained that she had apostatized, and was Babylon the harlot. They asserted the right of laymen to preach. They refused to pay tithes, and they protested against the temporal power of the clergy. They abolished much of the ritual in baptism. They de-

ANCIENT WARFARE—SHOWING THE USE OF THE BATTLE-AXE, ETC.—See WAR; also, see ARMS, ARMOR.

chose the life of poverty and spent his time in instructing others. He hired a poor scholar to translate into the vernacular some of the books of Scripture and approved sentences from the Fathers, and as his followers increased he sent chosen disciples out, two by two, to preach in the neighborhood, to the great indignation of the archbishop and clergy of Lyons. They were to go in poverty after the example of the apostles, and to work with their own hands for their support. Ordinarily they were known as the poor men of Lyons, but they were often called "Sabatati," from the large sabots or wooden shoes which they wore. Immense opposition was raised against this lay-preaching; but two of them appeared at Rome in 1179 and petitioned that they might be allowed to preach. Alexander III. received them in the Lateran Council; he approved of their poverty, but condemned them for their interference with

served, of no mark—they were, in 1183, anathematized, together with others denounced as heretics in Southern France. This widened the breach, and they continued to preach with earnestness and vigor, so that their followers were widely spread through France and Lombardy. By the admission of their opponents, they were of pure life, free from the stain of formal heresy; and thus they won many who were dissatisfied with the existing state of corruption in high places, and yet shrank from the heresies which infected others who had been accused of Manichean errors. Hence they speedily became numerous, and produced great alarm in the Church; and yet Reinerius, a Dominican inquisitor who had much to do with them, says that while other sects filled their hearers with horror by their foul blasphemies, the Leonists—men of Lyons—had a great show of piety, so as to live uprightly in the sight of all;

and that in the eucharist any transubstantiation took place in the hands of the priest. They deprecated extreme unction, and they held that the apostles were the only saints who ought to be held in honor, but they denied that they ought to be invoked. They opposed all alms, masses, fasts and prayers for the faithful departed as useless. They denied purgatory, and they maintained that the dead go at once to heaven or hell. They opposed the use of crosses, images and ornaments in churches; the ceremonies of Candlemas and Palm-Sunday; all benedictions, dedications, etc.—in fact, all traditions and ecclesiastical customs not expressly contained in Scripture. They aimed at great simplicity and absence of luxury; and that they were favorably distinguished for high moral character appears in their celebrated "Noble Lesson," a poem in rhyming verse written in the Provençal dialect. It contains a Biblical history

both of the Old and New Testaments, interspersed with moral precepts, and it ends with an attack upon the errors of papacy, persecutions, masses, prayers for the dead, simony and papal absolution. As to its date, A. D. 1100 appears in it; but it is probable that this is somewhat vague. In the library of Cambridge University there is a copy which has this date; but there are marks of erasure, and probably it is not older than A. D. 1400.

Between A. D. 1307 and 1323, out of six hundred and seven sentences to various punishments passed by the Inquisition in France upon heretics, ninety-two were upon the Waldenses. They grad-

but here they paved the way for the Reformation. But it was in Italy, under their modernized name of the Vaudois, that they made themselves most famous by their celebrated constancy, their fierce resistance in arms to persecution and their continuance as a distinct body to the present day. Severe as were the sufferings of those who lived on the French or western side of the Alps, they did not fare so cruelly as their brethren who were subject to the duke of Savoy. They occupied the district between Mount Viso and Mount Genevre, a tract consisting of secluded valleys and of towering crags upon which the persecuted often found shelter from their pursuers. It was perhaps for-

by a body of troops that had suffered defeat from the Italian Vaudois, who thus avenged themselves in their retreat. As has already been stated, the sufferings of the French Vaudois after the revocation of the Edict of Nantes were of the most awful character; but since the Revolution, and especially in modern times, their circumstances have changed, and at present each district has its pastor, its house of residence, and its place of worship.

The history of the Italian Vaudois is much more complicated, and comprehends a series of fierce invasions from without, of gallant defenses followed by the shameful defeat and retreat of the

ANCIENT WARFARE—SHOWING "LYERS IN WAIT" (OR AN AMBUSCADE).—See WAR; also, engravings on pages 572 and 650.

ually declined in that country, so that at the present time only a remnant is found on the western slopes of the Alps, in Dauphiné. The rapines, murders, burning and devastations which this simple, inoffensive people endured from the soldiery of Louis XIV. after the revocation of the Edict of Nantes are among the most memorable incidents in history—memorable as an instance of what ferocious bigotry and intolerance can do in urging on a hard-hearted and relentless band of murderers, and of the endurance of an oppressed and suffering people who count the faith of the Christian and the hope which the gospel inspires more worthy than life. As they suffered and declined in France they extended themselves into Lower Germany, especially Brandenburg, Pomerania and Mecklenburg, where many were burnt;

fortunate that they lived under two governments, for there were times when the French kings were engaged with more important undertakings than persecuting them; but the dukes of Savoy were ever ready to assail those on the eastern side. Often when attacked on one side of the mountains they were able to flee to the other; but sometimes an attack was made on both sides at once, and then their condition was truly miserable. It is said by Gilly that they had to pass through the horrors of no fewer than thirty-seven persecutions from their own dukes, in which neither age nor sex was spared. The French Vaudois offered no resistance to their persecutors as the Italians did; but when flight was impossible, they opposed patience and long-suffering to violence. In 1433 the people of Val Louise were entirely exterminated

assailants, and varied by the records of almost incredible persecutions. Many papal bulls were fulminated at them without inflicting injury; but the establishment of the Inquisition at Turin brought the danger nearer to them. They were accused by Pope John XXII, in 1332, of having murdered William, the rector of the parish of Engravia, in the diocese of Turin. In 1403 their district was entered and an attempt was made at their conversion. At length a crusade, in 1477, was preached against the Vaudois by Innocent VIII. Plenary indulgences were granted to all who should join in it, with liberty to appropriate whatever property of the heretics they might seize. Eighteen thousand regular troops and six thousand volunteers were poured into the country to plunder and lay waste; but Philip VII., the

duke of Savoy, interfered on behalf of his subjects, and for once protected them.

In 1556 they sent a confession of faith to the Reformers of Germany containing the following articles:

1. They expressed their belief in the Old and New Testaments and in the Apostles' Creed.

2. They acknowledged the holy sacraments instituted by Christ according to the true meaning of their institution.

3. They received the creeds sanctioned by the

representations at Turin cheeked persecution for a considerable time. Consequently, in 1655 the Vaudois identified themselves with the Protestant bodies and accepted the Confession of Augsburg.

One of the most bloody massacres which they ever endured was perpetrated after this time by means of treachery. The marquis de Pianesse assailed them in the valley of Angrogna with fifteen thousand men, but he was twice repulsed. He proposed peace, stipulating that for the sake of order a regiment of infantry and some cavalry

afford a fund for continued use, but unfortunately it was lost through the influences of political events.

In 1685, Louis XIV. and Amadeus II., the duke of Savoy, united and made a vigorous effort to exterminate them, and at first the assailants on both sides of the mountains were repulsed, but in the end the Vaudois had to surrender. Numbers perished in dungeons, and the remainder, to the number of about three thousand, were banished. Their lands were given to Italians and to Irishmen who, in

MOSES RELIEVING THE FAMISHED PEOPLE.—See WATER.

first four general councils and that of St. Athanasius.

4. They admitted the Ten Commandments as a rule of life.

5. They professed submission to the superiors placed over them by God.

Two years later an edict was passed against them by Emanuel Philibert, and they had to defend themselves against a fierce invasion. They placed their women in caves and defended themselves on the mountain-tops; and the count, having failed to force Angrogna, suffered a severe defeat in the Val de Tour. For the first time the Protestants of Germany came to their aid, and by their

should be quartered among them for a short time. The unsuspecting Vaudois consented; and the soldiers being let loose on them, a horrible massacre took place, as neither age nor sex was spared. A remnant escaped to the mountain-tops, and there they were able to defend themselves. It was now that Oliver Cromwell interfered on their behalf, and induced Cardinal Mazarin to make a joint and threatening remonstrance, before which the duke was obliged to give way, and peace was restored. Large contributions were made on their behalf in different States, and in England the sum of forty thousand pounds was collected, of which the half was transmitted, and the remainder was held to

the time of Cromwell, had been obliged to leave their own country, and who came to the Alps to engage in the slaughter of the Vaudois. Scattered as the Vaudois were in Switzerland, Holland, Brandenburg and the Palatinate, they never ceased to mourn and to long for their mountain home. The settlers in the Palatinate also suffered from the murderous attacks of the soldiery of Louis XIV., which obliged so many of the Protestants to flee from their native land for safety, and eventually about eight hundred of them projected a plan whereby they might return to their own land. The scheme was matured with such secrecy and completeness that they succeeded in coming to

gether from Holland, Switzerland and elsewhere into a compact body, and in forcing their way across opposing mountains to their old home, where they entrenched themselves. The incidents of this "glorious return," as it has been called, under the command of Henri Arnaud, are of a character so brilliant and strange that they would be thought wild and extravagant even in the pages of romance. Eventually, a quarrel between Louis and Amadeus led the latter to cease in his mad career, and since that time no serious effort has

they were excluded from the established hospitals. But a change has taken place in their condition, and new counsels now prevail. Owing to the influence of eminent Englishmen who took up their cause, restrictions have been abolished, houses have been erected for their pastors, and salaries have been secured for them also. Schools have been built in many places, and a college is founded at La Tour.

The late political changes which have taken place in Italy have tended to promote their wel-

tors from two or more candidates who are nominated by the parish. The Liturgy of Geneva is used, having superseded an older one of their own, but it is the *unreformed* liturgy, the one which was in use in Geneva before the entrance of Socinianism. The pastors are ordained by the laying on of hands by the moderator. They have offices for communion, baptism and marriage, but they have no burial service, and their ordinary public worship does not materially differ from that of other Protestants, being Presbyterian in its general tone and

A CARAVAN IN THE DESERT ARRIVING AT A DRY BROOK.

been made against them, but a course of petty persecution and vexatious restriction was adopted which continued in force until lately. Under Napoleon I. they received aid to maintain their pastors, and many of the restrictions were removed, but on his fall the old state of things was restored.

They were confined to their own poor and circumscribed territory, which became inadequate to their support, and hence they became poorer. No books were permitted to be printed in Piedmont for their use. They were not allowed to practice medicine or law beyond their own territories. All civil and military offices were closed to them, and unless they would renounce their own communion

fare. They have been permitted to settle in the large cities and towns of the country, and to erect or procure edifices in which they may worship God. Accordingly, the Vaudois Church is rapidly growing, and it is taking its place as the evangelical or reformed Church of Italy. In their discipline and forms they approximate very closely to the type of Protestantism as it exists in continental Europe, only they are free from the Socinianism of the Swiss and the rationalism of the French and German Protestants. They are governed by a synod composed of the pastor and one layman from each parish, presided over by the moderator; and the synod, as vacancies occur, elects the pas-

character. It may now be looked on as one of the ordinary Protestant and Presbyterian bodies, interesting, indeed, on account of its antiquity, the persecutions its people have often had to endure from their dukes, and the heroic and patriotic resistance which they opposed to them.

**WALDENSIS** (wal'den-sis), THOMAS, an English Carmelite, whose real name was Netter, was born at Walden, in Essex, about 1367. He studied at Oxford, and in 1409 was sent as a champion of the Church against heretics, by Henry IV., to the Council of Pisa. Henry V. reposed entire confidence in him, made him his con-

fessor, sent him to the Council of Constance, in 1415, and died in his arms at Vincennes. He became no less a favorite with the young monarch, whom he attended to France, and died there in 1430. Waldensis was the author of a work entitled "Doctrinale Antiquum Fidei Ecclesie Catholice."

A POTTER AT HIS WORK.

**WALKER** (wawk'er), CLEMENT, author of "The Compleat History of Independency," was born at Cliffe, in Dorsetshire, and educated at Christ Church, Oxford. Afterward, leaving the university without a degree, he retired to an estate he had at Charterhouse, in Somersetshire, where he lived in good repute, especially for his loyalty and hatred of the Puritans, in both which respects he appears soon after to have changed his mind.

Before the civil war he had been made usher of the exchequer; but when the Puritans or Presbyterians seemed to carry all before them, he closed with them, and was elected to Parliament in 1640. Afterward he became a zealous Covenantor, and had a share in the violent measures of the times, until the Independents began to get the upper

against the forces of James II., was a native of the county of Tyrone, and was educated at Glasgow. On the approach of James' army, Walker took refuge in Londonderry, where the English were gathered in some force. The town was almost destitute of defence, and Lundy, the governor, counseled surrender; but Walker, then an aged clergyman, encouraged the townspeople to fight to the last and hope for a rescue. Reduced to the last extremity, the spirited people always rallied and recommenced their brave defence when roused by the sermons Walker preached, or inspired by his example when he headed the charges of the sallying-parties. The town was relieved by the British fleet entering the harbor. Walker then went to London, where the court cordially received him, the House of Commons thanked him and the king created him bishop of Derry. But the bishop would not rest in his diocese. He was killed, in July, 1690, when leading on a troop at the battle of the Boyne. He wrote "A True Account of the Siege of Londonderry."

**WALKER, JAMES BARR, D.D.**, was born in 1806, at Philadelphia. He is the author of one of the most remarkable volumes ever written by any American minister, a work which has made him known in nearly every civilized land. It is entitled "The Philosophy of the Plan of Salvation, by an American Citizen;" and it is a remarkable fact that this book is more thoroughly prized and more freely circulated in England than it has been in the United States. In ten years after it appeared in England, it went through nineteen editions by the London Tract Society, and other publishers had to undertake several issues of the book. It has been translated into German, Italian, French and Welsh, and into Hindostanee for circulation by the missionaries in India. In 1855 he published "God Revealed in Nature and in Christ, including a Refutation of the Development Theory;" and in 1857 he gave to the public "The Philosophy of Skepticism and Ultraism," in which he combated the views of Theodore Parker and other Rationalists. In 1862 he published "The Philosophy of the Divine Operation in the Redemption of Man," and in 1869 "The Living Questions of the Age." He has also produced several pieces in poetry, and he established "The Ohio Observer," "The Watchman of the Valley" and "The Watchman of the Prairies." The above list of thoughtful works indicates the character of Dr. Walker's mind, and shows him to be fitted to deal with the important questions which are at issue between the rationalist and the skeptic on the one hand and the Christian believer on the other.

**WALKER, JESSE**, was beyond doubt one of the most remarkable and effective of the preachers in the Methodist denomination in the United States in the early years of the present century. He is usually styled "of the Missouri Conference;" and he deserves the title because of his remarkable efforts in St. Louis, which were crowned with success beyond anything that the most sanguine of his brethren had expected. He was born in North Carolina, but the date of his birth is uncertain. He had few advantages of education, for in his boyhood he had to labor for his own support in dressing deer-skins. About the close of the last century his father's family removed to Tennessee; and it appears that Jesse Walker was admitted in 1802 to the Western Conference, and appointed to the Red River circuit in that State. In 1806 he was sent to Illinois, and he had the whole terri-

**WALKER, GEORGE**, an Irish divine and the heroic defender of the city of Londonderry

tory before him, and in his first year two hundred and eighteen members were reported by him. Missouri was his next sphere, and in 1820 he formed the design of planting Methodism in St. Louis. His efforts in this enterprise displayed great prudence, indomitable zeal, remarkable faith and a persistency such as few men have ever evinced. Others were despondent, and even hopeless, but he persevered amidst discouragements which would have repressed other men, and he succeeded. He next directed his efforts to the conversion of the Indians on the Upper Mississippi, and here also he effected a remarkable work. He continued in his missionary career until his health failed, in 1834, when he retired to a farm which he had procured in Cook county, Illinois; and here in the following year he died in the full peace and hope of the Christian believer. He was not a man of learning; but he was vastly better, for his great good sense, his courage combined with wisdom, his ardent, substantial enduring piety, enabled him to do a great work for the glory of God.

**WALKER, JOHN**, an English divine, was born in Devonshire and educated at Exeter College, Oxford, where he became a Fellow. He was rector of the parish of St. Mary-the-More, in Exeter; and when Calamy published his account of ejected ministers for nonconformity, Walker undertook a similar work for the Church of England, which he published in 1714, with the title of "An Attempt toward recovering an Account of the Numbers and Sufferings of the Clergy who were Sequestered in the Grand Rebellion." For this performance he received the degree of doctor of divinity from the University of Oxford. He died in 1730.

**WALKER, JOHN**, was born in 1732, at Colney-Hatch, in Middlesex, near London. He was of Presbyterian parentage, but he entered the Church of Rome. For some years he was on the stage as an actor, but he retired and began an academy at Kensington Gravel Pits, from which he retired to follow the business of a lecturer on elocution. He traveled through Great Britain and Ireland, and gained a great reputation. He published a great number of works on elocution, grammar, pronunciation of English and Classical terms, composition and kindred subjects; but his chief work, which continues to be in demand, was his "English Dictionary." An edition appeared in 1774. Next year a modified edition appeared, and in 1791 the "Critical Pronouncing Dictionary and Expositor of the English Language" was published in quarto, and edition after edition of this work has been called for, and it is prized for its correctness as a guide in pronunciation. He died in 1807.

**WALKER, JOHN**, who became a Fellow of Trinity College, Dublin, attracted attention by the character of his theology, and about the year 1800 he was expelled from his Fellowship and from the college. He continued to preach in Dublin, and originated the sect known as "The Church of God." During his tenure of the collegiate position he distinguished himself greatly by the number of works which he published in classics and mathematics. He died in the year 1833.

**WALKER, JOHN**, was born in 1787, in Washington county, Pennsylvania. He was educated at Jefferson College, whence he passed for the study of theology to the care of the well-

known Dr. Anderson. His first settlement in the ministry was in Mercer county, Pennsylvania, and in 1814 he removed to Harrison county, Ohio. Here he preached in four charges which were scattered almost as widely as an episcopal diocese. Through his remarkable energy and great perseverance he secured a charter for the institution since known as Franklin College, a seminary which he did much to foster and sustain. He died in 1845, after an arduous, unselfish and diligent ministry, having done much in his day to sustain the cause of the Associate Church in the district of the country where he was settled.

**WALKER, OBADIAH**, an English divine, was born at Worstborough, Yorkshire, in 1616, and educated at University College, Oxford, where he obtained a Fellowship. In 1648 he was ejected; on which he went abroad, and is supposed to have been reconciled to the Church of Rome. Notwithstanding which, he accepted the headship of his college in 1676. At the accession of James II. he avowed himself a Roman Catholic, and had mass said in the college. He also set up a printing-press, from which he sent forth a number of books against the Protestant religion. At the Revolution he was sent to the Tower, but was soon after released. He died in 1699. He published "A Brief Account of Church Government" and "Life and Death of our Saviour." The sale of the latter work was prohibited by the university, on the ground of its alleged popish tendency.

**WALKER, SAMUEL**, was born in 1714, at Exeter, and educated at Oxford. He entered the Church, and for many years held the curacy of Truro, in Cornwall, where he became celebrated for the deep spirituality and remarkably evangelical character of his preaching. His writings soon carried his name through the Church, and they became known in Scotland, in this country, and indeed wherever evangelical truth is appreciated. He died at Blackheath, near London, in 1761. In 1755 he published "The Christian; being a Course of Practical Sermons." These had an immense circulation; and in 1763 he gave to the press his "Fifty-two Sermons on the Baptistal Covenant, the Creed, the Ten Commandments and other Important Subjects of Practical Religion." This work still further increased his fame. Two years later he published "Practical Christianity Illustrated;" and after his death "Christ the Purifier," a work on sanctification, and "The Covenant of Grace" were printed, while large editions of his collected works were issued. Those who know the value of his works always ask for "Walker of Truro," to distinguish him from others of the name.

**WALKINSHAW** (wauk'in-shaw), HUGH, was born in 1803, in the county of Antrim, Ireland. In 1819 his father's family emigrated to this country and settled in Belmont county, Ohio, and the young son, who had commenced the study of Latin before leaving Ireland, entered Franklin College, where he graduated in 1827. He studied theology under Dr. Black of Pittsburg and Dr. Wylie of Philadelphia, settling after his licensure in the united congregations of Brookland, North Washington, Union and Pine Creek. He was ordained in 1835. In 1841 he ceased to preach in all these places, devoting his time and labor to Brookland

and North Washington, where he continued to the close of his very laborious and useful life. He died in 1843, having only reached the fortieth year of his age.

**WALL. See CITIES; FORTIFICATIONS.**

**WALL, CHARLES WILLIAM, D.D.**, whose name stands in the front rank of modern Irish scholars, was educated in Trinity College, Dublin, in which he greatly distinguished himself in his undergraduate course. He attained a Fellowship; and continuing his connection with the college, he reached the dignity of a Senior Fellow, was made professor of Hebrew in the university, and subsequently vice-provost of Trinity College. His first work of importance was an "Examination of the Ancient Orthography of the Jews and the Original State of the Text of the Hebrew Bible," a treatise which comprised three volumes. His next was entitled "Proofs of the Interpolation of the Vowel Letters in the Text of the Hebrew Bible, and Grounds thence derived for a Revision of the Authorized English Version." The appearance of this learned work contributed greatly

ANCIENT WATER-CARRIERS.

to prepare the leading men in the Churches to undertake the work of revision which has been commenced.

**WALL, WILLIAM, D.D.**, who became a celebrated English divine, was born in 1646. Having entered the Church after the usual education, he became vicar of Shoreham, in Kent, a position which he held for fifty-two years. He was a voluminous and learned writer, chiefly on the sacrament of baptism. In 1674 he published his first work, which was entitled "Infant Baptism Asserted and Vindicated." In 1691 "Baptism Anatomized" appeared, and in 1706 "Conference between Two Men that had Doubts about Infant Baptism." In 1705 his greatest work appeared in its first form; it was a "History of Infant Baptism, in Two Parts." Defences of this work were published by him subsequently, and various editions have been prepared by different annotators, and in Germany and France it attracted great notice. After his death a posthumous work was published, entitled "Brief Critical Notes, especially on the Various Readings of the New Testament Books," and "Critical Notes on the Old Testament." These notes are of especial value, as they are brief and indicative of great learning

and judgment. He died at Shoreham, in 1728, aged eighty-two years.

**WALLACE** (wal'les), **ROBERT**, was born in 1772, in Loughgilly parish, county Armagh, Ireland. He joined the Reformed or Covenanting Church because of his disapprobation of the "regium donum," which was given to and accepted by the ministers of the Synod of Ulster and the Secession body. He graduated in Glasgow University in 1810, emigrated to this country, studied theology under the eminent Dr. Wylie, of Philadelphia, and was settled near Chillicothe, Ohio, over two churches. In 1820 he resigned one part of this charge. He was exceedingly zealous as a pastor and as a missionary, and in the latter capacity he was enabled to form the congregation of Salt Creek, which presented him with a call, and he settled in that church in 1822. Thus he continued to labor, his own charge regularly expanding until it became a great church; and yet he abated not in his missionary toil. He met with an accident going to preach by a fall from his horse, and his strength decreased until his death, in July, 1849. He was a conscientious, zealous, excellent, faithful pastor and a much-esteemed man.

VERY ANCIENT WATER-VESSELS.

**WALLER** (wal'ler), **SIR WILLIAM**, an eminent general of the Parliamentary army in the reign of Charles I., was born in 1597, in Kent, and was educated at Magdalen College and Hart Hall, Oxford. On his return from Germany, where he had served in the army of the Protestant princes against the emperor, he was elected a member of the Long Parliament. He belonged to the Presbyterian party, and on the breaking out of the war was made second in command under the earl of Essex. The West of England was the scene of his principal exploits, and in the early part of his career he fought with signal success, but was ultimately defeated. The Self-denying Ordinance removed him from service, and he became so much an object of suspicion to the republicans, that he was twice imprisoned. He died in 1668. He wrote "Divine Meditations" and a "Vindication of his Character and Conduct."

**WALLIN** (wal'lin), **JOHANN OLOF**, a Swedish clergyman distinguished as a poet and a preacher, was born in 1779. His hymns have as high a popularity as those of Watts in England. His pulpit eloquence was of the highest order. Many of his sermons and all his hymns have been published. He died in 1839.

**WALLIS** (wal'lis), **JOHN**, an English divine and eminent mathematician, was born in 1616, at Ashford, in Kent, and educated at Emmanuel College, Cambridge. In 1643 he obtained the sequestered living of St. Gabriel, in London, and in the

next year he became secretary to the Westminster Assembly of Divines. In 1649 he was appointed Savilian professor of geometry at Oxford; and he removed thither from London, where he had long resided, and by his efforts assisted in laying the foundation of the Royal Society. In 1658 he was appointed keeper of the university archives. At the Restoration he was received with kindness by Charles II., made his chaplain, and not only confirmed in his academical offices, but selected as one of the divines to review the liturgy. He died at Oxford, October 28, 1703. His principal works are "Animadversions on Baxter's Aphorisms" and "Animadversions on Lord Brooke's Nature of Truth."

**WALLOON** (wal'loon) **PROTESTANTS**, a branch of the French Calvinists imported into the Netherlands at the revocation of the Edict of Nantes. They differ from the general body of Dutch Calvinists only in the use of the French language and the Geneva Catechism. Numbers of them fled to England from the persecution of the duke of Alva, the governor of the Low Countries for Philip II. of Spain. A church was given to them by Queen Elizabeth at Canterbury, and some of their posterity still remain in that part of England.

**WALMESLEY** (waumz'le), **CHARLES**, a Roman Catholic divine and an eminent mathematician, was born in 1721. He was a doctor of the Sorbonne, a monk of the Benedictine order and vicar apostolic of the western district of England. He died at Bath in 1797. He was a member of the Royal Society and the author of several mathematical treatises.

**WALPOLE** (wal'pole), **RALPH** **DE**, who rose to be bishop of Norwich, was an eminent builder. To him the cathedral is indebted for the magnificent spire which crowns the central tower; and it is universally admitted that the tower and spire are by far the most important external features in the cathedral. He began his work about 1295. About two years before his death he built the chapter-house, which was afterward destroyed, and he began the cloisters, which were not finished until 1480. Bishop Walpole held the see from 1289 until his death, in 1299.

**WALSH** (walsh), **PETER**, a learned Roman Catholic priest, was born at Moortown, in the county of Kildare, Ireland, entered into the Order of Franciscans and became professor of divinity at Louvain. On his return to Ireland as procurator of the clergy, he persuaded many of his brethren to subscribe a declaration disclaiming the pope's supremacy in temporal. For this he incurred the resentment of his superiors to such a degree that he was obliged to retire to London, where he died in 1687.

**WALTER** (wal'ter). There were two ministers of this name who became distinguished among the Trinitarian Congregationalists of New England. **NEHEMIAH** was born of English parents in Ireland, in 1663. He displayed great talent in his early life, as he was able to speak Latin fluently when he had reached the age of thirteen years. In 1679 his father and the family settled in Boston, and here the education

of the son was carried on, and he graduated at Cambridge in 1684. He went to Nova Scotia for the purpose of learning French, and he became so proficient in it that he was able to preach in the French church in Boston in the absence of the pastor. He resumed his studies at Cambridge, and became a Fellow. He was settled in Roxbury as colleague with John Eliot, being ordained in 1688, when he was in his twenty-fifth year. Owing to a severe illness, his memory failed him, and he was obliged to take his manuscript into the pulpit, contrary to the custom of the day; but eventually his health and faculties were restored. After twenty-eight years of service, his son, Thomas Walter, was appointed as his colleague. He was born in 1696, and graduated at Harvard in 1713. In 1718 he became colleague to his father, and he died in 1724. He wrote on "Infallibility," on "Church Music," "The Scriptures the Only Rule of Faith and Practice," and he published several sermons. His father, who died in 1750, wrote on "Indwelling Sin in the Regenerate," "The Holiness of Heaven," "The Wonderfulness of Christ," and he published several sermons. Both these men were fine scholars and renowned preachers, displaying great vivacity and splendid eloquence in the pulpit. The elder of the two was pastor of Roxbury for more than sixty years.

**WALTER BRONSCOMBE** (bronz'-kum) was one of the most celebrated of the English bishops of the thirteenth century. He was born in Exeter, of humble parentage, and was one of the most eminent of the prelates of his day. His parents, by the aid of friends, had him sent to school and to Oxford, where he became a proficient in learning. His great acquirements obtained him patronage, and he became canon of Exeter and archdeacon of Surrey before he was in priest's orders. On the 24th of February, 1258, he was elected bishop of Exeter. He was a man of uncommon abilities and prudence, for during the wars between Henry III. and his barons he conducted himself so discreetly as to obtain both the confidence of his sovereign and the respect and esteem of the barons. His signature stands the first to the *Dictum* of Kenilworth, dated the 31st of October, 1266. In the year 1274 he assisted at the fourteenth general council held at Lyons, as is shown by his register. This register proves the great number of churches which Bishop Bronscombe dedicated in Devonshire and Cornwall. In one year only—viz., in 1268—he consecrated no fewer than forty. At Glasney, in Cornwall, he founded and richly endowed the college of St. Thomas the Martyr for thirteen secular canons. He restored to the church of the Holy Cross at Crediton its possessions and endowments. At Clyst he built a large and commodious palace which became a favorite residence of his successors. He died on the 22d of June, 1280, after governing his diocese with great ability for more than twenty-two years. He was buried in St. Gabriel's Chapel, which he had built for the place of his sepulture, and a magnificent monument was erected to his memory.

**WALTER OF CARLISLE** (kar-lil'), in the reign of Henry I., was a Norman priest who, by the authority of the sovereign, was made governor of Carlisle, and who began a monastery there which the king endowed. This was the only episcopal chapter in England of the Order of St. Austin. Athelwold, chaplain and confessor to Henry I., was by that monarch appointed the first prior

of Carlisle; and in the thirty-third year of his reign, by the counsel of Athelwold, he erected a bishop's see at Carlisle and made the said prior first bishop of it. "The see was erected," says Willis, "April 11, 1133, and Athelwold consecrated at York on the 14th of May in the same year." Carlisle, therefore, is not one of the ancient sees of England. It was taken out of Durham; and the cause, says Hutchinson, "alleged for dismembering Carlisle and constituting there a see, was on account of the distance from Durham;" and Camden says, "The monks of Durham looked upon this act of the sovereign as a grievous infringement of their ancient rights and privileges."

The records of the building of the present cathedral are very scanty. When entire, it must have been a noble and magnificent edifice; but the Puritans in the time of Cromwell destroyed the greatest part of the nave in order to erect guard-houses and batteries with the materials. The transept and the remains of the nave are evidently coeval with the foundation of the priory church, and therefore with Walter and Henry I. The choir and its aisles are in a totally different style of architecture, and Camden dates this part about the year 1350, which agrees very well with its form and details. In the reign of Henry II. the city was laid waste by the Scots; and it is said that in the year 1292 an accidental fire consumed the church, with half the city. In this fire the nave could not have been much injured, for it preserved its original Norman style and appearance down to the time of the civil wars in the seventeenth century. The choir no doubt suffered, as it was taken down and rebuilt as soon as a sufficient sum could be raised for the purpose, and indulgences were sold very freely for this object.

The west front and ninety-two feet of the nave are gone, as only forty-three long of the nave remain; and this part is plain, heavy and wanting in ornament. The windows are round-headed, of one light, and those of the clerestory are stopped up. The north transept has a door in the west wall, and in the end of the transept a window of six lights of the perpendicular character has been inserted. The choir is entirely different in cha-

racter from the remains of the nave. The eastern gable is lofty and well proportioned, and it contains a window which has justly been considered the most superb in England. It has nine lights and is filled at the top with tracery of an exceedingly rich and elegant design. The tower is perhaps the worst feature in the cathedral, as it rises only one story above the ridge of the choir-roof,

tioned, and in all its details rich and elegant. The columns are clustered and have beautiful sculptured capitals of leaves and flowers. The arches are highly pointed and adorned with a great variety of deeply-cut and elegant mouldings, among others that graceful one so common to this age of the Pointed style which resembles a flower of four petals turned back toward its stem. Gorgeous as

ORIENTAL WELL.—See WATER.

and but two above those of the transept and the nave. On entering the cathedral, the visitor finds the remnant of the nave filled with pews and fitted up as a parish church. The choir is entered by an arch doorway in the centre of the organ screen, which is placed between the two eastern piers, which support the tower. Passing into the choir, the scene is changed at once, as the beholder has now before him a view of one of the finest choirs in England. It is spacious, lofty, well propor-

all the parts of this fine choir are, the eye is at once fixed on the splendid eastern window, of which too much cannot be said in commendation, as it is viewed with rapture and left with regret. Among the list of the great men who filled the episcopal throne in this cathedral, one of the foremost was the celebrated Usher, a man of deep erudition, a zealous Protestant, without bigotry and fanaticism. When primate of all Ireland, he had to leave his see because of the condition of

Ireland; and when appointed to Carlisle, he lived for a time on the revenues of the see, until Parliament seized on them and used them for public purposes. Of the more modern bishops Edmund Law, D.D., was one of the most eminent; and one of his sons became bishop of Bath and Wells, another rose to be bishop of Elphin, in Ireland, and another was ennobled as Lord Ellenborough, and for many years served as lord chief-justice of the King's Bench.

**WALTER, HUBERT**, bishop of Salisbury, archbishop of Canterbury and chancellor of England. He accompanied Richard I. to the Crusade, was one of the three who commanded before Acre, and was mainly instrumental in procuring the truce with Saladin. On Richard's return Walter was high in his confidence, and assisted at his second coronation. By his advice

BALCONY OF ZENANA MOSQUE, AGRA, INDIA.

weights and measures were regulated and laws against fraud ordained. He crowned John, who made him chancellor. His death occurred in 1205.

**WALTER DE LANGTON** (deh lang'tun) became eminent among the English prelates at the close of the thirteenth century. He was consecrated to the see of Lichfield in 1296, and he became a great benefactor to the cathedral and the city of Lichfield. He began the Lady Chapel at the east end of the cathedral, and vaulted the transept of it, thereby adding much to the appearance of the building. He continued his efforts to perfect this beautiful edifice until his death, in 1321. His successor, Roger de Norburg, followed his example; but not until 1420, under the administration of Bishop Heyworth, was it completed.

**WALTER DE STAPLEDON** (deh sta'p'l-dun) was one of the greatest men of his time in England. He was professor of canon law, precentor

of Exeter and chaplain to Pope Clement V. He was elected bishop of Exeter in 1307, and enthroned in the year following with great pomp and magnificence. His great talents gained him the favor of Edward II., to whom he attached himself. When that weak monarch died, he left the government of the metropolis in the hands of Bishop Stapledon. This charge led to the death of this loyal but ill-fated prelate; for the populace, rising in arms in favor of the queen, after first plundering his new residence outside of Temple Bar, seized the bishop himself as he was proceeding through the city, and dragging him from his horse into Cheapside, proclaimed him a public traitor, a seducer of the king and a destroyer of the liberties of the city. Then, stripping him of his armor and other apparel, they cut off his head and fixed it on a long pole as a trophy and a warning. Two of his attendants underwent the same fate, and their bodies were thrown into the river, together with the bishop's, though they were afterward taken out by the order of the victorious queen and buried in the neighboring church of St. Clement Danes'. The remains of the bishop were, however, finally conveyed to Exeter and interred on the north side of the choir near the altar in 1327, about six months after his violent death. He was a great benefactor to the cathedral; and he founded and liberally endowed Hart's Hall and Stapledon Hall (now Exeter College), in Oxford, one of the largest colleges in the university, besides leaving funds for establishing a preparatory school for that college in St. John's Hospital, in Exeter.

**WALTER, WILLIAM**, D.D., was born in 1737, at Roxbury, and educated at Harvard College, where he graduated in 1756. He determined on entering the Episcopal Church, and in 1764 he sailed to England with a view to ordination by the bishop of London. On his return he was settled in Trinity Church, Boston, a charge which he held until 1776, when he left for Halifax, Nova Scotia. He was settled at Shelburne, where he held the office of dean; but in 1791 he was again in Boston, and next year he was inducted to the rectorship of Trinity Church, a position which he filled until his death, on the 5th of December, 1800. He was on most intimate and friendly terms with the brethren in the Baptist and Congregational Churches, and all classes united in bearing testimony to the excellence of his character. He was humane, eminently benevolent and a great friend of learning—a pastor distinguished for his diligence and care of the flock.

**WALTON** (wal'tun), **BRIAN**, D.D., a learned English prelate, was born in 1600, at Seamer, in the district of Cleveland in Yorkshire; in 1616 he was admitted a sizar of Magdalen College, Cambridge, whence he removed to Peterhouse in 1618,

and took his degree of master of arts in 1623. He left college for a curacy and mastership of a school in Suffolk, but was soon afterward removed to London, where he was first assistant in the church of All Hallows, Broad street, and afterward, in 1626, rector of St. Martins Orgar, with which he conjoined the rectory of Sandon, in Essex. He was involved in the troubles which arose from the contest of king and Parliament, was deprived of his preferment and was obliged to take refuge in Oxford. There he formed the plan of his great work, "The London Polyglot," and there probably he made some preparation for it. It was not, however, till he returned to London that any active steps were taken toward carrying his design into effect. A prospectus of the work was issued in 1652; the assistance of the most eminent Oriental and Biblical scholars of the day was engaged, and in 1653 the printing was begun. The first volume appeared in 1654, and the whole work was completed before the end of 1657. Of the merits of this invaluable work it is needless here to speak. It remains an imperishable memorial of the learning, assiduity and ability of the editor and his coadjutors. After the Restoration, Walton was, in 1660, made bishop of Chester, an office which he filled only for a few months, his death occurring November 29, 1661.

**WANDERING** (wan'der-ing). After the Israelites were delivered from Egypt, and had triumphantly passed the Red Sea, it was intended, when a covenant had been made with them, and statutes were prescribed them, that they should proceed to occupy the land promised to their fathers, Num. xiii. But in consequence of their rebellious fear to encounter the Canaanites, they were condemned to wander in the wilderness till the men of that generation perished, Num. xiv. 26-35. The sentence was rigorously executed, and forty years (in the whole) expired before the Jordan was crossed and the occupation of Palestine began, Josh. iv. 19; v. 6.

The itinerary of their journeyings is given with much particularity in Num. xxxiii. 1-49, and incidental notices of the direction they pursued, and the places at which they halted, are found in other parts of the Pentateuch. Generally, it is clear that after passing the sea their course was south or south-east to Sinai, and then nearly due north to Kadesh, from which place they had to turn southward to Ezion-geber, and that it was by a circuit round the Edomite territory that they at length came to the so-called "plains of Moab," nearly opposite to Jericho. But it is hard to identify many of the stations; the exact site of Sinai itself is disputed. There are few notes of time, and nearly thirty-eight years of the whole period are passed over with the record of little that occurred in them.

The present article can deal but briefly with the wanderings; it would demand a volume to discuss the various points of interest which present themselves.

The possibility of the Israelites spending so long a time in the region traversed may be first noticed. We find them repeatedly murmuring for want of water and of food. And though a supply of both was supernaturally vouchsafed, yet, when we recollect that they possessed large herds and flocks, we must allow that the nation could not have subsisted in a region utterly desolate. Now, if we suppose that the fastnesses of Horeb are sterile—though even there the monks of St. Catherine at the present day have cultivated gar-

dens, and early travelers speak of green plains where now everything is bare—if we admit that Arabia is an arid region unfit for habitation, yet large tracts of the so-called wilderness were rather open downs, suitable for and occupied by nomad tribes. The wilderness is traversed still by large pilgrimage caravans, and there are unmistakable traces in many parts of ancient fertility. There are the ruins of cities, and there is the memory preserved of many more; there are indications of water in different wadies, a proof that, had not the trees been so recklessly destroyed, vegetation could have flourished. Besides, various peoples inhabited the region, the Amalekites, for instance, when the Israelites passed along; so that, though there were districts wild and solitary enough, yet there was not through the whole sweep of country the utter desolation which some have imagined. And, be it observed, it was a wise providence which chose their way. The training Israel received in the desert told admirably on their future character.

After the passage of the Red Sea they took their journey thence by the wilderness of Shur to Marah, perhaps 'Ain Howdrak, and to Elim, Wady Ghurundel, or Wady Usei, Ex. xv. 22-27. They then reached the wilderness of Sin, el-Kda, and proceeded by Dophkah and Alush to Rephidim, perhaps Feirdan, and Sinai, Ex. xvi. 1; xvii. 1; xix. 1, 2; Num. xxxiii. 9-15. The group of Sinaitic mountains is well known, though differences of opinion exist as to the exact summit on which the glory of God appeared. See SINAI.

After the giving of the law began the march to Kadesh, which was hard by the wilderness of Zin and Paran, Num. x. 33; xi. 3, 34, 35; xii. 16. There appear to have been sixteen halting-places between Horeb and Kadesh, the first and second of which are not named, Num. x. 33; xxxiii. 16-30, Moseroth being near to Kadesh, and as some think another name for Mount Hor. For the identification of Kadesh, on which opinions vary, see KADESH. It was from Kadesh that the spies were sent into Canaan, and at Kadesh on their return that the fatal refusal to march on occurred, when sentence of penal wandering was passed upon the obstinate nation, Num. xiii. 26; xiv. 23, 34. We know (as before said) little of the history of those years. The rebellion of Korah occurred during the period, and certain additional statutes were given, Num. xv.-xix. We have also a brief record of stations on the way from Kadesh to Ezion-geber, and from Ezion-geber to Kadesh. It is probable that the time was occupied by marches and counter-marches between these points, till at last, in the fortieth year, they came once more to Kadesh with better hopes, and encamped in the wilderness of Zin to the east of the city, Num. xx. 1; xxxiii. 36.

There was still to be the tale of suffering, sin and death. Miriam died. The people murmured for water, and Moses and Aaron offended, and were told they should not enter the promised land. But the march must not be delayed. Application was therefore made to Edom for a passage through their country, but was churlishly refused. Accordingly, Israel "turned away" from Edom; and when near Mount Hor, Aaron died, Num. xx. From Hor they journeyed down toward the Red Sea, much to the discomfort of the people, crossed the Arabah from west to east, compassed the land of Edom, passed the brook Zered to the east of Moab, and at length came north of the Arnon into a district that had once belonged to Moab, and still retained its name,

though now appropriated by the Amorites, Num. xxi. 4-13, 18-20; xxii. 1; Deut. ii. 8, 13, 14, 24. Many eventful passages were there during this circuit—the plague of fiery serpents and the destruction of Sihon and Og—their conquests being pushed through Gilead and Bashan, before the Israelites sat down by the Jordan opposite to Jericho, Num. xxi. 21-35. And there was yet the attempted curse of Balaam and the chastisement of Midian, Num. xxii.-xxv., and then the last solemn charge of Moses, Deut. i. 1, recapitulating God's law and his wonderful dealings with his people; and then the great lawgiver died, the last event before they crossed the Jordan into their inheritance, Deut. xxxiv.

Little more can be added. It is but a general sketch which has been given of Israel's journeyings, of the country they traversed so long and of the events that befell them there. Great was their perverseness, and great the Lord's mercy to-

The Israelites were much engaged in war. At their entrance into Canaan they had to take possession of their allotted inheritance by conquest; and as they spared many of the clans whom they were to exterminate, and frequently by their sins brought down God's chastisement upon them, generally in the shape of being subjected by some neighboring nation, they were consequently seldom long without having recourse to arms; but had they been faithful to the national holy covenant, they would have been sure to be victorious.

In advancing against an enemy, terms of surrender were to be offered, except in the case of the devoted Canaanitish nations, and only if these terms were refused was the assault to be made, Deut. xx. 10-18. The impending onset of battle was announced by the sound of the sacred trumpets, Num. x. 9, and by the shoutings of the troops, 1 Sam. xvii. 20. Sometimes, too, the men were encouraged by an address from the com-

INTERIOR OF THE MOSQUE.

ward them, Ps. xcv. 7-11. And their history in the wilderness remarkably presignifies the future fortunes of the Church traveling through the wilderness of the world toward her heavenly home. In our pilgrimage we many times provoke the Lord; but oh how graciously does he deal with us! sparing us like a kind father, providing us with bread to eat and giving us water for our thirst, continually beckoning us onward to a better Canaan. "Let us therefore fear, lest, a promise being left us of entering into his rest, any should seem to come short of it," Heb. iv. 1.

**WAR.** Much has been already said upon this topic, and the reader must be referred to previous articles—for a description of the weapons used to ARMS, ARMOR, for the mustering and marshaling of troops to ARMY, for the mode of attacking and defending towns to ENGINES and FORTIFICATIONS, for the spoil and its distribution to SPOIL, for the treatment of the conquered to CAPTIVE. A few general notices only remain to be added here.

mander-in-chief, 2 Sam. x. 11, 12; 2 Chr. xx. 20. Stratagems were practiced, spies sent out, Josh. ii. 1, and ambushes contrived, Josh. viii. 4, 9. In besieging a city, banks were cast up and military engines placed on these to batter the walls, 2 Ki. xix. 32; Isa. xxix. 3, or attempts were made by scaling-ladders to climb over them; while the besieged took all the precautions they could, stopping the supply of water, etc., 2 Chr. xxxii. 2-5. Sometimes fire was employed to destroy the gates of a town or fortress, Jud. ix. 48, 49, 52. A victory was celebrated with great rejoicings, Jud. xi. 34; 1 Sam. xviii. 6, 7; 2 Chr. xx. 26-28; and as those who had distinguished themselves were specially praised, so for the dead in battle dirges were composed and lamentations made, 2 Sam. i. 19-27; 2 Chr. xxxv. 25. Trophies were set up when a victory was gained, and the arms of the vanquished were kept in the sanctuaries of the conquerors, 1 Sam. vii. 12; xv. 12; xxi. 9; xxxi. 10. But the then customary ferocities were much mitigated in the case of the Hebrews, who were charged to

show more mercy to their enemies during the hostilities, and afterward, than could be obtained from other victors, Deut. xx. 14, 19, 20; 1 Ki. xx. 31, 32.

We very often find the incidents of war intro-

1 Thess. v. 8; 2 Tim. ii. 3, 4, with a reference to those which decked Messiah himself, Isa. xi. 5; lix. 17; and the final blessedness of Christ's followers is described as attained by such as have been conquerors in a hard-fought battle, Rev. iii. 21.

CATHEDRAL OF REGENSBURG.

duced with a figurative meaning. The Deity is described as a warrior, and Messiah predicted under the same symbol—*e. g.*, Ps. xiv. 3; ex. 5, 6; Isa. xxvii. 1; xxxiv. 5; lix. 16-18; lxiii. 1-6. Further, the faithful are warned that they have a battle to fight and enemies whom they are to subdue, and the Christian graces are occasionally represented as arms or pieces of armor, Eph. v. 10-20;

**WARBURTON LECTURES.** The eminent Dr. Warburton, bishop of Gloucester, who died in 1779, bequeathed five hundred pounds in trust to Lord Mansfield, Sir Eardly Wilmot and Mr. Charles York to found a "Lecture," in which a course of sermons would be preached, to prove the truth of revealed religion and of Christianity in particular, from the prophecies of the Old and

New Testaments which relate to the Christian Church, with an especial view to the apostasy of papal Rome. Many of these lectures have been of great value, such as those of Hurd, Halifax, Bagot and others, and they deserve to take their place along with the Bampton and the Hulsean courses.

**WARBURTON** (war'bur-tun), WILLIAM, an eminent English divine and theological writer, was born at Newark-upon-Trent in 1698. He practiced for some years as an attorney, but quitting the legal profession, and having properly qualified himself, was presented to the rectory of Brand-Broughton, in Lincolnshire. He published a work on the "Alliance of Church and State" which attracted great attention. In 1737-38 was published the first part of his great work on "The Divine Legation of Moses," which is regarded as one of the masterpieces of the most famous period of English theology. He defended Pope's "Essay on Man," and became an intimate friend of the poet. In 1760 the bishopric of Gloucester was bestowed on him. Toward the close of his career his mind became prostrated, and the loss of his son brought on his death, which took place in 1779. Dr. Warburton was a man of vigorous faculties, a mind fervid and vehement, supplied by incessant and unlimited inquiry with wonderful extent and variety of knowledge; but he was proud of his literary powers, and treated all who opposed him with haughty disdain.

**WARD.** This word, besides its ordinary sense of a prison or imprisonment, Gen. xi. 3, 4, signifies sometimes the place of a watch or station, Isa. xxi. 8, and sometimes the guards themselves, Neh. xiii. 30.

**WARD, SETH**, a learned prelate and mathematician, was born at Buntingford, in Hertfordshire, in 1617, and educated at Sidney-Sussex College, Cambridge, of which he became Fellow. In 1644 he refused to take the covenant, and joined with some others in drawing up a treatise against it. In consequence of this refusal he was deprived of his Fellowship. He was afterward appointed Savilian professor of astronomy at Oxford, but was obliged to take the oath of allegiance to the Commonwealth, called the Engagement. On his coming to Oxford one of his chief cares was to bring into repute astronomical lectures, which for a long time had been entirely neglected. He was one of those philosophers who had stated meetings at the apartment of Dr. Wilkins, in Wadham College, which afterward gave rise to the Royal Society; and on the establishment of the latter he was nominated a Fellow in 1661, and for several years had the honor of being the second president of that learned body. On the Restoration he was presented by the king to the vicarage of St. Lawrence, Jewry, in London. Soon after, he was elected dean of Exeter; and in this situation he ingratiated himself so much with some persons of high rank that they procured for him the episcopal chair of that diocese. In 1667 he was translated to the see of Salisbury, to which he was a great benefactor, by causing the office of chancellor of the Order of the Garter to be restored and annexed to it for ever, after it had been withheld from his predecessors for a hundred and thirty-two years. But the noblest monument of his munificence was the College of Matrons in Salisbury, founded by him in 1682, for the reception and maintenance of ten women, the widows of ortho-

dox ministers in the diocese. He died in 1689. Among his works is "A Philosophical Essay toward an Eviction of the Being and Attributes of God."

**WARD, WILLIAM**, was one of the earliest Baptist missionaries to India, and was a contemporary of Cary, Marshman and other distinguished men. Mr. Ward was deeply read in Hindoo literature, and his work on the Hindoos, published in 1822, contains an immense mass of information regarding their religious and social system. He died in 1823.

**WARDEN** (war'den). In certain colleges the head of the establishment is thus named, the term being "the warden and Fellows," while in others it is "the master and Fellows," or the provost or the principal, as the case may be.

**WARDEN, CHURCH**, a lay-officer who attends to the ecclesiastical affairs of a parish. Such officers were appointed to protect the church, to execute parochial regulations and to act as the legal representatives generally of the parish. Easter week is the time, according to a long-prevalent custom, when church-wardens are chosen.

**WARDLAW** (ward'law), HENRY, bishop of St. Andrew's and founder of the university there, was preferred to that see by Pope Benedict XIII. in 1404. Though a man of strict morals and great simplicity of character, he was a still greater enemy to what he believed to be heresy than to immorality, and he condemned to the stake those who questioned the doctrines of the Romish Church. He died in 1440.

**WARDLAW, RALPH, D.D.**, an eminent nonconformist divine, was born in Dalkeith in 1779, and studied at Glasgow for the ministry in connection with the United Secession Church, for which he felt an hereditary attachment; but when on the eve of being licensed, he avowed his preference for Congregationalism, and in 1803 was ordained in North Albion Street Chapel, where he continued to labor for about twenty years, when he and his congregation removed to a splendid chapel in West George street, which they had erected at a large cost. About seven years after his ordination he became tutor in the Glasgow Theological Academy, a position which he filled with much efficiency and acceptance till his decease; and for many years he discharged his professional duties without fee or reward. His fame as a theologian attracted students of all evangelical denominations to his class-room. Dr. Wardlaw was a voluminous and varied writer. He wrote on the "Socinian Controversy," "Infant Baptism," "Christian Ethics," "Church Establishments," etc., published several volumes of discourses and many single sermons, besides a "Treatise on Congregationalism." In private life he was greatly beloved. His manners were unaffected and conciliatory, and he was a genuine pattern of the refinements, accomplishments and virtues which mark the scholar and Christian gentleman. He died in 1853.

**WARE.** There were three ministers of this name in New England who rose to eminence; the father, Henry Ware, D.D., Henry junior, D.D., and John, his two sons. The father, Henry Ware, was born in 1764, in Sherburne, Massachusetts, and entered Harvard College in 1781. Leaving college, he became a teacher in Cambridge, and

entered on the study of theology. A tutorship in Harvard was tendered to him, but he decided on settling at Hingham, where he was ordained in 1789. Owing to a scanty salary, he was obliged to undertake the labor of tuition, and he prepared students for college with great success. In 1805 he was chosen Hollis professor of divinity in Harvard; and this appointment led to a serious controversy because of his known Unitarian views. Dr. Pearson resigned his professorship and Fellowship in consequence; and thus commenced a dis-

and he died 22d September, 1843. Through life he had been an industrious student, and he was a powerful, attractive preacher. William Ware was born in 1797 at Hingham, Massachusetts, and graduated at Harvard in 1816. He settled as pastor in the Unitarian church in West Cambridge, and he continued to reside in Cambridge until the close of his life. He died in 1852. He edited "The Unitarian," was a frequent contributor to the "Christian Register," wrote a "Life of Nathaniel Bacon" and several sermons.

CATHEDRAL OF MESSINA.

cussion which continued for several years. He continued in his professorship until his death, in 1845. He was the author of several sermons, and from the year 1820 he published several pamphlets on the questions at issue respecting the Unitarian influence which was then prevailing in New England. Henry Ware, junior, D.D., was born in 1794, and educated at Harvard. He became distinguished as a preacher, and he was appointed to a professorship of pulpit eloquence and pastoral care in the divinity school at Cambridge. He entered on the duties, but his excessive delicacy interfered with his successful discharge of them,

**WARELWAST** (war'el-wast), a Norman who in the beginning of the twelfth century held the see of Exeter. He was a nephew of William the Conqueror, being a son of the Conqueror's sister. It is to him that the cathedral of Exeter owes its foundation; but the transept towers alone remain of his work. He laid the foundation of his edifice in the year 1112, but he did not live to finish it. His successors continued his design, which was not completed until the very end of the twelfth century, during the episcopate of Henry Marishall, who died in 1206, after having contributed much to complete the work.

**WARHAM** (war'ham), WILLIAM, an eminent English prelate, was born at Okely, in Hampshire, and educated at New College, Oxford. In 1493 Henry VII. sent him on a mission to Flanders, and employed him on other diplomatic services; made him master of the rolls, bishop of London, keeper of the great seal, lord chancellor, and, in 1503, archbishop of Canterbury. In 1506 he was elected chancellor of Oxford. On the accession of Henry VIII., Warham continued to hold the great seal, but the growing influence of Wolsey diminished his favor with the king, and the insolence of the cardinal caused him to resign his office in 1515. On Wolsey's disgrace it is said Warham declined the great seal. He was a man of piety and great liberality, so that at his death he left scarcely the means of paying his debts; but his zeal for the Church made him persecute those who differed from him, and credulous enough to

MONASTERY NEAR MESSINA.

believe in the pretended miracles of Elizabeth Barton. He died at Canterbury in 1532.

**WARNER** (war'ner), FERDINAND, a divine, and voluminous writer, was born in 1703, and educated at Jesus College, Cambridge. In 1730 he became vicar of Roud, in Wiltshire; in 1746 rector of St. Michael, Queenhithe, London; and in 1758 rector of Barnes, in Surrey. He died in 1768. He was frequently engaged in compilations for the booksellers, which, however, he executed in a very superior manner, and gave many proofs of diligent research and judgment. Among his principal publications is "A System of Divinity and Morality."

**WARNER, JOHN**, a learned prelate, born at Westminster in 1585. He was educated at Oxford, and became successively prebendary of Canterbury, dean of Lichfield and bishop of Rochester; suffered much for his loyalty in the civil war, but recovered his see at the Restoration, and died in 1666. He was the founder of the college at Bromley, Kent, for the widows of clergymen.

**WARS OF THE LORD, BOOK OF THE**, a document cited Num. xxi. 14. It was probably a collection of poems or songs celebrating the victories which had been achieved by the Israelites by the help of God. There is no reason to doubt that there were minstrels enough in Israel at all times of their history to record the events of that history in song, and those composed before the date of this notice might have been written in a book. What confirms this are the undoubted fragments of ancient songs in verses 17, 18 and 27-30.

It is not clear what the passage cited means, but it seems to give a geographical notice, and probably was of some importance as indicating the ancient boundaries of the Moabish territory.

**WARTON** (war'tun), also known as **ROBERT PURFEY** (pur'fe), rose to be bishop of

Hereford, succeeding John Harley in 1554. Harley was a man of great piety, virtue and learning, according to Leland, but he was deprived of his see by Queen Mary the year after his consecration because he was married and was opposed to the mass. Warton displayed great hospitality during his administration of the see, but his greatest works were the construction of the beautiful church of Mould, in Flintshire, and his munificence to those of Gresford and the splendid structure of Wrexham, in Denbighshire, which is one of the finest churches in the central part of Western England. He died September 22, 1557, and was buried in the south wing of the transept of his cathedral, in which there is a monumental effigy to his memory.

**WARTON, JOSEPH**, an accomplished scholar, poet and critic, was born in 1722, at Dunsford, in Surrey, was educated at Oriel College, Oxford, became curate of Chelsea and rector of Tunworth, and in 1766 was advanced to the station of head-master at Winchester, where he presided with high reputation nearly thirty years.

In 1788 he obtained a stall in the cathedral of Winchester, and the rectory of Easton, which he exchanged for Upham. In 1793 he retired from the school to his rectory of Wickham, in Hampshire, where he died in 1800. His chief works are an "Essay on the Writings and Genius of Pope" and translations from Virgil.

**WASH, WASHING.** See **ABLUTION; BATH.**

**WASSE** (wass), JOSEPH, a learned scholar, was born in Yorkshire in 1672, and educated at Queen's College, Cambridge, where he took his degree of bachelor of divinity in 1707. Before this he had assisted Kuster in his edition of "Suidas." In 1711 he was presented to the rectory of Aynhoe, in Northamptonshire. He became at length a proselyte to Dr. Samuel Clarke's Arianism, and corresponded much with him and with William Whiston, who says that he was "more learned than any bishop in England since Bishop Lloyd," and reports the singular compliment Bentley paid to him: "When I am dead, Wasse will be the most learned man in England." He published several essays in the "Bibliotheca Literaria." He died in 1738.

**WATCH.** Watching must have been coeval with danger, and danger arose as soon as man became the enemy of man or had to guard against the attacks of wild animals. Accordingly, we find traces of the practice of watching in early portions of the Hebrew annals. Watching must have been carried to some degree of completeness in Egypt, for we learn from Ex. xiv. 24 that the practice had at the time of the Exodus caused the night to be divided into different watches or portions, mention being made of the "morning watch." Compare 1 Sam. xi. 11. In the days of the Judges, Jud. vii. 19, we find "the middle watch" mentioned. See Luke xii. 38. At a later period Isaiah plainly intimates, Isa. xxi. 5, 6, that there was a watch-tower in Jerusalem, and that it was customary on extraordinary occasions to set a watchman. Watchmen were, however, even at an earlier day, customarily employed in the metropolis, and their post was at the gates, 2 Sam. xviii. 24; Ps. exxvii. 1, where they gave signals and information, either by their voice or with the aid of a trumpet, Jer. vi. 17. At night watchmen were accustomed to perambulate the city, Song Sol. iii. 3; v. 7. In the New Testament we find mention made of the second, the third and the fourth watch, Luke xii. 38; Matt. xiv. 25. The space of the natural night, from the setting to the rising of the sun, the ancient Jews divided into three equal parts of four hours each. But the Romans, imitating the Greeks, divided the night into four watches, and the Jews, from the time they came under subjection to the Romans, following this Roman custom, also divided the night into four watches, each of which consisted of three hours. The terms by which the old Hebrew division of the night was characterized are—1. "The first watch," Lam. ii. 19; 2. "The middle watch," Jud. vii. 19; 3. "The morning watch," Deut. xiv. 24; 1 Sam. xi. 11. The first extended from sunset to our ten o'clock, the second from ten at night till two in the morning, and the third from that hour till sunrise.

**WATER** (wa'ter). The vast importance of water in a warm climate can scarcely be exaggerated. The Israelites had ample experience of this

in their wanderings through the desert, where their murmurings were checked and their thirst relieved by God's miraculous interference, Ex. xv. 22-26; xvii. 1-7. Hence in commendation of the promised land its plentiful supply of water is repeatedly noted, Dent. viii. 7; xi. 11; and the happiness of the righteous is described: "Bread shall be given him; his waters shall be sure," Isa. xxxiii. 16. On the other hand, the miseries arising from failure of water and consequent famine and disease are often vividly depicted, 1 Ki. xvii. 7; xviii. 5; Lam. iv. 4; compare Luke xvi. 24.

Water was supplied by fountains, brooks or streams of running water, many of which became dry in hot seasons, cisterns or tanks, and wells. See **CISTERN, FOUNTAIN, WELL.**

It was natural that water should have a symbolic use. On certain solemn occasions the Israelites drew water and poured it out before the Lord, 1 Sam. vii. 6. There was a custom of this kind at the feast of tabernacles, when for seven days a priest brought water in a golden vessel from the pool of Siloam, and poured it, together with wine, on the altar. To this Christ may be supposed to allude in John vii. 37-39, symbolizing by water the refreshing and purifying influence of the Holy Spirit. Both spiritual graces and gospel blessings generally are frequently described by this term, Isa. lv. 1; Ezek. xxxvi. 25; Rev. xxii. 17. And the final happiness of God's people is said to be that they shall thirst no more, Matt. v. 6; Rev. vii. 16, 17; xxi. 6. For a notice of the water of jealousy see **JEALOUSY.**

**WATERLAND** (wa'ter-land), DANIEL, D.D., an English Church clergyman and religious controversialist, was born in 1683, at Waseley, in Lincolnshire. He graduated at Magdalen College, Cambridge, and became rector of Ellingham in 1713. Four years after, he was appointed chaplain to King George I. His "Defence of the Nicene Creed" and "Defence of Christ's Divinity," works called forth by the controversies of the time, attracted much attention, and brought their author rapid promotion. He died in 1740.

**WATERLANDERS** (wa'ter-land-erz), the less rigid portion of the Mennonites, so called because the majority of them belonged to a district named Waterland, in the North of Holland. They resemble the Baptists in England, and do not adopt the old Puritan stiffness and discipline of the "Flemings" or "Fine" Mennonites. The Waterlanders have also sometimes been named Johannites, from Hans de Rys, one of their leaders in the sixteenth century.

**WATSON** (wat'sun), RICHARD, a celebrated English prelate, was born in 1737, at Heversham, in Westmoreland, and educated at Trinity College, Cambridge. He was chosen, in 1764, professor of chemistry, and in 1771 he succeeded to that of divinity. He early distinguished himself by a display of his political opinions in a sermon preached before the university, which was published under the title "Principles of the Revolution vindicated," and excited an unusual degree of public attention. In 1776 he published his "Apology for Christianity." In 1782 he was advanced to the bishopric of Llandaff. On this promotion he published a letter to the archbishop of Canterbury, containing a plan for equalizing church revenues. In 1796 the bishop appeared a

second time as the defender of revealed religion, in his "Apology for the Bible," in answer to Tom Paine's "Age of Reason." The "Apology" is an inadequate reply to the most weighty questions raised so fiercely and ignorantly by Paine, but it is still worth reading, not only as a book of some historical importance, but as a masterpiece of style. Bishop Watson died in 1816.

**WATSON, THOMAS**, a Roman Catholic

prelate in the reign of Mary, was educated at St. John's College, Cambridge, of which he was elected Fellow, and in 1553 master. In the same year the queen gave him the deanery of Durham, vacant by the deprivation of Robert Horne. He had previously been chaplain to Gardiner, bishop of Winchester. In 1557 he was consecrated bishop of Lincoln. In this see he remained until the accession of Elizabeth, when he was deprived, on account of denying the queen's supremacy; and remaining inflexible in his adherence to popery, he suffered confinement in or near London until 1580, when he was removed to Wisbech Castle, together with several others. He died there in 1582. He held several conferences with those of the Reformed religion, and particularly was one of those appointed to confer with, or rather sit in judgment on, Cranmer, Ridley and Latimer, previously to their being burnt at Oxford.

**WATSON, THOMAS**, an eminent nonconformist divine, was educated at Emanuel College, Cambridge. In 1646 he became rector of St. Stephen's Walbrook, London, and was a preacher of great fame and popularity until the Restoration, when he was ejected for nonconformity. He afterward preached where he could with safety, until indulgence being granted in 1672, he fitted up Crosby Hall, Bishopsgate street, London, and preached there for several years. At length he

retired to Essex, where he died suddenly in 1689. He published a variety of small works on practical subjects, particularly "The Art of Divine Contentment," but his greatest work is his "Body of Divinity," consisting of a series of sermons on the Assembly's Catechism.

**WATTS, ISAAC**, the nonconformist divine, poet and miscellaneous writer, was born at Southampton, July 17, 1674. He was fond of books

PORTAL TO THE CATHEDRAL OF BURGOS, SPAIN.

from his earliest years, and at an early age began to try his hand as verse-maker and on Latin essays. Watts had been brought up a nonconformist; he continued one from conviction, and his purpose was to devote himself to the ministry. He preached his first sermon on his birthday, 1698. About three years later he succeeded to the pastorate of the church which then met in Mark Lane, London; but in consequence of a severe illness which immediately attacked him, an assistant was appointed. A still severer attack broke him down in 1712, and for rest and change he visited his friend Sir Thomas Abney, at Theobald's.

This visit, fruitful of good and joy to himself and the family, was prolonged for thirty-six years, Watts remaining the guest of Sir Thomas and of his widow till his death. Lady Abney survived him. Watts remained pastor of his church, and preached as often as his health allowed, refusing his salary when incapacitated for his work. In his retirement he pursued his studies, and composed and published his various theological and literary works, which in their day had a large circulation, and steadily served the cause of popular education as well as of religion. His sermons and theological dissertations are very numerous. His "Logic, or the right Use of Reason in the Inquiry after Truth," was published in 1725, and became a favorite text-book in the higher schools. Among his other writings are his "Improvement of the Mind," an "Essay toward the Encouragement of Charity Schools," and the "Horn Lyric." But Dr. Watts has probably exerted his widest influence and earned his most enduring celebrity by his metrical version of the Psalms of David and his hymns. These are, perhaps, now in danger of being underrated. But while it cannot be pretended that they are as a whole at all adequate expressions of the new and rich spiritual life and experience of men, it is certain that they would not have gained and held the place they occupy in religious observances unless they had much solid and appreciable truth and worth. And after all concessions are made to the depreciating critic, it must still be acknowledged that among Watts's Psalms and hymns not a few possess the charms of truth, deep feeling, simple and felicitous expression, and are as truly poetic as they are pious. These the world will not let die. His "Divine and Moral Songs" for children have taken strong hold on nurseries and schoolrooms and home firesides; they seem as permanent a part of children's books as Aesop's Fables, Robinson Crusoe and the Pilgrim's Progress, and are likely to remain so in defiance of grave criticism and light laughter. The

HEAD OF BISHOP WAYNFLETE.

last years of this venerable man were passed in great physical weakness, and were saddened by the unkindness of some of his relations. He died peacefully, November 25, 1748, and was buried in Bunhill Fields.

**WAVE-OFFERING.** See OFFERINGS.

**WAY.** See ROADS.

**WAYLAND** (wa'land), FRANCIS, D.D., LL.D., was born in 1796, in the city of New York. His parents were from England. He was edu-

cated at Union College, Schenectady, where he graduated in the year 1813. For some years he devoted his attention to the study of medicine; but in 1816 he entered Andover Theological Seminary, and in the following year he became a tutor in Union College. In 1821 he settled in Boston as pastor of the First Baptist Church, from which, in 1826, he retired to assume the duties of the chair of mathematics and natural philosophy in Union College. In a year he was made president of Brown University, and here his great talents found their appropriate sphere. Afterward he preached in the First Baptist Church in Providence; and he closed his laborious and honorable life in 1865. As president his duties were discharged with marked ability, as the buildings, the books and all things connected with the institution amply displayed. He collected philosophical instruments, raised vast sums for an endowment, and by the fame of his lectures gave tone and character to Brown University which raised it to a lofty eminence. He was a prolific author, publishing on missions, sermons, occasional discourses and minor works; but his name rose in literary circles when his "Elements of Moral Science" appeared. It speedily became a text-book in schools and colleges. Next in importance was his "Elements of Political Economy," which was followed by his "Moral Law of Accumulation" and "The Limitations of Human Responsibility," "Elements of Intellectual Philosophy," "Sermons to the Churches" and a large number of smaller works. He discussed the questions of slavery, collegiate education and many of the important questions of the day, and in all his writings there was the evidence of a master mind. As a thinker and an expounder he was justly regarded as standing at the head of his denomination.

**WAYNFLETE** (wane'flete), WILLIAM, a munificent prelate of the fifteenth century, was born at Wainfleet, in Lincolnshire. He was educated at Wykeham's School, Winchester, and at Oxford; and entering the Church, his talents, acquirements and high character obtained for him the mastership of the school where he was educated. Here for eleven years he displayed such diligence and judgment as to gain the approval of King Henry VI., who founded Eton College on the same model, and made Waynflete its first provost in 1443, and in 1448 he was consecrated bishop of Winchester. In 1456 he received the great seal, and held it for nearly four years, endeavoring to mediate between contending parties, till, dissenting from the violent measures of his party, he retired. Edward V. duly appreciated his merits, granted him a full pardon and showed him many tokens of good-will. Even Richard III. regarded his mild virtues, and Henry VII. confirmed him in all his rights. In 1448 he founded St. Mary Magdalen Hall, Oxford, and he also erected and liberally endowed a school and chapel, dedicated to the same saint, at Waynflete. He died in 1486.

**WEAN.** See CHILDREN.

**WEAPONS.** See ARMS.

**WEASEL** (wea's'l), one of the animals pronounced unclean, Lev. xi. 29. The Hebrew name is derived from a root signifying to "glide;" hence the weasel may be so called from its swift gliding motion or its gliding into holes. Possibly, however, the mole may be meant.

**WEAVER** (weav'er), **WEAVING** (weav'ing). Weaving of some sort must be contemporary with the use of textile fabrics, and this remounts to the earliest ages. That weaving was practiced by the Israelites before they were acquainted with the Egyptians cannot be doubted; but as the Egyptians were from an early period famous for the delicacy and beauty of the products of their looms, we may suppose that the Israelites learned something from them during their residence among them.

ORIENTAL WEAVER AT WORK IN THE OPEN AIR.

The fabrics required by a household were probably usually manufactured in the house. Hence in the description of the virtuous woman her diligence and skill in weaving are prominently commended, Prov. xxxi. 13, 22, 24. That weaving, however, was practiced as a trade, and that from a very early period there was a weavers' guild among the Israelites, appears evident from 1 Chr. iv. 21. Women also were employed in weaving as a trade, 2 Ki. xxiii. 7. Perhaps the commoner sorts of work were done at home, while skilled workers were employed to produce the fine byssus fabrics and highly-ornamented work resembling that for which the looms of Egypt were famous.

The looms of Egypt were of the most simple kind, and those of Judea were doubtless not less so. The "weaver's beam" was a piece of wood placed either perpendicularly or horizontally, to which the web was fastened. The other implements used were the shuttle and a pin or cord, used to fasten the web to the beam, Jud. xvi. 14.

The fabrics produced by the loom among the Hebrews were of woolen, byssus and cotton; also the camels'-hair and goats'-hair cloths used for the covering of tents and for the dress of the poor. Other more costly and artistic fabrics were also probably produced by weaving.

Our Lord wore a garment without seam wholly woven from top to bottom, John xix. 23. A similar garment Josephus says was worn by the high-priest, and the Brahmins of India make a point of wearing only such.

**WEBBE** (web), GEORGE, a pious prelate, was born in 1581, at Bromham, in Wiltshire, and was educated at Corpus College, Oxford. He was made minister of Steeple Aston, in Wiltshire, and in 1621 was inducted to the rectory of St. Peter and St. Paul, in Bath. In 1624 he proceeded D.D. On the accession of Charles I. he was made one of his chaplains in ordinary. He was consecrated bishop of Limerick in 1634. He died in 1641. His principal work is his "Præctice of Quietness."

**WEBSTER** (web'ster), ALEXANDER, D.D., was born in 1707, in the city of Edinburgh, and educated for the Scottish Church. In 1733 he was appointed parish minister of Culross, and four years afterward he was removed to the Tolbooth Church, in Edinburgh. He became well known in Scotland as the promoter of the fund which was created for the aid of the widows and ministers of the Church; and his practical sagacity and breadth of view, combined with a goodly measure of energy, made him one of the most useful ministers of his day in the Scottish capital. His efforts at statistics led to the first census in Scotland. He published a few sermons, but his most valuable efforts were in the direction which bore on the comfort of the families of the clergy and on the general welfare of the people. His chief characteristic was a broad common sense which, combined with a practical desire to do good, made him a valuable minister and member of society.

**WEBSTER**, NOAH, LL.D., who holds a distinguished place in American literature, was born in 1758, at Hartford, Connecticut, and educated at Yale College, which he entered in 1774. His course was interrupted for some time, as he was called to serve for a period in the militia; but he graduated in 1778, and was admitted to the bar in 1781. It is remarkable that in 1783 his "First Part of a Grammatical Institute of the English Language" appeared, and that it should have effected for him what many large works have failed to do for their authors. This was really a spelling-book only; and yet during the twenty years in which he was engaged in preparing his great "Dictionary" his family was supported by the proceeds of the copyright, which produced him only one cent for each copy! In 1785 he traveled in the Southern States, and suggested to Washington at Mount Vernon the propriety of a new Constitution of the United States. After a residence in Philadelphia, where he had engaged in teaching, he removed to New York and engaged in the publication of a newspaper. He removed his residence to New Haven; and here he labored assiduously at his "Dictionary," his life-work, on which he spent the toil of thirty-six years. From 1812 until 1822 he lived at Amherst, and he engaged very heartily in the establishment of the college which has made that place so deservedly popular. In fact, this was his permanent

home, as he only left it for a tour through different European countries and on occasions of temporary visits, and he died at Amherst in 1843, having reached the eighty-fifth year of his age.

He was a voluminous writer, as no fewer than thirty-seven distinct works proceeded from his pen, the thirty-seventh being "Webster's American Dictionary of the English Language," a work which has occupied a prominent place in the literature of the age. Twelve varied forms of his "Dictionary" have appeared; and on both sides of the Atlantic the numerous editions which have been issued have made these books known in most households as well as in schools, academies and colleges. Even one London edition is known to have required one hundred men in its preparation; and it is probable that no work in modern times has ever engaged a greater number of men of learning, than the publishers have had occasion to engage in revising, annotating and preparing the various issues of this remarkable treasury.

**WEBSTER**, RICHARD, was born in 1811, at Albany, in the State of New York. He entered the ministry of the Presbyterian Church, and for several years he had the charge of the congregation of Mauch Chunk, Pennsylvania, where he died in the year 1856. He was a man of fine taste, great piety and very devoted to his pastoral work. He had a peculiar talent for antiquarian research, which made him a successful collector of valuable details connected with the early history of our country, especially as it tended to illustrate the planting and expansion of the Church. He left behind him a considerable collection of such treasures, on which he had been laboring before his death. They were edited by the Rev. William Blackwood, D.D., who prefaced the work with an Introduction, and enriched it with Tabulated matter, while a valuable Life of the author by the Rev. C. Van Rensselaer, D.D., gave completeness to the publication.

**WEDDERBURN** (wed'der-burn), JAMES, was born about A. D. 1500, at Dundee, in Scotland. He is worthy of note because of his connection with religious poetry. He prepared a book which it is believed was used in 1549. It had the quaint title "Ane Compendious Buikie of Godly and Spirituall Sangs, collected out of sundrie Partes of Scripture, with sundrie of uther Ballates changed out of Prophane Sangs, for avoiding of Sinne and Harlotrie." He was aided by two of his brothers in getting up this book. It is stated as a remarkable fact in the "History of Eminent Scotchmen," by Chambers and Thomson, that before the introduction of the version of Sternhold and Hopkins into Scotland, in 1564, the Reformed congregations sang versions of twenty-one Psalms and paraphrases of the Lord's Prayer, Creed and Commandments which had been executed for that purpose by Wedderburn. He is supposed to have died in England in the year 1564.

**WEDDING.** See MARRIAGE.

**WEEDS.** See COCKLE.

ORIENTAL WEAVER AT WORK IN A SHED.

**WEEK.** The week of seven days, appears very early as a measure of time—e. g., Gen. vii. 10; viii. 10, 12; xxix. 17. See SABBATH. For feast of weeks see PENTECOST. Respecting the origin of this seven-fold division critics are not agreed. The most natural belief would be that the process of creation, six periods of working and one of rest, was at once made known to man, Gen. ii. 2, 3. In widely-separated nations the week has been acknowledged. And though there are some in which it cannot be traced, yet it is as probable that among these the observance had passed away, as that it never descended from a common ancestor. In the last century an attempt was made in France to abolish the weekly reckoning of time, because of hatred to religion and with a desire to obliterate the institutions of Christianity. In a barbarous and illiterate age this attempt would probably have in a while succeeded.

**WEEKS** (weeks), WILLIAM RAYMOND, D.D., was born in 1783, at Brooklyn, Connecticut. He graduated in the College of New Jersey, in 1809, and he acted as tutor for a short time after he had attained his degree. At that period of his life he had determined on giving himself to foreign missionary work, and, with a view to future usefulness, he gave himself to the study of Hebrew with great energy. In 1811 he entered Andover Theological Seminary, and in 1812 he was ordained and installed over the church at Plattsburg by the Columbia Presbytery, where he remained for two years. After this time he engaged in teaching and ministering to different churches as opportunity presented until 1832, when he accepted a call from the Fourth Presbyterian Church in Newark, New Jersey; and here he labored in that charge and taught in an academy until 1846, when his health declined. He died in 1848. Dr. Weeks was the author of a great number of works which were well received. He wrote on "Total Depravity," "The Design of

Redemption," "The Atonement," "Personal Holiness," "Consolation for the Afflicted," "Free Agency," "The Doctrine of Decees Explained," and he produced a large number of tracts, pamphlets and sermons on other important subjects.

**WEEMSE** (weem'se), JOHN, was a Scotchman, born about the close of the sixteenth century. He entered the ministry of the Church of England and rose to be a prebendary in Durham Cathedral, a position which he held only for two years, as he died in 1636. He had a vigorous mind, as his writings show, among which may be mentioned his "Christian Synagogue," which treats of the pointing, translation and collation of Scripture. In 1632 he published two works—viz., "Portraiture of the Image of God in Man" and an "Exposition of the Laws of Moses, Moral, Ceremonial and Judicial;" and in 1634 he issued a very quaint work, "Treatise of the Four De-

xvi. 11, margin, subsequently perhaps of lead, Zech. v. 7. There have been found in the Nineveh ruins bronze weights in the shapes of lions and ducks, with certain marks upon them indicating how much they were; in Egypt also there were lions' heads and bulls' heads, and similarly elsewhere. The shekel of the sanctuary, Ex. xxx. 13; compare 2 Sam. xiv. 26, was probably the standard, preserved in the tabernacle or temple.

The following table will show the proportionate weights:

Gerah.	Bekah.	1 or half-shekel.	Shekel.	Maneh.	Talent.
10	1	1	1	1	1
20	2	2	2	2	2
1200	120	60	60	60	60
60,000	6000	3000	3000	3000	3000

But this talent was of silver; the gold talent was double in weight; it was equal to 100 manehs, each of which contained 100 shekels.

Then as to correspondence with our own weights:

ANCIENT WEIGHTS.

generate Sonnes, viz., the Atheist, the Magician, the Idolater and the Jew." None of these works have lost their interest, and that on the "Laws of Moses" is learned and of very special value.

**WEIGHTS.** The subject of the Hebrew weights is one of considerable difficulty. It would require a lengthened treatise to describe the modes of calculation adopted, and to state the reasons of the conclusions arrived at. It must be sufficient here to notice the different weights mentioned, to show their relative proportions, and to exhibit, so far as learned men have been able to determine, their equivalents in the weights of our own time and country.

The weights mentioned in Scripture are a "gerah," implying a grain or berry, a "shekel," signifying weight, with its subdivisions of half-shekel and quarter-shekel, a "maneh," meaning part, and a "talent," the Hebrew equivalent for which means a globe or mass. There is reason to believe that anciently weights were of stone, Dent. xxv. 13, 15, margin; 2 Sam. xiv. 26; Heb.; Prov.

But the 10,000 shekels of a gold talent weighed 132 grains each, and consequently the talent 1,320,000 grains.

Trading was originally according to weight, so much gold or silver being weighed out by a purchaser; hence the monetary system grew out of that of weights, and the same words denoted both money and weights. It is therefore specially desirable to understand the relative weights of the Hebrew coinage. Perhaps the proportion was not always accurately observed. The following tables will be serviceable to the reader:

COPPER COINS.			
	Average weight.	Supposed weight.	
Half.....	255.4	250 gr.	
Quarter.....	132.0	125	
(Sixth).....	81.8	83.3	
SILVER COINS.			
	Average weight.	Supposed weight.	
Shekel.....	220 gr.	id.	
Half-shekel.....	110	id.	
(Third).....	73.3		

## EASTERN TALENT.

Hebrew gold.....	1,320,000 gr.
Babylonian (silver).....	950,040
Egyptian.....	840,000
Hebrew copper (?).....	792,000 (?)
Hebrew silver.....	660,000
Babylonian lesser (silver).....	475,520
Persian gold.....	309,000

The word "dram" appears to be sometimes used as indicating weight; it corresponds with the Persian daric, 129 grains troy.

**WELCH** (welsh), JOHN, who became eminent in Scotland, in connection with the Reformation settlement in the sixteenth century. He was born in 1570, and after the ordinary education of the day he was settled in the ministry at Ayr, when he was only twenty years of age. He was an ardent Presbyterian, and a decided supporter of the rights of the Church against the intrusion or dictation of the civil power. In 1605 he was imprisoned, and in the following year he was banished, because of his resistance of the policy of James VI., who sought to suppress the meeting of the General Assembly of the Church. He settled at St. Jean d'Angely, in France, where he resided for fourteen years, preaching in English and French to the different audiences that waited on his ministry. He enjoyed the friendship of Louis XIII., with whom he became a favorite. He returned to London in 1622; but the monarch refused to permit him to go to Scotland, and he died in the same year. His wife was daughter to John Knox, the Reformer. He was the author of a work entitled "A Reply against Gilbert Brown, Priest, on the Popish Controversy" and "Popery Anatomized." In 1752 a volume of his sermons was published, and in 1771 "Forty-eight Select Sermons" from his pen, with his "History and Prophecy Letters," were published. Several memoirs of this eminent man have appeared, and his name is still as a household word in Scotland.

**WELCHMAN** (welsh'man), EDWARD, a learned divine, was born in 1665, at Banbury, in Oxfordshire, and educated at Magdalen Hall, Oxford. After entering into holy orders, he was presented to the rectory of Lapworth, with which he held that of Solihull, in Warwickshire. He became also archdeacon of Cardigan. He died in 1739. His chief publication was his illustration of the Thirty-nine Articles.

**WELD, THOMAS**, an English cardinal, was born in 1773, at Lulworth Castle, Dorsetshire. He succeeded to his ancestral estates in 1810; but on the death of his wife, in 1815, he took orders, and was some years afterward consecrated coadjutor bishop of Canada. Being in Italy in 1829, Pope Pius VIII. elevated him to the dignity of a cardinal. For many years previous he had devoted the whole of his time, and a great part of his fortune, to pious and charitable purposes; and he now relinquished his estates to his brother, Joseph Weld, who, in 1830, received Charles X. of France, and his family, as guests at Lulworth Castle, previous to their removal to Holyrood House. He died April 10, 1837.

**WELDE** (weld), THOMAS, was a nonecon-forming minister in England who had been settled at Tarling, in Essex, but who emigrated, and arrived at Boston, Massachusetts, in 1632, and was soon after his arrival placed in Roxbury. He, together with John Eliot and Richard Mather, was commissioned to prepare a metrical version of the Psalms, and the results of their labors,

known as "The Bay Psalm-book," was printed at Cambridge in 1640. Next year he was commissioned to go along with Hugh Peters to England on behalf of the colony, and he settled in the ministry at Gateshead, on the river Tyne, opposite to Newcastle; but in 1662 he was ejected for nonconformity, and it is believed that he died in the same year. He published a work in quarto, in 1644, entitled a "Short Story of the Rise, Reign and Ruin of the Antinomians, Familists and Libertines that infested the Churches of New England." This work has been credited to some extent to Governor John Winthrop, and the fair-dealing of Welde as to the authorship has been called in question. He wrote an "Answer to W. R., his Narrative of the Opinions and Practices of Churches lately erected in New England." He was also associated with three other ministers in writing "The Perfect Pharisee under Monkish Holiness; against the Delusions of the Quakers," and "The False Jew Detected," exposing a man who pretended to be a Jew, and then an Anabaptist, and who was really an impostor.

**WELDON** (wel'dun), JOHN, an eminent composer of cathedral music, was born at Chichester. Early in life he became organist of New College, Oxford; in 1701 he was appointed gentleman-extraordinary of the Chapel Royal. He was also organist of St. Bride's, Fleet street, and of St. Martin-in-the-Fields, London. He assisted in setting Congreve's masque, "The Judgment of Paris," to music. Weldon's fame is mainly built on his anthems, "In Thee, O Lord," and "Hear my cry." He died in 1736.

**WELL.** The wells of Scripture are numerous, and some of them remain to this day, in part at least, the same as in olden times, as at Beersheba, though the masonry of the upper parts and the stone troughs set round have been removed. They have been dug into the solid rock to a great depth, and all the rubbish that has been thrown into them for centuries has not filled them up. Jacob's well still retains a depth of seventy-five feet. We have no information as to how they were dug; but the process in those days must have been a very laborious one, as the instruments employed were, so far as we know, of a feeble kind. One would like to know how Jacob dug into the rocky roots of Mount Gerizim, some hundred and fifty feet perhaps, for the well bears marks of being much deeper than it is at present. One would like to know how Saladin in after ages contrived to dig so many wells in Palestine, leaving behind him such memorials of his persevering skill as the well at Khan Jubiyuseph, or Bir-Eyub.

The first well mentioned in Scripture is in "the wilderness," in the way to Shur, where Hagar sat down when fleeing from Sarai, which was afterward called *Beer-lahai-roi*, "the well of him that liveth and seeth me," Gen. xvi. 14, between Kadesh and Bered. It is called both a "fountain" and a "well." The second well mentioned is also in connection with Hagar's history, Gen. xxi. 19, in the wilderness of Beersheba. After this a good many wells are mentioned—the wells of Beersheba, which remain to this day; the Mesopotamian well, Gen. xxiv. 11, at the city of Nahor; the wells in Gerar, Gen. xxvi. 15, 18; the well Esek, Gen. xxvi. 20; the well Sitnah, Gen. xxvi. 21; the well Rehoboth, Gen. xxvi. 22; the well Beersheba, Gen. xxvi. 25; the well in Haran, Gen. xxix. 2; the wells of Elim, Ex. xv. 27; the well dug by the princes, Num. xxi. 16; the well of Nephtoth, Josh.

xviii. 15; the great well in Sechu, 1 Sam. xix. 22; the well of Bethlehem by the gate, 2 Sam. xxiii. 16; the well of Harod, Jud. vii. 7; Jacob's well, on the low slope of Gerizim, Jud. iv. 6. These are some of the principal wells of Scripture.

They seem to have been sunk much deeper into the soil or rock than is at all usual for us. The risk of running dry in summer rendered this a necessity in these hot climates, for even in very favorable positions the water is almost exhausted by the summer drought—they are "wells without water." In some parts they are quite uncovered, such as at Beersheba, the nature of the surrounding soil not rendering them liable to be filled up by drift. In the desert they are covered; or at least they taper to a point, something like a bottle, so that their aperture is easily covered over, so as to seal them against the sand. They are in a measure sacred, so that no one would venture to destroy them or fill them up. Jacob's well has been in early ages built over by a church, which is now in utter ruins, and seems to have been also protected by an arch a little below the lip of the well. It is said to have been recently purchased by the Russians for the purpose of erecting over it a new chapel for the Greek Church.

**WELLER** (wel'ler), GEORGE, D.D., was born in 1790, at Boston. His father was of German origin, and connected with the Lutheran Church, but he entered the Episcopal Church, in which communion his son was educated. He had to encounter considerable difficulties in his early years in procuring an education; and having removed from Boston to Danbury, Connecticut, he opened a bookstore in that place, and while attending to business used great diligence in reading, and eventually he entered the family of the Rev. Dr. Judd of Norwalk, with a view to study for the ministry. During this course he acted as a lay-reader, and in 1816 he was admitted to deacon's orders by Bishop Hobart. For a short time he acted as a missionary in Putnam and Westchester counties; and on being admitted to priest's orders he accepted a call to Great Choptank Parish, at Cambridge, Maryland, where he remained five years. In 1822 he removed to St. Stephen's Church, Cecil county, Maryland; and having published an effective "Vindication of the Church," which defended the orders of the Episcopal Church against the attacks of the Romanists, he was chosen as editor of a religious paper about to be established in Philadelphia, and thus he became connected with "The Church Register," which he managed for three years. During this time also he published several short treatises on Church doctrines selected from Barrow, Jones, Law, Waterland and others, under the name of "The Weller Tracts," and their value continues to be recognized. He retired from labor owing to the state of his health, but as soon as his strength returned he settled in Nashville, Tennessee, in a church newly organized; and the edifice built for him was the first Episcopal church edifice erected

in the State of Tennessee. In 1838 he removed to Memphis, where a church edifice was commenced and finished, and next year he settled at Vicksburg; and here, in 1841, when the yellow fever broke out with great virulence, he devoted himself with great assiduity to the sick; but eventually he fell under an attack of the disease. Dr. Weller was widely and favorably known in the Church; he excelled in the departments of ecclesiastical law and history, and he was intimately acquainted with the literature of the Church of England.

**WELLS, EDWARD**, who became greatly distinguished in the literary world, was a native of England. He was educated at Christ Church, Oxford, receiving his master's degree in 1693 and his doctorate in divinity in 1704. He received the living of Blechley, in Buckinghamshire, and in

AN ORIENTAL WELL.

1717 he was made rector of Cottesbush, in Leicestershire. He devoted great attention to ancient geography, and his works, both in relation to classical and Biblical study, were far in advance of anything to be found in his day, and they are still recognized as possessing great value. After five or six publications had appeared of this character, he issued his "Historical Geography of the New Testament, the Journeys of our Lord and of St. Paul," etc. This great work has passed through numerous editions, has been frequently annotated, and it is still deservedly in demand. His next work of decided value was his "Help for the more Easy and Clear Understanding of the Holy Scriptures." His outline contained an attempt to give the English version a closer agreement with the original texts, with a paraphrase and notes, together with prefaces and dissertations. Objection has been made to the theological doctrines of this work, but its facts and criticisms are duly appreciated. He next issued a "Treatise on

the Book of Daniel," a work on the "Divine Laws and Covenants" and a "Grammatical Harmony of the Greek and Latin Tongues," besides a great many tracts and pamphlets on the questions of his day. He died in 1727.

**WELSH, DAVID, D.D.**, who became eminent as one of the leaders of the Free Church of Scotland, was born in 1793 at Braefoot, in Dumfriesshire, Scotland. His early education was conducted at the celebrated High School of Edinburgh, and he thence passed to the University of Edinburgh, where he distinguished himself very greatly for the closeness of his application and the accuracy of his attainments. In 1821 he was settled as parish minister of Crossinichael, and in 1827 he was removed to St. David's Church in Glasgow. In 1831 he was appointed professor of Church history in the University of Edinburgh, and he held this office until 1843, when he, together with Drs. Chalmers, Gordon, Caudlish and

JACOB'S WELL.

four hundred others, retired from the Established Church and organized "The Free Church of Scotland." He was the first moderator of that body, and he was at once appointed professor of Church history in the Theological College of the Free Church. When he retired from the Established Church, he had to surrender his office of secretary to the Board for the Publication of the Bible in Scotland, and he thereby lost the salary of five hundred pounds sterling per annum. He was one of the promoters of the "North British Review," which was commenced in 1844, and for some time he acted as editor. He wrote a "Memoir of Dr. Thomas Brown," the predecessor of Wilson in the chair of mental philosophy and the successor of the celebrated Dugald Stewart. In 1834 his sermons appeared, and in 1844 the "Elements of Church History." His contributions to reviews and to the "Encyclopedia Britannica" were collected and published in 1856, and a volume of his sermons appeared posthumously. He died in 1845. Dr. Welsh was one of the most eminent men in Scotland of his age.

**WEN**, spoken of animals, Lev. xxii. 2. It probably means having running sores or ulcers.

**WENCESLAS** (wen'ses-law) IV., king of Bohemia and emperor of Germany, was born in 1361. To the former crown he succeeded in his second year, and his father, the emperor Charles IV., had him crowned king of the Romans in 1376, and two years after he succeeded to the empire. At this time the contentions of the rival popes, Urban VI. and Clement VII., disturbed Europe. Wenceslas sided with Urban; but unable to enforce his authority upon the princes of the empire, he had to grant them many privileges in derogation of his own power. Among his unjust and cruel measures was that of canceling all debts due to Jews. He tortured and had John Nepomuk, a Bohemian preacher, drowned in 1393; and the same year his Bohemian nobles imprisoned him for some months. The doctrines of Wycliffe having penetrated into Bohemia, and the preaching of

Huss causing much excitement, Wenceslas attended the diet at Frankfort, and pretended to be desirous of promoting the peace of the Church. He was deposed in 1400, but he still continued to call himself emperor, although another was elected, and he retained the crown of Bohemia till his death. The entrance of Zizka and his armed Hussites into Prague, in August, 1419, agitated him so deeply that he died of apoplexy a few days later.

**WERBURG** (wer'burg), SAINT, was the daughter of Wulphrus, king of the Mercians, who flourished about A. D. 600. Perceiving that his daughter was disposed to a "religious" life, he caused her to be veiled and placed with other ladies in a monastery which he built in Chester. She continued to preside in this house until her death, and she was buried in the monastery. The celebrated earl Hugh (see LUPUS, HUGH) re-edified and enlarged this monastery, which rose to be a place of great importance. Eventually the see of Chester was formed out of this ecclesiastical foundation.

**WESLEY** (wes'le). The name of a distinguished family of divines in England.

1. **SAMUEL**, was born about 1662, in Dorsetshire, and was educated in nonconformist sentiments, which he soon relinquished, owing to the violent prejudices of some of his sect in favor of the death of Charles I. At the age of sixteen he was admitted a servitor of Exeter College, Oxford, and on taking orders obtained the living of South Ormesby, in Lincolnshire, and afterward the rectories of Epworth and Wroote. He wrote a volume of poems, entitled "Maggots," "The Life of Christ," an heroic poem; "The History of the Old and New Testaments, in verse." He died in 1735.

2. **SAMUEL**, eldest son of the preceding, was born at Epworth, about 1692, was educated at Westminster and Christ Church, Oxford, became usher in Westminster School, and in 1732 was appointed master of the grammar-school at Tiverton, where he died in 1739. He was a rigid High Churchman, and wholly disapproved of the course of his brothers John and Charles. He was the author of "The Battle of the Sexes," and other poems.

3. **JOHN**, founder of Wesleyan Methodism, was the son of Samuel Wesley the elder, and was born at Epworth, in 1703. He graduated at Lincoln College, Oxford, in 1726, and was appointed Greek lecturer the same year. Shortly he became curate to his father at Wroote, and while laboring there in 1728 was advanced to priest's orders. Returning to Oxford University in 1730, he and his brother, with a few other students, formed themselves into a society for the purpose of mutual edification in religious exercises. So singular an association excited considerable notice, and among other nicknames bestowed upon the members that of Methodists was applied to them. Mr. Wesley, with some others, chiefly Moravians, came to Georgia, in 1735, with a view of converting the Indians. After a stay of two years he was compelled to leave the country in consequence of a love affair and the quarrel in which it involved him. He therefore returned to England, where Whitfield's preaching was then producing much excitement. The same year, 1738, was marked by a great religious change in the mind of Wesley, and by his visit to the Moravian settlement at Herrnhut. It was not till that year that, as he asserted ever afterward, he was really converted. In the following year he commenced itinerant preaching, and gathered many followers. The churches being shut against him, he built spacious meeting-houses in London, Bristol and other places. For some time he was united with Whitfield, his old college companion; but differences arising respecting the doctrine of election, they separated, and the Methodists were denominated according to their respective leaders. He had already separated himself from the Moravians. Wesley was indefatigable in his labors, and almost continually engaged in traveling over England, Wales, Scotland and Ireland. His society, though consisting of many thousands, was well organized, and he preserved his influence over it to the last. He published some volumes of hymns, numerous sermons, political tracts and controversial treatises. In Wesley's countenance mildness and gravity were blended, and in old age he appeared extremely venerable; in manners he was social, polite and conversable; in the pulpit he was fluent, clear and argumentative. The approach of old age did not in the least abate his zeal and diligence; he was almost perpetually traveling; and his religious services, setting aside his literary and controversial labors, were almost beyond calculation.

tion. His married life was very unhappy. His wife, whom he married about 1750, appears to have tormented him with jealousy and refractory conduct. She left him several times, and finally deserted him in 1771. He died March 2, 1791.

4. **CHARLES**, younger brother of the preceding, was born at Epworth in 1708. He was educated at Westminster School and at Christ Church, Oxford, and was associated with his brother John in all his labors in the establishment and spread of Methodism. Yet he was very unlike him in character and disposition. Charles Wesley was of a more genial and generous nature, and did not think liveliness and laughter incompatible with genuine piety. He wrote many of the hymns for his brother's collection, and some of them have much poetic spirit and elegance of expression. He died at London in 1788.

**WESSEL** (wes'sel), **JOHN**, a celebrated Dutch theologian, sometimes called a precursor of Luther, was born at Groningen in 1419. He became a great Hebrew and Greek scholar, taught theology at Heidelberg, Cologne, Louvain and Paris, and in the disputes between the Realists and Nominalists he adopted the views of the latter. He was the friend of Francisco della Rovere (afterward Pope Sixtus IV.), and spent some years at Rome during his pontificate. He never took orders, but published several treatises on theological and ecclesiastical subjects, and fearlessly attacked what he believed to be false doctrines as well as flagrant abuses in practice. Of course he was suspected of heresy. He died at Groningen in 1498.

**WEST**. The Hebrew word for west properly signifies sea—i. e., the Mediterranean—a proof that the Hebrew language was developed in Palestine. Sometimes, indeed, the phrase "where the sun goeth down" is used, Deut. xi. 30; Josh. i. 4. And there is another word signifying "darkening" or "sunset," met with in a like sense, Isa. xlv. 6. A Hebrew regarded himself as looking toward the east; and therefore "behind," or "backward," implies westward, Jud. xviii. 12; Job xxiii. 8; Isa. ix. 12. Hence, also, the western or Mediterranean Sea is called the "utmost," "uttermost" or "hinder" sea, Deut. xi. 24; Joel ii. 20; Zech. xiv. 8.

**WEST, GILBERT, LL.D.**, was the son of the Rev. Richard West, D.D., who distinguished himself in Merton and Magdalen Colleges, in Oxford, and afterward became prebendary of Winchester and archdeacon of Berks, but who left few literary works behind him of much value. Gilbert West, after his education at Eton and Oxford, entered the army. In 1729 he was made a clerk-extraordinary to the Privy Council, and he reached a full clerkship in 1752. He also held the position of under-treasurer of Chelsea Hospital. He was a nephew of Sir Richard Temple, and his residence in Kent was a place of attraction to public men, such as Lord Lyttleton and William Pitt the great earl of Chatham, as well as to many of the literary men of his age. Accordingly, he became familiar with the skepticism of the day; but he had the manliness and the wisdom to examine the word of God for himself, and the result was his memorable work, "Observations on the History and Evidences of the Resurrection of Jesus Christ," which produced a remarkable effect on the popular mind of England, and which has been republished ever since in large editions and translated into French and German. It has been often published along with an essay by Lord Lyttleton

THOMAS WHITE.

He was the author of "The Ark of God the Safety of the Nation," "Popery the Prop of European Despotisms," "Babylon the Great," and "Right- and Left-Hand Blessings;" and he edited "A Complete Analysis of the Holy Bible," which was a modification of a former work by Matthew Talbot. The work of Talbot had fallen into neglect in England, but of late years this edition by Dr. West, another one by Dr. Eadie of Glasgow, and still another with valuable additions by Dr. Hitchcock of New York, have brought it into notice again. He also wrote on the "Causes of the Ruin of Republican Liberty in the Ancient Roman Republic." He died at Philadelphia, September 2, 1864.

**WEST, SAMUEL, D.D.**, was born in 1730, at Yarmouth, and educated at Harvard, where he graduated in 1754. He was settled as minister at New Bedford, Massachusetts. In 1793 he published "Essays on Liberty and Necessity," the first part appearing in Boston, and the second part in 1795, at New Bedford. This work was a reply to President Edwards on the same subject; and the second President Edwards published a criticism on the work of Dr. West, and after the death of the latter an unfinished rejoinder was found among his papers. Dr. West, who was of the Unitarian school, published a "Tract on the

Salvation of Infants" and several sermons. He died in 1807, at Tiverton.

There was another New England minister of the same name and of the same school of theology, who was born in 1738, at Martha's Vineyard, and who also was educated at Harvard, and settled in 1764 at Needham, whence, in 1789, he removed to Boston, to the Hollis Street Church. His publications consisted of sermons, which appeared at intervals from 1774 until 1800, except his contributions, in the form of essays, to the "Columbian Sentinel." He died in 1808.

**WEST, STEPHEN, D.D.**, was born in 1735, at Tolland, Connecticut, and educated at Yale College, where he graduated in 1755. From 1759 until 1818 he was minister at Stockbridge, Massachusetts. He was a Trinitarian Congregationalist in doctrine and Church order, and a man of much mental force and grasp of reasoning. In 1772 he published at New Haven an "Essay on Moral Agency: Remarks on Edwards' Inquiry on Freedom of the Will;" and a second edition of it, somewhat enlarged, appeared in 1774. In 1785 he published an "Essay on the Scriptural Doctrine of the Atonement," and in 1806 he issued a "Life of Rev. Samuel Hopkins, D.D." He continued to write even when growing in years, for in 1816 he published "Evidence of the Divinity of Christ," while many sermons and essays from his pen appeared in "The Theological Magazine" and "The Evangelical Magazine." He died on the 15th day of May, 1819.

**WEST, WILLIAM, D.D.**, was born in 1739, in Fairfax county, Virginia. The incidents of his early life and education are few, but it is known that the vicinity of his home to Mount Vernon aided in maintaining an intimacy with the family of General Washington which continued through life. He was ordained by the bishop of London, and in November, 1761, he received a license from the bishop to labor in Virginia. Shortly afterward he was ministering in Ann Arundel county, Maryland. In 1767 he was inducted into St. Andrew's parish, in St. Mary's county, from which he was removed in 1772 to St. George's parish, Harford county; and here he remained seven years, leaving it in 1779 to become rector of St. Paul's parish, in Baltimore. In 1784 a new church edifice was erected, the population of Baltimore being then eight thousand. When the independence of the colonies was gained, the work of organizing the parishes and churches was commenced, and Dr. West was called to take a leading part in the work. He failed in an effort which he made to prevent the Methodists from organizing as a separate body, his object being to have them still in connection with the Protestant Episcopal Church.

When the General Convention of the Episcopal Church met in Philadelphia, Dr. West was anxious to follow the forms which in England had been maintained in the mother-Church, rather than to enter on a series of changes which he feared would loosen the attachment of the people. In 1790 he was appointed president of the diocesan convention, having held the position of secretary at all the previous meetings. A new parsonage had been erected by the congregation, an edifice which is still used as such; and when Dr. West was preparing to remove into it, he was seized with putrid fever, and died on the 30th day of March, 1791, at the age of fifty-two, and in the thirtieth year of his ministry. He was an humble, pious, prudent man, and a faithful pastor,

greatly beloved for his wisdom and goodness by all who knew him.

**WESTON** (wes'tun), EDWARD, D.D., who was born in London, began his education at Oxford, in Lincoln College, in 1578. Here and at private school he spent five years, after which he went to Rome and studied six years, and thence to Rheims, where he became a teacher. Here and at Douay he taught divinity for ten years, until 1602, when he was sent on a mission to England. How long he remained in England is uncertain, but he was in Douay again in 1612. Subsequently he was made a canon of the collegiate church of St. Mary in Bruges. He was a man of great erudition, and thoroughly trained in the subjects connected with the theology of the Romish Church and the questions of his age. He died about the year 1634.

CHRIST CHURCH, PHILADELPHIA.—See WHITE, WILLIAM (BISHOP).

**WETENHALL** (we'ten-hal), EDWARD, was born in 1636, at Lichfield. His education was commenced in Trinity College, Cambridge, and in 1660 he left Cambridge for Oxford, where he became rector of Lincoln College. He received the living of Longcombe, in Oxfordshire, which was in the gift of the college, and in 1667 he was promoted to be canon residentiary at Exeter. He was led to go to Ireland, where, six years afterward, he was appointed to the united sees of Cork and Ross, and in 1699 he was translated to the province of Ulster and settled in the see of Kilmore. He published, both Latin and Greek works, and in theology he wrote on "Our Lord's Passion," "Method and Order of Private Devotion," "Scripture Authentic and Faith Certain," besides sermons and minor works. He died in London in 1713.

**WETSTEIN** (wet'stine), JOHN JAMES, a learned theologian, was born in 1693, at Basel.

He was pastor in his native city from 1713 till 1730, when, his orthodoxy being suspected, he retired to Holland. He was soon recalled, but preferred to remain at Amsterdam, where he was made professor of Greek, and afterward of ecclesiastical history. He devoted himself with great ardor and perseverance to the restoration of the purity of the text of the New Testament, and after collating the various Greek manuscripts which he could find in the principal European libraries he published, in 1730, his "Prolegomena" to the Greek Testament. His valuable edition of the Greek text itself was published in 1751-52. Wetstein visited England several times, and was chosen Fellow of the Royal Society. He died in 1754.

**WETTE** (wet'te), WILHELM MARTIN LEBERECHT DE, D.D., a learned German theologian, was born January 12, 1780, at Ulla, near Weimar. He was educated at Weimar and Jena, and a powerful influence on his mental habits and bent of opinion was exerted by early intercourse with Herder, Griesbach and Paulus. In 1807 he became extraordinary professor of theology at Jena; in 1809 he was appointed ordinary professor of theology at Heidelberg; thence he went, in 1810, to Berlin. Having come under the censure of the government in consequence of his sympathy with the murderer of Kotzebue, he was, in 1819, dismissed from his professorship and banished from the Prussian dominions. He betook himself to Basle, where he was appointed professor of theology in 1821; and here he remained till his death, which took place June 16, 1849. Few men have exerted a more powerful influence on modern theology in Germany than De Wette. His learning, his vigor, his acumen, his boldness, his versatility and his unwearied assiduity conspired to give him a powerful hold over educated men of all classes. He commenced his career as an adherent of the destructive school of criticism, and to the last he was in criticism very much of a skeptic. But along with this he was an interpreter singularly fair as well as learned and acute, so that his exegetical works possess the highest value. The works by which he is best known are—"Introduction to the Books of the Old and New Testament" and "Manual of Jewish Archaeology."

**WHALE.** The Hebrew word *tannin*, sometimes translated "whales," Gen. i. 21; Job vii. 12, would seem to comprise great marine creatures, mammals and non-mammals. The "great fish" which swallowed Jonah, Jon. i. 17, is called by our Lord *kētos*, a "whale;" probably the Greek term as well as the Hebrew is of a comprehensive character. But whales have been sometimes seen in the Mediterranean. The white shark also frequents this sea. It is sometimes thirty feet in length. See DRAGON, JONAH, THE BOOK OF.

**WHARTON** (hwar'tun), CHARLES HENRY, D.D., was born in 1748, in St. Mary's county, Maryland. His ancestors, who were among the early settlers of Maryland, were of high social standing, belonging to the membership of the Church of Rome, in which faith he was trained. In 1760 he was sent to the Jesuits' College at St. Omer; and here he enjoyed the instruction of the Rev. Edmund Walsh, who was equally famed for amiability and his profound knowledge of the Greek and Latin languages. Two years afterward, when the Jesuits were expelled from France, the instructors and the pupils removed

to Bruges, where they were protected by the Austrian government, at that time ruling in Flanders. He was admitted to orders in the Church of Rome in 1772, and at the close of the Revolutionary war he was residing at Worcester, in England, waiting to return to his native land and enjoying the society of the refined and educated, as it is known that Sir William Jones revised a manuscript poem which he had written to General Washington. During his residence at Worcester he was greatly exercised on the subject of religion, and the result was his abandoning the Romish Church to enter into the Protestant Episcopal. Being the heir to the paternal estate, he generously made it over to his brother; and when some flaw in the title was pointed out, he conveyed it again so firmly that tenure of the property by his brother could not be disputed.

He became rector of Immanuel Church, New-castle, Delaware, and about 1792 he appears to have had some connection with the Swedish church in Wilmington; but in 1798 he was removed to Burlington, New Jersey; and here he ministered for thirty-five years, enjoying the cordial esteem and tender affection of all who knew him. He declined the presidency of the Episcopal Academy in Philadelphia, but he was induced to accept the presidency of Columbia College, in New York, though he only held the place for about a year. In 1803 he declined the office of principal of Beaufort College, South Carolina; and thus he repeatedly displayed his unwillingness to leave his retirement, even though in emolument he would have been a great gainer. Thus he continued to labor until his declining health compelled him to lay aside public duties, and on the 23d day of July, 1833, he passed away to his rest. He was eminent for his simplicity, his humility, his great disinterestedness and his unfeigned piety and great regard for Scriptural truth. As a linguist he held a high place, being almost as intimate with Latin as he was with the English tongue.

**WHARTON**, HENRY, was born in 1664, at Worsted, in Norfolk, England. He was educated at Caius College, in Cambridge, where he was distinguished for his incessant application and profound scholarship. He was ordained in 1687, and in the following year he was made chaplain to Sancroft, the archbishop of Canterbury. In 1689 the vicarage of Minster Thanet and the rectory of Chartham were given to him. He wrote on the "Celibacy of the Clergy," proving it to be a novelty. In 1691 two folio volumes appeared from his pen on the "History of the Bishops and Archbishops of the English Church from the planting of Christianity in the Kingdom until the year 1540." Though carelessly printed, this is a work of rare learning. In 1693 he published an edition of the Venerable Bede's "Historical and Theological Works." Several of his sermons and other minor works were published, but in March, 1695, he sunk from excessive literary labor. He was beloved by Sir Isaac Newton, and all who knew that in Cambridge he had been senior wrangler, and that his application and diligence were almost unparalleled, had formed great expectations from his labors, and united together in deploring his early death. He died a martyr of literature.

**WHATELY** (hwāt'le), RICHARD, D.D., archbishop of Dublin, one of the most distinguished theological writers of his age, was born in London in 1787, and educated at Oriel College,

Oxford. In 1822 he was presented to the rectory of Halesworth, in Suffolk, and applied himself with characteristic energy to the duties of a parish clergyman, besides finding time to write. His country life did not last long, for in 1825 he was recalled to Oxford as Head of Alban Hall, a post which he held for five years. His literary activity during this period was extraordinary, and the subjects of his works very various. In 1831 he was appointed archbishop of Dublin. It was two years after the passing of the Roman Catholic Relief Act, and he had the difficult task of carrying out, in the details of social, political and religious life, the principle which it embodied. His known liberal views and sympathies, and his energy and honesty of work, well fitted him for the task; but many of his own clergy regarded him with suspicion or dislike, and after twenty years of hard labor, especially in the promotion of the system of unsectarian education, he retired from the National Board. His clergy were gradually reconciled to him, and his family, with his tacit acquiescence, took a very active part in the promotion of Irish Church missions and ragged schools and refuges. Dr. Whately took little part in the wider and more concerning religious controversies which arose after his settlement in Dublin. Among his distinguishing personal qualities were a large munificence, genial hospitality, ever-ready wit and solid common sense. During his Oxford life he was feared and disliked by many for his singular contempt for the proprieties and his intolerance of mediocrity and pretentiousness. With his free thought, fearless questionings and suspected orthodoxy he had "a quill up for everybody," and Oxford, it has been said, breathed more freely when Whately left for Halesworth. He became bishop of Kildare in 1846 by the union of that see with Dublin, was visitor of Trinity College, president of the Royal Irish Academy and chancellor of the Order of St. Patrick. He was also the founder of a professorship of political economy in Dublin University. Dr. Whately married in 1821, was left a widower in 1860, and after a long decline died at Dublin, October 8, 1863. Among his numerous works may be named—"Errors of Romanism traced to their Origin in Human Nature," "The Kingdom of Christ delineated," "Essays on some of the Difficulties in the Writings of St. Paul" and "Historic Doubts relative to Napoleon Bonaparte," 1821, a nut for certain free-thinkers to crack.

**WHEAT.** See GRAIN.

**WHEATLEY** (hwāt'le), PHILLIS, was one of the most remarkable women of the African race who had become famed in this country. She was born in Africa about the year 1754. In 1761 she was brought to Boston, Massachusetts, when she was purchased by a man named John Wheatley, and at an early age she displayed intellectual powers of no mean order. Before she was seventeen years of age she had acquired a knowledge of Latin as well as English, and she wrote several pieces of poetry which were received with great favor. In 1773 she was taken to London. The celebrated countess of Huntingdon paid her great attention, and under her auspices a volume of her poetical effusions was printed. She returned to Boston and married a colored man named John Peters, who proved to be quite unworthy of her companionship. He took up the business of a shopkeeper, became a broker, then a lawyer, and finally a physician, and eventually he brought her

down to great distress, from which she was delivered by death in the month of December, 1784. In addition to the volume of poetry published in London, she wrote an "Elegiac Poem on the Death of George Whitefield," an "Elegy Sacred to the Memory of Dr. Samuel Cooper," and a volume, which was privately printed, entitled "Letters of Phillis Wheatley, the Negro Slave-Poet of Boston." General Washington had such taste and feeling as led him to commend her poetical effusions; but the different temperament of Jefferson led him to express a hostile judgment. This humble woman was a simple-minded, earnest, pious Christian, and she died in the faith of the gospel.

**WHEATLY** (hwāt'le), CHARLES, was born in 1686, in the city of London, and educated at

many sermons from his pen were published. He died in 1742.

**WHEATON** (hwe'tun), NATHANIEL SHELDON, D.D., was born in 1792, at Marbledale, Connecticut, and educated at Yale College, where he graduated in 1814. In 1818 he became rector of Christ Church, Hartford, Connecticut, a position which he held until 1831, when he accepted the presidency of Washington, now Trinity, College, Hartford. He displayed much energy in this office, and raised a large sum for an endowment. In 1837 he left Hartford and became rector of Christ Church, in New Orleans, where he remained seven years. While rector in Hartford he spent a year in Europe, and in 1844 he visited different European places again, and on his return

BISHOP WILLIAM WHITE.

Merchant Tailors' School, whence he proceeded to St. John's College, Oxford. This college was founded in 1557 by Sir Thomas White, who had been a merchant tailor in London, and who established it for a president, fifty Fellows and scholars, one chaplain, an organist, six singing men, six choristers and two sextons. All the Fellows except eleven are selected from Merchant Tailors' School; and accordingly the subject of this memoir went to St. John's as the usual course of the eminent pupils of the school. He became a Fellow; and having entered the Church, he was chosen lecturer of St. Mildred's Church, London, and subsequently he held the vicarages of Brent and Farnaux-Pelham, in Hertfordshire. His greatest work, by which his name continues to be known, was on the Book of Common Prayer, which has passed through many editions, and which is still sought after. He wrote on the Lord's Supper, on the Nicene and Athanasian creeds, and a great

to his native land he lived in comparative seclusion. He published descriptions of both his European journeys, and he bequeathed twenty thousand dollars to Trinity College. He died in 1862, at Marbledale.

**WHEEL.** The Hebrew word *galgal*, rendered "wheel" in Ps. lxxxiii. 13, and in Isa. xvii. 13 "a rolling thing," is very reasonably supposed by Dr. Thomson to designate the wild artichoke. This plant, called by the natives 'akab, throws out numerous branches of equal size and length in all directions, thus forming a kind of globe about a foot in diameter. In autumn these break off, and being very light and dry, trundle about before the wind.

**WHELOCKE** (hwe'lok), ABRAHAM, who flourished in the first half of the seventeenth century, held a distinguished position in the University of

Cambridge, being the first professor of Arabic, in 1632, along with which was strangely associated a professorship of the Saxon language. In 1622 he had been appointed minister of St. Sepulchre's Church, and he held this position for twenty years. He was on terms of friendship with Sir Henry Spelman, who gave him the vicarage of Middleton, in Norfolk. His literary labors were chiefly connected with Anglo-Saxon and Arabic works. He published a folio in 1644 on Anglo-Saxon chronology, and he revised a work by Lambard on the Saxon laws. In 1652 he published the first eighteen chapters of the Gospel in Matthew in Persian and Latin; and in 1657 the four Gospels in Persian and Latin were published after his death, to be distributed in Persia, with a view to the establishment of a mission in that country. He was engaged to correct the Syriac and Arabic of Walton's Polyglot as it passed through the

GEORGE WHITEFIELD.

press, but he died in 1653, having reached the age of sixty years.

**WHELPDALE** (hwelp'dale), ROGER, who flourished in the close of the fourteenth and the beginning of the fifteenth century, was born in Cumberland, as the name may indicate, for it has a topographical signification. He was educated at Oxford, at first in Baliol College, whence he removed to Queen's College; and here he rose to be provost. He was recognized to be a man of great erudition in his day, devoted to learning. He wrote several works on logic and mathematics as they were then treated, and he was the author of a book entitled "De Invocato Deo," which treats of prayer and the worship of God. In 1419 he was raised to the see of Carlisle; but his former studious and collegiate habits followed him through life, and he devoted no attention whatever to public affairs, and merely went through the routine duties of the see. He died in 1422, bequeathing all his property to objects of charity and piety.

**WHETHAMSTEDE** (hwe'tam-steed), JOHN, a learned abbot of St. Alban's, was ordained a priest in 1382 and died in 1464, when he had been eighty-two years in priest's orders, and was over a hundred years old. He wrote a chronicle of twenty years of this period, beginning in 1441 and ending in 1461. It contains many original papers, and gives a full account of some events, particularly of the two battles of St. Alban's. More than one-half of his chronicle is filled with the affairs of his own abbey, to which he was a great benefactor, particularly to the altar of the patron saint, which he adorned with much magnificence.

**WHEWELL** (hen'el), WILLIAM, D.D., was born in very humble life at Lancaster, in 1795. He entered Trinity College, Cambridge, where he became greatly distinguished, becoming second wrangler, gaining numerous prizes, becoming a Fellow and a tutor, and at length reaching the high position of master of Trinity. He was professor of mineralogy, of moral philosophy in the university, and vice-chancellor. He was one of the most profound scholars that Cambridge has produced in modern times, and his writings would form a moderate-sized library. In every department of natural philosophy, in astronomy and general physics, he excelled. He was one of the authors of the Bridge-water treatises. His name is usually associated with his "History of the Inductive Sciences" and the "Philosophy of the Inductive Sciences." In 1845 his "Elements of Morality" appeared, and in 1847 his sermons preached in the university, in 1852 his "Lectures on the History of Moral Philosophy in England." From year to year he issued editions with

essays and criticisms of the works of Butler, Grotius, Plato and the great authors of ancient and modern times, the last of this class being "The Platonic Dialogues for English Readers," in three volumes, which appeared in the years 1859, 1860 and 1861; and thus he continued with unceasing energy while health and life enabled him to work, until more than forty distinct works were produced by him, most of them being on the most profound subjects of science which can occupy the human mind. He died March 6, 1866.

**WHICHCOTE** (hwich'kôt), BENJAMIN, D.D., was born in 1610, in Shropshire, in England, and educated in Emmanuel College, Cambridge, the college from which so many of the eminent men proceeded who founded the institutions of New England. He entered Emmanuel in 1626, and as soon thereafter as 1633 he had reached a Fellowship, and he rose to be an effective tutor. He established a lecture in one of the city churches in Cambridge, and he was made one

of the university preachers. In 1643 he received the living of North Cadbury, in Somersetshire, and in the following year he was appointed to the important position of provost of King's College. The rectory of Milton, in Cambridgeshire, was given to him in 1649, and in 1662 he was minister of St. Anne's, Blackfriars, in London. His last preferment was the vicarage of St. Lawrence, Jewry, which was bestowed on him in 1668. At the Restoration he was deprived of his provostship in King's College. He belonged to the class of divines of whom Cudworth and Stillingfleet are specimens—men who desired to introduce a moderate form of religion, feeling dissatisfaction with the closely-defined doctrines of Calvinism, and yet recognizing the work of the Redeemer on behalf of sinners, while great importance is given to the duties of life. Lately, the term "latitudinarian" has been applied to this school, of which he was one of the founders. His writings, with the exceptions of two minor works in the form of aphorisms and apophthegms, appeared in the form of sermons, which were really essays or treatises, developing the divinity which was then becoming fashionable. He was an especial favorite with Archbishop Tillotson, who admired him as a man of "most profound and well-poised judgment." He died in the year 1683.

**WHIP**, 1 Ki. xii. 11. See PUNISHMENTS.

**WHIRLWIND**. See WIND.

**WHISTON** (hwis'tun), WILLIAM, born in 1667, is celebrated as the translator of Josephus. He was the son of an English clergyman, and himself entered the Church, becoming chaplain to the bishop of Norwich, and afterward rector of Lowestoft. He was a man of scientific attainments, and was appointed to succeed Sir Isaac Newton as Lucasian professor of mathematics at the University of Cambridge. He was expelled from his chair, however, for Arian opinions. He then removed to London and gave lectures on astronomy, but was prosecuted as a heretic. Being refused admission to the sacrament at his parish church, he opened his own house for public worship, using a liturgy of his own composition; and toward the close of his life he became a Baptist. He died in 1752.

**WHITAKER** (hwit'a-ker), WILLIAM, an eminent English divine, was born at Holme, in Lancashire, in 1547, and educated at Trinity College, Cambridge, where he was chosen Fellow. In 1569, when he had only entered his twenty-first year, he published the liturgy of the Church of England in Greek. This and other works greatly increased his reputation, extending it to Oxford, where he was incorporated doctor of divinity. In 1579 he was appointed regius professor of divinity at Cambridge. He took an ample share in confirming the Protestant establishment, and carried on a successful controversy with some of the champions of the Romish Church. Cardinal Bellarmine, though often foiled by his pen, honored his picture with a place in his library, and said "he was the most learned heretic he had ever read." In the same year (1579) Queen Elizabeth gave him the chancellorship of St. Paul's, and he was afterward preferred to the mastership of St. John's College, Cambridge. He was now again involved in controversy with the popish writers, particularly Bellarmine and Stapleton. In 1589 an assembly was held at his college by the celebrated

Puritan Cartwright and others, for the purpose of promoting a purer form of discipline in the Church. Whitaker was by no means a favorer of Cartwright's opinions; but when, in consequence of this meeting, some imperfections in the Book of Discipline were corrected and altered, he did not object to join in subscribing the book thus amended. Some have doubted whether he was a Puritan, or ought to be classed with those who were hostile to the forms of the Church. In 1595 there were some warm disputes about points of Christian doctrine; and when these began at Cambridge, Whitaker took no inconsiderable share in them. "Deeply rooted," says Arehdeacon Churton, "in the principles of Calvinism, he is yet to be commended for his candor in acknowledging, at the very time when the predestination disputes ran high, that 'these points were not concluded and defined by public authority in our Church.'" He died December 4, 1595.

**WHITBY** (hwit'be), DANIEL, a Church of England divine and celebrated controversialist, was born at Rushden, in Northamptonshire, in 1633. He studied at Trinity College, Oxford, of which he became a Fellow in 1664. Through the patronage of Dr. Seth Ward, bishop of Salisbury, he obtained two prebends in the cathedral, and was rector of St. Edmund's Church from about 1673 till his death. Dr. Whitby was a very learned theologian and voluminous writer, but the greatest part of his writings had reference to controversies of his time, and, like them, now lie forgotten. He wrote many works against the Papists, pleaded for the Dissenters in his "Protestant Reconciler," a book which was burnt by order of the university of which he was a member, and the principles of which he formally disavowed, wrote against Calvinism, and afterward against the doctrine of the Trinity, and published a great many sermons. His most important work was the "Paraphrase and Commentary on the New Testament." He died at Salisbury in 1726.

**WHITE**. See COLORS.

**WHITE, GILBERT**, born at Selborne, in Hampshire, in 1720, is famous as the author of a natural history of his native place which ranks as an English classic. His accurate observations are highly valuable to the scientific student, while his style has obtained general popularity for his work. He was educated at Oriel College, Oxford, where he became a Fellow, and was one of the senior proctors of the university. He died in 1793.

**WHITE, JOHN**, a Puritan divine, and usually called the "Patriarch of Dorchester," was born in 1574, in Oxfordshire, and educated at New College, Oxford. Here he took his degree in arts, was admitted into holy orders, and became a frequent preacher in or near Oxford. In 1606 he became rector of Trinity Church, at Dorchester, where in the course of his ministry he expounded the whole of the Scripture, and went through about half of it a second time. About 1624, Mr. White, with some of his friends, projected the new colony of Massachusetts, in New England, and

after surmounting many difficulties succeeded in obtaining a patent. The object was to provide a settlement or asylum for those who could not conform to the discipline and ceremonies of the Church. During the heat of the civil war a body of horse in the neighborhood of Dorchester plundered his house and carried away his library. He then made his escape to London, and was made minister of the Savoy. In 1640 he was appointed one of the learned divines in a committee of religion appointed by the House of Lords, and in 1643 he was chosen one of the Westminster Assembly of Divines. In 1645 he was appointed rector of Lambeth. He afterward returned to Dorchester, where he died in 1648.

**WHITE, JOHN**, a noneonformist lawyer, and commonly called, from his principal publication,

**WHITE, JOSEPH**, an eminent divine and Orientalist, was born at Stroud, in Gloucestershire, in 1746, was educated at Wadham College, Oxford, and was elected Laudian professor of Arabic in 1775. Having, in 1781, as Bampton lecturer, delivered a series of sermons on the evidences of Christianity, which were highly approved, he was presented to a prebend at Gloucester, and took the degree of doctor of divinity, though it afterward appeared he was much indebted to Mr. Badoek and Dr. Parr in the composition of them. In 1800 he published his "Diatessaron, or a Harmony of the Gospels in Latin," which was followed by his "Egyptiaca, or Observations on certain Antiquities of Egypt," and "Griesbach's Greek Testament." He died in 1814.

**WHITE, JOSEPH BLANCO**, theological and

MONUMENT TO GEORGE WHITEFIELD, IN THE PRESBYTERIAN CHURCH, NEWBURYPORT, MASS.

"Century" White, was born in Pembroke, in 1590. He was educated at Jesus College, Oxford, whence he went to the Middle Temple, and in due time was admitted to the bar. While a barrister he was much employed by the Puritans in the purchase of impropriations, which were to be given to those of their own party, for which he received such a censure in the Star Chamber as served to confirm the aversion he had already conceived against the hierarchy. In 1640 he was chosen member of Parliament for the borough of Southwark; joined in all the proceedings which led to the overthrow of the Church; was appointed chairman of the committee for religion and a member of the Assembly of Divines. He died in 1645. His principal publication is entitled "The First Century of Scandalous, Malignant Priests, made and admitted into Benefices by the Prelates, in whose hands the Ordination of Ministers and Government of the Church hath been."

miscellaneous writer, was born of an Irish family settled at Seville in 1775. He was brought up a Roman Catholic, educated at the Dominican convent of Seville, and in 1799 was ordained priest. But falling into a state of religious doubt, he left the Church of Rome and his native country, and settled in England in 1810. He soon after became a clergyman of the Church of England, but, still harassed by doubt, quitted it too, and joined the Unitarians. Almost incessantly at work with his pen, he produced original works in Spanish and in English, established and edited Spanish periodicals, and contributed to some of the leading English reviews. Among his separate works are—"Practical and Internal Evidence against Catholicism;" "The Poor Man's Preservative against Popery." He died May 20, 1841.

**WHITE, SIR THOMAS**, founder of St. John's College, Oxford, was born at Reading in 1492;

became an opulent London tradesman, and in 1553 he served the office of lord-mayor, and received the honor of knighthood for preserving the peace of the city during Wyatt's rebellion. He died in 1566.

**WHITE, WILLIAM, D.D.**, was born in Philadelphia, on the 26th day of March, 1748. His father had emigrated from London and settled in Maryland, but he removed to Philadelphia, where his son William was born. His education was commenced in the English school of the Pennsylvania University, whence he went to the preparatory department, and eventually to the higher classes of the regular University course. In 1770 he sailed to England with a view to ordination, and in the Chapel Royal, in December, 1770, he was ordained as deacon by the bishop of Norwich, at the request of the bishop of London, and two years afterward he was admitted to priest's orders by Dr. Terriek, who then presided over the diocese of London. On his return he became an assistant to Dr. Peters, in Philadelphia. On the outbreak of the Revolutionary war he espoused the side of the colonists, and in 1777 he removed to the residence of his brother-in-law, in Harford

TOMB OF THE TIPPOO FAMILY AT VELLORE, INDIA.

county, Maryland. At this period he and the Rev. Dr. Duffield were appointed chaplains to Congress at Yorktown; and he held this office until the seat of government was fixed in the District of Columbia. It is worthy of note, however, that in all his ministrations as chaplain he never intruded political matters either into his prayers or other services.

In 1779 he was elected rector of St. Peter's and Christ Church, where he had previously been assistant; and he held that position until his death. In 1786 it was resolved that three of the clergy should be sent to London, with a view to consecration to the office of bishop; and Dr. Provost of New York, Dr. White of Pennsylvania and Dr. Griffith of Virginia were chosen. The latter was prevented from going, but the others were presented by Mr. Adams, the American ambassador, to the archbishop of Canterbury; and as Dr. White was consecrated before Dr. Provost on the occasion of the archbishop's performance of the solemnity, he therefore became the first American bishop in the line of the English succession. During the remainder of his life he continued in the most assiduous manner to discharge all the important duties of his office. Until his death he served at the consecration of all the bishops

which were elected after his own designation to office, the last of the number being Bishop Kemper of the Western mission. His last sermon was preached in St. Peter's Church, on the last Lord's day in June, 1836; and on the 17th day of the month following he was removed from his earthly labors. As a preacher he was diligent in preparation, as a Churchman he took part in the questions of the day, and as a bishop he was eminent for the prudence and faithfulness which his numerous charges display. He was a frequent contributor to the religious journals of the day and an ardent friend of the Bible Society. He wrote on the subject of "Assurance" and on the controversy between the Calvinists and the Arminians, and not less than forty-eight distinct publications issued from his pen. Few men in our country have held a more distinguished position and have been more justly esteemed than Bishop White.

**WHITEFIELD, or WHITFIELD** (hwit'-feeld), **GEORGE**, a celebrated English Dissenting minister, and founder of the Calvinistic Methodists, was born at Gloucester, in 1714. After leaving school, he assisted his mother in her business as the hostess of a public inn, but he entered Pembroke College, Oxford, as a servitor in 1733. In the following year he allied himself with John and Charles Wesley, who some time previously had laid the foundation of the sect of Methodists at Oxford, and after this time he distinguished himself by his zeal and his constant labors among the sick. He was ordained a deacon in 1736, before he had taken his degree. His first sermon, preached at Gloucester, had the unwonted effect of filling many people with great excitement, and his discourses in England during the next two years were followed by similar results. He appeared in London, on his way to join Wesley in America, in 1738, and the impression made by his sermons on all classes of the metropolis was of the most profound description. Crowds gathered before dawn round the doors of the church at which he was to preach. In this country his success was as great as in England, to which, however, he returned in the course of a few months to be admitted to priest's orders. He came again to America, and after staying two years returned in 1741. About this time, a difference arising on a doctrinal point between him and Wesley—Whitefield was a Calvinist and Wesley an Arminian—they each denounced the other, and divided the body of the Methodists between them. His sermons drew immense crowds, but he had not the power of organizing a self-supporting sect; and but for the munificence of the Countess of Huntingdon, who agreed with him in doctrine, and who built and endowed chapels in which his doctrines should be preached, his followers would not have been kept together. He made a great missionary journey to Scotland in 1741, creating intense excitement wherever he went. He paid seven visits to America in all, the last time in 1769. He died at Newburyport, near Boston, September 30, 1770. Whitefield's person was graceful and well proportioned, his stature above the middle size. Excepting a defect in one eye, his features were good and regular. His deportment was easy, without any formality, and his manner was polite and engaging.

**WHITEHEAD** (hwite'hed), **DAVID**, an eminent divine, was born at Tunderley, in Hampshire, and educated at Oxford. He was chaplain to Queen Anne Boleyn, and in 1552 was nominated

by Cranmer as the fittest person for the archbishopric of Armagh. In the beginning of the reign of Mary he retired, with many of his countrymen, to Frankfort, where he was chosen pastor to the English congregation of exiles. On the accession of Elizabeth he returned to England, and was one of the committee appointed to review King Edward's liturgy; and in 1559 he was also appointed one of the public disputants against the popish bishops. In this he appeared to so much advantage that the queen offered him the archbishopric of Canterbury, which he declined, desiring to preach the gospel without any preferment. He was accordingly a frequent preacher, and in various places where preaching was most wanted. He died in 1571.

**WHITEHEAD, JOHN**, an English Methodist preacher. He was well educated; and quitting the trade of linen draper at Bristol, he taught a school at Wandsworth, where he was patronized by the Quakers, whose principles he had adopted. He next traveled on the Continent as tutor to one of his pupils, and at Leyden he applied himself to anatomy and physic, and took his medical degree. On his return to London he became physician to the London dispensary. He preached the funeral sermon of John Wesley and published an account of his life; but the work gave great offence to the Methodists.

**WHITEHOUSE** (hwite'house), **HENRY JOHN**, was born in 1803, in the city of New York, and educated in Columbia College, where he graduated in 1821. In 1824 he was ordained to the ministry of the Protestant Episcopal Church. His course in the ministry was very distinguished. For fifteen years he held the position of rector of St. Luke's Church, in Rochester, New York, and from 1844 until 1851 he was rector of St. Thomas' Church, in the city of New York. He was made doctor in divinity by Columbia College in 1865, and in 1867 the University of Cambridge conferred the degree of doctor of canon law on him, while he received the honor of doctor of laws from the University of Oxford. In 1851 he was consecrated assistant bishop of Illinois, and on the death of Bishop Chase, in the following year, he became the diocesan. When in London, he preached before the Pan-Anglican Council that had been called together in that city in 1867. He died August 10, 1874. He was the author of sermons, addresses and charges.

**WHITE STONE.** See **COLORS.**

**WHITGIFT** (hwit'gift), **JOHN**, archbishop of Canterbury, was born at Great Grimsby, in Lincolnshire, in 1530. He was brought up by an uncle, from whom he imbibed views which inclined him afterward to support the Reformation. He completed his education at Cambridge, studying first at Queen's College and then at Pembroke Hall, under Ridley and Bradford. By politic reticence he escaped persecution during the reign of Queen Mary, and on the accession of Elizabeth was ordained priest. He held at Cambridge successively the posts of Lady Margaret professor of divinity, master of Pembroke Hall, master of Trinity College and regius professor of divinity. He was also named chaplain to the queen. Whitgift already showed himself in the university what he became afterward in the widest field—a rigid conformist and disciplinarian, intolerant of deviation from the forms and doctrines of the Established

Church either on the side of Romanism or of Puritanism. He took a prominent part as vice-chancellor in the expulsion of Cartwright, the great Puritan preacher and professor of divinity, wrote an answer to the "Admonition of the Parliament," and in 1577 was appointed bishop of Worcester. In 1583 he became primate. From that time he acted the part of inquisitor with pitiless rigor, insisting on new articles of subscription, suspending the clergy who refused them and procuring tyrannous laws against the press. Personally he was pious, liberal and free from harshness, but officially he was intolerant of dissentients and doubters, and sincerely believed he ought to deal with them as he did. Under James I. he took a prominent part in the conference at Hampton Court, but did not live to join the commission appointed for regulating Church affairs. He died at Lambeth, February 29, 1604.

**WHITTINGHAM** (hwit'ting-ham), **WILLIAM**, was born in 1524, at Chester, and educated in Brasenose College, Oxford. He went to Orleans, in France, where he was united in marriage to the sister of John Calvin. He was ordained at Geneva by the Reformed ministers of that city; and when John Knox left the place, Whittingham succeeded him as preacher. He returned to his native land; and, although his ordination had been received abroad, he succeeded to the deanery of Durham, a position which he held from 1563 until his death, notwithstanding the vigorous attempts which were made to discharge him on the plea that he was not validly ordained. During his abode at Geneva he had rendered five of the Psalms into metre, the one hundred and nineteenth being one of them; and they were included in the collection which passed under the name of Sternhold and Hopkins. He also took part, when at Geneva, in the translation of the Scriptures into English, and in 1557 the volume which is attributed in part to him was published, and it is known as "The First Edition of the Geneva Translation." Copies of this issue bring a high price among book-collectors. He died in 1589.

**WHITTINGHAM, WILLIAM ROLINSON, D.D.**, was born in 1805, in the city of New York, and educated in the Episcopal General Theological Seminary, where he graduated in 1835. He was ordained in 1827, and in 1831 he became rector of St. Luke's Church, New York. He was made professor of ecclesiastical history in the theological seminary where he had studied in 1835, and five years afterward he was chosen bishop of Maryland and consecrated on September 17, in the year 1840. He edited the "Children's Magazine" and "The Churchman" for some time, and the "Family Visitor" was also under his care. His charges have been prepared with great carefulness, and many of his sermons as well as his charges have been published. He has always held a high character in his diocese, being greatly beloved by his clergy and by his brethren in the episcopate and the Church generally. Age and growing weakness led to the appointment of an assistant bishop in the diocese, and, with the aid of Dr. Pinckney, he still continues to preside in his responsible sphere.

**WICKLIFFE, or WYCLIFFE** (wik'lif), **JOHN**, the "Morning Star of the Reformation," was born probably at Wycliffe, near Richmond, in Yorkshire, about 1324, and educated at Oxford. The terrible pestilence of 1348 appears to have

profoundly impressed his mind and aroused him to earnest reflection. While he pursued diligently his studies in various departments, he especially devoted himself to philosophy and theology. He drank deep at the Biblical fountains, and early began to call others to them. Nor was he slow to see and to expose the ills and abuses prevailing both among the monks and the clergy. He took a leading part in the contests between the mendicant orders and the university and between the Crown and the Papacy. In 1381 he was elected warden of Baliol, and about the same time was appointed rector of Fyvingham, in Lincolnshire. Four years later he became warden of Canterbury Hall, from which office, however, he was soon removed, and he unsuccessfully appealed to the pope against the sentence of the archbishop. In 1372 he took his degree of doctor in theology and became professor of divinity in the university. His

in England; blows followed, and the meeting broke up in confusion. In May following three bulls of Gregory XI. were addressed to the king, the primate and the University of Oxford, requiring them to proceed against Wickliffe, who early in 1378 answered the summons of the primate, and went unattended to the chapel at Lambeth. "Men expected he should be devoured;" but the proceedings were stopped by an order from the queen-mother, and Wickliffe was dismissed, like the apostles Peter and John, with a warning not to say such things again. About this time he appears to have commenced sending out his "poor priests," evangelists and missionaries to propagate in the country-places the truth of the gospel. The same year, 1378, began the great schism in the papacy. Early in 1379 Wickliffe fell dangerously ill at Oxford, and an attempt was made by a party of monks, who visited him, to induce him to

A STREET IN BOMBAY, INDIA.

reputation and influence were so great that in 1374 he was one of the commissioners sent by Edward III. to Bruges to treat with Pope Gregory XI. respecting the repeal of the statutes of Provisors and Premunire. A compromise was agreed to; and on Wickliffe's return, in 1375, he was named prebendary of the collegiate church of Westbury, and presented to the rectory of Lutterworth, in Leicestershire. He labored incessantly as a preacher and pastor, and his sharp sayings about the pope and the Church could not but excite attention in high quarters. His opinions spread rapidly among the common people, and the Church grew alarmed. The zealous and haughty Courtenay was then bishop of London, and in February, 1377, he cited the bold preacher to appear before a convocation at St. Paul's. Wickliffe appeared there on the 19th February, attended by Lord Percy, marshal of England, and John of Gaunt, duke of Lancaster. The cathedral was densely crowded; hard words passed between the bishop and the duke, then the most powerful noble

recant. With an energy startling in one so feeble and pale, he faced them and said, "I shall not die, but live, and again declare the evil deeds of the friars." He did live, and in the following year he dealt the hardest blow of all to error and evil, by the completion and publication of his English Bible, on which he had worked between ten and fifteen years. It was translated from the Vulgate, and is believed to have been the first complete version in English. In 1381 he publicly attacked the doctrine of transubstantiation, and sentence of condemnation was pronounced by the university. The breaking out of Wat Tyler's insurrection the same year intensified the alarm which his opinions had excited. A synod was held in London, at which Courtenay, now primate, presided; Wickliffe's opinions were declared heretical; and soon after, a royal ordinance was issued for the arrest and imprisonment of Lollards, his followers. Wickliffe addressed a petition to the Commons, and they demanded the repeal of the ordinance. In November, 1382, he was cited before the pri-

mate at Oxford, presented two confessions, one in Latin, the other in English, and without being again formally condemned withdrew to his cure at Lutterworth. He is said to have been summoned to Rome by Urban VI., and to have been prevented by bodily weakness from obeying it. He spent his remaining days in peace, writing and preaching fearlessly to the last. He was struck with paralysis while standing before the altar at Lutterworth, 29th December, 1384, and was carried to his house, where on the last day of the year he peacefully died. No statute for the burning of heretics had yet been passed, and heresy was regarded in England as a spiritual offence, punishable only by spiritual censures, or Wickliffe must have been burnt. His doctrine was condemned by the Council of Constance, and his remains were, by order of the council, exhumed, burnt and cast into the Swift, a brook running by Lutterworth.

**WIDOW** (wid'ō). A tender regard for widows was inculcated by the Mosaic law, Ex. xxii. 22; Deut. xiv. 29; xxvi. 12; see also Job xxii. 9; Ps. xlv. 6; Isa. i. 17; Jer. vii. 6; Ezek. xxii. 7; Zech. vii. 10; Mal. iii. 5. In the New Testament the same kindness was prescribed, Acts vi. 1-6; 1 Tim. v. 3-16. It is questioned whether, in the directions just referred to, a kind of religious order was intended. Probably not at first. The creditable Christian widows were just to be recipients of Christian charity; but afterward some special duties were, it is likely, assigned to them. See MARRIAGE.

**WIFE**. God created mankind male and female, sanctioning in paradise the ordinance of marriage, in which a man was to cleave to his wife, and they twain be one flesh, Gen. ii. 24; Matt. xix. 4-6. This would imply that each man should have a single wife. But polygamy commenced early in the world's history, Gen. iv. 19, and was subsequently carried to the most frightful excess, 1 Ki. xi. 3. The Mosaic law did not prohibit polygamy, but by various statutes it endeavored to control it, and remedy some of the evils which naturally flowed from such a practice. See MARRIAGE.

**WIGAND** (we'gand), JOHN, a learned divine of the Reformed religion, was born at Mansfield, in Upper Saxony, in 1523, and educated at Wirtemberg, attending also the lectures of Luther and Melancthon. In 1541 he went to Nuremberg, where he taught for three years. He then returned to Wirtemberg and began the study of divinity, which he engaged in with great assiduity; and being invited to his native place, Mansfield, he was there ordained, being the first who was ordained after the establishment of the Protestant religion. He soon became a very useful and popular preacher, and was one of those who strongly opposed the "Interim." In 1553 he was chosen superintendent of Magdeburg, where by his preaching and writings, he greatly promoted the Reformed religion; and he had a considerable share in the voluminous collection entitled "The Magdeburg Centuries." In 1560 he was appointed professor of divinity at the University of Jena. In 1562 he was chosen superintendent at Wismar, and remained there seven years, when he returned to Jena, where he was made professor of divinity and superintendent. He died in 1587. He wrote a great number of works, principally commentaries on different parts of the Bible and treatises on the controversies of the Popish writers.

**WIGHARD** (wig'hård) was one of the Anglo-Saxon clergy who flourished in the middle of the seventh century, and whose journey to Rome and the consequences which followed it invest him with such importance as to demand a place for his name in this work. When the Scottish bishop Coleman was defeated at the synod of Whitby, he returned to Scotland, but many of the clergy whom they left behind still held to his views; nevertheless, they gradually lost their influence, and the power of the clergy in the southern part of the island rapidly extended northward. Several of the bishops of Scottish and Irish birth who had been ordained at Iona were objected to, and their powers were questioned. Accordingly, on the death of Deusdedit, the archbishop of Canterbury, the English princes sent a priest of their own selection to Rome, that from the hands of the pope he might receive that authority which would transmit the apostolic grace in its purity to future generations. Wighard was the man chosen for this mission, but he died at Rome before his consecration. Vitalian, the pope of the day, chose a Greek monk, Theodore, whom he consecrated and sent to England as archbishop of Canterbury. Theodore was in his sixty-eighth year when he arrived in England. He was of good health, possessed of immense energy and a splendid scholar, intimately acquainted with Greek and Latin and the learning of the East. He established great schools in different places, and he even became a teacher himself of the sons of the upper classes. According to Hook ("Archbishops of England"), he introduced the use of the organ, which at that time was unknown in Western Europe. He also caused the dioceses to be divided into smaller districts, known at present as parishes; and now athane or landed proprietor who built a church and aided or endowed it, was recognized as its patron. To show the results of Theodore's educational work, it may be mentioned that from him proceeded Egbert and the school of York, from Egbert came Bede and the school of Jarrow, from Bede came Alcuin and the school of Charlemagne at Paris, Tours and Lyons, from these came Raban and the school of Fulda, from Raban proceeded Walafrid and the school of Riehenau and Lupus with his school of Ferriers, from Lupus came Heiric, Remi and the school of Rheims, from Remi came Odo of Cluni, and from the dependencies of Cluni came Gerbert and Abbo of Fleury, who repaid to the Anglo-Saxons, a portion of the debt which the Franks owed to them, by opening the schools of Romsey Abbey in England, after the inroads and devastations of the Danes.

**WILBERFORCE** (wil'ber-fors), SAMUEL, D.D., was born in 1805, at Bloomfield, on Clapham Common, near London. He was the third son of the celebrated William Wilberforce, who rose to fame among the statesmen and the social reformers of England. He entered Oriel College, Oxford, in which he took a high place, being classed first in mathematics and second in classics when he took his bachelor's degree in 1826. He kept his name on the books of the college and university, and passed through all the degrees until, in 1845, he was made a doctor in divinity. Two years afterward he entered at Cambridge, where he was admitted "ad eundem gradum," or to the same rank and degree. He had a rapid rise in the Church, for in 1828 he was curate in Chickendon, in Oxfordshire, rector in 1830 of Brixton, in the Isle of Wight, select preacher in the University of Oxford in 1837. In one year, 1839, he be-

came rector of Alverstoke, archdeacon of Surrey and chaplain to Prince Albert, and in the following year a canonry in Winchester Cathedral was bestowed on him. Four years afterward, the queen made him sub-almoner, and next year he became dean of Westminster, and again filled the office of select preacher to the university, and before the year ended the see of Oxford was given to him; and thus he became chancellor of the Order of the Garter. In 1847 the queen elevated him to the office of high-almoner, and in 1869 he was translated from Oxford to the more important see of Winchester. He has been a voluminous writer, and his sermons, charges and addresses have regularly been given to the public as they were delivered. He attached great importance to his parliamentary duties, and his attendance was most punctual on all occasions when the affairs of the Church were affected by public measures. He was a fluent, graceful, persuasive and effective speaker. Few men had more readiness, and his zeal and promptitude in all public matters were surpassingly great. His death, in 1874, was alarmingly sudden, as he fell from his horse, that had stumbled unexpectedly; and although he was eminent for his skill and daring in horsemanship, his neck was dislocated, and the accident terminated his busy life.

**WILBERFORCE, WILLIAM**, an English author and philanthropist, was born in 1759. He entered St. John's, Cambridge, at seventeen, inherited a large fortune on his coming of age, and in 1780 was returned to Parliament for Hull. His youth had been passed gayly, and he was fond of society; but in 1787 he began to live seriously, and in the following year he turned his attention to slave-trade abolition, and to this object he devoted himself during the remainder of his life. For the attainment of his purpose he introduced a bill into Parliament in 1789, but failed in carrying it. In 1804 his bill passed the Commons, but was rejected by the Lords. In 1807, however, it was carried triumphantly. Wilberforce now devoted himself to abolish the slave-trade abroad, but the state of his health compelled him to retire from Parliament and to leave his unfinished work to the care of Sir T. Fowell Buxton. He received a message, however, only three days before his death, July 29, 1833, informing him that the Abolition Bill had passed the second reading, and he died happy. His "Practical View of Christianity" was very successful, having gone through five editions in the first six months.

**WILCOCKS** (wil'cox), JOSEPH, an eminent prelate, was born in 1673, and educated at Magdalen College, Oxford. On entering into orders, he became chaplain to the Factory at Lisbon; and after his return he was appointed preceptor to the daughters of the prince of Wales, for which he was rewarded with a prebend of Westminster, and in 1721 made bishop of Gloucester, from whence, in 1731, he was translated to the see of Rochester, with which he held the deanery of Westminster, in which office he promoted the building of the magnificent west front of Westminster Abbey. He died in 1756.

**WILDERNESS**. See DESERT; WANDERING.

**WILFORD** (wil'ford), FRANCIS, an Oriental scholar, a native of Hanover, went out to India in 1781 as lieutenant of some troops which were sent from his native country to reinforce the British troops of the line. Soon after the peace of

Mangalore, in 1784, he was stationed at Russapugla, where he devoted his leisure-hours to the elucidation of Hindoo antiquities by means of whatever notices he could find concerning them in Greek and Latin authors. A few years afterward he was stationed at Benares, the centre of Hindoo learning, where he engaged a knavish pundit to teach him the sacred dialect. In 1792 he published an essay on Egypt and the Nile from the ancient books of the Hindoos. In this work he unwittingly gives currency to falsehoods which had been palmed upon his unsuspecting simplicity by the impostures of his instructor. Wilford was an original member of the Asiatic Society and a foreign associate of the Institute of France. He died in 1822.

**WILFRED** (wil'fred), SAINT, archbishop of York, celebrated as the supporter of papal authority in Britain, was born, probably in the kingdom of Northumbria, in 634. Having studied theology, he went to Rome in 653, made a long stay at Lyons, and on his return received from the king of Northumbria the monastery of Ripon. In 654 he was ordained priest by Egilbert, bishop of Paris, and the same year he distinguished himself at the Synod of Whitby as the advocate of the Roman views on the Easter question and other matters, in opposition to the Scottish teachers. He was appointed archbishop of York, and preferred to be consecrated at Paris by Egilbert. In his absence another appointment had been made by the British party, and he did not get possession of his see till 667. His ambition, pride and pompous way of living made him enemies, and in 678 he was deposed and his immense diocese divided into three. He set out for Rome to make appeal to the pope; preached for some months in Friesland; on the way obtained the pope's decree in his favor, which the king slighted; was imprisoned; and making his escape, preached in the kingdom of the South Saxons. Restored to York, in 637, and again deposed, he again appealed to the pope, and after his return, in 705, held the see of Hexham. He died at Oundle in 709, and was buried at his monastery of Ripon. Wilfred was canonized, and many churches in the North of England are dedicated to him.

**WILFRID** (wil'frid), SAINT. In A. D. 661 a monastery which Alchfrid, king of the Northumbrians, had built of Inrhyphum (Hripensis Ecclesia, now Ripon), received this noted saint as the first abbot. The house was erected for the Benedictines, but it became a collegiate church about four hundred years after its first establishment. When the house was founded, the question as to the proper time to celebrate Easter was vehemently discussed. Eata, who held to the Irish and Scottish view, had been nominated to the rule of the house; but Wilfrid, having gone to Rome, received the Roman tonsure, adopted the Roman views respecting Easter, and on his return Alchfrid sent Eata away, and with him St. Cuthbert, who had been appointed a monk, and he instituted Wilfrid in the place of the expelled northern. Many historians recognize Wilfrid as the first abbot, and omit all notice of Eata and of his expulsion from the newly-founded house.

**WILKINS** (wil'kinz), SIR CHARLES, D.C.L. and K.C.H., was born in 1740, at Frome, in Somersetshire. He received the appointment to the position of a writer in the service of the East India Company. This is a civil as distinct

from a military position; and according to the talent displayed by the "writers," they rose to be collectors, residents at native court, judges or councilors. He was sent to the Bengal presidency, and he arrived at Calcutta in 1770. He soon developed a great talent for the attainment of Eastern languages, and in 1778 he made the type for and printed "Halhed's Grammar" of the Bengalee tongue. Next he formed a set of types in the Persian character for the use of the Company, and in 1784 he had attained to such influence that he took part with Sir William Jones in forming the famous "Literary Society of Calcutta," which has done so much for the advancement of Indian literature by the production of the valuable "Asiatic Researches." In 1786 he returned to England; and there he even increased his devotion to Indian literature, as his numerous publications showed. In 1801 he became librarian to the East India Company, and four years subsequently he was made a visitor and examiner of the students in Oriental studies at the Company's colleges at Addiscombe and Haileybury. His first great Indian literary work was a translation from the Sanscrit of a royal grant of land by an ancient rajah; the next was his translation of the "Bhagvat-Geta" from the Sanscrit; then followed "The Hecetopades" of Veeshno-Sarma. In 1795 he translated and published the story of "Dorshwanta and Sakoonatala," and in 1808 he published a Sanscrit grammar, and thus became the "father of Sanscrit literature" in the Western world. He was a frequent contributor to the "Asiatic Researches," and he had a considerable amount of work done on a translation of the "Institutes of Menu" from the Sanscrit before he learned that Sir William had undertaken the same work. His last work of any importance appeared in 1815, and is entitled "The Radicals of the Sanscrit Language." He died in 1836, having retained his offices in the India House and in the colleges until his death.

**WILKINS, DAVID**, a learned English divine and antiquary, was born in 1685. Of his parentage and education and the employment of his early years we have no account; but it appears from his epitaph that he more than once made the tour of Europe, many of the languages of which he knew. In 1715 he was appointed keeper of the library at Lambeth, of which he drew up a descriptive catalogue. As a reward for his industry and learning he was collated to the rectory of Mongeham-Parva, in Kent, in 1716, to that of Great Chart in 1719, and to the rectory of Hadleigh, in Suffolk, in the same year. He was also constituted chaplain to the archbishop, appointed commissary of the deanery of Boeking, collated to a prebend of Canterbury in 1720, and to the archdeaconry of Suffolk in 1724. He died in 1745. He had been honored with the degree of doctor of divinity by the University of Cambridge in 1717.

**WILKINS, ISAAC, D.D.**, who was born in Jamaica, in 1742, but brought by his parents to New York for his education, rose to considerable importance in the time of the Revolution. He was educated at King's, now Columbia, College. He was appointed to represent the borough of Westchester in the colonial Legislature in 1772, and in 1775 he went to England, where

he remained for a year, and on his return he sold his farm and went to Shelburne, in Nova Scotia. He remained here for ten years. He returned to New York in 1798 and prepared for the ministry of the Episcopal Church, and he was called to the rectorship of St. Peter's, Westchester, as soon as he was ordained. This was his only charge; and here he continued to labor until 1830, when he sunk under the effects of age. He was greatly esteemed for his wonderful adherence to principle and to every matter in which he believed he was right. He was endowed with great courage. In preaching he aimed at great brevity in his sermons, holding that no more should be given from the pulpit than the hearers would be able to carry away.

**WILKINS, JOHN, D.D.**, was one of the most learned of all the English prelates of the seventeenth century. He was educated at Cambridge, and he became master of Trinity College, one of the most elevated places of literary distinction in the universities of Great Britain. He was particularly distinguished for his attainments in mathematical and philosophical science, and he wrote extensively in this department. He owed

OLEANDER, OR WILLOW OF SCRIPTURE.

his position in Trinity College to the favor of Richard Cromwell. He was consecrated bishop of Chester on November 15, 1668, and he held this see until his death, in 1672.

**WILL**. The condition of mind freely choosing or refusing things is the will in exercise. That which moves or influences the will is the mind's view of the benefits to be obtained or the evils to be shunned.

By the will of God in Scripture we may understand his absolute purpose, Rom. ix. 19, his free determination, Eph. i. 11, or his holy commandments, Matt. vii. 21.

Man's will may be influenced by motives, but it cannot be forcibly changed. The fault of our fallen state is that pointed out by our Lord: "Ye will not (ye are not willing to) come to me that ye might have life," John v. 40. And the condemning reason is given: "Light is come into the world; and men loved darkness rather than light, because their deeds were evil," John iii. 19. The remedy for this is that divine operation which enables us rightly to appreciate things, and therefore to desire that which is really desirable. "The condition of man after the fall of Adam is such that he cannot turn and prepare himself, by his own natural strength and good works, to faith and calling upon God; wherefore we have no power to do

good works pleasing and acceptable to God, without the grace of God by Christ preventing us, that we may have a good will, and working with us, when we have that good will."

"Will" in the sense of a testamentary disposition of property does not occur in Scripture. But such wills were made, see 2 Sam. xvii. 23; 2 Ki. xx. 1; Isa. xxxviii. 1. See INHERITANCE.

**WILLARD** (wil'ard), EMMA, was born in 1787, at Berlin, Connecticut. She early developed a remarkable power for instruction, and her name has long and justly been associated with those real benefactors of our country who have devoted their talents and energies in training and elevating the generations who may succeed them. She commenced her successful career in 1803, and in establishments at Westfield, Massachusetts, Middlebury, Vermont, Waterford and Troy, New York, she presided with acknowledged ability over institutions which were successively under her care. Subsequently she effected much good by traveling through the different States with a view to bring her knowledge and experience to bear on the establishments which she visited.

A WINDOW AT POMPEII.

She prepared several text-books in history, geography, chronology, astronomy and other branches, and they reached a sale which is truly wonderful. Upward of five thousand ladies who were under her care traced their mental culture and the formation of their habits to her influence. She died in April, 1870.

**WILLET** (wil'let), ANDREW, who was born in 1562, at Ely, became one of the most learned controversialists of the sixteenth century on all questions between the Protestant and the Romish Church. At the early age of fourteen he was sent to Peter House, the oldest of the colleges in Cambridge, now called St. Peter's College. He removed to Christ College, in which he became a Fellow. He was gifted with the rectory of Childerly, and in 1597 he was made rector of Little Grafton, which he only held for a time, as he exchanged it for the parish of Barley. The work which has handed his name down to the present time was his "Synopsis Papismi." It is a general view of the Romish Church, and it is a treatise of immense learning. It has passed through several editions, one being as late as 1852, in ten volumes. He published a supplement to this work, and in 1602 he issued another, entitled "A Ca-

tholicon—that is, a General Preservative or Remedy against the Pseudo-Catholic Religion;" and in the year following, "Detection or Discoverie of a False Detection, containing a Defence of Synopsi." He also published several works on books of the Old Testament, among others on Genesis, Exodus, Leviticus, Daniel, First and Second Samuel, and on Romans and Jude in the New Testament, and these commentaries are replete with learning, the one on Daniel being considered the most valuable. This prodigy of learning and industry died in 1621.

**WILLIAM DE CARILEPHO** (kar-e-le'fo) succeeded Walcher (see WALCHER) in the see of Durham, and to him must be assigned the honor of projecting and commencing the present grand cathedral of Durham. It was begun A. D. 1093, on a magnificent scale and in the most gorgeous forms of the massive Norman. After the death of the founder, in 1095, Ranulf Flambard finished the walls, and Galfrid Rufus, the next bishop, built the chapter-house, which was destroyed. The famous Hugh Pudsey, who presided over this see from 1153 to 1195, built the galilee. During the episcopates of Richard Poore and Nicholas Fernham the nave was vaulted, the central tower, as high as the first part of it extends, and the great chapel of the nine altars behind the choir were built. The upper parts of the western towers were built by Walter Kirkham between the years 1249 and 1260. Anthony, elected in 1283, vaulted the choir and built the vestry. Thomas Hatfield, elected in 1345, and who died in 1381, inserted the great west window, and that in the north wing of the transept; he also erected the bishop's throne, under the arch of which he prepared his own tomb. John Fordham, elected in 1381, finished the altar screen; the cloisters were built between the years 1388 and 1437, at which time the galilee was repaired; and Richard Fox, who was elected in 1494, restored some of the windows, thus bringing this superb structure to a state of comparative finish in which little more could be desired.

This great cathedral presents many peculiar features. To a student in architecture it presents specimens of all the styles, beginning with the massive and greatly enriched Norman and passing on through the Early English, the Decorated and the Perpendicular. All these periods may be studied on a grand scale, and the effects which they respectively produce on the beholder may be realized. In size it is a cathedral of the first class, in architectural details it abounds in most valuable specimens, in its history it is a catalogue of romances; and yet many hundreds of travelers pass Durham without being aware of its great magnificence. The north front is well seen from the open space around it, and the grandeur of the cathedral is augmented by the presence of the imposing Norman castle which stretches its great size along one side of the enclosure. The south side is entirely concealed by the cloisters and houses of the dean and prebendaries. The east end of this cathedral is wholly unlike any other in the kingdom; it presents a façade of much greater extent than that of the west front. This is called the Chapel of the Nine Altars, from its having contained, and perhaps from its having been originally constructed to contain, that number of altars. It is equally uncommon in its form and beautiful in its architecture. The centre com-

partment, which is a line from west to east with the line of the nave and choir, is terminated by a pediment or gable point, in which is an exceedingly magnificent and large Catherine-wheel window, the effect of which, as seen from the choir, is most superb. The centre division of the Nine Altar Chapel contains the altars of St. Cuthbert and the Venerable Bede, as well as those of St. Oswald and St. Lawrence on one side of it, and St. Edmond and St. Martin on the other. It is in this Nine Altar Chapel that the students of Durham University assemble daily for morning prayer.

The situation of the cathedral is most remarkable; it crowns the summit of a hill, and adjoining it is the great Norman castle. The western end of the cathedral and the castle stand on the verge of a precipitous descent to the river Wear, which flows beneath, and which almost meets around the hill on which these great structures stand, thus nearly forming an island. The houses which constitute the old cathedral city are built on the sides of the hill, as if they had taken shelter under the protection of these giant structures, the only part which is free from houses being the descent from the cathedral and the castle. Originally, there was a great door in the western end between the two great towers, underneath the great window leading to the descent over the river. This door was closed up, and on the descent of the hill, close to the cathedral, was erected one of the most remarkable ecclesiastical buildings in England, the galilee of Durham Cathedral. For many ages porches had been built attached to churches for penitents who had not been restored to Church privileges, and these porches were often called "galilees." At Durham this building has been used as the Lady Chapel, and it is placed at the west end because of a difficulty which the builders had experienced at the eastern part of the cathedral. Singular as its size is, it is still more singular in its form, as it is longer from north to south than it is from east to west. It is divided into five aisles by four rows of clustered columns, each composed of four shafts, of which those to the east and west are built of several courses of stone, while the other two are of one piece of coarse marble each, all the arches being semicircular and adorned with zigzag mouldings. The columns are as light as the Early English, the arches are pure Norman, and the windows of this singular structure are Perpendicular, being inserted by Bishop Langley in the fifteenth century. The tomb of the Venerable Bede is the great attraction in this part of the cathedral.

The dimensions of this cathedral are as follows: Extreme length from east to west, including the galilee and the chapel at the east end, five hundred and ten feet; of the transept, from north to south, one hundred and seventy feet. The Nine Altar Chapel is one hundred and thirty-five feet; breadth of nave and aisles, eighty feet, the choir being of the same width; height of the nave and choir, sixty-nine feet six inches; the western towers one hundred and thirty-eight feet, and the great central tower two hundred and fourteen feet. Durham has always been presided over by eminent men, such as Poore, Fox, Wolsey, Tunstall, Morton, Cosin, Crewe, Barrington and Maltby; but among them all there were none who excelled the great Butler, the author of the "Analogy," who was translated from Bristol to this see, although his presidency over it was only for a brief period, as he was removed by death in about a year and a half after he entered on the duties of the diocese.

**WILLIAM OF MALMESBURY** (mahmz/-ber-re) deserves a place in this work because of the fact that he was the first English writer after the time of Bede who attempted successfully to raise history above the dry and undigested details of a mere chronicle. The invasion of England by the Anglo-Saxons and the Danes covered the land with heathenism and swept away the forms of civilization that had prevailed. There is, therefore, a wonderful degree of interest attaching to the men who in religion, in architecture and in literature became the leaders of a new civilization in the country. William of Malmesbury is believed to have been born about A. D. 1093, in Somersetshire, and in his boyhood he was sent to the monastery at Malmesbury. Here he displayed a taste for such learning as "religions houses" afforded, and he became librarian in the monastery. He afterward accepted the office of precentor, and he might have been abbot, but he declined the responsibility of the post. The work by which he is known is his "History of the Kings of England" from A. D. 449 to A. D. 1143. The history was originally written in Latin, and various editions of it have appeared, and three translations—in 1815, 1847 and 1854—have been published. He has been called the chief of all English historians, and an unprejudiced modern critic says: "Next to the 'Saxon Chronicle,' he is the most valuable authority for Anglo-Saxon history. In his annals of the Norman period and of his own time he is judicious and, as far as could be expected, unprejudiced." He died at Malmesbury in the year 1142.

**WILLIAM** (wil'yum) I., king of England, called "the Conqueror," was born in 1027. He was son of Robert, duke of Normandy, and succeeded to the dukedom in 1035. He laid claim to the throne of England on the death of Edward the Confessor, and landed at Pevensey, in assertion of his right, in September, 1066. On the 14th of October following he encountered the army of Harold, the Saxon king, at Senlac, near Hastings; and the great battle which there took place established the Norman conquest as one of the most important events in the current of English history. William re-established the payment of Peter's pence, indignantly refusing, however, to do homage to the pope. He died by a fall from his horse during an invasion of France, and was buried in the cathedral of Caen, where a monument was erected to him by his son, William II.

**WILLIAM II.**, surnamed "Rufus," king of England, was second son of William the Conqueror, and was born in Normandy, about 1060. On his father's death he hastened to England, obtained possession of the royal treasury at Winchester, and was crowned by Lanfranc, then archbishop of Canterbury. The subjugation of insurrections, wars with Normandy, campaigns against the Welsh, a long quarrel with Anselm, the new primate, from whom William long kept the temporalities of the see, and other troubles, filled up most of his reign. His avarice, profligate life and severity as a ruler made him universally hated, and the manner of his death was considered an expression of God's judgment against him. He was shot, August 2, 1100, while hunting in the New Forest, which he had formed for the purposes of the chase by the unscrupulous depopulation of extensive districts in Hampshire.

**WILLIAM III.**, king of England, was born in 1650. He was son of William II. of Orange,

and Mary, the eldest daughter of Charles I. He was chosen stadtholder of Holland at the age of twenty-two. In 1678 he married Mary, eldest daughter of the duke of York, afterward James II., and this alliance gave him far greater importance as head of the league subsequently formed against France, and leader of the Protestants of Europe. When the arbitrary measures of James II. became intolerable to his subjects, the hopes of the leading friends of freedom and Protestantism naturally turned to him, and he accepted the call sent him, to come and save their rights and liberties. He landed at Torbay, November 5, 1688; the king fled, but was captured and brought back; William arrived in London in December; and by the convention, assembled in January, 1689, the crown was offered to William and Mary, and was accepted by them. They were crowned April 11 by Compton, bishop of London, and the sermon was preached by Bishop Burnet. The primate Sancroft and seven of the bishops, refusing to take the oaths to the new government, were suspended from their office, and Sancroft, with five of the bishops (all who then survived), was subsequently deprived. Some of the clergy followed the example of the prelates, and with them are known as the party of the "Nonjurors." Resistance was made in Scotland, but ended with the defeat of Dundee at Killiecrankie, while a more serious conflict raged in Ireland, in which James II. and William personally took part, and which was closed by the victory of the latter at the battle of the Boyne. The reign of William III. forms one of the great epochs of English constitutional history—"the revolution"—the main feature of which is the final recognition by law of those great principles of regulated liberty for which the statesmen and heroes of the Commonwealth had contended. The character of William has been both extravagantly lauded and passionately depreciated. His taciturn cold manner, his preference of his foreign friends, and the way in which he stood aloof from both the political parties naturally excited prejudice and ill-will against him. But it is not possible to doubt his great intellectual and moral qualities, clear-sightedness, courage (often to rashness in the field), decisiveness and indomitable energy, and persistency of purpose. One dark stain on his character is ineffaceable; he distinctly sanctioned the atrocious massacre of Glencoe, devised by the master of Stair. William III. died at Kensington Palace, in consequence of a fall from his horse, March 8, 1702, and was buried in Westminster Abbey.

**WILLIAMS, DANIEL**, D.D., was born at Wrexham, in Wales, in 1644. He was carefully educated, and by deliberate choice he entered the Presbyterian ministry, and in 1663 he commenced to preach. He was called to a church in Dublin, and there he ministered from 1668 until 1687, when he removed from Ireland. In the following year he was settled in London, in a dissenting church in Hand alley, off Bishopsgate street, and there labored until his death. Among the dissenters in London it was customary to establish "lectures," and Daniel Williams succeeded Richard Baxter in the Merchants' Lecture, in the well-known dissenting chapel, Pinner's Hall. He also became preacher at Sater's Hall. He was the founder of the celebrated Red Cross Street Library, in London, which has been the great storehouse of literature among nonconformists, and has afforded a centre for their meetings on subjects connected with their interests. He also devoted much of his ample means to objects of benevolence.

With a view to make the library of value from the outset, he purchased the collection of Dr. Bates, for which he paid nearly six hundred pounds, and added his own valuable books. In 1727 his trustees bought a site, and in 1729 the library was opened to the public. At present this collection contains about twenty thousand volumes. Dr. Williams published several works, among which may be mentioned "The Vanity of Childhood and Youth;" "Gospel Truth Stated and Vindicated;" "A Defence of Gospel Truth," being a reply to a criticism of Mr. Chauncey; "Man made Righteous by Christ's Obedience;" His sermons, in five volumes, were published in 1738, and another edition appeared in 1750. He was an admirable linguist, and after his death a work which he left behind him was published, entitled "Tractatus Selecti," etc., or "Select Treatises, turned out of English into Latin." He died in January, 1716.

**WILLIAMS, ELEAZER**, who became very celebrated because of his claim to have been Louis XVII. of France, is supposed to have been born about 1787. Usually he was believed to be the son of Thomas Williams, an Indian chief in the

PALESTINE GRAPES.—See WINE.

State of New York. For some time before his death, in 1858, in a lengthened discussion, the question of his parentage was debated, and circumstantial evidence of a remarkable character was adduced to prove that he actually was the dauphin of France, who had been secretly abducted from Paris, instead of being permitted to die of neglect and ill treatment, as all historical records had testified. He had been ordained in the Protestant Episcopal Church, and he served as a missionary on the frontier of Canada, at St. Regis. He prepared a spelling-book in the language of the seven Iroquois nations, which was published in 1813, at Plattsburg, and in 1815 he published in the same language a small work entitled a "Caution against our Common Enemy." His diligence was still further displayed by a translation into the Mohawk or Iroquois of the Book of Common Prayer, accompanied with a selection of psalms and hymns. He died in 1858; but in the following year his life was published at Albany, under the title "Life of Te-ho-ra-gwa-ne-gen, alias Thomas Williams, a Chief of the Caughnawaga Tribe of Indians in Canada." Of this work the "Historical Magazine" says: "This posthumous work of one who figured so lately as the lost prince will excite some interest. It is a sketch of his reputed father, for that is all, we believe, that Thomas ever claimed or was deemed

to be, although the maternity was positively claimed by the wife."

**WILLIAMS, GRIFFITH**, an Irish prelate, was born at Caernarvon in 1589, and educated at Jesus College, Cambridge. He ob-

ANCIENT WINE-MAKING IN THE EAST.—See WINE-PRESS.

tained successively the curacy of Hanwell, the living of Foseat and the lectureship of St. Peter's, Cheapside, London, where he gave such offence to the Puritans that he was suspended. He was presented, however, with the living of Llan-Lechyd, in the diocese of Bangor; and he was also made chaplain to the king, prebendary of Westminster and dean of Bangor. In 1641 he was advanced to the see of Ossory; but the rebellion breaking out the same year, he was obliged to flee to England, where he suffered much for his loyalty; but at the Restoration he recovered his bishopric, and died at Kilkenny in 1672. He wrote "Seven Golden Candlesticks" and other works.

**WILLIAMS, JOHN**, archbishop of York and lord-keeper of the great seal, was born at Aber-Conway in 1582, and was educated at St. John's College, Cambridge. He was ordained priest in 1609, and in the following year became chaplain to Lord Chancellor Ellesmere—the first step to his worldly success. He was soon introduced to the king, James I., was appointed one of his chaplains

ANCIENT WINE-MAKING IN THE EAST.—See WINE-PRESS.

in 1619, and soon after dean of Salisbury, and both by his learning and his Toryism made himself a great favorite with James. He succeeded in ingratiating himself also with Buckingham, and he was made dean of Westminster. On the fall of Bacon, in 1621, Williams was named lord-keeper, and about the same time was raised to the see of Lincoln. His labors at this period were enormous,

as chancellor, statesman and bishop. He is said to have had in his employ a number of court spies; to have been greedy of preferments, of which he had so many as to be a "diocese" in himself; yet his conduct in the court of Star Chamber is praised and also blamed for mildness. Buckingham was never able to shake James' faith in Williams, but on the accession of Charles I. Laud became his bitter enemy, and succeeded in procuring a conviction against him in the Star Chamber on a false accusation, and he was fined, imprisoned and suspended from his ecclesiastical functions. On his liberation he forgot his personal wrongs, and stood up boldly for the monarchy, to the surprise and admiration of the king, who reversed the proceedings against him, restored him to

favor and made him archbishop of York. He defended the king at his own cost, attended him to Oxford, and was faithful to him to the last. He died at Aber-Conway in March, 1650.

**WILLIAMS, JOHN**, a learned prelate, was born in Northamptonshire in 1634, and educated at Magdalen Hall, Oxford. In 1673 he was collated to the rectory of St. Mildred, London, to which was added a prebend in the cathedral of St. Paul. After the Revolution he was promoted to a prebend of Canterbury, and in 1696 he was advanced to the bishopric of Chichester. He died in 1709. He wrote a number of tracts against the papacy and Socinianism.

**WILLIAMS, JOHN, LL.D.**, was born in 1726, at Lampeter, in Wales. He was a nonconformist, and a well-known minister of a dissenting church at Sydenham, in Kent, the seat of the modern "Crystal Palace." In 1767 he greatly distinguished himself by the appearance of his "Concordance to the Greek Testament, with the English Version to each Word, and the Hebrew Roots corresponding to the Greek Words of the Septuagint, with Critical Notes and an Index." His next publication was on "Subscription to the Thirty-nine Articles;" and in 1789 he incited considerable anxiety and stirred up a controversy by his "Free Inquiry into the Authenticity of the First and Second Chapters of St. Matthew's Gospel."

Bulkley, and still more earnestly Archbishop Magee, replied to him. In 1783 he published a work on the "Best Method of Learning Languages." Later still, he wrote an "Examination of Dr. Bell's Argument for the Authenticity of the Two First Chapters of Matthew and Luke." He wrote also on the "Tradition of the Discovery of America

by the Welsh Prince Madog ab Owen Gwynedd." Several of his sermons were published. He died in 1798, at the age of seventy-two.

**WILLIAMS, JOHN**, the devoted missionary to the islands of the South Seas, was born at Tottenham, near London, in 1796. He was brought up to the trade of ironmonger, but at the age of twenty his strong religious feelings led him to become a missionary, and he was sent as agent of the London Missionary Society to the Society Islands. He settled in the island of Raiatea, where he zealously labored not only for the religious instruction, but for the social and secular interests, of the people with marked success. He got a government organized, a chapel built, taught the natives how to build houses, contrived a sort of sugar-mill, and in order to promote the commerce of the islands bought a ship, named the "Endeavor," with which to pass from island to island. In 1823 he discovered the island of Rarotonga; reduced the dialect to writing, and made a translation of the New Testament into it; built himself a ship to return to Raiatea; made afterward several voyages in it among the various groups of islands; and in 1834 visited England, where he remained about four years. During this period he wrote and published his profoundly interesting "Narrative of Missionary Enterprises in the South Seas." He sailed again in April, 1838, with a company of missionaries in the "Camden," purchased for the services of the mission, and after making visits to Rarotonga, Tahiti, Raiatea and other islands landed at Erromanga. And there this pure-hearted, self-denying and indefatigable Christian missionary was attacked and murdered by the natives, November 20, 1839.

**WILLIAMS (AB ITHEL), JOHN**, a distinguished Welsh scholar and antiquary, was born at Llangynhafel, Denbighshire, in 1811, and educated at Jesus College, Oxford. Having entered the Church, he was minister successively of several parishes in Wales, was appointed rector of Llanymowddwy, Merionethshire, in 1852, and ten years later rector of Llanenddwyn, in the same county. He began early to write for English and Welsh periodicals, and to translate into Welsh English devotional works, and at length, by his studies in Celtic archaeology and his editions of ancient Welsh manuscripts, made himself a considerable reputation, not only in Great Britain, but on the Continent. He wrote "The Ecclesiastical Antiquities of the Cymry;" "Druidic Stones;" "A Glossary of Terms used for the Articles of British Dress and Armor." He died August 27, 1862.

**WILLIAMS, MONIER**, was born in 1819, at Bombay, and educated at King's College, London, whence he was removed to the Company's College, at Haileybury, after which he entered Balliol College, Oxford. He also studied in University College. His course in the university was very distinguished; he received the Boden scholarship in 1843. In 1844 he was made professor of Sanscrit at Haileybury; in 1858 he became director of Oriental studies at Cheltenham College, and in 1860 he was elected Boden professor of Sanscrit at Oxford. His learning in all matters connected with the languages of India, and especially with Sanscrit, is very accurate and profound, and most of his publications are connected with Sanscrit and cognate subjects. They are so numerous that only a few of the most important can be enumerated. He became a professor in 1844, and in 1846 he

published his Sanscrit grammar; then a dictionary and several translations of the great Indian poems and dramas. In 1858 he began to publish works in Hindoostani, including grammars, vocabularies, selections and introductions. Then he took up Sanscrit in connection with missionary work, and he has thus steadily aimed at the production of such works as aid in preparing missionaries for their work to a great extent before going to the severe climate of India, and also to prepare the civil servants of the government for their administrative functions in the government of the great population which Providence has permitted to pass into European hands.

**WILLIAMS, MORGAN**, lived in the sixteenth century when the great awakening on the subject of Church corruptions and the necessity for reform were occupying the English mind. He held the post of abbot in the wealthy house at Bristol, which first as a priory and afterward as an abbey for black canons had existed from the

ANCIENT ORIENTAL WINE-PRESS.—See WINE-PRESS.

year 1120, when Robert Fitzharding, the mayor of Bristol, founded the establishment for the Augustinian Order. Williams was the last abbot, as he surrendered his convent into the king's hands on December 9, 1539. In return he received a pension of eighty pounds per annum, upon which he retired into private life. The way was thus prepared for the creation of the new see of Bristol.

**WILLIAMS, ROGER**, the founder of the State of Rhode Island, and nobly distinguished as the first assertor in modern Christendom of the sanctity and perfect freedom of conscience, was a native of Wales. Born in 1599, he studied at Oxford, entered the Church, and naturally joined the Puritan party, emigrating with them to this country. He arrived at Boston in February, 1631, and holding already in perfect clearness the grand truth of which he was the first modern apostle, soon found himself in collision with the churches already existing there; for they still acted on the very principles of which they had been the victims at home. He was invited to settle as pastor at Salem, but the court of Boston would not allow it, and he withdrew to Plymouth. Two years later

the church of Salem elected him for their teacher; but the hostility to this "troubler of Israel" grew fiercer, and the breach widened; Salem was disfranchised, and sentence of exile was pronounced against Williams. Permission being given him to remain till the winter was past, he preached to the people, who flocked to his own house to hear him. But at length, in 1636, he was ordered to embark for England. To avoid this he left Salem in the winter weather, wandered homeless and half fed for fourteen weeks, then found friends and hospitality among the Indians, whose language he had learnt. He preached to them, won their love, and was their friend and peacemaker till his death. He had resolved on founding a new settlement, and after beginning to build and plant at Seekonk had to abandon the spot, and selected Rhode Island, on which he landed from an Indian canoe, with five comrades, in June, 1636. He called the place "Providence," and commenced building. In the course of two years he was joined by others who were glad of such an asylum. Williams founded a commonwealth in the form of a pure democracy, and his system has had its influence on the whole political history of the State. He showed no spirit of revenge toward those who had persecuted him; and when the colonies were threatened with a general rising of the Indian tribes, he nobly risked his own life, and undertook the mission to the Narragansetts to dissolve the conspiracy, in which he succeeded. To secure the permanent existence of Rhode Island as a separate State, Roger Williams was chosen to visit England in 1643 to obtain a charter. He was received with the greatest favor by the Long Parliament, and took back with him the desired charter. Ten years later he was again sent to England, and succeeded in averting a threatened dismemberment of the little State. Williams refused the office of governor, to which the colony wished to appoint him, labored on for its good, rewarding himself in doing it, had a warm controversy with George Fox, and died at Providence in 1683.

**WILLIAMS, ROWLAND, D.D.**, who became one of the most eminent of the English clergy of the Broad Church school, was born in 1817, in Flintshire, in Wales. He entered Eton as a king's scholar, and he became Newcastle medalist; and as Etonians usually go to King's College, Cambridge, he followed the usual course. His fine scholarship gained him the Battie's scholarship in his first year, and he graduated and became a Fellow of King's College in 1841. He acted as tutor for eight years, and in 1850 he accepted the position of vice-principal and professor of Hebrew in St. David's College, at Lampeter, in Wales. In the same year the bishop of Llandaff made him his chaplain. In 1855 he was appointed select preacher to the University of Cambridge, and in 1859 he became vicar of Broadehalke, in Wiltshire. In 1862 he retired from his professorship; and as he had been one of the contributors to the famous "Essays and Reviews," he was called on to defend himself before the judicial committee of the Privy Council for the views promulgated in his essay. The result was a reversal in February, 1864, of the adverse decrees which the Court of Arches had passed against him. He was a diligent writer, and he freely avowed his

sentiments with a candor which often alarmed his friends and the friends of revelation. Among his publications may be mentioned—"Christianity and Hinduism," "Christian Freedom in the

ANCIENT WINE-VESSLS.

Council of Jerusalem," "On the Difficulty of Bringing Theological Questions to an Issue," "Persecution for the Word," "The Prophets of Israel and Judah," "Letter to the lord-bishop of St. David's," to which he added an appendix in a second edition; and he wrote very extensively on antiquarian and religious matters connected with Wales, and he had a large amount of literary work

STORING WINE IN JARS.

to undertake in defence of his views on revelation and inspiration. He died January 18, 1870.

**WILLIBALD (wil'le-bauld)**, often written **WILLIBALDUS (wil'le-bauld'us)**, was a native of Wessex, where he was born about A.D. 700. He became bishop of Eichstadt about the year 741, and devoted himself with great zeal to

WINE STORED AWAY.

the conversion of the Germans. He traveled extensively, and his experiences and what he saw are recorded in "Early Travels in Palestine." He is one of those eminent men of a distant age of whom only a few memorable incidents remain, who were great as workers, but not given to writ-

ing; they left their works as their monuments. He appears to have died about A. D. 786.

**WILLIBROD** (wil'le-brod), SAINT, apostle of the Frisians, was born in the kingdom of Northumbria, about 658. He was brought up in the monastery of Ripon, and after spending twelve years in Ireland embarked with a number of other monks for Friesland, where the missionaries were received with great favor. Willibrod went to Rome and obtained the sanction of the pope for his undertaking; and after several years of apparently successful labor he was sent to Rome a second time, and was consecrated bishop. He established his see at Utrecht, made a missionary journey into Denmark, and founded the abbey of Epternac, near Treves, which he governed till his death, which occurred in 738.

**WILLISON** (wil'i-sun), JOHN, who became eminent in the Church of Scotland as a preacher and a substantial, solid divine, was born in 1680. He was parish minister at Brechin for several years, and subsequently he was removed to St. John's parish, Dundee, where he labored with great zeal and success until 1750, when he died.

POMPEIIAN WINE-CART.

His name is hallowed in Scotland to the present day, and his works have been as much sought after and as greatly prized as those of any of the elder divines who have been the glory of the Church. Among his works may be mentioned his "Example of Plain Catechizing;" his "Sacramental Directory, or a Treatise on the Sanctification of a Communion Sabbath." This is an admirable work, of enduring value. In 1755 his "Afflicted Man's Companion" was published, and repeated editions of this religious classic are still called for, as is his well-known and excellent "Sacramental Catechism," "Sermons," "Free and Impartial Testimony to the Church of Scotland;" and minor works have also appeared from his pen, all of which are included in the quarto and octavo editions of his collected works.

**WILLOCK, WILLOCKS, or WILLOX** (wil'lokz), JOHN, a Dominican or Franciscan friar who became one of the earliest champions of the Reformation in Scotland, was born in Ayrshire, about the beginning of the sixteenth century, and studied at the University of Glasgow. He visited England in 1541, and was there subjected to imprisonment for a breach of the Six Articles of Henry VIII. He became afterward chaplain to the duke of Suffolk; and on the accession of Mary he fled to Friesland, where he was

patronized by the duchess Anne, who employed him in several missions to Scotland. In 1558 he returned to his native country and preached the doctrines of the Reformation in the town of Ayr. He was one of the four ministers appointed to assist the council of government on the deposition of Mary, the queen-regent. In 1561 he was appointed one of the superintendents who succeeded to some of the duties of the Romish bishops. He spent most of the remainder of his life in England, but was moderator of several General Assemblies in Scotland, from 1563 to 1568.

**WILLOW** (wil'lo). There are two Hebrew words rendered "willow" in our version. One occurs, Lev. xxiii. 40; Ps. cxxxvii. 2, only in the plural. It is perhaps the *Salix Babylonica*, weeping willow, with pendulous boughs; or, still more likely, the oleander. The "brook of the willows," Isa. xv. 7, is supposed to be that elsewhere called the brook Zerod, the boundary between Moab and Idumaea, now the *Wady el-Ahse*. Another word is used in Ezek. xvii. 5. Probably it denotes the *Salix Aegyptiaca*. The stems and twigs of this are long, thin and of a pale yellow color. On the twigs are shoots a span in length, which put forth

in spring woolly flowers of a pale color and fragrant smell. A kind of sweet water is distilled from these. After the captivity the willow was regarded as an emblem of sorrow.

**WILMER** (wil'mur), WILLIAM H., D.D., was born in 1782, on the Eastern Shore of Maryland. After a due course of preparation he was ordained in 1808 by Bishop Claggett, and settled in Chester Parish, Maryland. In 1812 he removed to St. Paul's Church, at Alexandria, Virginia, and here his labors were attended with great results; a new large church was erected by the congregation, and he soon rose into importance in the management of the public interests of the Church. He was made president of the Education Society of the District of Columbia. He aided also in sustaining St. John's Church, in Washington City, although he declined accepting a call to that charge; and from 1819 until 1826 he served as one of the editors of the "Washington Theological Repertory," to which journal he contributed many papers. He served as a delegate in every General Convention from the time of his removal to Virginia until his death, and on four occasions he was president of the House of Clerical and Lay Deputies of that body. In 1823 he undertook the duties of the chair of systematic theology and ecclesiastical history and Church polity in the

Theological Seminary of Virginia; and in 1826 he declined the appointment of assistant-rector of the Monumental Church at Richmond, along with Bishop Moore, because of the felt importance of his work in the seminary. Ere long he was made president of William and Mary College and rector of the church at Williamsburg; but shortly after he entered on his duties in his new sphere he was seized with congestive bilious fever, which soon terminated in death. The family of Wilmer has been well known in the Church. A brother of the Rev. Simon Wilmer was rector in Swedesborough, New Jersey, and afterward in Maryland; and his son was rector of St. Mark's Church, in Philadelphia, and subsequently bishop of Louisiana. A younger brother of Dr. William H. Wilmer held the living of Portobacco for nearly forty years, and his uncle James J. Wilmer was a clergyman in Maryland before and subsequent to the Revolution.

**WILNA** (wil'na), ELIJAH, also called "the Pious." This remarkable Hebraist and commentator, who endeavored to produce a reformation among the Jews in Poland at the same time that Mendelssohn and Wessely were laboring to the same effect in Germany, was born at Wilna in 1720. His natural endowments were so extraordinary that when eleven years old he was not only a thorough Hebraist, but unraveled the mysteries of the Kabbalah, and was master of astronomy, geometry, grammar, etc., and at the age of thirteen was appealed to as a great authority and teacher. In addition to his marvelous native powers he possessed a real love for learning and great assiduity, as well as an independent fortune, and lived to be seventy-seven years of age. It is therefore not surprising that up to the year 1760 he wrote the prodigious number of sixty volumes in explanation of both the Scriptures and the traditional law, that he was visited by the rabbins from far and wide as the oracle of the Jewish nation. He died in 1797.

**WILSON** (wil'sun), DANIEL, D.D., was born in 1778, at Spitalfields, and educated at St. Edward's Hall, Oxford. On entering the Church he became curate to the Rev. Richard Cecil, rector of Chobham and Bisley, in Surrey. In 1803 he received the Oxford prize for an "Essay on Common Sense," and in 1804 he was made assistant-tutor at St. Edmund's Hall, and from 1807 until 1812 he was sole tutor and vice-principal. From 1803 until 1809 he had acted as curate of Worton, in Oxfordshire, and in the latter year he became assistant-curate of St. John's Chapel, Bedford Row, in London. He was vicar of St. Mary's, Islington, from 1824 until 1832; and here he did a great work in this populous region of the capital. In 1832 he was appointed to the Indian see of Calcutta, a position which he filled with eminent ability until his death, in 1858. He was a man of undoubted piety, of great energy and decision of character, resolute for all that he believed to be right, and the instrument of great good at home and abroad. He was a leading power in the evangelical party of the Church of England, and all classes in India mourned for his death. He wrote on the "Evidences of Christianity," on "Confirmation," "The Divine Authority and Perpetual Obligation of the Lord's Day," "Sufficiency of Scripture as the Rule of Faith," "Expository Lectures on the Colossians." His charges and sermons were written with great care, and they were published from time to time; and he wrote much on the controverted questions suggested by the

Romanizing views which appeared in the "Tracts for the Times."

**WILSON, HENRY BRISTOW**, was born in 1804, and educated in Merchant Tailors' School, in London, whence he passed to St. John's College, Oxford. He obtained a Fellowship in this college, graduated with high honor and became a tutor in the college. He rose to great preferment in the university, where he became select preacher, public examiner and professor of Anglo-Saxon. In 1850 he was appointed as Bampton lecturer for 1851. He chose as his theme "The Communion of Saints; an Attempt to Illustrate the True Principles of Christian Union." He wrote on the prevalent "Opinions on the Inspiration of the Scriptures," and he contributed to the "Oxford Essays;" but the work which of all others brought him into notice was his share in the famous work known as "Essays and Reviews." The authors of this remarkably advanced and bold volume were Frederick Temple, D.D., Rowland Williams, D.D., Baden Powell, M.A., Henry Bristow Wilson, B.D., V. C. W. Goodwin, M.A., Mark Pattison, B.D., and Benjamin Jowett, M.A. The appearance of the essays caused a storm in the theological world, led to a vigorous legal contest and called forth upward of fifty distinct works in criticism and reply, while a vast number of anonymous essays and pamphlets appeared, while all the leading quarterly reviews and magazines devoted ample space to the examination of the daring views which the essayists had avowed. As in the case of Dr. Williams, so in that of the Rev. Dr. Wilson, the Court of Arches had condemned their views as submitted from their essays; but the judicial side of the committee of the Privy Council, which is the ultimate court of appeal in the Church of England, reversed the decision of the Arches Court, and so the defendants were acquitted.

**WILSON, HORACE HAYMAN**, Professor, LL.D., a distinguished Oriental scholar, was born in 1786. He went to Bengal in 1803, as assistant-surgeon in the East India Company's service, and devoting himself to Sanscrit, was in 1812 appointed secretary to the Asiatic Society, and was subsequently made secretary to the committee of public instruction in Calcutta. While in India he was at the head of the educational department, and as long as it was possible continued the public profession of Sanscrit and Arabic in the schools and colleges. In 1830 he specially advocated a non-interference with suttee, and resented Lord William Bentinck's abolition of it in a petition drawn up on behalf of the Hindoo zemindars of Bengal. In 1833 he was equally opposed to the educational measures of Mr. Trevelyan, and to the last, it may be said, fought the battle of an obsolete conservatism in regard to all native institutions. On returning to England he wrote a history of British India, in continuation of Mill's, and his contributions to the illustration of Hindoo literature and science were never relinquished. He was appointed Boden professor of Sanscrit in the University of Oxford, in which capacity he ended his laborious and eminent life. The profound erudition of Dr. Wilson, and his attainments as an Oriental scholar, are probably unequalled; and his contributions to the knowledge of Hindoo literature were so continuous that they embrace all subjects connected with it. He died in 1860.

**WILSON, JOHN, D.D.**, has held a very prominent position in Bombay as the father and

leader of the missionary cause in Western India under the auspices of the Free Church of Scotland. His great progress in the languages and learning of India led to his admission to membership in the literary societies of India. In addition to an extraordinary amount of missionary labor, especially in the management and extension of scholastic institutions for the elevation and Christianization of the natives, Dr. Wilson has been an extensive contributor to the various departments of learning which bear on missionary work. Among his very learned treatises may be mentioned "An Exposure of the Hindu Religion, in reply to Mora Bhatta Dandekara;" "The Doc-

may be able to go forth fully equipped to evangelize the native population. This policy was decided on after maturely considering the nature of the climate and the unlikelihood of ever being able to procure missionaries in adequate numbers from Britain and America to meet the wants of the teeming millions of India.

**WILSON, THOMAS**, bishop of Sodor and Man, was born in 1663 at Burton in Cheshire. He was educated at Trinity College, Dublin, was ordained priest in 1689, and three years later became tutor to Lord Strange, son of the earl of Derby. He was consecrated bishop of Sodor and

CHURCH OF CERTOSA, NEAR PAVIA.

trine of Jehovah addressed to the Parsis," which was published at Bombay in 1839; "The Parsi Religion: Unfolded, Refuted and Contrasted with Christianity;" "The Evangelization of India," published in 1849; "History of the Suppression of Infanticide in Western India, under the Government of Bombay." In 1846 Dr. Wilson traveled extensively through Palestine and the adjoining countries, and the result of his explorations was given to the world in his "Lands of the Bible Visited and Described," which appeared in two volumes in the year 1847. Dr. Wilson in Bombay, Dr. Duff in Calcutta and Dr. Anderson in Madras held similar positions in the sphere of missionary labor in the three Indian presidencies; the aim of all these laborers being to train native preachers and teachers so thoroughly that they

Man in 1698. He applied himself zealously to the moral and religious improvement of his diocese, but carried out his views of discipline with too high a hand, and in 1722 suffered imprisonment at Castle Rushin. He was released on appeal the following year. His works consist of "Religious Tracts" and "Sermons," with a short "History of the Isle of Man." He died in 1755.

**WILSON, WILLIAM RAE, LL.D.**, chiefly known by his "Travels in the Holy Land," was born in 1774. At an early age he became acquainted with the duke of Kent, who remained his steady patron through life, and who furnished him with every species of recommendation likely to facilitate his travels in the East. He was one of the first of a class of travelers, since become nu-

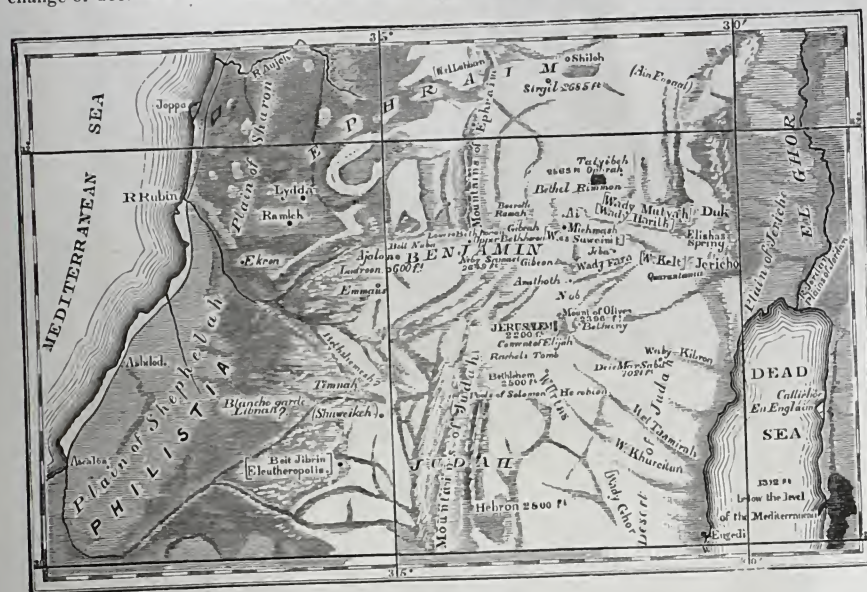

merous, whose object has been to illustrate the statements of holy writ by observations on the scenery and manners of those parts of the world in which its events took place. In all his works he preserved a religious tone, with a strong bias against the Roman Catholic Church; but, on the whole, his writings display an unusual freedom from false coloring and affectation. He died June 2, 1849.

**WIMPLE** (wim'pel), Isa. iii. 22. The same word is also rendered "veil," Ruth iii. 15. It is a woman's wide upper garment or shawl. See **DRESS**.

**WINCHESTER** (win'ches-ter), ELHANAN, was born in 1751, at Brookline, Massachusetts, and entered the ministry of the Baptist Church. He was the first minister of the Baptist Church in Newton, Massachusetts. He went to South Carolina, and while preaching at the Pedee River he held Calvinistic views. In 1781 he made his change of doctrinal views known in Philadelphia,

portance of Family Religion," to which he appended Prayers and Hymns.

**WINCHESTER**, THOMAS, D.D., was an eminent and learned English clergyman of the eighteenth century. He attained to a Fellowship in Magdalen College, Oxford, and in 1761 the rectory of Appleton, in Berkshire, was given to him, it being in the gift of the college. He is celebrated for a dissertation which he published on the seventeenth article of the Church of England. Calvinists have contended that this article favors their views, and Arminians have strenuously maintained that it may lawfully be held in an Arminian sense. Dr. Winchester adopted the course of going to the writings of the compilers of the articles, and from the sentiments which they fully expressed in their works he deduced the meaning which he held they intended to convey by the words which they used in the article. Several editions of this work have been called for. He wrote also on the confessional. He died in 1780.

SOUTH PALESTINE.

where he proclaimed the doctrine of universal restoration. He died at Hartford, Connecticut, in the year 1797. His sentiments were set forth in a work entitled "The Universal Restoration; exhibited in a Series of Dialogues," which was published in London in the year 1792. Of this work several editions appeared in England and in this country. He wrote on "The Empire of Christ," and issued a course of lectures on the "Prophecies that Remain to be Fulfilled." Besides these, he was the author of hymns, poems, catechisms and sermons.

**WINCHESTER**, SAMUEL GOVER, was born in 1805, at Rock Run, in Maryland. He entered the ministry of the Presbyterian Church, and was settled in the Sixth Presbyterian Church from the year 1830 until the year 1837, when he was removed to Natchez, in the State of Mississippi, in which charge he labored until his death. He was an admirable preacher, a solid theologian and a most genial, attractive man. He published an edition of Willison's "Companion for the Sick," "Christian Counsel to the Sick," "Discourse at Oakland College," "The Theatre" and the "Im-

**WINDHAM** (wind'ham), JOSEPH, an eminent antiquary, was born at Twickenham, in 1739; was educated at Eton and at Christ's College, Cambridge; went to Rome, and there took drawings of the monuments of antiquity; composed the principal parts of the "Ionian Antiquities," published by the Dilettanti Society; and assisted Stuart in his work on Athens. He was a Fellow of the Royal and Antiquarian Societies, and he was one of the committee for the publication of the "Cathedrals of England." He died in 1810.

**WINDOW**. See **HOUSE**.

**WINDS**. As in most other languages, the winds are used in the Hebrew Scriptures as representatives of the different regions of the earth, in the broader sense; so that the four winds are a convenient designation for the four quarters of the world. The east wind is frequently mentioned as the peculiarly dry and parching wind. The west wind, on the other hand, as coming charged with moisture from the Mediterranean, was refreshing and favorable to vegetation. So to some extent was the north or north-west wind, and the more

peculiarly hot wind was from the south, sometimes, though only for brief seasons, and chiefly in the southern parts of Palestine, growing into a scorching blast. From the peculiar position of the Sea of Galilee, lying five or six hundred feet below the level of the sea, and with ravines from it on the north running up toward the mountainous region of Hermon, it is subject to sudden squalls of wind, which naturally come from the north. But these are very irregular and fitful in their movements. Wind as an emblem of wrath or judgment seems almost invariably connected with the hot tempests designated in our version "whirlwinds."

**WINE**. The use of wine as a product of the grape is of great antiquity. Thus we find it recorded that Noah planted a vineyard and drank of the wine he procured from it to intoxication, Gen. ix. 20, 21.

There are several different words used in the original languages of Scripture which are rendered "wine" by our translators. *Yayin* is the most general term, clearly the same with the Greek *oinos*, the Latin *vinum*, and our own "wine." *Tirsh* is also of frequent occurrence. Derived from a root which signifies to "get possession of," it is perhaps applied to wine as indicating its inebriating qualities, whereby it gets possession of the brain. *Asis*, found in Song Sol. viii. 2; Isa. xlix. 26, is derived from a word denoting to "tread;" it refers, therefore, to the method of expressing the liquor from the fruit. It may properly mean new wine, as recently trodden out, but not necessarily unfermented wine. *Sobe* occurs but thrice, viz., in Isa. i. 22; Hos. iv. 18; Nah. i. 10; its root signifies to "soak," or drink to excess. The cognate verb and participle are constantly used in the latter sense, Deut. xxi. 20; Prov. xxiii. 20, 21; Isa. lvi. 12. *Hlemer*, Deut. xxxii. 14, in Chaldee *hhamar* and *hhamrd*, conveys the notion of "foaming" or ebullition, which may apply equally to the process of fermentation or to the frothing of a liquid, fermented or unfermented, on being poured out. *Mesech*, Ps. lxxv. 8, *mezeg*, Song Sol. vii. 2, and *mimsach*, Prov. xxiii. 30; Isa. lxxv. 11, are all connected with some other substances, as water or spices. *Shécar*, "strong drink," is a generic term applied to all fermented liquors, such as those obtained from barley, apples, honey, dates, all of which, according to Jewish authorities, were known in Palestine. It is sometimes distinguished from wine, Deut. xiv. 26, but certainly sometimes, as in Num. xxviii. 7, includes it; occasionally it is a mixture, Isa. v. 22. *Hhómeltz* was a weak sour wine or vinegar; *ashishdâh*, 2 Sam. vi. 19; 1 Chr. xvi. 3; Song Sol. ii. 5; Hos. iii. 1 (where our version gives "flagons of wine"), was a solid cake of pressed raisins; and *shémârim*, properly implying the "lees" or "dregs of wine," is sometimes, as in Isa. xxv. 6, used of wine kept on the lees in order to increase its body. In the New Testament the following terms occur: *oinos*, the general designation of wine; *gleukos*, Acts ii. 13, sweet wine; *sikera*, from the Hebrew *shécar*; *ozos*, vinegar; and in Rev. xiv. 10, a strange expression, *kekerasmēnos akrotos*, literally "mixed unmixed," in our version "poured out without mixture."

It has been questioned whether some of these words do not apply rather to the fruit than to the wine which might be produced from it. And undoubtedly *yayin* and *tirsh* are found connected with expressions, Isa. xxiv. 7; Jer. xl. 10, 12, which more properly belong to fruit. But it has

been well replied that it is not fruit simply as fruit that is intended in such places, but rather as the raw material from which wine comes. Thus in Mic. vi. 15 the drinking of wine is referred to as the result of treading, and in Jud. ix. 13; Ps. civ. 15 the exhilarating effects of the product are distinctly noticed. Besides, whatever kinds of liquor may be understood by *yayin* and *tirsh*, it is clear that they were liquors, because they are generally said to be drunk, Gen. ix. 21; Isa. lxii. 8, 9. And though *tirsh* is often connected with corn, no argument can be thence derived that both were solids more than for changing the usual signification of our own "drink" because it is often coupled with "meat"—"meat and drink." The evidence is conclusive when we consider the effects of indulgence in *yayin* and *tirsh*. To the former are attributed the darkly-flashing eye, Gen. xlix. 12, the unbridled tongue, Prov. xx. 1, the excitement of the spirit, Prov. xxxi. 6, the enchainment affections of its votaries, Hos. iv. 11, the perverted judgment, Prov. xxxi. 5, the indecent exposure, Hab. ii. 15, 16, and the sickness resulting from the heat of wine, Hos. vii. 5. The allusions to the effects of *tirsh* are confined to a single passage, but this a most decisive one, viz., Hos. iv. 11, "Whoredom and wine (*yayin*), and new wine (*tirsh*), take away the heart," where *tirsh* appears as the climax of engrossing influences in immediate connection with *yayin*.

It is hence of little consequence to determine whether the ordinary wine of the Hebrews was fermented or unfermented. Still, it is the fair inference that the fermenting process did take place. Our Lord's comparison, Matt. ix. 17, is well-nigh conclusive; and if exception be taken to that, none can be made to Job xxxii. 19, where new wine is described as likely to burst new bottles. Besides, the eye of the wine, Prov. xxiii. 31 (where in our version "color"), must be the air-bubble which is one of the tokens that fermentation has taken place.

Special notice has been taken of the two words which occur most frequently in Hebrew for wine; a similar proof might be offered in regard to the other words; for example, the power of intoxicating is ascribed to *asis*, Isa. xlix. 26; Joel i. 5. And indeed we may reasonably infer that if some kinds of wine produced intoxication, whilst others did not, then a distinction would be made in the Scripture warnings. Whereas, instead of allowing one kind as innocuous and censuring another as dangerous, the prohibition is in all cases the same—against excess. And even the *gleukos*, which, according to its name, must have been sweet rather than new wine, seeing that it was at Pentecost that the reference was made to it, Acts ii. 13, 15, when the jeering populace ascribed the utterance of the inspired apostles to drunkenness, must have had an intoxicating power.

Of the mixing of wine a word must be said. Some of the Hebrew terms given above imply this. But it was not always to lower its strength by adding water, more generally to increase it. Thus we find mixed wine provided for festivals and occasions of revelry, Prov. ix. 2, 5; xxiii. 30; Isa. v. 22; and when wine is symbolically used for the

severity of God's judgments, the cup in the divine hand is described as "full of mixture." Doubtless also the flavor was to be increased; we may well suppose, therefore, that spices and aromatics were mingled with the wine. The mixture of wine and myrrh offered to our Lord, Mark xv. 23, was intended to stupefy and deaden the sense of pain, but He who for our sake drank the cup of sorrow to the very dregs refused the alleviation.

Enough has been said to show that wine was in general use in Palestine, Gen. xxvii. 28, some

were so dedicated from their birth were to abstain perpetually, Jud. xiii. 4, 5; Luke i. 15; vii. 33. The priests, too, when performing their sacred functions, were to take neither wine nor strong drink, it being possibly under the influence of liquor that Nadab and Abihu had committed their fearful sin, Lev. x. 1, 8-11. These were all exceptional cases.

Besides the social use of wine, it was an accompaniment of sacred rites. A drink-offering must be presented with the daily sacrifice, Ex. xxix. 40,

CHURCH OF STA. MARIA DELLA CROCE, AT PAVIA.

kinds being more prized than others, as the wine of Helbon, Ezek. xxvii. 18, still notable, and the aromatic wine of Lebanon, Hos. xiv. 7. Our Lord provided it miraculously when the ordinary supply failed at a marriage-feast, John ii. 1-11; and those only of whom we read as refusing wine were the Rechabites, on whom their father laid the charge in order the better to secure their persistence in a nomad life, Jer. xxxv., for had they built houses, or sowed fields, or cultivated vineyards, their whole manner of living would have been changed. The Nazarites indeed were to abstain from wine during the period for which their vow extended, Num. vi. 1-4, 20; and those who

41, also when the first-fruits were brought, Lev. xxiii. 13, and with burnt-offerings and sacrifices, vowed or free-will, generally, Num. xv. 5, 7, 10. The priests received tithe of wine, and had also the first-fruits of it, Ex. xxii. 29; Neh. x. 37, 39. For a notice of wine used at the celebration of the passover see **PASSOVER**. It was with this wine, together with the leavened bread, that our Lord instituted the sacrament of the holy supper.

There are many admonitions in Scripture against excess in the use of wine; particularly those who held office in the Church were to be sober and temperate, Luke xxi. 34; Rom. xiii. 13; Eph. v. 18; 1 Tim. iii. 3, 8; Tit. i. 7.

**WINE-PRESS, or WINE-FAT.** When the grapes were collected, which was an occasion of mirth and singing, they were conveyed to the press. This was commonly placed in the vineyard, Matt. xxi. 33, or at any rate outside the towns and villages, Zech. xiv. 10. It consisted of two troughs or vats, one smaller than the other, the former to receive the grapes, the latter the expressed juice. The smaller was placed above the larger, and when filled with grapes was trodden by several persons—a service which, though fatiguing, was usually performed with singing and other expressions of joy, Judg. ix. 27; Isa. xvi. 10; Jer. xxv. 30; xlviii. 33. The expressed juice flowed through a hole or spout in the side of the smaller vessel into the larger one.

The Egyptians usually trod the grapes, but they

FRENCH CHURCH AT BERLIN.

sometimes resorted to a process of twisting in a bag similar to that of the torcular among the Romans. Among the Hebrews treading only seems to have been employed; and as this caused the garments to be sprinkled with the juice, which was red, and as it conveyed a representation of oppression and torture, images of war and bloodshed were taken from it, Isa. xvi. 10; lxiii. 1-3; Lam. i. 15. Some such method of relieving the fatigue of the treaders may have been resorted to as indicated in the wood-cut which represents an ancient Egyptian wine-press.

**WINKLES** (win'kles), R. B., deserves a place in this work because of the great service which he has rendered to literature by the publication of his really magnificent and learned work on church architecture entitled "Architectural and Picturesque Illustrations of the Cathedral Churches of England and Wales, with Historical and Descrip-

tive Accounts." The historical matter is by Thomas Moule, and it is arranged in a lucid manner, with sufficient minuteness of detail for the general reader. Different editions of this work have appeared, but the edition of 1860, which contains Ripon and Manchester as well as the Welsh cathedrals, presents a complete work, as the three volumes contain one hundred and eighty-seven splendid steel engravings, which illustrate the most effective views of the best parts of all the great English cathedrals. The work is in imperial octavo, with good paper and fine type, and it is eminently worthy of a chief place in the library of the student, the scholar, or in the collections of public institutions.

**WINNOW.** See AGRICULTURE.

**WINSLOW** (winz'lo), EDWARD, was born in 1595, in Worcestershire, and emigrated to New England in the year 1620. He was elected governor of the colony on three occasions, viz., in 1633, 1636 and 1644. He was the author of an exceedingly interesting and valuable work, which continued the history of the colony from the end of Mourt's relation, at December, 1621, until September, 1623. Mourt is supposed to have been George Morton. The governor was also the author of "Hypocrisis Unmasked: a True Relation of the Proceedings of the Governor and Company of the Massachusetts against Samuel Gorton (and his Accomplices), a notorious Disturber of the Peace." This work was reprinted under another title in 1649, when it assumed the name of "The Danger of Tolerating Levellers in a Civil State." He also wrote "New England's Salamander, discovered by an Irreligious and Scornful Pamphlet, called New England's Jonas Cast Up at London;" and his next work was one of a less acrimonious, less political and less personal character, entitled "The Glorious Progress of the Gospel among the Indians in New England." This appeared in 1649,

and in 1653 he issued "A Platform of Church Discipline in New England." This exceedingly energetic man was lost on a voyage between Hispaniola and Jamaica, in the month of May, 1655.

**WINSLOW, HUBBARD, D.D.**, was born in 1800, at Williston, Vermont, and educated at Yale College, where he graduated in 1825. He became pastor of the First Congregational Church in Dover, New Hampshire, in 1828, from which position he removed in 1832 to the Bowdoin Street Church, Boston, where he remained twelve years. In 1844 he became principal of the Mount Vernon Institute for young ladies in Boston, from which office he retired in 1853. He was made pastor of the Presbyterian church at Geneva, New York, in 1857, and in 1859 he retired from this charge. He wrote very extensively, and his works are of much value. The most important of them are his "Controversial Theology;" "Discourses on the

Trinity," a very able work; "Christianity applied to our Social and Civil Duties;" "Mental Cultivation;" "Elements of Intellectual Philosophy;" and "Elements of Moral Philosophy." Both these works have been highly and justly commended by eminent men on both sides of the Atlantic. "The Hidden Life," "The Design and Mode of Baptism," and a large number of other minor works, in addition to addresses and papers in reviews and religious journals. He died at Williston, Vermont, in August, 1864.

**WINSLOW, MIRON, D.D., LL.D.**, a brother of Hubbard Winslow, was born September 12, 1789, at Williston, Vermont. He was educated at Middlebury College, where he graduated in 1815. He then entered on the study of theology at Andover for three years. Having dedicated himself to the cause of missions, he went in 1819 as a missionary to Ceylon under the American Board of Commissioners for Foreign Missions. He founded a seminary at Oodoville, and labored earnestly for seventeen years, when he removed to the Madras presidency. In 1840 he was made president of the Madras College. His writings were generally connected with missions, such as his "Tamil and English Dictionary." In preparing this dictionary he was aided by educated natives, and he used the manuscripts of the late Rev. Joseph Knight of Madras. This is an exceedingly valuable work. He translated the Bible into Tamil, completing this great undertaking in the year 1855. His "Mémorial" of Mrs. Winslow was justly received with great favor, and his papers on missions in Ceylon and India have been greatly instrumental in advancing the missionary cause. He died at the Cape of Good Hope, on return voyage to this country, on the 22d day of October, 1864.

**WINTER.** See SEASONS.

**WINTHROP** (win'thrup), JAMES, LL.D., was born in 1752, at Cambridge, Massachusetts, and educated at Harvard, where he graduated in 1769. From 1772 until 1787 he served as librarian in the college; and having been with the forces of the colonists at Bunker Hill, in 1775, he was wounded in that action. He filled the office of chief-justice of the Court of Common Pleas for several years. His literary works included "An Attempt to Translate the Prophetic Part of the Apocalypse of St. John into Familiar Language," "Systematic Arrangement of Several Scripture Prophecies relating to Antichrist" and "Attempt to Arrange in the Order of Time Scripture Prophecies yet to be Fulfilled." He was a diligent contributor to scientific and literary journals, and all his works showed a thoughtful, cultivated mind. He left his library to the college at Meadville, Pennsylvania. He died in 1821.

**WINTLE** (win'tl), THOMAS, was born in 1737, at Gloucester, and educated in Pembroke College, Oxford, where he obtained a scholarship. He reached a Fellowship in due time, and he became a successful tutor in his college. In 1767 he received the living of Writisham, in Kent, and in 1774 he was made rector of Brightwell, in Berkshire. He published "Daniel, an Improved Version attempted, with Dissertations and Critical Notes." In 1794 he was Bampton lecturer, his subject being "The Expediency, Prediction and Accomplishment of the Christian Redemption." He also wrote on ethics and on the vision contained in the second chapter of Zechariah. He

entered into the controversy with the bishop of Worcester touching his strictures on Archbishop Secker and Bishop Lowth, in his "Life of Bishop Warburton." He died in 1814.

**WINZET** (win'zet), NINIAN, was a decided opponent of the Reformation in Scotland, and yet he declaimed with great earnestness against the corruptions of the Church of Rome. He is supposed to have been born in 1518, in Renfrewshire, and he presided over the Scottish monastery of St. James, at Ratisbon. The Irish Scots founded a celebrated house here, and in time it fell into the hands of their brethren from Scotland. Winzet, or Wingate, as his name is sometimes written, became abbot in 1576. The titles of his works will explain their character: "Certane Tractatis for Reformatoun of Doctryne and Maneris," 1562; "The Last Blast of the Trumpet of Gode's Worde against the vsurpit Auctoritie of Johne Knox and his Caluinian Brether, intrudit Precheouris," 1562. This work was suppressed, and the printer was imprisoned, while the author had to flee from Scotland. A few of the leaves were saved, and they are preserved in the university library at Edinburgh. He was the author of "An Exhortation to Mary Queen of Scottis, for unfenzit Reformation of Doctryne and Maneris," and "Buke of fourescoir and three Questions teaching Doctryne, Ordour and Maneris propoit to ye Precheouris of ye Protestants in Scotland." This work, which was written with much mildness, is still sought after as a literary curiosity, and it brings a high price among collectors of rare works. He died in 1592.

**WISDOM** (wiz'dum). In reference to the Deity, wisdom may be said to be one of those perfections which go to form his character. In his infinite wisdom he decides on that which is the most fitting, in the best way, at the most suitable time. The Scripture frequently extols the divine wisdom, and drawing the contrast between that and the wisdom of the world—the reliance of men upon their own imperfect and perverted judgment—shows us that if we would be truly wise we must learn of Him who gives wisdom without upbraiding to those who ask it at his hand, Job xxviii. 12-28; Prov. iii. 13-18; Rom. i. 22; xvi. 27; 1 Cor. i. 17-21, 24, 25, 27; ii. 6-8, 13; James i. 5.

It is not necessary to multiply observations of this kind. Let it rather be remarked that so high is the estimation of true wisdom that we find it personified in Scripture, and described as uttering a voice to incite men to listen to the message which God has conveyed to the world, Prov. i. 20; viii. 1; ix. 1-5. Indeed, we may regard this as more than a mere personification, and may with reason believe that we have here the word of that divine Person who is elsewhere emphatically called "the wisdom of God," 1 Cor. i. 24.

**WISDOM OF JESUS, THE SON OF SIRACH.** See ECCLESIASTICUS.

**WISDOM, BOOK OF, or WISDOM OF SOLOMON.** By one or other of these names, more commonly the latter, is designated one of the books of the Apocrypha. That it was not the production of Solomon is on all hands admitted; and the name of Solomon, therefore, whom the author would seem to personate, is improperly connected with it. Jerome mentions that some of the ancients ascribed it to the famous Alexandrian Jew Philo; but this was mere con-

jecture, which is now almost universally rejected. The writer is unknown, though there can be little doubt that he was a Hellenizing, most likely an Alexandrian, Jew, who lived probably a century or a century and a half before the Christian era. It has come down to us only in Greek and Latin, and never existed in Hebrew. It has no place in the Jewish canon, but, along with the other Apocryphal books, it has been declared canonical by the Council of Trent. Its leading object is to describe and extol wisdom, both in respect to its own inherent qualities and to the happy fruits which have sprung from it in the history of the past. Many just reflections are thrown out in the course of the work; but in some of its representations it is not in proper accord with the doctrines or testimony of Scripture, as in the flattering style employed respecting the Israelites; in the way also the author speaks of himself—not only as a kind of impersonation of wisdom, but as having been good even before he was born, and having, as such, come into an undefiled body, ch. viii. 18-21; and, generally, in the artificial coloring the book throws over many of the transactions of Old Testament history, plainly bespeaking a different mode of contemplation from what is found in inspired Scripture.

**WISEMAN** (wize'-man), NICHOLAS PATRICK STEPHEN, cardinal and Roman Catholic archbishop of Westminster, was descended from an Irish family, and was born at Seville in 1802. He was educated first in Waterford, then at the college of St. Cuthbert, near Durham, and afterward went to the English college in Rome. He was made a priest and doctor of divinity in 1825, and shortly after appointed vice-rector of his college, to the rectorship of which he succeeded a few years later. He went to London, and in 1835 delivered a course of lectures at Moorfields which attracted great attention. In 1836 he founded the "Dublin Review," in conjunction with Daniel O'Connell. In 1840 he was appointed vicar-apostolic in England, and received the title of bishop of Melipotamus. In 1850 he became the leading agent in an event which caused the greatest excitement and indignation in the popular mind, and was known as "the Papal Aggression." It consisted in the apportionment of England into ecclesiastical districts under the government of bishops of the Romish Church, who received from the pope territorial titles after chief towns in their respective dioceses. Dr. Wiseman was himself

styled archbishop of Westminster, and at the same time was elevated to the dignity of cardinal, being the seventh English cardinal since the Reformation. The Ecclesiastical Titles Act, rendering the assumption of such titles illegal and penal, was passed in the midst of the popular ferment on the subject. Dr. Wiseman produced in the course of his life many works showing great learning and intellectual power. Among them, one of his earliest was entitled "Lectures on the Connection of Science and Revealed Religion," and one of his latest, "Recollections of the Last Four Popes." His name was frequently before the public as a

ST. PETER'S CHURCH, CAEN.

lecturer on art, science, history and other topics, his ambition being rather to shine in many fields than to be thoroughly master in one. He is said to have declared before his death that he had never in his life a doubt respecting any article of the Catholic creed. No wonder that he failed to understand the times in which he lived. It was through his influence that the "Home and Foreign Review," the able organ of the liberal party in the Church of Rome, was condemned, and its discontinuance necessitated. He died in 1865.

**WISE MEN.** See DIVINATION, MAGI.

**WISHART** (wish'art), GEORGE, the friend of John Knox, and usually called "The Martyr,"

was a Scottish schoolmaster, and having received the doctrines of the Reformation, began to preach them, probably about 1536. Fear, however, drove him from his native country, and he was some years in England, where also he preached, and by persecution was induced to recant. After his return to Scotland, in 1543, he distinguished himself as one of the boldest and most vehement promoters of the Reformation, riots and destruction of churches sometimes following his discourses. Recent investigations have made it all but certain that Wishart was concerned in the plots formed against the life of Cardinal Beaton. He was seized at Haddington by the soldiers in the service of Beaton, tried for heresy and burnt at St. Andrew's, March 28, 1546.

**WISHART, GEORGE**, a Scottish historian, was born at Yester, in East Lothian, in 1602, became a parish minister at St. Andrew's, but refusing to sign the Covenant, was more than once imprisoned. He was several years chaplain to the marquis of Montrose, on whose execution, in 1650, he held the like situation in the household of the queen of Bohemia. He returned to England at the Restoration, was appointed rector of Newcastle, and two years later bishop of Edinburgh. Wishart was author of a history of the campaigns

OXFORD.—See WOLSEY, CARDINAL.

of Montrose, written in Latin and published in 1650. It was translated into English, and has been several times reprinted. He died in 1671.

**WIST**, Ex. xvi. 15; Acts xii. 9, knew.

**WIT**, Ex. ii. 4, know. To do to wit, 2 Cor. viii. 1, to let know.

**WITCH, WITCHCRAFT**. See DIVINATION.

**WITHERSPOON** (with'er-spoon), JOHN, D.D., LL.D., was born in 1722, at Yester, in Scotland, and educated at the University of Scotland. He was settled as parish minister at Beith in 1745, where he continued until his removal to Paisley, in the year 1757. He was an excellent theologian, and he threw himself with great zeal into the effort to promote the cause of evangelical religion in Scotland. He was induced to accept the presidency of the College of New Jersey, and he left Paisley for this position in 1763. He entered on his office with great energy, and he displayed an earnest desire to promote the intellectual, moral and civil interests of the colonies. When the difficulties with the mother country assumed a threatening aspect, he became a member of the provincial council of New Jersey in 1776, and he represented the State of New Jersey in the general congress in the sessions of 1776 to 1779, 1781 and 1782. He

was a faithful, active member of the body, seeing the difficulties arise which terminated in civil war and ended in revolution. He was a signer of the Declaration of Independence, and he witnessed the close of the struggle and the birth of the nation, as he lived until November, 1794. His work had great success, and ran through several editions. It is entitled "Ecclesiastical Policy," being an humble attempt to open up the mystery of moderation. He was replied to by the leaders of the moderate party, and he replied in his "Serious Apology." His next is an admirable work, clearly written and on a weighty subject: "Essay on the Connection between the Doctrine of Justification by the Imputed Righteousness of Christ and Holiness of Life." He wrote on "Ecclesiastical Characteristics," and among the important subjects in this work, which extended to three volumes, is his treatise on regeneration. He entered into the controversy between the colonies and Great Britain, and he wrote several essays on purely American affairs. These, together with his numerous sermons and his lectures on moral philosophy, make up an extensive collection of works, which now usually appear in four large volumes, octavo. This eminent man and genuine patriot was a lineal descendant of the Reformer John Knox, much of whose spirit he inherited.

**WITNESS** (wit'ness), Num. xxxv. 30; Acts vii. 58. See TRIAL. Sometimes inanimate things were appealed to as witnesses, Gen. xxxi. 44-53; Josh. xxiv. 26, 27. Witnesses were first to be the executioners of those whom their testimony had condemned, Deut. xiii. 9; xvii. 7. False witnesses were to suffer that which those they slandered would have suffered. See OATH.

A witness may be opposed for standing to the truth. Those who had witnessed the works of Christ, and maintained his cause, were so opposed, sometimes even to the shedding of their blood. Hence the term in the New Testament comes to signify "martyr," Acts xxii. 20; Rev. ii. 13; xx. 4.

**WITNESS OF THE SPIRIT**. St. Paul, speaking of the blessedness of those who are led by the Spirit of God, describes them as being made "sons of God," so that with filial confidence, being adopted into his family, they call God "Abba, Father." He adds: "The Spirit itself beareth witness with (or perhaps to) our spirits that we are the children of God," Rom. viii. 14, 16. The following remarks of Dr. Alford may properly be cited here: "What is this witness of the Spirit itself? All have agreed that it is something separate from and higher than all subjective inferences and conclusions. But, on the other hand, it does not consist in mere indefinite feeling, but in a certitude of the Spirit's presence and work continually asserted within us. It is manifested, as Olshausen beautifully says, in his comforting us, his stirring us up to prayer, his reproof of our sins, his drawing us to works of love, to bear testimony before the world," etc. And he adds, with equal truth: "On this direct testimony of the Holy Ghost rests ultimately all the regenerate man's conviction respecting Christ and his work; for belief in Scripture itself (he means, in the highest sense of the term 'belief,' conviction personally

applied) has its foundation in this experience of the divine nature of the (influencing) Principle which it promises, and which, while the believer is studying it, infuses itself into him." The same commentator remarks that "this is one of the most decisive passages against the pantheistic view of the identity of the Spirit of God and the spirit of man. However the one may by renovating power be rendered like the other, there still is a specific difference. The spirit of man may sin, 2 Cor. vii. 1; the Spirit of God cannot, but can only be grieved, Eph. iv. 30, or quenched, 1 Thess. v. 19; and it is by the influence of this highest principle of holiness that man becomes one spirit with the Lord himself, 1 Cor. vi. 17."

**WIZARD**. See DIVINATION, ENCHANTMENT.

**WLADISLAS** (lad'iz-laus) I., SAINT, of Hungary, was born in 1041. He was one of the most celebrated of the Arpad family, the son of Bela I., and after several revolutions he succeeded his brother Geysa in 1077. He was a valiant and warlike prince, and gained victories over the Bulgarians and Servians, whom he made tributaries, and added Croatia and Dalmatia to his dominions. When he had concluded his wars, he directed his attention to the internal administration of his kingdom, promoting civilization, protecting commerce and building churches. He died in 1095. He was canonized by Celestine III.

**WOIDE** (woid), CHARLES GODFREY, a learned Orientalist, was born in Holland or in Poland, in 1725. He became a Socinian minister, but in 1770 went to England as preacher at the German Chapel Royal. He was subsequently preacher at the Savoy, became, in 1782, assistant librarian at the British Museum, and was made doctor of canon law, Oxford, and chosen Fellow of the Royal Society. His most important work was an edition of the Greek New Testament from the Alexandrine codex in the British Museum, to which he wrote a critical preface. He died at London in 1790.

**WOLF** (woolf), a well-known wild animal repeatedly mentioned in Scripture for its rapacity, Gen. xlix. 27, and its fierce prowling about by night, Jer. v. 6. The name is also figuratively used to designate cruel adversaries of the Church, John x. 12; Acts xx. 29. The wolf is still abundant in Asia Minor, and it is very possible it may anciently have been common in Palestine. At this day, though some deny that wolves are found there, yet others speak of occasionally meeting with them.

**WOLF, JOHANN CHRISTOPH**, a learned Lutheran divine and eminent scholar, was born at Wernigerode, February 21, 1683. He was educated at Wittenberg; and when he had finished his studies there, he spent some time in traveling through Holland and England, chiefly with a view of exploring the public libraries of those countries. In 1710 he was appointed professor of philosophy at Wittenberg, in 1712 professor of Oriental languages at Hamburg, in 1715 pastor of the Domkirche in that city, and in 1719 pastor of St. Catherine's there. He died July 25, 1739. He was a man of learning and indefatigable labor, and we are indebted to him for several works of standard value in the department to which they belong. His principal works are "Hebrew Lexicon" and "History of the Manicheans."

**WOLF** (wulf), JOSEPH, D.D., LL.D., was born in 1795, at Weilerbach, near Bamberg, in Germany. His father was a Jewish rabbi, and he was educated in the Jewish faith, which he abandoned in 1812, when he was baptized in the Romish Church. He took the name Joseph at the time of his baptism. Six years' experience of the Romish system was more than he could bear; and accordingly, in 1818, he was expelled for his non-acceptance of several dogmas of the Church. He became a traveler, and his journeys through lands in Western Asia and among reckless Mohammedan tribes brought him into notice and made him for many years a person of great prominence before the public. In 1827 he married Lady Georgina Mary Walpole, daughter of the earl of Orford, and in these explorations he was often accompanied by his wife. He was admitted to deacon's orders by the bishop of Jersey in 1837, and to priest's orders by the bishop of Dromore in the year following. In 1845 he received the vicarage of Isle Brewers, in Somersetshire, and in this parish he erected a church edifice. Lady Georgina died in 1859, and in 1861 he married a second wife, who survived him. He died at his vicarage in Isle Brewers in 1862. His "Missionary Journal" extended to three volumes. His "Researches and Missionary Labors among the Jews, Mohammedans and Other Sects," though loosely written, is fraught with deep interest. He published an intensely attractive narrative of his mission to Bokhara in the years 1843-45. The object of the mission was to determine the fate of Colonel Stoddart and Captain Connolly. His travels and adventures were published in two volumes. For fully forty years this remarkable man stood prominently before the public, and as a writer, a traveler and a speaker he attracted an unusually great degree of regard.

**WOLFE** (wulf), CHARLES, was born in 1791, in the city of Dublin, and educated in Trinity College in that city. He entered the ministry of the Protestant Established Church of Ireland in the year 1817, and for a short time he served in the parish of Ballyclog, in the county of Tyrone,

ment, and he died on the 21st day of February in that year, regretted by all who knew him, as he had endeared himself greatly during his short ministry to all classes with whom he had to associate. After his death, his remains, including sermons, essays and letters, with a memoir, were published, and among them appeared the poem which has placed his name in the roll of the sons of poetic genius. His lines on the burial of Sir John Moore were attributed by some to Lord Byron because of their exceeding power and freshness; but Byron had no need to live by other men's production, and much as he admired this brilliant gem, which went direct to the heart of the nation, and which was worthy of Byron or Campbell or Moore, they all rejoiced in the fact that the authorship of this piece, which is likely to be enshrined in the literature of the English language, was undoubted, and they united with the hosts of critics that in reviews and literary journals have recognized its pathos and true poetic power. The subject of this memoir was a connection of Wolfe who fell at Quebec.

**WOLLASTON** (wul'lus-tan), WILLIAM, was born in 1659, at Coton Clanford, in Staffordshire, and educated in Sydney Sussex College, Cambridge. He entered in 1674 as a pensioner, and he was ordained about 1681. His first position was as an assistant master in Birmingham school. In 1688 he succeeded to a large property from a cousin; and having evidently more attachment to literature than he had to the active duties of the ministry, he took up his abode in London and gave himself to his favorite pursuits. His first work assumed the form of poetry, and was entitled "The Design of Part of the Book of Ecclesiastes; or, the Unreasonableness of Men's Restless Contentions for the Present Enjoyments." This work, however, he afterward suppressed. His next was the one with which his name has been ever since associated, viz., "Religion of Nature Delineated." As Tenneman has observed, in this treatise Wollaston has maintained that truth is the supreme good and the source of all morality; and Warburton has said, "For a general view of nat-

WOMEN OF MODERN EGYPT.—See WOMAN.

after which he became curate at Donoughmore. His health was feeble, and he only was spared until 1823, when he was carried off by consumption. He had gone to the Cove of Cork because of the mildness of the climate, but without any improve-

ment, and he died on the 21st day of February in that year, regretted by all who knew him, as he had endeared himself greatly during his short ministry to all classes with whom he had to associate. After his death, his remains, including sermons, essays and letters, with a memoir, were published, and among them appeared the poem which has placed his name in the roll of the sons of poetic genius. His lines on the burial of Sir John Moore were attributed by some to Lord Byron because of their exceeding power and freshness; but Byron had no need to live by other men's production, and much as he admired this brilliant gem, which went direct to the heart of the nation, and which was worthy of Byron or Campbell or Moore, they all rejoiced in the fact that the authorship of this piece, which is likely to be enshrined in the literature of the English language, was undoubted, and they united with the hosts of critics that in reviews and literary journals have recognized its pathos and true poetic power. The subject of this memoir was a connection of Wolfe who fell at Quebec.

shown in so just and elegant a manner to arise out of natural religion, is not at all diminished by that airy speculation." He died in 1724.

WOMAN OF MODERN EGYPT.—See WOMAN.

**WOLSEY** (wool'se), THOMAS, the celebrated cardinal archbishop of York and minister of state under Henry VIII., was the son of a butcher at Ipswich, and born there in 1471; but he must have been a man of some means, for he was able to send his son to Oxford, where he displayed great talent. He was educated at Magdalen College, where he graduated at fifteen years of age, acquiring the title of "the boy bachelor." He gained a Fellowship in his college, received ordination and was appointed to the grammar-school adjoining the college, in which he had three sons of the marquis of Dorset as pupils, and from the marquis, at the age of twenty-nine, he received his first clerical appointment, the living of Lymington, in Somersetshire. By means of Sir John Nafont, a gentleman in Somersetshire, he was introduced to Henry VII., whose favor he gained, and who sent him on a mission to the emperor. So prompt was he in action that he had returned, having succeeded in his object, before Henry was aware that he had even set out from England; whereupon he rose rapidly into favor, becoming dean of Lincoln, king's almoner and chaplain to the archbishop of Canterbury.

On the accession of Henry VIII. he rose from almoner to lord-almoner, had lands and houses in Fleet street bestowed on him, and every year for the next seven years added to his preferences and wealth. In 1510 he was rector of Torrington; in 1511 canon of Windsor and registrar of the Order of the Garter; in 1512 prebendary of York; in 1513 dean of York and bishop of Tournay, in

Flanders; in 1514 bishop of Lincoln and archbishop of York; in 1515 cardinal and chancellor of England; and in 1516 legate a latere, an extraordinary honor from the pope which made him nearly as mighty as a pope over the clergy in England.

His wealth from all these sources was truly prodigious; and it was augmented from the dioceses of Bath, Worcester and Hereford, which he held for foreign prelates, allowing them fixed stipends far below the annual proceeds which he collected. Then he held in commendam the rich abbey of St. Albans, and had stipends from the kings of France and Spain and the doge of Venice. No subject in England had ever enjoyed such a revenue; at one time it fully equaled the income of the Crown. The residences of the great cardinal were of course numerous, as they were attached to his several preferments. The principal one was York Place, afterward called Whitehall; an extensive palace that had been for centuries a seat of the prelates of York, and which was furnished

almost unbounded. Sables and silks adorned him; even his shoes were of silver gilt, inlaid with pearls and diamonds. Preceded by a long array of mace-bearers and cross-bearers, by spearmen and a pursuivant-at-arms riding on fine couriers, his bearing exceeded anything ever witnessed among the dignitaries of the Church in former days. And yet the fall of Wolsey was as sudden as his elevation. His unwillingness to pronounce on the king's marriage with Katharine displeased alike the king and Anne Boleyn. He had powerful enemies who were furious at his splendor, and they pointed to his ruinous taxation, his unwonted extravagance. In 1529 legal proceedings were instituted against him. He resigned the great seal and retired to his see of Winchester. He was impeached in the House of Lords, but the bill was thrown out in the Commons. He was deprived of most of his posts in the Church, had to surrender his magnificent palace of York Place and was ordered to go to his diocese of York. Here he ingratiated himself so much with the

the formation of a great college at Oxford, and with great energy he set about the completion of the work. At the time there was a great movement in the intellectual world of Oxford. Brazenose College was founded in 1511, Corpus Christi in 1517, and Cardinal College, by Wolsey, in 1525. His fall, in 1529, arrested the work, but in 1532 the king had the works renewed; and having alterations made, he called it the College of King Henry VIII. Thus it remained until 1546, when the king, desiring to set at rest the hostility raised against him for destroying so many religious foundations, erected the bishopric of Oxford, and by combining his college with the remains of the foundation formerly at Osney, the great college of Christ Church was formed, for which the adjoining cathedral serves as a college chapel.

It is remarkable that the chapel of the college should be the cathedral of the diocese; but so it is. Portions of the edifice are of great antiquity, presenting points of no mean interest to the antiquary. The priory chapel of St. Frideswide

WOMEN OF MODERN EGYPT.—See WOMAN, and DRESS.

with every luxury by Wolsey; but he desired to build himself a more magnificent and original abode which would outvie every palace in the kingdom; so the manor-house of Hampton Court was removed, and near it the palace of Hampton Court soon grew into stately height and breadth. It was on a scale of such largeness, utility and magnificence as none but a Wolsey could have ventured to conceive or execute. The highly-ornamented buildings, all of brick, were to be disposed in five courts; the interior arrangements comprehended no less than two hundred and eighty beds for visitors of rank. Eventually he presented Hampton Court to Henry VIII., who enlarged it; and of the palace of that day there remain the chapel, the great hall and various chambers and offices; but the remainder of the pile, as it now appears, is of later date, being chiefly of William III.'s erection.

His household was truly royal, as he had from five to eight hundred persons engaged in his service, including fifteen knights and forty squires. The earl of Derby, Lord Henry Percy, and even a Cavendish, were among their number. In his levees and journeys his display of luxury was

people that when he was arrested on a charge of high treason he was accompanied by crowds of weeping attendants. He had been ill before he had gone to York; and now, leaving the place disgraced and broken down, he sunk under a fever which was wasting him, and by the time he reached Leicester he said to the abbot, "I am come to lay my bones among you." Three days afterward he died, leaving behind him the memorable words, "Had I served my God as faithfully as I have my king, he would not have given me over in my gray hairs." Never did death-bed speech contain a more profound or pathetic moral. It was at midnight that the heartbroken cardinal was interred by the brethren of Leicester Abbey in the chapel of "Our Lady," in their church, with no solemnity except such as was essential to the awful duty and arose out of heartfelt sorrow.

Reference has been made to Hampton Court, but a greater work of Wolsey's yet remains to be described. In early life he had made a vow that if he ever attained to power and wealth he would leave a monument behind him which would be an advantage to coming generations as well as a memorial of his fame. Accordingly, he projected

stood on the same spot, and it was probably erected in the twelfth century. The spire is more recent, but still it is one of the earliest in existence. The Latin Chapel, the choir and other parts are worthy of inspection. Service is held in it daily, at four o'clock P.M. The vaulting of the choir is a good example of the latest Gothic, elaborate and with long pendants, and the chapter-house is a fine room of Early Pointed architecture. The dimensions of this small cathedral are as follows: Length from east to west only one hundred and fifty-two feet; transept, from north to south, one hundred and one feet; the height of the nave, forty-one feet; of the choir, only thirty-seven feet. It is its connection with the great college adjoining which gives importance to this diminutive edifice; and it is further to be remembered that as a cathedral it has been presided over by some of the most eminent men who have adorned the Church of England, among whom may be enumerated Dr. John Fell, John Potter, D.D., Thomas Secker—both of these being subsequently archbishops of Canterbury—Robert Lowth; and of the moderns who have held the see may be mentioned Samuel Wilberforce.

**WOMAN** (woom'an). The woman, according to inspired history, "was taken out of man," Gen. ii. 23. St. Paul refers to this narrative in order to distinguish the proper place of woman: "The head of the woman is the man." "For the man is not of the woman, but the woman of the man; neither was the man created for the woman, but the woman for the man," 1 Cor. xi. 3, 8, 9. Still, the pre-eminence of the man is not to be strained to lordly authority, but honor is to be given to the wife "as unto the weaker vessel," 1 Pet. iii. 7. It is observable that, generally speaking, women are allowed their due place of honor only where the truths of divine revelation are known. In countries ignorant of God they are subjected to degradation and regarded by men as their slaves. The progress of the gospel is peculiarly a boon to the female sex.

It is very true that we have in heathen story traces of God's original disposition. Ignorant as men must have been in the Greek heroic age of the material appliances of civilization, we yet find them, as represented by Homer, with a certain

WOMEN OF MODERN EGYPT.—See WOMAN, and DRESS.

dignity and delicacy of mind and character. Still more is this apparent in the women. Polygamy seems to have been unknown; the relations between husband and wife were tender, the marriage tie inviolable; so that, though surrounded with rude and boisterous men, Penelope, holding to the belief that her husband still lived, had no force to dread but that of persuasion. The manners of Greeks of those times show in favorable contrast to those of the Hebrews. No such foul deeds as that of Amnon and Tamar are met with. Was it that the religion then was of a higher type? Nay, for it was peculiarly anthropomorphic; debased from the first principle, and likely from its character to deteriorate further. As the Greek religious element was developed, not bringing down god-like virtues to men, but carrying up, as was natural from its falsity, human vices to the deities, though civilization spread, yet the earlier purity was lost, and in the historic ages of their literature we read little of virtuous women, much of courtesans, and thus the sex was degraded. To repair that degradation is one object of the gospel, and only by Christian principles can woman be replaced in the condition for which she was created.

Much greater social liberty seems to have been anciently allowed to the Hebrew women than is now customary in the East. We find also in Scripture story several mentioned who were endowed with prophetic gifts, such as Deborah, Jud. iv. 4, 5, Huldah, 2 Ki. xxii. 14, Anna, Luke ii. 36, 37, the four daughters of Philip the evangelist, Acts xxi. 8, 9, and others. Rules are given for the exercise of such gifts in Christian assemblies, 1 Cor. xi. 5; but, generally, by the gospel women are peremptorily forbidden to teach publicly, 1 Cor. xiv. 34, 35; 1 Tim. ii. 11, 12. Unless, therefore, commissioned by special revelation, women would in so teaching directly disobey the holy law.

**WOOD.** See FOREST.

**WOOD-OFFERING.** The offering of wood in order to keep up a sufficient supply of fuel for the fire on the altar is not mentioned till after the return from captivity, Neh. x. 34; xiii. 31. It appears that there was a solemn feast appointed, called *xylophoria*. This was held, according to

happily ended. Dr. Wood was a man of eminent piety, of much zeal and faithfulness, and greatly beloved through all the Church. He died in 1867.

**WOOD, ROBERT**, was born in 1716, at Riverstown, in Meath, province of Leinster, Ireland. He was educated in Oxford, where he developed a great taste for classic and antiquarian learning. He succeeded in planning an expedition to the East which was productive of most important results to literature. Along with his friends Dawkins and Bouverie, he visited Syria, and the result was his splendid works on Baalbec and Palmyra. Ever after he was known by the familiar cognomen "Palmyra Wood." He next commenced an "Essay on Homer," but before it was finished he was made under-secretary of state by Lord Chatham, and so valuable were his services found that he was kept in this office during three administrations. The work on Palmyra contained fifty-seven atlas folio plates; that on Baalbec contained forty-six atlas folio plates; and in subsequent editions the combined works contained one

some authorities, on the twenty-second day of the month Ab, and the Talmudists say that every family when they brought their wood sacrificed a voluntary burnt-offering, called the "korban of wood." But the accounts we have of this do not agree.

**WOOD** (wud), JAMES, D.D., was born in 1799, at Greenfield, New York. He was educated in Union College, at Schenectady, where he graduated in 1822. He entered the ministry of the Presbyterian Church, and was settled, in 1826, at Amsterdam, New York; but in 1839 he accepted the chair of Biblical literature in the theological seminary at New Albany, Indiana. In 1859 he was made president of Hanover College, Indiana, which office he held until 1866. He subsequently assumed the duties of the presidency of the Van Rensselaer Institute, at Hightstown, New Jersey. He wrote on baptism, "A Call to the Sacred Office of the Ministry," "Old and New Theology," "The Gospel Fountain," "Grace and Glory," together with contributions to various journals. His "Old and New Theology" is a very temperate statement of the causes which eventuated in the division of the Presbyterian Church, which has

hundred and ten plates. His work on "The Troad and Homer" was privately printed in 1768, and a revised edition appeared after his death. It is worthy of note that he died, in 1771, in the house at Putney in which Gibbon the historian was born, in 1737.

**WOOD, SIR WILLIAM PAGE**, who rose to be lord-chancellor with the title of Baron Hatherley, was the second son of Sir Matthew Wood, M.P. He was born in 1801, at London, and educated in Trinity College, Cambridge, where he obtained a Fellowship. He entered on the study of the law and was called to the bar in 1827. He reached the position of queen's counsel in 1845, and he represented Oxford in Parliament from 1847 until 1852. He was made vice-chancellor of the county palatine of Lancaster in 1849, and he reached the solicitor-generalship in 1851. In 1852 he was made vice-chancellor, and in 1868 honors flowed in on him, as he was made lord-justice of appeal in the Court of Chancery, a member of the Privy Council, and elevated to the House of Lords as Baron Hatherley, lord high chancellor. Notwithstanding the enormous amount of respon-

sible work which these positions ceaselessly demanded at his hands, Lord Hatherley was for thirty-eight years a regular Sabbath-school teacher in his parish in Westminster, where he resided; and he also found time, in addition to his legal writing, to contribute two works on Scriptural subjects which are both of substantial value. The first was a "Vindication of the Marriage Law," and the second was entitled "The Continuity of Scripture, as Declared by the Testimony of our Lord and of the Evangelists and Apostles." This is a condensed and most forcible argument in support of the divine authority of the Holy Scriptures and of the truth of the Christian interpretation of them.

**WOODBRIDGE** (wood'brij), BENJAMIN, was born in 1622, near Highworth, in Wilts,

CHURCH OF STA. MARIA DELLA GRAZIE, PAVIA.

England. He entered Magdalen Hall, Oxford, in 1638, but he came to New England, entered Harvard College, and he holds the memorable place of being the first graduate of that seat of learning, receiving his degree in 1642. He went back to England, and was thought worthy of being successor at Newbury, in Berkshire, to the celebrated Dr. William Twisse, who was prolocutor of the Westminster Assembly of Divines. Dr. Twisse died in 1646, and Woodbridge preached, with little intermission, at Newbury until 1683. After 1662 he appears to have officiated privately for eight or nine years because of the troubles encountered by the Puritans, but he seems to have conformed, as he received orders from Dr. Earle, the Bishop of Salisbury, in 1665. He wrote on "Justification by Faith," and he replied to W. Eyre of Salisbury in "The Method of Grace in the Justification of Sinners." A work of a different character which he published in 1656 was en-

titled "Church Members set in Joynt," his argument in it being directed against lay-preaching. He was considered a man of great learning, of profound and exact judgment. He died in 1684.

**WOODBURY** (wood'ber-re), ISAAC B., was born in 1819, at Beverly, Massachusetts. He deserves a place in this work because of his eminent service in the cause of sacred music, especially in his efforts to cultivate a taste among the young with a view to the due discharge of the duty of praising God in the great congregation. He was the author of sixteen distinct publications, including oratorios, anthems, choruses, glee-books, Sunday-school singing books, works on thorough bass, the instruction for the melodeon, and similar productions. They had an immense circulation, and they aided very materially in elevating the character of sacred music in a great many churches and congregations in widely separated districts of the country. He died at Columbia, in South Carolina, in the year 1858.

**WOODHEAD** (wood'hed), ABRAHAM, was born in 1608, at Meltham, in Yorkshire, England. In 1624 he entered University College, Oxford, in which he became a Fellow in 1633. He entered the ministry, soon became widely known as a man of great learning, and in 1641 he reached the position of proctor in the university. In that year he went to Rome, where he secretly conformed to the Romish Church; and he appears to have been a thoroughly dishonest man, as he held his position outwardly, but by anonymous pamphlets he taught the tenets and views of the Romish Church. Eventually he was deprived in 1648, but in 1660 he was restored. Tiring, however, of such a life, he induced his college to give him an allowance of twenty pounds a year for traveling, on which he subsisted. He took up his abode at Hoxton, near London, where he lived in retirement, teaching Roman Catholic youths and writing controversial works. He was considered the ablest Romish controversialist of his time. He wrote on "Church Government," a guide in controversies. He examined Dr. Stillingfleet's "Principles on the Adoration of our Blessed Saviour in the Eucharist," on "Martin Luther and the Celibacy of the Clergy," on "Images and Idolatry," and in addition he published a "Life of St. Teresa," from the Spanish. He died in 1678.

**WOODHULL** (wood'hull), SELAH STRONG, D.D., was born in New York, in the year 1786. He entered Yale College in 1798, and graduated in 1802, after which he began to study law; but in a short time he abandoned it for theology. He went to Princeton, and here he enjoyed the instruction of the Rev. Henry Kollock, D.D. In 1805 he was licensed to preach, and settled in the church at Bound Brook; but in the following

year he was called to the Reformed (Dutch) Church in Brooklyn, Long Island. During 1814 he served for some time as chaplain in the army. In 1820 he accepted the secretaryship of domestic correspondence for the American Bible Society, and he discharged the duties of this office during all the time he held his pastoral charge. In November, 1825, he removed to New Brunswick, New Jersey, in consequence of his having been appointed a trustee and a professor of ecclesiastical history and pastoral theology in the theological seminary at that place; and in Rutgers College he was appointed to the chair of metaphysics and mental philosophy. To the regret of his friends and the members of the Church, he was seized with influenza shortly after his settlement in New Brunswick, and inflammatory fever followed, which ended in his death, on February 27, 1826, in the fortieth year of his age. His mind was of a very high order; he was exceedingly systematic, and as a preacher he was eminently methodical, clear and instructive.

**WOODROW** (wood'ro), ROBERT, a Scotch Presbyterian minister who took a prominent part in Church politics, was born in 1679. He was one of the committee appointed to act with the Commission of Assembly in Edinburgh for the protection of the Scotch Church at the time of the union, and was sent to London on the deputation of the Church to George I. He is best known as a historian by his "History of the Sufferings of the Church of Scotland from the Restoration to the Revolution," and his valuable manuscripts, containing lives of distinguished members of the Scotch Church, a complete history of which he contemplated. "The Woodrow Manuscripts," in the Advocates' Library, amount to several hundred volumes. In 1841 "The Woodrow Society" was founded for the publication of the works of the fathers of the Scottish Church. Dr. Woodrow died in 1734.

**WOODS** (woodz), LEONARD, D.D., was born in 1774, at Princeton, Massachusetts, and educated at Harvard, where he graduated with great distinction in 1796. In 1798 he settled at Newbury, Massachusetts, as successor to Dr. D. Tappan, and he remained in Newbury until 1808, when he became professor of theology in the Andover Theological Seminary. He filled this chair with great dignity and fame until 1846, when he became emeritus professor. He was one of the great theologians of our country, and his name will always be hallowed at Andover. He was an exceedingly voluminous and very solid writer, and his works have been so numerous that the titles only of the leading and more important among them can be given. As a Trinitarian, he criticised the sermon of Dr. Channing at the ordination of the Rev. Jared Sparks, at Andover, in 1820. He wrote on "The Inspiration of the Scriptures," on "Perfection, as held by Mahan and Others," on "Church Government," on "Swedenborgianism," and his sermons, tracts, pamphlets and other issues which were called forth from year to year have made a large collection. In the Tract Society, the Education Society, the Temperance Society, the American Board of Commissioners of Foreign Missions, he was active and influential. He left a "History of Andover Theological Seminary" nearly completed, in which he had incorporated all the memorable facts and incidents which would give a perfect picture of that institution from its commencement. He died in 1854.

**WOOL.** Wool has always been of high value, 2 Ki. iii. 4, and the first-fruit of it was to be offered to the priests, Deut. xviii. 4. The white wool of Damascus was brought to Tyre, Ezek. xxvii. 18; and the purity of this whiteness often serves for illustration, Ps. cxlvii. 16; Isa. i. 18; Dan. vii. 9; Rev. i. 14. Yet dyeing of it was then understood by the Hebrews. Garments made of woolen and linen threads mixed together were prohibited by the law. The cloth seems to have borne a peculiar name, *shaatnez*. "Thou shalt not wear a garment of *shaatnez* (English Version, 'of divers sorts'), of woolen and linen together," Deut. xxii. 11; Lev. xix. 19. The word is understood to have been of foreign origin, and no generally-received explanation has yet been given of it. See DRESS.

**WOOLMAN** (wool'man), JOHN, was born in 1720, at Northampton, Burlington county, New Jersey. He acted as a storekeeper in early life, and tried the business of a tailor. Being connected with the Society of Friends, he traveled as a preacher through different parts of the colonies. He was a very earnest man, with an intensely emotional nature, which his writings display. In 1754 he wrote on "Keeping of Negroes;" in 1768 his "Considerations on Pure Wisdom and Human Policy, on Labor, on Schools and on the Right Use of the Lord's Outward Gifts" appeared. In 1772 he wrote an "Epistle to the Quarterly and Monthly Meeting of Friends," and thus he admonished the age by his earnest appeals, the power of which was recognized by men of the most cultivated minds. He had gone to York, in England, to attend a quarterly meeting, and here he caught small-pox, of which he died in 1772.

**WOOLSEY, THEODORE DWIGHT, D.D., LL.D.**, was born in 1801, in the city of New York, and educated at Yale College, where he graduated in 1820. He then went to Princeton for theology and to Germany for further study in Greek, of which language he became professor in Yale in 1831. He held this position for twenty years, and in 1846 he was raised to the presidency of the college, from which he retired in 1871, and was succeeded by the Rev. Dr. Porter. Several of the early publications of Dr. Woolsey were on Greek authors, including Euripides, Æschylus, Sophocles and Plato. He distinguished himself very greatly by his work on international law, which was published in 1860, and of which several editions have since been called for; and the profound character of this work has been equally acknowledged by eminent men on both sides of the Atlantic. He wrote a series of articles in "The New Englander" on marriage and divorce which attracted great attention, and in 1869 they were issued in a collected form, and their value continues to be recognized in this country, as he had a special reference to the condition of the United States in the line of discussion which he followed. His inaugural discourse in 1846, in which he argues for a classical education, is an essay of great power, and should be pondered by the trustees of many of our colleges and academies where classical culture is undervalued because its advantages have never been experienced. Of the same character also is his "Historical Discourse," pronounced before the graduates of Yale College.

**WOOLSTON** (wool'stun), THOMAS, an English divine of strangely heterodox opinions, and at the same time of great ingenuity and learning, was born in 1669, at Northampton, and studied

at Sidney-Sussex College, Cambridge, of which he was elected a Fellow. He led a blameless and studious life at his college; but having become an assiduous reader of Origen's works, he imbibed a fondness for allegorical interpretations of Scripture, which, acting upon a temper naturally enthusiastic, led him to set forth in his works opinions which were considered indecent and blasphemous. His college deprived him of his Fellowship, and some time after, he was indicted, found guilty and sentenced to be imprisoned for a year and to pay a heavy fine. This sentence he was neither able nor willing to comply with, and he was consequently kept in prison till he died, which he did not very long after his incarceration, in the year 1731.

**WORCESTER** (wur'ster), JOSEPH EMERSON, LL.D., was born in 1784, at Bedford, New Hampshire, and educated in Yale College, where he graduated in 1811. After leaving Yale Col-

lege he engaged for some time in tuition at Salem, and after two years' sojourn he removed to Cambridge, Massachusetts, where he spent the remainder of his life, which he devoted to literature. His name, like that of Noah Webster, will continue to stand out prominently among the great lexicographers of our language, and his other works would ensure a splendid reputation to ordinary writers. The geographical dictionary and the gazetteer of the United States brought him into prominent notice; then followed several works in geography and history, which were modified in the various editions which the public rapidly demanded. At length his great work, "The Universal and Critical Dictionary of the English Language," appeared in 1846, and it has continued to be in great demand ever since in Great Britain as well as in the United States. At length an extended series of his dictionaries was completed, which comprised the royal quarto, the universal, the academic, the elementary and the primary, thus making a complete collection for library use and for all purposes of scholastic and academic education;

and their value has been attested by the large editions which from year to year are continuously in demand. Dr. Worcester died in 1865.

**WORCESTER, NOAH, D.D.**, was born in 1758, at Hollis, in New Hampshire. His ancestors came from Salisbury, in England. His education at school terminated when he was sixteen years of age, and in the spring of 1775 he joined the Revolutionary army in the humble capacity of a fifer. He was at Bunker Hill and at Bennington. On retiring from the army he commenced a school, in which, while he dispensed his small stock of knowledge, he added to his own acquirements. In 1782 he became a member of the Congregational Church. And now he began to study with great diligence and regularity of system. A letter which he published on the "Origin of Evil" brought him into notice and tended to prepare the way for his entering the ministry; and after consultation with several ministers he

FIRE-WOOD HEWERS.

was examined as to his acquirements and views, and in 1786 he was licensed to preach. He was settled as pastor in Thornton, where he had resided for several years, discharging the various duties of schoolmaster, selectman, town-clerk, justice of the peace and representative to the General Court. He was engaged as the first missionary of the New Hampshire Society, and from 1802 he traveled extensively in the northern part of the State for two years. In 1809 he settled at Salisbury; and here he produced his work on the Trinity, which caused extensive and warm controversy. His views had met with so little acceptance in Salisbury that he removed his family to Brighton in 1813 to act as editor of "The Christian Disciple;" and he cast the influence of this journal into the scale of Unitarianism. He took a very decided part also on behalf of the cause of peace; and he published a celebrated tract on that question in 1814, which was favorably received, and it led to the institution of the Peace Society. In 1828 he retired in a great measure from all labor in the cause of peace, and in 1829 he published "The

Atoning Sacrifice, a Display of Love, not of Wrath," and this work had an extensive circulation. Although he suffered from paralysis in 1815, he recovered; and notwithstanding repeated mild attacks, he lived until 1837. He was interred at Mount Auburn, where a monument has been erected to his memory. In addition to the works already mentioned, he was the author of earnest pamphlets and sermons on "The Gospel Ministry," "Close Communion," "Reasons for Declining the Baptist Theory" and several tracts on the subject of the Trinity, which were published after the year 1812, at intervals, until 1836.

INTERIOR OF THE CATHEDRAL OF BARCELONA, SPAIN.

WORD. See LOGOS.

**WORDSWORTH** (wurdz'wurt), CHRISTOPHER, D.D., was educated at Trinity College, Cambridge, where he became a Fellow in 1798. He entered the ministry of the English Established Church, and in 1804 he became rector of Ashby and Oby-with-Thirne, in Norfolk; in 1808 he rose to be dean of Bocking, in Essex, and in 1816 the living of St. Mary's, Lambeth, was given to him, along with the rectory of Sundridge, in Kent. Four years afterward he exchanged these parishes for the rectory of Buxted-with-Uckfield, in Surrey; and from 1820 until 1841 he held the elevated place of master of Trinity Col-

lege, Cambridge, when he retired to his rectory at Buxted, which he made his home until his death. His great work was his "Ecclesiastical Biography," the object of which is to present a record of the eminent men who flourished in England from the Reformation to the Revolution, and who were connected with the religious interests of the kingdom. Dr. Wordsworth was brother to the poet, William Wordsworth. The rector of Buxted had a son, Christopher Wordsworth, D.D., who was born in 1807, and educated in Trinity College, Cambridge, where he also became a Fellow, and where he received several medals and university honors. He traveled in Greece, was master of Harrow, canon of Westminster, vicar of Stamford, in Berkshire, and in 1869 he was made bishop of Lincoln. He has been a most voluminous writer, as no less than thirty-seven distinct works were published by him before he was sixty years of age, and he continues with great zeal to prosecute his literary career. His critical edition of the New Testament is among the most learned of his works, and his "Notes and Introductions on the Books of the Old Testament" are very valuable. As Hulsean lecturer for 1848, he prepared a "Critical and Expository Course on the Apocalypse;" and he revised this work, adding the Greek text. Among his multitudinous essays, pamphlets and charges will be found criticisms on almost all the leading topics of the age, in addition to the more solid theological treatises which he has produced.

**WORKS.** This word occurs sometimes in the sense of ordinary labors, as in Ex. v. 13; sometimes as indicating miracles, Num. xvi. 28; John v. 20; x. 25. By the "works" or conduct of men their character is known. For as our Lord teaches, grapes cannot be gathered of thorns, or figs of thistles, the productions of a tree testify to its nature and quality, so men are known by their fruits, Matt. vii. 16-20. The "works of the law," Gal. ii. 16; iii. 2, 10, are those which the law of God requires. But a sinless performance of them is nowhere found with fallen man, 1 John i. 8, 10; hence justification before God is not by the works of the law, Rom. iii. 20, 28. The "works of the flesh" are those which naturally flow from the

corrupted heart of men, Rom. viii. 8. These the law condemns, and for these God's just judgments are inflicted. But a holy principle will yield its appropriate fruit. There are works of faith—that is, if a man believes in Christ for the remission of his sins, he will give proof of the reality of his faith by his conduct; and if he does not seek to please God in his actions, honoring the Saviour by a holy walk and conversation, his faith is a mere name, of no value or efficiency, James ii. 17, 18, 26.

**WORLD** (world) is the English term by which our translators have rendered four Hebrew words: 1. *Hhēdēl* comes from a root which signifies "to rest," "to discontinue," and hence "to cease from life," "to be at rest," and as a noun, "the place of rest," "the grave." The word occurs in the complaint uttered by Hezekiah when in prospect of dissolution, and when he contemplates his state among the inhabitants, not of the upper, but the lower world, Isa. xxxviii. 11, thus combining with many other passages to show that the Hebrews, probably borrowing the idea from the Egyptian tombs, had a vague conception of some shadowy state where the manes of their departed friends lay at rest in their ashes, retaining only an indefinable personality in a land of darkness and "the shadow of death," Job x. 21, 22. 2. *Hhēdēl* means "to conceal," and derivatively "any hidden thing," hence "age," "antiquity," "remote and hidden ages," also "the world," as the hidden or unknown thing, Ps. xlix. 1. In a similar manner, 3. *glām* (in the New Testament *glōia*), the root signification of which is "to hide," denotes a very remote, indefinite and therefore unknown period in time past or time to come, which metaphysicians call eternity *à parte ante*, and eternity *à parte post*. In Ps. lxxiii. 12 it is rendered "world;" but in this and in the previous instance it may be questioned whether the natural creation is really meant, and not rather "the world" in our metaphorical use of the term, as denoting the intelligent world, the rational inhabitants of the earth, and still more specifically that portion of them with which we are immediately concerned. 4. *Tēbēl* comes from a radix that signifies "to flow;" and as water is the unfailing cause of fertility in the East, it denotes "to be productive," "to bear fruit," and as a noun "the fruit-bearer"—that is, the earth. This word is frequently rendered "world" in the common version; but if more was intended than the earth on which we dwell, it may be doubted if the passages in which it occurs will justify the translators.

In truth, the Hebrews had no word which comprised the entire visible universe. When they wanted to speak comprehensively of God's creation, they joined two words together and used the phrase "heaven and earth," Gen. i. 1. We have already seen that they had an idea of an under world; the meaning of their ordinary term for earth, which signifies the "lower," shows that they also regarded the earth as beneath the sun; while the term for heaven, denoting "what is elevated," indicates that their view was that the heavens, or the heights, were above. Above, below and under—these three relations of space comprehend their conception of the world.

**WORM** (wurm). There are several Hebrew words so rendered in our version, some of them improperly so. Thus *zōhhalēm*, implying "creeping" or "crawling," Mic. vii. 17, is more accurately translated elsewhere "serpents," Deut. xxxii. 24. *Sds*, also, a word signifying the "leaper," Isa. li.

8, must mean some species of moth. But besides these there are two other words, *rinnādā*, signifying rotting or putridity, and *tōlā*, *tōlā'ath* or *tōlē'ah*, so called from "licking" or "swallowing." The first of these seems to describe the maggots bred in any putrefying substance, as in the manna, Ex. xvi. 24. The second is used for any maggot, worm or caterpillar. Sometimes it designates the worm or insect, *Coccus ilicis*, from which the scarlet or crimson dye is obtained, Isa. i. 18. Also it is used for the maggots bred in the manna kept beyond the proper time, Ex. xvi. 20, and described as gnawing plants, Deut. xxviii. 39; Jon. iv. 7, where probably it was a caterpillar, some kinds of which are peculiarly destructive. The words *rinnādā* and *tōlā* are often employed indiscriminately. Thus both are represented as feeding on the bodies of the dead, Job xxi. 26; xxiv. 20; Isa. lxvi. 24. From the last-named passage our Lord seems to have adopted his striking metaphor of the eternal worm which torments the lost in the future world, Mark ix. 44, 46, 48. In Job xix. 26 there is no word in the original expressing "worms." In the New Testament we have the fearful death related of Herod Agrippa I., who was "eaten of worms," Acts xii. 23. Josephus describes Herod the Great as dying in a similar way; and an apocryphal writer uses the same language in regard to Antiochus Epiphanes, 2 Macc. ix. 9.

**WORMWOOD** (wurm'wood), a plant belonging to the genus *Artemisia*, remarkable for the intense bitterness of many of its species. This genus is distinguished by the multitude of fine divisions into which the leaves are usually separated, and the numerous clusters of small, round, drooping, greenish-yellow or brownish flower-heads with which the branches are loaded. *Artemisia absinthium*, wormwood, is said by Kitto not to exist in Palestine. *Artemisia abrotanum*, southernwood, is widely scattered over the South of Europe, Palestine, Persia and other parts of Asia and elsewhere. But there is another species, *Artemisia Judaica*, which has been found in Palestine, Arabia and the deserts of Numidia. It is erect and shrubby, with a stem about eighteen inches high. Its taste is very bitter, and both leaves and seeds are used in the East in medicine as a tonic. Probably the Scripture term is general, comprising various bitter plants; but if an individual be intended, we may fairly suppose it to be the *Artemisia Judaica*.

The term is commonly employed in a figurative sense for a bitter lot, or calamity, or curse, Deut. xxix. 18; Prov. v. 4; Jer. ix. 15; xxiii. 15; Lam. iii. 15, 19, and for injustice, Amos v. 7; vi. 12, where our version gives "hemlock." It also aptly represents the disastrous nature of an anti-Christian power which should corrupt and embitter the pure water which it touched, Rev. viii. 11, 12.

**WORSHIP** (wur'ship). This word is properly used to express the homage which was to be paid to the Deity, and which it was sinful to offer to any other being, Ex. xxxiv. 14; Isa. ii. 8. See IDOLATRY. Thus we find St. Peter and an angel refusing such tokens of reverence, Acts x. 25, 26; Rev. xxii. 8, 9. The case of Nebuchadnezzar worshipping Daniel, Dan. ii. 46, is peculiar. The Chaldee word used and its Hebrew cognate indicate everywhere else the paying of divine honor, and it seems most probable that this is the sense here. If so, Daniel no doubt directed the king's reverence to the Most High, for in the very next verse Nebuchadnezzar declares his belief that the

God of Israel was "God of gods." For notice of the mode of public worship among the Hebrews, see OFFERINGS, SYNAGOGUE, TEMPLE.

**WORSHIPER**, Acts xix. 35. Compare margin, and see EPHESUS.

**WORTHINGTON** (wur'thing-tun), THOMAS, D.D., was a native of Plainscough, in Lancashire. After a course at Oxford, he went to the English College at Douay in 1572. He entered the Romish priesthood, and for some time he resided at Rheims, after which he returned to England as a missionary. In 1584 he was imprisoned in the Tower, and next year he was banished. In 1599 he was made president of the English College at Douay, a position which he held until 1613. At length he found his way back to England, and he appears to have lived chiefly in Staffordshire. He joined the Jesuits, and died in 1626. He was the author of two volumes of "Annotations on the Old Testament," a "Catalogue of the Martyrs," and an "Anker" of Christian doctrine, in which he sought to establish the leading doctrines of the Romish Church from Scripture, and a work on the rosary.

**WORTHINGTON**, WILLIAM, a learned English divine, was born in Merionethshire, in 1703, was educated at Jesus College, Oxford, and obtained prebends in the cathedrals of Asaph and York. His principal works are—"Essay on the Scheme of Redemption," "On the Historical Sense of the Mosaic Account of the Fall of Man" and "The Scripture Theory of the Earth." He died in 1778.

**WOTTON** (wut'tun), WILLIAM, an English divine, critic, historian and miscellaneous writer of great learning, was born at Wrentham, in Suffolk, in 1666. He had a remarkable facility in acquiring languages and extraordinary force of memory. When four years and three months old, he could read Hebrew, Greek and Latin. He graduated bachelor of arts at Cambridge before he was thirteen, and master of arts at seventeen years of age. His chief works are—"Reflections upon Ancient and Modern Learning," an edition and Latin translation of the ancient laws of Wales and "The History of Rome from the Death of Antoninus Pius to the death of Alexander Severus." He died in 1726.

**WRANGHAM** (rang'am), FRANCIS, was born in 1769, and educated at Magdalen College, Cambridge. He entered in 1786, and next year he gained the prize for Greek epigrams. At the same time he removed to Trinity Hall, where he became third wrangler, classical medalist and second Smith's prize-man. He also gained the Seatonian prize on four occasions. He entered the Church, was made curate of Chobham, vicar of Hunmanby, in Yorkshire, rector of Thorpe-Basset and archdeacon of Cleveland. In 1823 he was made a prebendary of York, and in 1825 he received a stall in Chester, while in 1827 he was presented to the rectory of Dodleston, in Cheshire. He was eminent for his knowledge of Latin, and of literature generally. In addition to sermons

in several successive volumes and tracts, he published very extensively on almost every department of current literature. He had his collection of ten thousand pamphlets bound in about one thousand volumes, and in 1842 he presented them to the library of Trinity College, Cambridge. He died in 1843, aged seventy-three years.

**WREN** (ren), SIR CHRISTOPHER, an architect, engineer and physicist of world-wide renown, was born in 1632, at East Knoyle, in Wiltshire, and educated at Wadham College, Oxford. He became at an early age conspicuous for the ardor and success with which he prosecuted his studies in mathematics and physical science. He did much to perfect the barometer in 1655, shortly after that instrument had been invented, and he himself was the inventor of a number of valuable mathematical instruments. He was appointed Savilian professor of astronomy at Oxford in 1660. Besides astronomy, mathematics, chemistry and anatomy, Wren had also carefully studied architecture, and in 1663 the dean and chapter of St. Paul's engaged him to make a survey of the cathedral, with a view to repairing that great structure. He gave in a report, accompanied with sugges-

TOMB OF SIR CHRISTOPHER WREN.

tions, designs and plans. But the cathedral having been leveled with the ground by the great fire of 1666, Wren, instead of being employed as the restorer of the old structure, was appointed the architect of the new. His great success in this work is known to the world. The cathedral, begun in 1675, was completed in 1710, the last stone of the lantern being placed by Christopher, the architect's son. Wren was also the architect of many of the finest buildings in and near London. Amongst these are the Custom-House, Royal Exchange, Monument, Greenwich and Chelsea Hospitals, Hampton Court. In 1672 he was knighted. In 1680 he was appointed president of the Royal Society. He died in 1723, and was buried in St. Paul's Cathedral.

**WREN**, MATTHEW, bishop of Ely, was born in London, in 1585, studied at Pembroke Hall, Cambridge, of which he was chosen fellow, took orders, and in 1621 was named chaplain to Prince Charles, afterward Charles I. He accompanied the prince and Buckingham on their journey to Madrid in 1623, and gained great influence with Charles. Wren was appointed in 1629 one of the judges of the Star Chamber—a post for which his acrid, rigorous temper well fitted him. He accompanied the king to Scotland in 1633, was promoted in rapid succession to the sees of Here-

ford, Norwich and, in 1638, Ely, composed the form of prayer for the 29th May and assisted in preparing the Scottish liturgy, the first use of which had such memorable consequences. Articles of impeachment were brought against him by the Commons at the close of 1640, the court of Star Chamber and the high commission court being abolished about the same time, and Wren was a prisoner in the Tower for eighteen years. He was released at the Restoration, and died in 1667.

**WRESTLING** (res'ling). See GAMES.

**WRIED, or WRYED** (ride), Ps. xxxviii. 6, marg., altered in many modern copies into "wearied," curved, crooked.

**WRIGHT** (rite), CHARLES HENRY HAM-ILTON, was educated in Trinity College, Dublin, whence he passed to Exeter College, Oxford, and in both of these colleges he became distinguished for his attainments in languages. In 1859 he pub-

lished "The Book of Genesis in Hebrew," to which he added "Various Readings and Grammatical and Critical Notes," thus producing a revised and critical text. In 1860 he issued a "Grammar of the Modern Irish Language," for use in the classes of Trinity College, and this manual has run into several editions. In 1864 he published a critical edition with notes and a revised text of the Book of Ruth; and in the following year he issued a volume of sermons which he had preached at Dresden, entitled the "Spiritual Temple of the Spiritual God." His next work appeared in Edinburgh in 1867, in the form of sermons, the title being "The Fatherhood of God." All his works display his critical scholarship, showing that in range and minuteness he is equal to the progress of the age.

ANCIENT ROLLS, ROLL-CASES, STYLES, ETC.—See WRITING.

fore that time, or otherwise the sacred historian would probably have added this extraordinary and divine revelation to the other parts of his information respecting the transactions on Mount Sinai.

After the gift of language, it would seem that writing was the most highly beneficial and important boon which could be conferred on men possessed of intellect and understanding, who from their circumstances must spread over the whole earth, and yet be forced from various necessities to maintain intercourse with each other.

Even in the first ages of the world it would be requisite not only to preserve unimpaired the knowledge of God, but it would seem desirable to have some method of transmitting and receiving intelligence from the scattered communities of a more certain nature than verbal messages ever can be; nor is it probable that events which were destined to act upon all time should be left to float upon the uncertain stream of tradition, when by the art of writing they might be accurately conveyed without addition or diminution to the latest posterity. It is scarcely possible that the won-

drous gift of writing was withheld until the world had been twice re-peopled and two thousand five hundred and thirteen years had rolled by. Is it, then, too much to believe that God by revelation immediately imparted to mankind the power of writing? For it does not appear that any person ever invented an alphabet who had not previously heard of or seen one, and every nation which possessed the art always professed to have derived its knowledge from a god.

It was a matter of the utmost consequence that the most exact accounts should have been preserved of the creation, the fall of man and many prophecies of deepest interest to unborn generations. The ages and genealogies of the patriarchs, the measures of the ark, the first kingly government in Assyria, the history of Abraham and his descendants for four hundred and thirty years, including minute circumstances, changes and conversations in many different countries, could scarcely have been perfectly preserved by oral descent for twenty centuries; but allowing the art of writing to have been given with language, there is no difficulty, and it becomes obvious that each transaction would be recorded and kept exactly as it was either revealed or happened.

In the fifth chapter of Genesis it is said, "This is the book of the generations." If there had been merely a traditional recollection of the generations of Adam, preserved only by transmission from one memory to another for more than a thousand years, the term "book" would have been most inapplicable, and could not have been used; and to suppose that a written document had been referred to cannot be deemed as forcing the construction of the word in this instance more than when it is also believed that "the book of the generation of Jesus Christ," Matt. i. 1, was likewise copied from a national register, and not given by a new revelation or old tradition, for the genealogies in the New Testament were not of less importance than those of the sons of Shem, Gen. xi., and yet the former were taken from public records. Why, then, should a miracle have been wrought to preserve the latter?

The book of Job is considered to be the most ancient written document extant, and is deemed an authentic narrative, and not an imaginative poem, James v. 11. Hales asserts that Job lived at most two hundred years before the Exode. Our version of the Scriptures fixes the time of Job at B. C. 1520, which allows but twenty-nine years between his era and that of the departure of the Israelites from Egypt. Be that as it may, the declarations of Job prove that letters and books were known to him and his countrymen, who were a people quite distinct from the Hebrews.

In the nineteenth chapter of Job, ver. 23, 24, it is said, "Oh that my words were now written! oh that they were printed in a book! that they were graven with an iron pen." Also Job xxxi. 35, "Mine adversary had written a book." Such expressions could not have been used, and would have had no meaning, if the art of writing had been unknown, nor could there have been such terms as "book" and "pen" if the things themselves had not existed.

If, then, it be granted that the book of Job was written, and such expressions were current before the Exode, it becomes evident from sacred history that writing was not only in use before the law was given on Mount Sinai, but that it was also

known amongst other patriarchal tribes than the children of Israel. Another singular phrase is found in Job: "My days are swifter than a post," Job ix. 25. This would imply the regular transmission of intelligence by appointed messengers from place to place; and although it does not follow as a necessary consequence that such a person

MODERN EGYPTIAN WRITING IMPLEMENTS.—See WRITING.

on all occasions carried letters, it is more than probable that such a mode of conveying important communications was established in civilized countries where books, pens and writing were known.

Before the law was given by God to Moses, he had been commanded to write the important transactions which occurred during the progress of the Israelites from Egypt to Canaan; for in Ex. xvii. 14 it is recorded, "And the Lord said unto Moses, Write this for a memorial in a book." An account of the discomfiture of the Amalekites is the first thing said to have been written by Moses. This battle was fought ere the people left Rephidim, Ex. xvii. 13, from whence they departed into the wilderness of Sinai, Ex. xix. 2, and therefore that writing was drawn up before the events on the mount took place. The law was written by the finger of God, Ex. xxxi. 18, B. C. 1491, and since that time there is no question as to the existence of the art of writing. The commandments were written on two tables of stone, Ex. xxxiv. 1; but immediately afterward, when Moses was interceding with God for the sinning idolaters, he says, "Blot me out of thy book which thou hast written," Ex. xxxii. 32. If writing in alphabetical characters had been seen by Moses for the first time on the tables of stone, he could not from these have had the faintest conception of a book,

PERSIAN WRITING IMPLEMENTS.

which is a thing composed of leaves or rolls, and of which the stones or slates could have given him no idea.

Forty years after the law was written the Israelites took possession of the land of Canaan. Amongst other places which were conquered was one called by them Debir, but whose original name was Kirjath-sepher, or the city of books, or Kirjath-sannah, the city of letters, Josh. xv. 49;

Jud. i. 11. The Canaanites could not have gained their knowledge of letters or of books from the Hebrews, with whom they were entirely unacquainted, or at war, and must therefore have derived them from other sources. The Canaanites, being the descendants of Canaan, a son of Ham, had probably preserved and cultivated the same arts and sciences which Misraim, another son of Ham, carried into Egypt, Gen. x. 6.

The Book of Jasher, Josh. x. 13, is mentioned by Joshua, but whether as a chronicle of the past or present is uncertain.

Books and writing must have been familiar to Moses, "who was learned in all the wisdom of the Egyptians," Acts vii. 22, for at the time of his birth that people had arrived at a high pitch of civilization. Since the penetration of Dr. Young discovered the key by which the hitherto mysterious hieroglyphics can be deciphered, it has been found that from the earliest era Egypt possessed a knowledge of writing. Without crediting the very distant period given by some chronologists, which fixes the beginning of the first regal dynasty there about 5867 years B. C., it is not presuming too much to think that the chronology adopted by Usher is too short to include many scriptural transactions.

Hales, agreeing with Josephus, says that Menes, the first king of the first Egyptian dynasty, began his reign B. C. 2412 years; but previous to his assuming the royal dignity, Egypt had been long ruled by a succession of priests, and in their theocracy Thoth or Hermes, "a god," was considered by them to be the inventor of letters, and in no instance is the discovery of the art of writing ever attributed to men.

There were three kinds of writings practiced in Egypt: 1. The hieroglyphical, or sacred sculptured characters; 2. The hieratic, or sacerdotal, which was abbreviated; 3. The demotic, or enchorial, which became the hand in general use. Lepsius maintains that the Egyptians had two colloquial dialects in use which were very distinct, the classical or sacerdotal, and the popular. The sacred or hieroglyphic writing, as well as the hieratic of all ages, presents the former, whilst the demotic presents the common dialect. Wilkinson thinks the hieroglyphical was the sole

mode of writing was unknown in the earliest times; for from the account of the burial of Jacob, Gen. l. 9, and from the song of Moses, Ex. xv. 1 and xiv. 26, it is clear that horsemen were a part of the Egyptian army, and yet there is but one solitary specimen of a man on horseback among the infinite variety of sculptured representations of their manners and customs. The priestly rulers of Egypt had continued, like the framers of caste in India,

mode of writing was unknown in the earliest times; for from the account of the burial of Jacob, Gen. l. 9, and from the song of Moses, Ex. xv. 1 and xiv. 26, it is clear that horsemen were a part of the Egyptian army, and yet there is but one solitary specimen of a man on horseback among the infinite variety of sculptured representations of their manners and customs. The priestly rulers of Egypt had continued, like the framers of caste in India,

ANCIENT ENGLISH SKIPPET FOR OLD RECORDS.

to bind down by certain definite and established laws every mode of action, and from that circumstance it may be inferred that the manner in which trials before the judges were carried on was not an innovation of later times. There were royal and priestly scribes, but there must have been a different grade, employed by other classes, as in their law-courts the complainant always stated his case in writing, and the defendant also replied in writing, from which circumstance it may be inferred that there was some common popular writing for such purposes besides that of the sacred hieroglyphics, or sacerdotal mode. In the paintings which represent the judgment after death, Thoth, who is called the "secretary of justice," is always portrayed with his tablet and style, just beginning to write.

The Memnonium is said to have been built about the time of Moses, B. C. 1571; over the entrance gateway to the library was inscribed "Remedy or Balsam for Souls." Over the mouldering door which led to the bibliothetical repository, Champollion read, written over the heads of Thoth and Sakh (who were the male and female deities of arts, sciences and literature), the remarkably appropriate titles of "President of the Library" and "Lady of Letters." In the Sanctuary at Luxor, erected two hundred years before the birth of Moses, there is an inscription over Thoth which begins, "Discourse of the Lord of the Di-

vine Writings." The number of works ascribed to Thoth is stated to have been thirty-six thousand five hundred and twenty-five.

The great pyramid is supposed to have been erected at least 2123 years B.C. In A.D. 1837 Colonel Howard Vyse found in the low chamber the name of Suphis (Cheops) scored in red ochre on the rough stones behind the front facing of the room.

In Egypt nothing was done without writing. Scribes were employed on all occasions, whether to settle public or private questions, and no bargain of any consequence was made without the voucher of a written document. On a tomb said to have been built about the time the pyramids were erected is seen the representation of a steward giving an account of the number of his master's flocks and herds. The scribes and stewards, who were employed in domestic suits, conveyancing and farming, could not have used the *sacred* characters for their affairs, nor could they have been understood by the people generally if they had; it may therefore be concluded that the enchorial writing was that in popular practice.

Pliny is in error in saying that papyrus was not used for paper before the time of Alexander the

been found in different tombs at Thebes; on five of them is written the same inscription, "The flower opens, and, lo! another year." In China writing is still symbolical, there being eighty thousand characters, to which there are two hundred and fourteen radical keys.

Letters are generally allowed to have been introduced into Europe from Phœnicia, and to have been brought from thence by Cadmus into Greece about fifteen centuries before Christ, which time coincides with the eighteenth Egyptian dynasty; but while none may deny such to have been the origin of European alphabetical characters, it does not prove the Phœnicians to have been the inventors of writing. That people occupied Phœnicia in very early times after the deluge; and if the patriarch and his sons possessed the knowledge of letters, their posterity would doubtless preserve the remembrance and practice of such an invaluable bequest, which would be conveyed by their colonies into Greece and Africa. In the New World it was found that the Peruvians had no system of writing, while the Mexicans had made great advances in hieroglyphical paintings.

The Aztecs, who preceded the Mexicans, had attained much proficiency in the art, such as was adequate to the wants of a people in an imperfect state of civilization. By means of it were recorded all their laws, and even their regulations for domestic economy; their mythology, rituals and calendars and their political annals carried back to a period long before the foundation of their empire.

A Mexican MS. usually looks like a collection of pictures, each forming a separate study. Their materials for writing were various. Cotton cloth, or prepared skins, were used, but generally a fine fabric made from the leaves of the aloe, from which a sort of paper was prepared, somewhat resembling Egyptian papyrus, which could be made more soft and beautiful than parchment. When written, the documents were either made up into rolls or else into volumes, in which the paper was shut up like a folding screen, which gave the appearance of a book. When the Spaniards arrived in Mexico, great quantities of these MSS. were in the country; but the first Christian archbishop, Zumarraga, caused them to be collected from every part of the country, and had the whole burnt.

In later times there have been two instances in which persons in semi-barbarous countries have constructed an alphabet from having heard that by such means ideas were communicated in many lands. A man of the Greybo tribe, on the African coast, and a Cherokee are said to have formed a series of letters adapted to their respective languages; but in neither case was it the result of intuitive genius.

Various have been the materials and implements used for writing. As was before observed, paper made from the papyrus is now in existence which was fabricated two thousand years before Christ. Moses hewed out of the rock two tables of stone on which the commandments were written, Ex. xxxiv. 1. After that time the Jews used rolls of skins for their sacred writings. They also engraved writing upon gems or gold plates, Ex. xxxix. 30.

Before the discovery of paper the Chinese wrote upon thin boards with a sharp tool. Reeds and canes are still used as writing implements among the Tartars; and the Persians and other Orientals write for temporary purposes on leaves, or smooth sand, or the bark of trees. The Arabs in ancient times wrote their poetry upon the shoulder-blades of sheep.

The Greeks occasionally engraved their laws on tables of brass. Even before the days of Homer table-books were used, made of wood cut in thin slices, which were painted and polished, and the pen was an iron instrument called a style. In later times these surfaces were waxed over, that the writing might be obliterated for further use. Table-books were not discontinued till the fourteenth century of the Christian era.

BOOK, FROM THE ISLAND OF CEYLON.

At length the superior preparations of paper, parchment and vellum became general, and superseded other materials in many, and all entirely civilized, nations.

WROE (ro), RICHARD, was one of the most eminent of the wardens of the great collegiate church of Manchester in the beginning of the eighteenth century. He succeeded Nicholas Stratford, D.D., who became dean of St. Asaph. Wroe was so eloquent as a preacher that he was called the "silver-tongued." He also held the position of prebendary of Chester along with his office in Manchester. He died in 1718.

WULFHELM (woolf/helm) was a famous bishop of the diocese of Wells in the eleventh century. In A.D. 910 Adhelm, who had been abbot of Glastonbury, was consecrated by Plegmund, archbishop of Canterbury, the first bishop of Wells, with Somerset for his diocese. A church had been erected at the place afterward called Wells, so named because of a remarkable spring—St. Andrew's Well—which rises near the site of the episcopal palace and flows with copious transparent waters through several parts of the city. This primitive structure was raised by Ina, the king of the West Saxons, who dedicated it to St. Andrew. Wulfhelm, who as second bishop succeeded Adhelm, erected the first cathedral, and in his work he received great aid from Bishop Giso, one of the chaplains of King Edward the Confessor. Wulfhelm effected a great work in beautifying the grand choir of the new edifice; and having presided at Wells eight-and-twenty years, he died, A.D. 1087, and was buried on the northern side of the high altar in his church. Owing to the attachment of John de Villula to Bath, a vigorous

MODERN ORIENTAL WRITING-CASE.

effort was made by the monks of that place to have the see permanently located there. This bishop died in A.D. 1122, and after his death it was determined that the bishop should in future be designated as the bishop of Bath and Wells. See JOHN DE VILLULA.

In 1205 Joceline Trotman, or de Wells—for he was a native of the place and had been a canon—was consecrated for the diocese, at Reading. He incurred the king's displeasure by laying the kingdom under an interdict, at the command of the pope, and he spent five years abroad in banish-

ment. On his return he brought with him very enlarged views, and he set about the enlargement of the church on a plan which really issued in a new cathedral, and which when it was completed produced one of the most perfect and beautiful edifices in Christendom. He began his work in the year 1214, when he took down the greater part of the former church, and commenced rebuilding it on a more spacious and architectural plan, calculated to produce a noble and admirable effect. He was able to have it rededicated on October 23, 1239. He not only built the gorgeous western front as it now stands, which is universally admitted to be one of the most remarkable specimens of enriched architecture in England, but he also built and endowed two costly chapels, one in his own palace at Wokey and the other at Wells. Bishop Joceline died on the 19th of November, 1242, and was buried in the middle of the choir. The entire plan or model of the church adopted by this bishop appears never to have been departed from, but to have been strictly followed in the works of successive bishops till its total completion by Bishop Stillington, in 1465. Ralph Shrewsbury, the thirtieth bishop of Wells, who succeeded in 1329, a century after its commencement, excelled almost all his predecessors in this see in his works of liberality and munificence, and has the merit of continuing the original plan in his great benefactions to the cathedral.

The very beautiful architectural style adopted in the reign of Henry III. is remarkable for the vast skill and taste displayed in the construction and ornamental parts. The boldness and lightness of all the edifices raised at this period are yet unrivaled, and they command a very high respect for the taste and the ability of the architects. At Wells the western front is richly decorated with sculpture, and one of the most critical artists of the present age has not hesitated to direct the attention of his pupils to the tasteful decorations of rich foliage and gracefully-disposed statues which abound on the exterior of the great church as rebuilt by Bishop Joceline. On the southern side, above the western door, are figures which illustrate the deluge and important acts of the patriarchs. Companions to these on the northern side are figures which represent the leading incidents in the life of Christ; and above them are two rows of statues larger than nature, in niches, of kings, queens and noble patrons of the church—saints, bishops and others—from its foundation to the reign of Henry III. Near the pediment is our Saviour come to judgment, attended by angels and his twelve apostles. The upper arches on each side, along the whole western front and continued in the northern and southern ends, are occupied by figures rising from their graves, strongly expressing hope, fear, astonishment, stupefaction or despair, inspired by the presence of the Lord and Judge of the world in that awful moment. It is worthy of remark that this sculpture was finished in 1242, two years after the birth of Cimabue, the restorer of painting in Italy, and the work was going on at the same time that Nicola Pisano, the Italian restorer of sculpture, exercised the art in his own country. It was also finished forty-six years before the cathedral of Amiens, and thirty-six years before the cathedral of Orvieto was begun, and it seems to be the first specimen of such magnificent and varied sculpture, united in a series of sacred history, that is to be found in

Western Europe. The general idea may have been brought from the East; but as the style is different from the tombs of Edward the Confessor and King Henry III., which were by Italian artists, and as Trotman is the name of the bishop who raised all this splendor in England, the strong presumption is that the execution was by English artists.

The cathedral church of Wells, as it now remains, is not only one of the most perfect in its original plan, designed in the early part of the reign of Henry III., but its appendages are more complete than those of any other cathedral in England; and accordingly the late C. A. Stothard, an artist of extraordinary talent in delineating and appreciating the value of the antiquities of his country, has justly said, "The cathedral, with its various surrounding gates, the magnificent

EARLY ENGLISH SIGNS OR SYMBOLS AFFIXED TO WRITINGS.

close and the west front covered with figures of the finest workmanship, certainly must bear the palm from all others." The western front occupies a space of one hundred and fifty feet in length, including the boldly projecting buttresses of the large towers, which rise to the height of not less than one hundred and thirty feet. The statues, of the size of life and larger, which are upon this front, amount to one hundred and fifty-three in number, and of smaller figures there are more than double that number. Instead of one great western window, there are three splendid lancet windows separated by piers of width nearly equal to the openings—a peculiar feature in the early stage of the Pointed architecture, which points to the precise date of the foundation of the structure. The projecting buttresses and the great space over the western triple window are enriched to an extent that excites universal admiration. The porch on the northern side of the nave is exceedingly elegant; the great enrichment of the highly-pointed

arch of entrance is an abundance of beautiful recessed mouldings peculiar to the style in which it is erected; the insulated and banded shafts of the pillars on the sides have boldly sculptured capitals, amongst the foliage of which are represented the remarkable events in the life and martyrdom of St. Edmund the King, who was shot with arrows and afterward beheaded, in the year of our Lord 870.

The whole of the cathedral from the western front, excepting the upper parts of the towers on that part of the edifice to about the middle of the choir, is reputed to have been erected by Bishop Joceline. Before the year 1264 the whole of the more eastern part of the building, together with the Lady Chapel, was nearly completed. The choir and the Lady Chapel are of a lighter and more advanced ornamental style than the nave of the parts west of the central towers. The chapter-house was built in the time of Bishop William de la March. This is one of the most beautiful portions of ecclesiastical architecture, not only in England, but in Christendom. It is octagonal in form, with a central clustered pillar of wondrous grace, and the groining of the roof is a marvel of variety and beauty.

The total length of the nave is one hundred and ninety-one feet; its whole breadth, including the aisles, is sixty-seven feet; and in height this part of the church is sixty-seven feet. The choir is about one hundred and eight feet in length, and the transept is one hundred and thirty-five feet in length. The height of the nave is not so great as that of Salisbury, and there is a considerable difference in the length; but the effect on entrance is grand because of its admirable proportions and its perfect preservation. Ten pointed arches on either side separate the nave from the aisles; over each of the aisles is a triforium and a clerestory in one uniform style of architecture, while the groining of the ceiling is plain. The lancet arches of the triforium are very characteristic of the period, but the windows have been altered since the reign of Henry III. The central tower is one hundred and sixty feet high, and the total length of the church from east to west is about three hundred and seventy-one feet. One of the most remarkable features of this church is the manner in which the piers of the central tower are strengthened by a strong support in the form of an insulated arch, which sustains another

arch, inverted in its point and having spandrels perforated with a circle in each; and a more perfect and scientific abutment could not have been invented, as these double arches, with their spandrels, form an excellent counterpoise to the lateral pressure. The cloisters on the southern side of the church were chiefly the work of Bishop Babwith, who presided over the diocese in the reigns of Henry IV., V. and VI. He built the eastern part, with a chapel beneath and a library above, and this side of the cloister has twenty-five windows. The western side, with twenty-five windows, was built at the expense of the munificent Beekington; and he added a school, a schoolmaster's lodgings and an exchequer over it. He also began the third side, but it was finished by Thomas Henry, who was the treasurer of Wells; and these all adhered to the style of the original church. Such is the exceedingly beautiful great church of Wells, an edifice which for centuries has been the pride of the South-west of England, and which

fills all visitors with astonishment and rapture. It is not so large as York or Winchester, Salisbury or Canterbury, but its fine proportion, its rich adornments, its unity of style and the striking features which the chapter-house, the choir, the western front and the general surroundings present, leave the student of taste nothing to desire as he contemplates the splendid cathedral which for centuries has stood as a monument of the architectural genius of Joceline Trotman.

**WULFSTAN** (woolf'stan), or **WULSTAN** (wool'stan), who was bishop of Worcester from A. D. 1002 until 1016, deserves a place in this work because of the fact that in a dark age he gave a considerable share of attention to literature. The authorship of the "Anglo-Saxon Homilies" is attributed to him, although the name "Lupus Episcopus" is attached to them. He was made archbishop of York, and while in this office he wrote a letter to the people of his province which is still extant. He appears to have died in A. D. 1023.

**WULSTAN, SAINT.** This eminent man flourished at Worcester, at the close of the eleventh century. In A. D. 983 Oswald had completed a cathedral at Worcester, and he set himself to expel the "seculars," or the married clergy, from the cathedral, and to introduce in their places the monks or the regulars, and he completely succeeded; but in 1041 the Danes under Hardicanute entered Worcester, plundered and burned the city and the new church. In 1084 Wulstan laid the foundation of a new structure, and it is believed that a part of his work may be seen in the greater transept, or rather the eastern wall of it. The lesser transept, the choir and the Lady Chapel are of the Early English period, and the nave was the work of Bishop Blois, about A. D. 1224, and the tower was finished in the year 1374.

**WYKEHAM** (wike'ham), **WILLIAM OF**, so called from the name of his native place, was born in 1324, and educated at Winchester School. He acquired such a reputation in science, and especially as an architect, that he was employed by the bishop to carry out his improvements in Winchester Cathedral, and he subsequently projected and accomplished those splendid works at Windsor and Queensborough Castle which made him celebrated. Entering the Church in 1362, he obtained various preferments, and was made privy seal, and obtained such influence that "everything was done by him and nothing without him." In 1366 he was made bishop of Winchester, and the year following chancellor, holding the seal with great ability for three years and a half. Owing to the influence of a party headed by John of Gaunt, who were strongly opposed to the increasing influence of the clergy, he was unjustly persecuted and deprived of his temporalities in 1376; but the esteem in which he was held by the people generally compensated for the loss, and on the death of Edward III. his worth and integrity were fully recognized. He again received the great seal from Richard II. in 1389, holding it till 1391, and by his wise counsels restoring public tranquillity, restraining the king and gaining the thanks of Parliament. On the death of the king he withdrew from public affairs, devoting himself to his episcopal duties with unremitting attention, suppressing irregularities, repairing edifices and recruiting the finances of the see. In 1386 he completed his munificent foundation of New Col-

lege, Oxford, in the chapel of which is still to be found his crosier or pastoral staff. This and the staff of Bishop Fox, who founded Corpus Christi College, to which he bequeathed it, are believed to be the only crosiers owned by the colleges of England. He also built and endowed St. Mary's College, at Winchester. He died September 24, 1404, and was buried in Winchester Cathedral, where a splendid monument is erected to his memory.

As an illustration of the manner in which men of talent who entered the Church in those days attained to wealth and power, it may be mentioned that Wykeham in early life was made clerk of the king's works at Henley, Yethamstead and Windsor; then rector of Pulham, prebendary of Lichfield, of London and Southwell, of Lincoln and of York. He was made archdeacon of Northampton and of Lincoln, bishop of Winchester and lord high chancellor of England. Wykeham was an actor and administrator, and not a writer; but it is worthy of note that an autograph letter of his, dated in February, 1367, brought one hundred and forty-seven dollars and fifty cents in gold at a sale in London a few years ago.

Any of his three great works would have conferred distinction on any man. His great school in Winchester has for nearly five hundred years been one of the most important places of education in Europe for young men on their way to the university; and the magnificent college which he founded and endowed at Oxford, to which his Winchester students were to proceed, has ever since its foundation been in the first rank of the colleges in the university. It is a curious fact that when it was founded and was really a new establishment, by the populace it was called "New College," a name by which it has ever since been known, although it is the oldest in Oxford, so far as its principal buildings are concerned, and it was the seventh in chronological order of the twenty-five halls and colleges in the city. He laid the foundation of the college in the year 1380, and on the 14th day of April, 1386, the first warden and Fellows entered the buildings at three o'clock in the morning with solemn procession and litanies. Next year he began his preparatory college at Winchester, and in 1400 he completed the cloisters, which he intended to serve for the churchyard of the college.

As Winchester was the capital of the West Saxon kingdom, it naturally received great attention as a centre of ecclesiastical as well as civil power. Accordingly, Kynegils, the first Christian king of the West Saxons, endowed a cathedral at Winchester and granted all the lands to the church within seven miles' distance. Ethelwold, in 980, finding the building ruinous, repaired it; but the oldest part of the present cathedral is attributed to Bishop Walkelyn, in the reign of William the Conqueror. The most conspicuous part remaining of his work is the massive central tower of the church, fifty feet broad and one hundred and forty feet high; and its appearance presents the general simplicity and massiveness of the age. The windows are semicircular, enriched with the chevron and billetted moldings then in use, and the capitals and the shafts indicate the Anglo-Norman style of architecture. The transept also was his work, and it remains yet in a more firm and secure state than any part of the building which is of later construction. Stern and rude to the ordinary spectator, an accomplished architect has observed "that there are few studies equal in point of value to this transept." In the time of

King John the whole east end of the church, with the Lady Chapel, was rebuilt by Godfrey de Lucy, bishop of Winchester, who died in 1204, and was buried in the midst of his own works. William de Edington, bishop of Winchester, who was also treasurer and chancellor to King Edward III., had begun and was proceeding to finish the rebuilding of the great nave of the church; but he died in 1366, having only lived to complete the western front and a small part of the nave. He was succeeded by Wykeham, who at once applied all his taste and energies to the cathedral, and he may be said to have rebuilt the body of the cathedral from the western front to the central tower, in the Pointed style, and in this work he was aided by the prior and monks of the convent.

The chief characteristics of the exterior of this church are the vast length of the nave, the plainness of its masonry and the shortness and solidity of the tower. The architectural antiquary seeks in vain for that picturesque arrangement of parts and variety of form which affords so much delight in a view of the cathedrals of Salisbury, Lincoln, Wells and Ely; yet he soon discovers a peculiar grandeur of effect, arising from its extent and quantity, together with many specific beauties of design which tend to rouse and gratify inquiry. The nave of Winchester is justly considered one of the finest in England. The exterior of the choir and Lady Chapel is of most beautiful workmanship. The ceiling of the central tower is copied from that of the chapel in New College, Oxford, which also was of Wykeham's foundation.

The whole length of the cathedral from west to east, internally, is five hundred and forty-five feet, externally it is five hundred and fifty-five feet; and of the transept from north to south, within the walls, is two hundred and eight feet. The breadth of the nave, with its aisles, is eighty-six feet, and the height is seventy-eight feet. The choir, from the screen to the altar, is one hundred and thirty-five feet in length, and the Lady Chapel is fifty-four feet, while the length of the nave is two hundred and fifty feet. The presbytery is seventy feet in length, and the breadth of the chapel behind the high altar is twenty feet.

The cathedral stands apart from other buildings, for the cloisters and the chapter-house were destroyed in the time of Elizabeth, after the Reformation. The prior's hall and other parts of his lodgings now form the residence of the dean, and the site of other conventual buildings is occupied by the prebendal gardens.

The splendor of Winchester is recognized by every visitor on entering the nave, when the triumph and skill of Wykeham are seen in the vast extent from the western porch to the central tower. Indeed, so magnificent is this nave that no language can adequately describe it. About the middle of the southern side of the nave, between the fifth and sixth pillars, is the chantry chapel, containing the monument of the founder, William of Wykeham; and the design and execution of this work is perhaps one of the most perfect specimens of monumental architecture of the period in which it was erected. The front, which is of black marble and evidently very massive and old, stands between the sixth and seventh pillars, on the north side of the nave. The choir begins under the central tower and stretches eastward; it is separated as is usual by a screen from the nave.

Winchester has enjoyed the sway of a long list of great men, among whom, in former ages, may be mentioned Eddington, Gardiner, Fox, Waynfleet, Beaufort, Wykeham, Morley and Langton,

while among the moderns the late bishop Wilberforce will no doubt long continue to hold a distinguished place. In closing this notice, it may be stated that the tomb of William Rufus was placed in the middle of the sanctuary. It is composed of gray marble, and is raised about two feet above the ground, presenting the general outline of a house, in allusion to its destination, the last dwelling here below; but it is supposed that Bishop Blois removed his bones, as an honor paid to his remains. In the seventeenth century some embroidered cloth, a large gold ring and a small silver chalice were found in it.

**WYLIE** (wi'le), **ANDREW, D.D.**, who descended from Scotch-Irish parentage, was born in 1789, in Western Pennsylvania, where his father had settled. He received his education in part at Washington Academy and in part from his eldest brother, who was a minister of the Presbyterian Church. He entered Jefferson College, where he graduated in 1810, and in which he acted as tutor both before and after he took his degree. After the usual course of theology, he was ordained by the presbytery of Ohio, and installed as pastor of the church of Miller's Run in 1818. In 1812 he had been appointed president of Jefferson College, and he held this office for four years. In 1817 he removed to Washington, and accepted the presidency of the college at that place. In 1828 the trustees of Indiana College elected him president of that institution, and in 1829 he removed to Bloomington, thus accepting a position which he held until his death. After his settlement in Bloomington, he resigned his connection with the Presbyterian and entered the communion of the Protestant Episcopal Church, accepting ordination from the hands of Bishop Kemper in 1842. He had been led to reject some of the statements in the Westminster Confession of Faith, and he did not think it was accordant with good faith to remain in a body whose tenets were not approved. He had a very vigorous frame, but a severe wound weakened him, and a cold led to inflammation of the lungs, which in a few days' sickness ended in death. He died November 11, 1851.

**WYLIE, SAMUEL BROWN, D.D.**, was born in 1773, in Moylagh, near Ballymena, in the county of Antrim, Ireland. He received a thorough education in his boyhood, and he was carefully nurtured in religious matters under parental training. He distinguished himself greatly in the University of Glasgow, where he graduated as master of arts in 1797. Owing to the views which he entertained on the political questions of the day, he was induced to emigrate to the United States, and he landed at New Castle, Delaware, in the month of October, 1797. His first position was that of a teacher at Cheltenham, about ten miles north of Philadelphia. In 1798 he was appointed a tutor in the University of Pennsylvania, a position for which his great classical attainments eminently qualified him. Afterward he established an academy, which he conducted with great success, and which rose to great celebrity in Philadelphia. In 1823 he was raised to the chair of Latin and Greek in the university, and here his minute acquaintance with these tongues, his great power of analysis and his accuracy and facility of communicating knowledge made him one of the most distinguished professors in the university. He held this chair until 1845, when he retired from the active duties and

became professor emeritus. When the Reformed Presbyterian Church organized a theological seminary, he was made a professor, and he held this appointment until 1851, and thus he was engaged as instructor for more than sixty years.

Dr. Wylie entered the communion of the Reformed Presbyterian Church on his arrival in Philadelphia, and under the care of the Reformed presbytery he studied theology, and in due time he was licensed to preach. He preached for a short time in Walkill county, New York, after which he returned to Philadelphia and took charge of a small congregation in that city. In June,

1800, he was ordained at Ryegate, Vermont, and along with the Rev. James McKimney he traveled extensively in the South and West, aiming at strict discipline being carried out among the members of the Reformed Church on the subject of slaveholding, which had been forbidden by the supreme judicatory of the Church. In 1802 he visited Scotland and Ireland as a delegate to the churches in those lands. The charge in Philadelphia over which he was placed grew in numbers and importance under his care, and speedily it assumed a prominent place among the churches of the city. This was his only charge, and under his long and faithful pastoral care the members saw the value of such a steady connection; and how much more desirable on all sides is it for any church to procure and retain the services of a good and able, faithful servant of God than to be hunting after novelty and seeking the excitement of repeated changes! In 1843 his son, Theodore W. J. Wylie, was associated with him in the pastoral charge of the flourishing church which for so many years had prospered under the ministry of this faithful man. In 1847 a public meeting was held in his church, and as a commemoration of his services for fifty years he was presented with an address, a service of plate and a purse of five hundred dollars in gold. He continued to preach with great vigor until within four months of his death, which took place on the 13th of October, 1852.

Dr. Wylie was one of the most remarkable men of the day in our country. He was equally famed for his classical and theological attainments. He was a celebrated expositor of the word of God, clear, accurate and instructive. He was watchful in matters of discipline; and although he had to discharge duties so complicated and varied, he was at home in them all.

**WYNTOWN** (win'town), **ANDREW**, was a canon regular of the Priory of St. Andrew, in Scotland, from which he was elevated in 1395 to be prior of St. Serf's Inch, or island, in Lochleven. His name is often given as Wynton, Wyntown, Wintonne and even Winton. He is usually recognized as the third of the early poets of Scotland whose works remain, Thomas the Rhymer and John Barbour being his only predecessors. The dates of his birth and death are unknown, but in his "Chronicle" he records the death of Robert, duke of Albany, who died in 1420, and it is ascertained that in 1413 he held his priory.

FOUNTAIN IN THE CERTOSA, NEAR FLORENCE, ITALY.

His chief work, which is in couplets, usually of eight syllables, though at times lines occur of six, and even ten, syllables, was undertaken at the suggestion of an ancestor of the earls of Wemyss, is entitled "De Orygynale Cronykil of Scotland, be Andrew of Wyntown, Priour of Sanct Serfis." An edition of it, with a glossary, was published by David Macpherson in 1795, in two volumes. Wyntown appears to adhere faithfully to such authorities as the "Fœderis Anglie" and the existing remains of the "Registry of the Priory of St. Andrew," that venerable monument of ancient Scottish history and antiquities, generally coeval with the facts recorded in it.

## X.

**XAVIER** (za'vyer), SAINT FRANCIS, a celebrated Jesuit missionary, called the "apostle of the Indies," was born in Spain, in 1506. He was sent to study at Paris, and there met Ignatius Loyola, whose affectionate disciple and ally he thenceforth became. He assisted Loyola in the formation of the new society, and gladly undertook, in 1540, the laborious mission to the East Indies. After very devoted service at Goa, on the Malabar coast, in Travancore and in the islands

**XANTHICUS** (zan'ti-kus), the sixth month of the Macedonian year, 2 Macc. xi. 30, 33. Josephus says that it corresponded to the Hebrew Nisan.

**XERXES** (zerx'eez). This monarch is not mentioned in the Scripture by the name by which he was known to the Greeks; but there can hardly be a doubt that he was the Ahasuerus of the book of Esther. He succeeded his father, Darius, on the throne of Persia B. C. 485. After subjugating Egypt, he spent four years in preparing for invading Greece. In the spring of B. C. 480 he advanced to the Hellespont, and at Abydos he crossed by a bridge of boats. He had one million seven hundred thousand, and his war ships numbered twelve hundred and seven. His progress was arrested by Leonidas, at Thermopylae, and here he suffered one of the most memorable defeats recorded in the annals of war by the valor and strategy of a small Greek army. He fled over to Asia, and the troops which he left behind him were defeated at Platea, in Boeotia, while on the same day his forces which had crossed the Hellespont were totally routed at Mycale, in Ionia. Xerxes was murdered by Artabanus, B. C. 465, and his son Artaxerxes succeeded him. See **AHASUERUS**, 2, **ESTHER**, THE BOOK OF. Xerxes is referred to in Dan. xi. 2.

## XENOPHON

(zen'o-fon), the illustrious Athenian historian, was born probably about B. C. 450. He was a disciple and friend of Socrates, who saved his life at the battle of Delium. With his friend Proxenus he joined the army of Cyrus the Younger as a volunteer in the expedition against Artaxerxes. After the death of Cyrus at the battle of Cunaxa, and the treacherous murder of the Greek generals, Xenophon took the lead in conducting the famous retreat of the ten thousand from Upper Asia to their native land. He afterward served in the Spartan army against the Persians; and sentence of banishment being passed on

him by the Athenians, he retired into Elis, and lived there about twenty years. It is not known whether he availed himself of the permission to return to Athens, nor when nor where he died. He was living B. C. 357. The principal works of Xenophon are the "Anabasis of Cyrus," the history of the expedition in which the historian took so prominent a part, the "Cyropaedia," a fascinating picture of an ideal state based on the traditions respecting the elder Cyrus, the "Memorabilia of Socrates," a very precious memorial of the great practical philosopher, and the "Hellenica," a historical narrative. He wrote several shorter works. Xenophon's mode of thought is practical, not speculative, and his style is singularly lucid, simple and manly. His "Anabasis" and "Cyropaedia" have been so much esteemed that they have been used as text-books in academies, the object being to imbue the young mind with correct ideas of a good Greek style.

**XENOPHANES** (zen-of'a-nee), a Greek philosopher and poet, was a native of Colophon, and settled at Elea, in Magna Graecia. He lived in the latter half of the sixth century B. C., and was a contemporary of Pythagoras. He is recognized as the founder of the Eleatic school, the characteristic doctrine of which was an idealistic pantheism. Xenophanes was the first philosopher who endeavored to set the idea of the deity free from the degrading images previously associated with it. Fragments of his poem on "Nature" and of his elegies are all that are preserved.

**XIMENEZ DE CISNEROS** (zim'i-nee de sis'ne-rōs), FRANCISCO, cardinal, archbishop of Toledo, a distinguished Spanish statesman, was born in Castile, in 1437. He studied at the University of Salamanca, then visited Rome, where he acquired a great reputation, suffered a long imprisonment in consequence of a dispute with the archbishop of Toledo, and in 1482 entered the Franciscan order, to the rule of which he devoutly and rigidly conformed. Ten years later Queen Isabella of Castile chose him for her confessor, an office which he would fain have declined. He succeeded Cardinal Mendoza in the archbishopric of Toledo in 1495. In 1506 he became regent of Spain, and distinguished himself by the wisdom and energy of his administration. Though seventy years of age, he even conducted an expedition into Africa and conquered Oran. He was again regent after the death of Ferdinand in 1516, and died in the following year. Cardinal Ximenez was one of the greatest men of his age, and the services which he rendered as statesman, as churchman and as patron of literature were very important. He founded the University of Alcalá de Henares, and had the celebrated Complutensian Polyglot compiled at his expense. Spain owes to him the first establishment of the rule which excludes papal bulls not sanctioned by the king, and the first measures toward the emancipation of the towns from the tyranny of the feudal nobles.

**XIMENEZ**, FRANCISCO, one of the twelve friars who first preached Christianity to the Mexicans in the sixteenth century. During his residence in Mexico he collected a great deal of information relative to the plants and animals of that country, and published a treatise on the subject which is acknowledged to possess much merit.

CEILINGS IN CHURCH OF ST. CROCE, FLORENCE.

of the Archipelago, he went to Ceylon. Meeting there a Japanese refugee, he accompanied him in 1549 to Japan, and established there the mission which was maintained by the Jesuits for more than a century. On his return to India he fell ill, and died on an island off the coast of China, in December, 1552. He was beatified in 1619, and canonized by Gregory XV. three years later. He left five books of epistles and other small works. It has been recently shown that there is much exaggeration in the common accounts of the successes of this eminent preacher, though they were very remarkable.

## Y.

**YALDEN** (yal'den), or **YOULding** (yūlding), THOMAS, divine and poet, was born about 1671, and educated at Magdalen College, Oxford, where he formed an intimacy with Addison and Sacheverel, which lasted through life. He was chosen lecturer on moral philosophy, and in 1707 he took the degree of doctor in divinity. He obtained the rectories of Charlton and Cleanville, in Herefordshire, from the duke of Beaufort, and in 1713 was appointed preacher to Bridewell Hospital, on the resignation of Dr. Atterbury. Among his poetical pieces are—"The Temple of Fame," "The Conquest of Namur," "Hymn to Darkness," etc. He died in 1736.

**YALE** (yāl), CYRUS, was born in 1780, at Lee, Massachusetts. He was educated in Williams College, where he graduated with distinguished honor in 1811. He studied theology under Dr. Porter, who became a professor in the theological seminary at Andover; and having been licensed to preach by the Hartford North Association, he was ordained and settled as the pastor of the church in New Hartford, Connecticut, on October 12, 1814. After twenty years' labor in this charge he removed to Ware, Massachusetts; but he soon left that place for his old charge, where he remained until his death, which took place on the 21st day of May, 1854. He wrote biographical sketches of several ministers, and many of his sermons and addresses on public occasions were published after they were delivered. All these sermons display a cultivated intellect and a mind of no ordinary power.

**YALE**, ELIHU, was born on the 5th day of April, 1648, at New Haven. He was the son of Thomas Yale, who was one of the first colonists who came in 1638, but who returned to England with his family in 1658. The son Elihu was educated in England; and when he was about thirty years of age, he went to the East Indies, where, after twenty years' service, he accumulated a large fortune. From 1687 until 1692 he was governor of Fort George, at Madras. He passed the close of his life in England, and it is worthy of note that he introduced the system of selling goods by auction in England, this being the mode by which he undertook to dispose of the costly wares which he had imported from the East. He was a principal benefactor in the founding of Yale College, which was named after him in consequence of the munificence which he displayed toward that institution in its infancy. He became governor of the East India Company; and he was

admitted as a Fellow of the Royal Society. His donation to the college at New Haven amounted to the sum of four hundred pounds, which at the time was considered a remarkable evidence of liberality. He died at London, July 22, 1721.

**YALE**, ELISHA, D.D., was born in 1780, at Lee, Massachusetts. He was educated under his pastor, the Rev. Dr. Shephard, and at West Hartford, Connecticut, he received instruction in classics and theology. In 1803 he was licensed by the North Association of Hartford county, and immediately afterward he was settled at Kingsbor-

justified. Various interpretations of the words are proposed. Gesenius would render "a troop of royal merchants always fetched a troop of horses at a fixed price;" and Keil approves.

**YATES** (yāts), ANDREW, D.D., was born in 1772, at Schenectady, and educated in Yale College, where he graduated in 1794. He was a member of an influential family, as one of his brothers was governor of the State of New York, and another, who was an eminent member of society, bequeathed the greater part of his large estate to the Legislature of the State of New York for

ARABESQUE DECORATION IN THE VATICAN AT ROME.

ough, New York; and here he continued during his ministerial life. He was ordained at Kingsborough in 1804 by a council composed of ministers of the Reformed Dutch, Congregational and Presbyterian Churches. Soon after his settlement at Kingsborough he began to superintend the education of young men, and was devoted to this work until the establishment of the Academy in that place. He died on January 9, 1853, closing a life of great usefulness in the only charge to which he had ever ministered. He published several sermons, and was a frequent contributor to different religious journals.

**YARN**. See **LINEN**, **WEAVING**. It is questionable whether our version of 1 Ki. x. 28 can be

benevolent and literary purposes. He was ordained to the ministry of the Reformed (Dutch) Church in 1797, and in that year he accepted the professorship of ancient languages in Union College, which he held for four years, and from which he retired to become colleague with the Rev. Dr. Williams in the Congregational church in East Hartford, Connecticut. His ministry was greatly blessed in that church, where he labored for fourteen years with great faithfulness and acceptance. He did much good by means of a theological class which he opened to aid in preparing young men for the ministry, to which he added instruction in classics. Failure of his health obliged him to retire from this charge, and in 1814 he returned

to Union College as professor of moral and intellectual philosophy. During his vacations he did much for the cause of religion by his ministrations in destitute regions. He had a great capacity for organization, and as an evidence of this fact it may be stated that around Schenectady three handsome churches were erected by his influence; and it is known that as many as thirteen churches were either gathered together or strengthened by this eminently good man in his declining years. He resigned his professorship in the year 1825, and engaged with a younger brother in a

**YEAR.** The Hebrew year consisted of twelve unequal months, which, previously to the exile, were lunar. The twelve solar months made up only three hundred and fifty-four days, constituting a year too short by no fewer than eleven days. This deficiency would have soon inverted the year, and could not have existed even for a short period of time without occasioning derangements and serious inconvenience to the Hebrews, whose year was so full of festivals. At an early day, then, we may well believe a remedy was provided for this evil. The later Jews intercalated a month every

authorities hold that the civil year originally began, as now, with the month Tisri, the Rabbinis conjecturally assigning as the reason that this was the month in which the creation took place. But the commencement of the civil year with Tisri, at whatever period it originated, had after the exile this advantage, that it accorded with the era of the Seleucids, which began in October. The ancient Hebrews possessed no such thing as a formal and recognized era. Their year and their months were determined and regulated, not by any systematic rules of astronomy, but by the first view or appearance of the moon. In a similar manner they dated from great national events, as the departure from Egypt, Ex. xix. 1; Num. xxxiii. 38; 1 Ki. vi. 1; from the ascension of monarchs, as in the books of Kings and Chronicles, or from the erection of Solomon's temple, 1 Ki. viii. 1; ix. 10; and at a later period, from the commencement of the Babylonish captivity, Ezek. xxxiii. 21; xl. 1. When they became subjects of the Græco-Syrian empire they adopted the Seleucidæ era, which began with the year B. C. 312.

**YEAR, NEW.** According to the Jews, the destiny of every individual is at this time determined. The Creator sits on his throne, and on the first day of the first month weighs the merits and demerits of all; those whose demerits preponderate are sealed to death; those whose merits preponderate are sealed to life; while the cases of those whose merits and demerits are equally balanced are delayed till the day of atonement.

**YEAR, SABBATICAL.** Just as every seventh day was a day on which no work should be done, so every seventh year the land of Israel was to have its rest. The provisions, as we find them laid down in the law, are these: The fields were to be left to their own spontaneous yield, no seed being sown, and likewise the vineyards and the oliveyards were not to be pruned or tended. And whatever grew of itself was to be public property; the owner of the soil was not to gather it; the poor and the stranger, and even the beasts of the field, might feed on it at will, Ex. xxiii. 10, 11; Lev. xxv. 2-7. Moreover, there was to be a general release; all debts must be then forgiven save to a foreigner, Deut. xv. 1-11. We must not, however, confound with this year that seventh in which a Hebrew servant was to become free, Deut. xv. 12-18; this last might fall at any time, being the seventh year from the date of his being sold.

There was a close connection between the sabbatical year and the weekly Sabbath, a larger increase being yielded the preceding year, Lev. xxv. 20-22; just as an increased quantity of manna was gathered on the sixth day in the wilderness. God would impress on the people the great lesson that the land was his, and would inculcate the principle of loving fellowship by showing that an owner, his steward, was not to keep in a hard and grudging spirit everything to himself. The land, too, would be benefited; it would have its season of lying fallow, and would the better thereafter yield its increase. And, to stamp more evidently the holy purpose of this season, it was then especially at the feast of tabernacles that the law was to be publicly read to the people, Deut. xxxi. 10-13.

We have little notice of the observance of this year in the sacred history; the Jewish writers infer from 2 Chr. xxxvi. 21 that it had been neglected seventy times seven—i. e., four hundred and ninety—years. It is referred to in an apocryphal book, 1 Macc. vi. 49.

two or every three years, taking care, however, to avoid making the seventh an intercalated year. The supplementary month was added at the termination of the sacred year, the twelfth month (February and March); and as this month bore the name of Adar, so the interposed month was called Veadar, or Adar the Second. The year, as appears from the ordinary reckoning of the months, Lev. xxiii. 34; xxv. 9; Num. ix. 11; 2 Ki. xxv. 8; Jer. xxxix. 2; compare 1 Macc. iv. 52; x. 21, began with the month Nisan, Esth. iii. 7, agreeably to an express direction given by Moses, Ex. xii. 2; Num. xi. 1. This commencement is generally thought to be that of merely the ecclesiastical year; and most Jewish, and many Christian,

CATHEDRAL OF AMIENS.

seminary at Chittenango; and here he gathered a large church and erected a house of worship. His latest effort was in the wild region in the northern part of the county of Saratoga, called by the Indians Saconda. Here he gathered a congregation, and with immense toil raised the funds to finish the little sanctuary; but two weeks before it was dedicated he sunk under his great toil and exposure, and he passed from earth to his reward on October 13, 1844. He was an excellent theologian, a fine preacher, an admirable college-officer, frank, kind and most genial among the students, and during all his public life he was recognized as a pious, useful man, and was universally mourned at death.

**YEATES** (yāts), THOMAS, Orientalist, author of excellent grammars of the Hebrew and Syriac, a most laborious editor and translator of portions of the Scripture, and distinguished in his day for a variety of Biblical labors of considerable value. In early life he was a member and secretary of the Society for promoting Constitutional Reform, but for many years previous to his death he took no part in politics. He was born in 1768, and died in 1839.

**YELLOW.** See COLORS.

**YOKE** (yōk). Several Hebrew words are rendered "yoke" in our version. *Ol* is the curved piece of wood upon the necks of animals of draught, by which they are fastened to the pole or beam, Num. xix. 2. *Mōth*, properly a "staff" or "bar," for bearing on the shoulder, signifies also a yoke, Jer. xxvii. 2. Both these words are symbolically used as the emblem of servitude, 1 Ki. xii. 4, 9-11; also of suffering or calamity, Lam. i. 14; iii. 27. An iron yoke implies severe bondage, Dent. xxviii. 48. And hence, to "break a yoke" is to become free, Gen. xxvii. 40; Isa. ix. 4. Similarly in the New Testament the term "yoke" indicates subjection or servitude, Matt. xi. 29, 30; Gal. v. 1. There is another Hebrew word, *tsomed*, embodying the idea of "fastening" or "yoking together," as beasts are yoked together to the plough, and hence signifying a pair. It is used of oxen, 1 Sam. xi. 7; of asses, Jud. xix. 10; of riders, Isa. xxi. 7. Hence it is occasionally applied to land, meaning as much as a yoke of oxen could plough in a day, 1 Sam. xiv. 14.

**YOKE-FELLOW**, Phil. iv. 3. Most likely reference is made to some one of the apostles' fellow-laborers; which, it is impossible to say.

**YORK MINSTER** (york mins'ter). This is the title usually applied to the cathedral in the city of York, in England, the term "minster" indicating the fact that it was a church which was served by monastic clergy, a church belonging to a monastery, as were Beverly Minster, Ripon Minster and others. It is believed that Edwyn, king of Northumberland, erected a wooden church or oratory in A. D. 627 on the site now occupied by the cathedral, and that it was dedicated to St. Peter by Paulinus, the first bishop of York, one of the missionaries sent by Pope Gregory to spread the Romish order in England. The church was afterward constructed with stone, and was completed by Oswald, who succeeded Edwyn in the kingdom of Northumberland about the year 642. About 720 it was repaired by Wilfrid, who is known as the founder of the churches of Ripon and Hexham; but in 741 it was destroyed by fire. Archbishop Egbert rebuilt it, but it was demolished by the Danes, together with the greater part of the city. The first archbishop after the Norman conquest, Thomas, a canon of Bayeux, who was also chaplain to King William, acquired the title of fifth founder by rebuilding his cathedral on a grander scale than had hitherto been adopted. The fact that the Anglo-Saxon churches were of wood and liable to be burned was assigned as a reason for rebuilding them in the Anglo-Norman reigns. The church of Thomas was of short duration, for in the year 1137 it was destroyed by fire, together with St. Mary's Abbey, which had been rebuilt by William Rufus, and thirty-nine parish churches.

The crypt of the present cathedral was begun

in 1171 by Archbishop Roger, and he lived to complete this very interesting specimen of Anglo-Norman architecture. The southern transept was begun in 1227 by Archbishop Walter Grey, and the northern transept was finished in the year 1260 by John le Romain, the treasurer of the church, who also erected the magnificent central tower of the cathedral. The son of John le Romain, who was also named John and who became archbishop, laid the foundation of the nave on the 7th of April, 1291, and this part of the church was com-

recent date, for the style of the windows and buttresses corresponds with the same parts of the nave, or western end of the church, which was founded in 1291; so that the date of the chapter-house may be fixed at the period of King Edward I. On one of the pillars is inscribed a Latin sentence in golden letters: "*Ut rosa flos florum, sic est domus ista donorum*"—"As the rose is the flower of flowers, so this is the house of houses."

On the 2d of February, 1829, the choir of this great cathedral was found to be in flames. It had

CATHEDRAL OF SPIRES.

pleted by his successor, William de Melton, who was also treasurer and chancellor of England. Archbishop Thoresby laid the foundation of the present choir on the 29th of July, 1361, and many of the stones used in the building were procured from the bishop's palace at Shireburn, which was demolished for the sake of the materials. (See page 438.) The lantern tower above the roof was rebuilt at the same time; other parts were completed, and the western front was erected by John de Birmingham, the treasurer of the church.

The erection of the elegant chapter-house is ascribed to Walter Grey, archbishop in the reigns of John and Henry III., but it is probably of more

been set on fire by a man named Jonathan Martin, a religious enthusiast, who had concealed himself after evening prayers for that purpose, and the entire roof of the choir, about two hundred and twenty-two feet in length, was demolished, together with the woodwork of the choir and organ. The restitution of the choir was entrusted to Sir Robert Smirke, and the expense was defrayed by public subscription. The restoration has been absolutely perfect, as every part was finished in exactly the same style as the members had exhibited that were destroyed. In the walls, the roof, the windows and the carvings every care was taken that the cathedral when renovated

should be altogether as perfect as before the calamity occurred. The timber of the roof is of teak, supplied from the government dock-yards; and it is known that this wood is more durable than oak. The lead covering of the roof is from the mines of the Greenwich Hospital estates, and the carved work in wood and stone is allowed to be exquisitely beautiful and correct, exception being taken only to the surmounting pinnacles of the stalls.

The ground-plan of the cathedral is the usual form of a cross, and is of great dimensions, the

great mass of the lofty cathedral presents a most magnificent appearance as it rises in solemn majesty over all the buildings of the venerable city. The massive central tower, which rises to the height of one hundred and eighty-eight feet, and the two western towers, are exceedingly imposing and effective. The western towers, which are the gems of the building, and which rise to the height of one hundred and ninety-six feet, were not added till the reign of Henry VII., and to the same period the ornamented battlement which surmounts the western gable must be attributed.

allel in ecclesiastical architecture. (See page 745.) It is usually compared with the celebrated façade of Rheims cathedral for richness, sublimity and beauty of architectural design, and it is certainly superior in its fine proportions, chaste enrichments and scientific arrangement to any church in England. (See page 1400.) The three entrances in the western front are exceedingly rich, with numerous shafts, enriched capitals and flowered mouldings. The magnificent western window over the porch is divided into eight lights by upright mullions, which in the head of the window run into flamboyant tracery. The windows of the nave are of the same character as those of the western front, but those of the transepts are lancet and of an earlier age.

The choir is of the same height as the nave, with variations of design in the architectural details. The windows of the eastern part of the choir and of the Lady Chapel have a singularly-formed open decorated screen before each of them such as is only to be met with in this structure. It strengthens and adds deep shadows to the windows, and thus it increases the wondrous brilliancy of the great eastern window, where the same device is repeated, and with the same grand effect. The central part of the eastern front is entirely occupied by the eastern window, which is of surpassing beauty. It is seventy-five feet in height and thirty-two feet in breadth, and it is divided into nine lights or compartments by mullions, which are doubled, so that galleries are carried across the windows in such a manner that access can be had to it either for inspection of the paintings or for repairs. The glazing of this window was begun in 1405, when the dean and chapter contracted with John Thornton of Coventry to execute it. He was to receive for his own work four shillings a week, and was to finish the whole in less than three years. There are one hundred and fifteen subjects from the Old Testament portrayed in it, the figures being about two feet two inches high, beautifully drawn, in a style resembling the early Italian school of painting.

The chapter-house is situated on the north side of the choir, and it is entered from the aisle of the north transept. The whole pile of the chapter-house is an octagon of sixty-three feet in diameter; the height of it to the middle knob of the roof is sixty-seven feet ten inches, unsupported by any pillar geometrically placed in the centre, but the building is strongly supported by eight buttresses. In the gable of the northern transept there are five tall lancet windows which present a most striking appearance. They are known by the name of "The Five Sisters," and they are so called from the tradition that the stained glass with which they were adorned was the gift of five maiden sisters. It is supposed that a cloister was intended to have been erected on this north side of the cathedral, but it was never built. Consequently, this cathedral is without cloisters—a usual appendage of large ecclesiastical buildings. The minster is comparatively free from buildings which externally are attached to many cathedrals, and which obscure their fair proportions, there being only a vestry, a consistory court, and a record-room on the south side; but even they are sadly out of place and out of harmony with the style of the edifice.

To comprehend the full effect of a great cathedral, the visitor has only to take his stand in the interior of the nave of this great church at the western door, and look along the vast range of columns, of splendid arches and superbly groined

CATHEDRAL OF MAYENCE.

extreme length externally from east to west being about five hundred and fifteen feet, and extending from north to south at the transept two hundred and forty feet. There are three grand entrances on the western front, one in the southern transept, which is the one most frequently used, and an entrance in the northern transept, which formerly was the communication with the palace of the archbishop that stood on this side of the church.

The exterior of York Cathedral, although built at different and distant times, from the reign of Henry III. to that of Henry VII., and comprising a period of more than two hundred and fifty years, presents a remarkable uniformity of architecture; and although the site is not elevated, the

The nave of the church, which was completed by Archbishop Milton, is two hundred and fifty feet in length and one hundred and three feet in breadth. On the 20th of May, 1840, a workman was employed to repair the great clock in the south-western tower, and incautiously he permitted a lucifer match to fall among dried leaves which birds had brought into the tower for their nests. The upper part of the tower was burned, the molten bells fell into the aisle, and the flames spread to the roof of the nave, which was destroyed. In both these calamitous fires the invaluable stained glass of the windows was preserved.

The western front, the most remarkable feature of this venerable edifice, is perhaps without a par-

roof which stretches aloft and before him for the length internally of four hundred and eighty-six feet, the vista being terminated by a window which has deservedly been characterized as the finest ever erected in an ecclesiastical edifice, in order to realize the full effect of the mediæval style. The solemnizing effect of this interior is felt by all spectators, and the visitor is at a loss to determine whether the tall clustered columns, the rich floriated capitals or the interlacing of the ribs in the groined roof is the most imposing; but ever and anon the eye is attracted to the blaze of gorgeous commingled and yet softened light which, according to Pugin, flows through the finest window in the world, and which tints with its mellowed beauty every feature in the great cathedral; and the fact is discovered that it is the harmony of all its parts which produces the powerful impression which all visitors experience when they behold this great and splendid fane.

York Minster, as may be expected, abounds with monuments of princes, archbishops, chancellors and nobles who have risen to fame in the Church and the State. One of the most attractive is that of Archbishop Grey, in the north aisle of the south transept, the founder of the south transept of the cathedral, not so much because of its architecture as of the fame of the man whom it commemorates; for none of the monuments at York can be compared with the grand display presented by most of the other cathedrals in the kingdom. York is usually called the largest of the English cathedrals, but in length it appears to be exceeded by the churches of Ely, Canterbury and Winchester, and it is equalled by that of Lincoln, but there is a harmony, a majesty and a unity in York which none of these churches can present; and it is not strange that foreigners leave the country most deeply impressed by this great minster, and assign to it a leading, if not the foremost, place among the cathedrals of England.

YOUNG (yung), EDWARD, an English poet, was born in Hampshire in 1684. From Winchester School he passed to New College, Oxford, which he left for Corpus Christi; and in 1708 he received a law Fellowship in All-Souls College, at the instance of Archbishop Tenison, and on entering orders, in 1727, was named one of the royal chaplains. In the rectory of Welwyn, in Hertfordshire, to which he was presented by All-Souls College, he passed the rest of his life and composed the greatest of his poems. His fame as a man of rare and strong genius does not rest upon the satires, tragedies and other works which he produced previous to his settlement in Welwyn. The death, in 1741, of his wife, Lady Elizabeth Lee, daughter of the earl of Lichfield, combined with other painful bereavements which occurred about the same time, gave a grander cast to his thoughts and a tone of deeper solemnity to his feelings. The "Night Thoughts," with which his fame is mainly associated, began to appear in 1742, and in their strain of lofty sentiment afforded clear indications that he had learned in suffering what he taught in song. The death of his wife is believed to have been the occasion of his writing his "Night Thoughts." Of his prose writings, few in number, and only known now to book-hunters, the most pungent was his "Certain, not Fabulous," a work in which he dealt mercilessly with the infidel authors of his time. At the period of his death, in 1765, his faculties were unimpaired, and he enjoined his executors to destroy his manuscripts,

It was the high distinction of the author of the "Night Thoughts" to give unmistakable evidence of earnestness of spirit in an age when authors too frequently wasted their powers on frivolous themes.

YOUNG, JOHN, LL.D., was born in 1781, at Rutherglen, near the city of Glasgow. He had to encounter considerable difficulty in acquiring a learned education, but by great perseverance he succeeded in acquiring the necessary preparation for a college course, and he entered the University of Glasgow. After a course in arts he passed through the divinity hall under the care of the secession body;

and metaphysics, on the one hand, and in describing his own system on the other hand, were so attractive that students hung on his sentences as if they had been hearkening to a romance. He resolved all mental phenomena into a few elementary powers—sensation, memory, judgment and association—and his ethical system was equally simple. Among the fundamental laws of belief he placed causation and personal identity. "Experience," he was wont to say, "itself does not reveal to reason the relation of cause and effect;" and he held that "cause is not that only which in a particular instance precedes a change, but that

ROMAN TESSELLATED PAVEMENT.

but becoming devoted to philosophical subjects, he abandoned the idea of entering the ministry in the denomination of his fathers. So great were his philosophical attainments that he was commended as eminently qualified for the chair of mental philosophy in the college of Belfast, to which he was appointed in 1815. Here he became greatly distinguished, and so important were his prelections that students on entering college longed to pass their first year in logic, rhetoric and belles-lettres, in order that they might enjoy the delight of being under Dr. Young. With him metaphysics was no dry study. He had an intensely keen power of analysis, and his discussions in setting forth the characteristics of the different schools of psychology

which in similar circumstances we believe must always have been followed by a similar change, and will always be so followed in future; our belief in the relation of cause and effect thus presents us with a universal truth;" and he held that this belief "is irresistible, and is derived from an instinctive principle in our nature." On the subject of personal identity he says, "If we ask why each of us believes in his own identity as regards the feelings which he formerly experienced as belonging to the same person which he now calls himself, does not the very same statement of the question show its absurdity? Is it not obvious that even in the casual expressions which we employ we take the fact for granted by the use of the pronouns I and she?"

It is to be referred therefore to a primary law of our nature." He had no difficulty in getting at the proof for the existence of an external world, for he says, "All our sensations are connected with the conviction of certain external things as their cause, and things which are independent of us, because we cannot command their existence by our

following he issued "Evil and Good, a Mystery," a work in which he discusses the mixed condition of the present economy; and in 1860 he entered the lists against Dr. Mansel in a work entitled "The Province of Reason," being a very vigorous criticism of Dean Mansel's Bampton lecture. His last work of any importance appeared in 1870,

ANCIENT SHIP FROM OLD ENGLISH MSS.

volition." There is no doubt whatever but that the simplification of the many mental powers which Dr. Brown made in the system of Dugald Stewart was taught in Belfast several years before Dr. Brown succeeded to the chair in Edinburgh in which he expounded his views as set forth in his published lectures, and the fact that for many years Dr. Young had taught his system at Belfast before Dr. Brown's lectures appeared will show that he had not copied from that eminent man, as has unjustly been charged. After the death of Dr. Young, in 1829, a portion of his lectures was published, with a memoir by the Rev. William Cairns, D.D.; but the manuscripts had been left in such a state that when the work appeared his students all regretted that his untimely death had prevented the author, who was a man of real genius, from preparing his course in such a manner as would have been worthy of the subject and would have done justice to his great fame.

**YOUNG, JOHN, LL.D.**, has greatly distinguished himself among the many writers of the present day on questions connected with advanced questions in theology. He became distinguished as the pastor of Albion Chapel, in London, whence he was removed to Edinburgh. In 1836 he published a work on the "Chief Points of Controversy between Protestants and Roman Catholics," and in 1855 he became still better known by his "Christ in History," a work in which he undertook to present the facts and incidents of the life of Christ on earth, in order therefrom to set forth the claims of his Person, life and work. In the year

under the title "The Creator and the Creation; How Related." All these bear on the most profound questions of the day, and indicate the character of Dr. Young's mind.

**YOUNG, JOHN CLARKE, D.D.**, was born in 1803, at Greencastle, Pennsylvania. He passed three years at Columbia College, New York, and in 1823 he graduated at Dickinson College, Carlisle, Pennsylvania. He then entered the theological seminary at Princeton in 1824; and from 1826 until 1828 he acted as a tutor in the College of New Jersey. He was licensed to preach in 1827 by the Presbytery of New York, after which he settled as pastor of the McCord Presbyterian Church, Lexington, Kentucky. In 1830 he was made president of Centre College, Danville, Kentucky, and he held this office until his death. He was an admirable preacher, an efficient college-officer, and greatly beloved in life for his geniality and great moral worth. In 1835 he published an "Appeal" to the Presbyterians of Kentucky on the education of their slaves, and this work had an enormous circulation. He also wrote a very thoughtful essay on the subject "Universal Education a Pecuniary Gain to a Nation," and he published several sermons from time to time as they were delivered.

**YOUNG, PATRICK**, was born in 1584, at Seaton, in East Lothian, Scotland. His father was Sir Peter Young; and the young man, who was afterward known by his Latinized name, "Patricius Junius," was educated at the Univer-

sity of St. Andrew. He held the office of librarian to James I. of England for some time, and the rectories of Hayes and Llannine were given to him. He was a man of great learning; and when he traveled on the Continent of Europe, in 1617, he created a great excitement wherever he went. His first work was an edition of "Clemens Romanus," and in a second edition he added a Latin version. He also published "The Poetical Books of Scripture, from the Alexandrian Manuscript." His labors on this manuscript were of use to Usher, Grotius and others, as may be seen in Walton's Polyglot. He assisted Thomas Reid in rendering the works of King James into Latin, and he gave great assistance to Selden in his work on the "Arundelian Marbles." Selden dedicated this work to him. He died in 1652.

**YOUNG, DR. THOMAS**, a distinguished natural philosopher, was born of a Quaker family, at Milverton, in Somersetshire, in 1773. He was carefully educated, and was a zealous student of ancient and modern languages, mathematics and natural philosophy. At the age of nineteen he went to London to study medicine. At this period he began to shake off his Quakerism and to dress and live like the people he was thrown amongst. After studying a short time at Edinburgh, he made a tour through Germany, and early in 1797 entered Emmanuel College, Cambridge. He began to practice as a physician in London in 1801, was chosen the next year professor of natural philosophy at the Royal Institution, and in 1802 became foreign secretary to the Royal Society. Dr. Young was subsequently physician of St. George's Hospital, secretary to the Board of Longitude and

A TILE TOMB AT COLCHESTER, ENGLAND.

foreign associate of the French Academy of Sciences. Dr. Young greatly distinguished himself as a student of the hieroglyphical inscriptions of Egypt, and was the first to suggest the discovery for which Champollion obtained the chief credit. He contributed many articles to the "Encyclopædia Britannica," the "Quarterly Review," the "Philosophical Transactions" and various scientific journals. He died May 10, 1829.

Z.

THE ANGEL APPEARS TO ZACHARIAH, ANNOUNCING THE BIRTH OF JOHN THE BAPTIST.

**ZABAD** (za'bad). 1. A descendant of Judah, 1 Chr. ii. 36, 37. 2. An Ephraimite slain by the men of Gath, 1 Chr. vii. 21. 3. One of David's warriors, 1 Chr. xi. 41, very probably identical with No. 1. 4. One of the persons who murdered King Joash, 2 Chr. xxiv. 36. He is also called Jozachar, 2 Ki. xi. 21. 5, 6, 7. Three who had married foreign wives, Ezra x. 27, 33, 43.

**ZABADAIAS** (za-ba-di'as), 1 Esd. ix. 35, identical with Zabab, Ezra x. 43.

**ZAANAIM** (za-na'-im). See ZAANANNIM.

**ZAANAN** (za'-an-an), a place mentioned only once, Mic. i. 11. Perhaps it is identical with Zenan, a town in the plain country of Judah, Josh. xv. 37.

**ZAANANNIM** (za-anan'-nim), a plain, so styled, on the border of Naphtali, not far from Kedesh, Josh. xix. 33. It is called also Zaanaim, Jud. iv. 11. But the word rendered plain is more properly an oak, and two places are not indicated in Josh. xix. 33, Allon and Zaanannim, but rather the oak at or near Zaanannim.

**ZAAVAN** (za'a-van), one of the descendants of Seir, Gen. xxxvi. 27; called also Zavan, 1 Chr. i. 42.

**ZABADEANS** (za-ba-de'anz), 1 Macc. xii. 31, an Arab tribe attacked by Jonathan Maccabæus. Their settlements may have been on the slopes of Anti-libanus, where are still the villages Kefr Zebad and Zebedany.

**ZABAGLIA** (za-bag'le-a), **NICCOLO**, an Italian architect, was born at Rome, in 1674, and displayed such great abilities while employed as a carpenter at the Vatican that he was appointed architect of St. Peter's. He died in 1750. He invented the method of transferring fresco paintings from the plaster.

**ZABARELLA** (za-ba-rel'la), **FRANCESCO**, a distinguished Italian ecclesiastic, was born at Padua, in 1339. He was an eminent professor of the canon law, and arrived successively at the dignities of bishop of Padua, archbishop of Florence and cardinal. He took a prominent part in the council of Constance, and was the author of several learned treatises on ecclesiastical subjects. He died in 1417.

**ZABBAI** (zab'bi). 1. A person who married a foreign wife, Ezra x. 28. 2. The father of one who helped to repair the wall of Jerusalem, Neh. iii. 20. The name is Zaccai in the margin.

**ZABBUD** (zab'bud), one who returned from Babylon with Ezra, Ezra viii. 14. In some copies the name is Zaccur.

**ZABDEUS** (zab-de'us), 1 Esd. ix. 21, the same as Zebadiah, Ezra x. 20.

**ZABDI** (zab'di). 1. A descendant of Judah, the grandfather of Achan, Josh. vii. 1, 17, 18. He is probably the person called Zimri in 1 Chr. ii. 6. 2. A Benjamite, 1 Chr. viii. 19. 3. The superintendent of David's vineyards, 1 Chr. xxvii. 27. 4. A Levite, of the sons of Asaph, Neh. xi. 17. Perhaps, and identical with, Zaccur, 3, Zichri, 5.

**ZABDIEL** (zab'de-el). 1. The father of one of David's officers, 1 Chr. xxvii. 2. 2. An overseer of the priests, said to be son of one of the great men, Neh. xi. 14. See HAGGEDOLIM. 3. An Arabian who put Alexander Balas to death, 1 Macc. xi. 17.

**ZABUD** (za'bud), the son of Nathan, principal officer to Solomon and the king's friend, 1 Ki. iv. 5.

**ZABULON** (zab'u-lon), Matt. iv. 13, 15, a Greek form of Zebulun.

**ZACCAI** (zak'ki). 1. One whose descendants returned with Zerubbabel, Ezra ii. 9. 2. Ezra iii. 20, margin. See ZABBAI.

**ZACCHEUS** (zak-ke'us). 1. An officer of Judas Maccabaeus, 2 Mace. x. 19. 2. A superintendent of taxes at Jericho. Having heard of the Redeemer, he felt a great desire to see him as he drew near that place, for which purpose he climbed up into a sycamore tree because he was little of stature. Jesus, pleased with this manifestation of his eagerness, and knowing that it proceeded from a heart not far from the kingdom of God, saw fit to honor Zaccheus by becoming his guest. This offended the self-righteous Jews, who objected that he was gone to be a guest with a man that is a sinner. This offensive imputation was met by Zaccheus in the spirit of the Mosaic conception of goodness: "The half of my goods I give to the poor; and if I have taken anything from any man by false accusation I restore him fourfold." He that knew the heart of man knew not only the truth of this statement, but that the good works of Zaccheus emanated from right motives, and therefore terminated the conversation with the words: "This day is salvation come to this house, forasmuch as he also is a son of Abraham," a declaration which, whether Zaccheus was by birth a Jew or not, signifies that he had the same principle of faith which was imputed to Abraham, the father of the faithful, for righteousness. Luke. xix. 2. Tradition represents Zaccheus as the first Christian bishop of Caesarea.

**ZACCHUR** (zak'kur), a descendant of Simon, 1 Chr. iv. 26.

**ZACCUR** (zak'kur). 1. The father of the Reubenite spy, Num. xiii. 4. 2. A Levite of the family of Merari, 1 Chr. xxiv. 27. 3. One of the sons of Asaph, head of a course of singers, 1 Chr. xxv. 2, 10. He is possibly the same with Zichri, 1 Chr. ix. 15. 4. Ezra viii. 14, margin. See ZABUD. 5. One who helped to repair the wall of Jerusalem, Neh. iii. 2. 6. A Levite who sealed the covenant, Neh. x. 12. 7. The father of one of the treasurers appointed by Nehemiah, Neh. xiii. 13.

**ZACHARIAH** (zak-a-ri'ah). 1. The son and short-lived successor of Jeroboam II., king of Israel. He reigned only six months, having been vanquished and slain by Shallum, who conspired against him, 2 Ki. xiv. 29; xv. 8-10. His reign is generally assigned to B.C. 772, but there is a confusion in the chronology of the period of which different modes of explanation have been attempted. 2. The other Zechariah in the Authorized Version is merely known as the father of Abi, the mother of Hezekiah, 2 Ki. xviii. 2.

**ZACHARIAS** (zak-a-ri'as). 1. 1 Esd. i. 8, the same as Zechariah, 2 Chr. xxxv. 8. 2. 1 Esd. i. 15, a perversion of Heman, 2 Chr. xxxv. 15. 3. 1 Esd. v. 8, the same as Seraiah, Ezra ii. 2. 4. 1 Esd. vi. 1; vii. 3, the prophet Zechariah. 5. 1 Esd. viii. 30, the same as Zechariah, Ezra viii. 3. 6. 1 Esd. viii. 37, the same as Zechariah, Ezra viii. 11. 7. 1 Esd. viii. 44, the same as Zechariah, Ezra viii. 16. 8. 1 Esd. ix. 27, the same as Zechariah, Ezra x. 26. 9. 1 Mace. v. 18, 56, the father of Joseph, a captain in the Maccabean wars. 10. The father of John the Baptist. He was of the course of Abia or Abijah, and resided in a city among the mountains of Judah (as some say, Hebron). When he was executing in his turn his office in the temple, he was apprised by an angel that his wife Elizabeth should have a son. Zacharias hardly believed the an-

nouncement, and was struck with dumbness till John's birth and circumcision. Then his mouth was opened, and he uttered that noble strain of praise with which ever since the Church has honored the Lord, Luke i. Nothing more is certainly known of him.

**ZACHARY** (zak'ka-re), 2 Esd. i. 40, the prophet Zechariah.

**ZACHER** (za'ker), a Benjamite, 1 Chr. viii. 31. He is also called Zechariah, 1 Chr. ix. 37.

**ZADOK** (za'dok). 1. In the reign of David, Zadok (the son of Ahitub and father of Ahimaaz, 1 Chr. vi. 8) and Ahimelech were the priests, 2 Sam. viii. 17. Zadok and the Levites were with David when, after the middle of the eleventh century B. C., he fled from Absalom; but the king ordered Zadok to carry back the ark of God into the city, 2 Sam. xv. 24, 25, 27, 29, 35, 36; xviii. 19, 22, 27. The king also, considering Zadok a seer, commanded him to return to the city, stating that he would wait in the plain of the wilderness until he should receive such information from him and his son Ahimaaz, and also from the son of Abiathar, as might induce him to remove farther away. On hearing that Ahithophel had joined Absalom, David requested Hushai, his friend, to feign himself to be also one of the conspirators, and to inform Zadok and Abiathar of the counsels adopted by Absalom and his rebellious confederates. The request of David was complied with, and the plans of the rebels made known to David by the instrumentality of Zadok and the others.

After Absalom was vanquished, David sent to Zadok and Abiathar, the priests, saying, "Speak unto the elders of Judah, Why are ye the last to bring the king back to his house?" etc., 2 Sam. xix. 11; xx. 25. When Adonijah attempted to succeed to the throne, Abiathar countenanced him; but Zadok was not called to the feast at which the conspirators assembled. King David sent for Zadok and Nathan the prophet to anoint Solomon king, 1 Ki. i. 32-45.

2. The father of Jerusha, king Jotham's mother, 2 Ki. xv. 33. 3. Another in the line of priests, 1 Chr. vi. 12. As he also is said to be son of Ahitub, some have imagined that the names are introduced a second time by an error of transcription. The Zadok of Neh. xi. 11 is either this person or No. 1. 4, 5. Two who helped to repair the wall of Jerusalem, Neh. iii. 4, 29. 6. One who sealed the covenant, Neh. x. 21, possibly identical with No. 4 or 5. 7. A scribe, Neh. xiii. 13.

**ZAHAM** (za'ham), one of the children of Rehoboam, 2 Chr. xi. 19.

**ZAIR** (zair), a place in Idumaea where, when the Edomites revolted from King Joram of Judah, he defeated them in a night attack upon their troops, 2 Ki. viii. 21. Its locality can only be conjectured.

**ZALAPH** (za'laf), the father of a person who repaired the wall of Jerusalem, Neh. iii. 30.

**ZALMON** (zal'mon), one of David's warriors, 2 Sam. xxiii. 28. He is elsewhere, 1 Chr. xi. 29, called Ilai.

**ZALMON**, a wooded hill near Sheehem to which Abimelech and his party repaired for boughs with a view to the burning down of the

tower of the city, Jud. ix. 48. But the name never occurs again, and no indication exists which might lead to the identification of the particular eminence meant.

**ZALMONAH** (zal-mo'nah), one of the stations in the desert which the Israelites reached after leaving Mount Hor, Num. xxxiii. 41.

**ZALMUNNA**. See ZEBAB AND ZALMUNNA.

**ZAMBIS** (zam'bis), 1 Esd. ix. 34, identical with Amariah, Ezra x. 42.

**ZAMBRI** (zam'brī), 1 Mace. ii. 26, identical with Zimri, Num. xxv. 14.

**ZAMOTH** (za'moth), 1 Esd. ix. 28, identical with Zattu, Ezra x. 27.

**ZAMZUMMIMS** (zam-zum'mims), a race of giants dwelling anciently in the territory afterward occupied by the Ammonites, but extinct before the time of Moses, Deut. ii. 20.

**ZANCHI** (zang'ke), GIROLAMO, a celebrated Italian Protestant, was born at Alzano in 1516; and having formed a close intimacy with the celebrated Peter Martyr while they were canons regular of San Giovanni di Laterano, the conversation and example of this distinguished convert to the Reformed Church ultimately produced such an effect on the mind of Zanchi as induced him to throw off the monastic habit and abjure the Romish faith. He was accordingly under the necessity of quitting Italy, and after seeking a refuge, first at Geneva and next at Strasburg and Chiavenna, he accepted the divinity professorship at Heidelberg in 1569, where he settled, under the immediate patronage of Frederick III., elector-palatine, at whose instigation he composed his great treatise against Antinomianism. The

ZACHARIAH'S TOMB.

death of this prince, in 1578, occasioned his resignation, and he removed to Neustadt; but he returned to Heidelberg in 1585, and died there in 1590. His principal work is a treatise "On the Doctrine of Predestination," which was translated into English by Dr. Toplady.

**ZANOAH** (za-no'ah). 1. A town in the plain country of Judah, Josh. xv. 34. It is to the south-east of Zorah, still bearing the name of *Zan'a*.

2. Another town of Judah in the mountains, Josh. xv. 56; perhaps *Zan'utah*, ten miles south of Hebron.

**ZAPHNATH-PAANEAH** (za'f-nath-pa-a-ne'ah), a name or title given by Pharaoh to Joseph when appointed to the dignity of ruler next under the king of the land of Egypt, Gen. xli. 45. The signification of it is little more than conjectural, and scholars have widely differed in the derivations they have proposed. Those who prefer a Hebrew origin say it means "the revealer of mysteries." But surely, as an Egyptian title, it must have an Egyptian derivation. It seems reasonable to interpret it as designating some public benefit derived from him to the kingdom. Gesenius believes that it may mean "the preserver or rescuer of the age or world."

**ZAPHON** (za'fon), a city in the low level of the Jordan in the kingdom of Sihon, allotted to the tribe of Gad, Josh. xiii. 27.

**ZARA** (za'rah), Matt. i. 3. See ZERAH.

**ZARACES** (zar'a-ces), 1 Esd. i. 38, a person—evidently not Zedekiah, compare 1 Esd. i. 46—said to be brother to Jehoiakim.

**ZARAH** (za'rah), a variation of Zerah.

**ZARAIAS** (za-ri'as). 1. 1 Esd. viii. 2, a variation of Zerachiah, Ezra viii. 4. 2. 1 Esd. viii. 31, a variation of Zerachiah, Ezra viii. 4. 3. 1 Esd. viii. 34, a variation of Zebadiah, Ezra viii. 8.

**ZAREAH**, Neh. xi. 29. See ZORAH.

**ZAREATHITES** (za're-ath-ites), the inhabitants of Zareah or Zorah, 1 Chr. ii. 53.

SHRINE OF "THE THREE KINGS," AT COLOGNE.

**ZARED**. See ZERED.

**ZAREPHATH** (zar'e-fath), a town near Sidon to which Elijah was sent during the latter

part of the great drought in his time, 1 Ki. xvii. 9. In the New Testament it is written Sarepta, Luke iv. 26. It now goes by the name of *Sarafend*, and is only a *tel*, or hill, with a small village on it, at the distance of seven or eight miles from Sidon, and near the Zaharani River. The ancient town or village, however, appears to have stood on the shore, and not on this height, as there the ruins of a place of some size are found, and among them a chapel erected by the Crusaders on what was supposed to be the site of the widow's house with whom Elijah stayed. The ruins comprise, besides columns, marble slabs, sarcophagi and other relics so numerous as to

prove that at one time a wealthy and flourishing city had existed at that place.

**ZARETAN**. See ZEREDA.

**ZARETH-SHAHAR** (za'reth-tsha'har), a city allotted to Reuben; it was on a hill in a valley, Josh. xiii. 19. It has not been identified.

**ZARHITES** (zar'hites), THE, a family of the tribe of Judah, descendants of Zerah, son of Judah. Achan belonged to the family, Num. xxvi. 13; xxvii. 11; Josh. vii. 17.

**ZARTANAH**, or **ZARTHAN**. See ZEREDA.

**ZATTHU** (zat'thu), one who sealed the covenant, Neh. x. 14.

**ZATTU** (zat'tu), one whose descendants returned from captivity with Zerubbabel, Ezra ii. 8. Several of this family had married foreign wives, Ezra x. 27. Probably Zattu and Zathu are identical.

**ZAVAN**. See ZAAVAN.

**ZAZA** (za'za), a descendant of Judah, 1 Chr. ii. 33.

**ZEAL** (zeal), an earnest temper which may spring from either commendable or imperfect and evil motives. It is often ascribed to God, 2 Ki. xix. 31; Isa. ix. 7. And men are sometimes commended for the zeal they show when it evinces itself in exertions for God's glory, Num. xxv. 11-13. But sometimes zeal for God is assumed as a cloak for selfishness, as in the case of Jehu, 2 Ki. x. 16, who desired to gain the crown of Israel, but "took no heed to walk in the law of the Lord," 2 Ki. x. 31. Ignorant or misdirected zeal may incline men even to persecute the Church and

true servants of Christ, Rom. x. 2. Zeal, to be a Christian grace, must be grounded on right prin-

RELIQUARY AT COLOGNE.

ciples directed to a right end, and must not be a mere transient emotion, Gal. iv. 18.

**ZEALOTS** (zel'ots), the followers of Judas the Gaulonite or Galilean. Josephus speaks of them as forming the "fourth sect of Jewish philosophy," and as distinguished from the Pharisees chiefly by a quenchless love of liberty and a contempt of death. Their leading tenet was the unlawfulness of paying tribute to the Romans, as being a violation of the theocratic constitution. This principle, which they maintained by force of arms against the Roman government, was soon

ANGEL AT BOLOGNA.

converted into a pretext for deeds of violence against their own countrymen, and during the last days of the Jewish polity the Zealots were lawless brigands or guerrillas, the pest and terror of the land. After the death of Judas and of his two sons, Jacob and Simon, they were headed by Eleazar, one of his descendants, and were often denominated Sicarii, from the use of a weapon resembling the Roman sica.

**ZEBADIAH** (zeb-a-di'ah), a common name among the covenant-people—of several Benja-

mines, 1 Chr. viii. 15, 17; xii. 7; a son of Asahel, Joab's brother, 1 Chr. xxvii. 7; several priests and Levites of later times, 1 Chr. xxvi. 2; Ezra vii. 8; x. 20; a Levite who took part, in Jehoshaphat's time, in the work of teaching the law throughout Judah, 2 Chr. xvii. 8; also in the same reign a prince of the house of Judah, the son of Ishmael, and appointed along with the high-priest to judge in cases of importance, 2 Chr. xix. 11.

**ZEBAH** (ze'bah) and **ZALMUNNA** (zalmun'nah), chiefs of the Midianites whom Gideon defeated and slew. See GIDEON.

**ZEBAIM** (ze-ba'im). This is probably part of a man's name, Ezra ii. 57. See POCHERETH.

**ZEBEDEE** (zeb'e-de), a Galilean fisherman, husband of Salome and father of the two apostles James and John. He appears to have been a man of substance, as he had hired laborers in his business, and his wife was one of those who ministered to Jesus, Matt. iv. 21; Mark i. 19, 20; Luke v. 10; John xxi. 2. After the call of his sons by Jesus we hear no more of Zebede himself. Possibly he did not live much longer.

**ZEBINA** (ze-bi'nah), one who had married a foreign wife, Ezra x. 43.

**ZEBOIM** (ze-boy'im), or **ZEBOIM** (ze-bo'im). 1. One of the cities in the vale of Siddim destroyed with Admah, Sodom and Gomorrah, Gen. x. 19; Dent. xxix. 23. 2. A town or place of Benjamin, standing in or near a valley or gorge, 1 Sam. xiii. 18.

**ZEBUDAH** (ze-bu'dah), the mother of Jehoakim, 2 Ki. xxiii. 36.

**ZEBUL** (ze'buhl), the governor of Shechem for Abimelech, Jud. ix. 28-41. He overreached and ejected Gaal, apparently a Canaanite chief.

**ZEBULONITE**. See ZEBULUNITES.

**ZEBULUN** (zeb'u-lun), the sixth and last son of Leah and the tenth born to Jacob, Gen. xxx. 20. His personal history does not contain a single incident worthy of record, and his name is not once mentioned except in the genealogical lists. At the time of the descent of Jacob into Egypt, Zebulun had three sons, Sered, Elon and Jahleel, Gen. xlv. 14, who became the founders of the

three great families into which the tribe was divided, Num. xxvi. 26. Though the first generation was so small, this tribe ranked fourth in numbers among the twelve when the census was taken at Mount Sinai, in the year of the exodus, Judah, Dan and Simeon being more numerous. During the wilderness journey it increased from fifty-seven thousand four hundred males to sixty thousand five hundred, but it held just the same relative place among the twelve, Judah, Dan and Issachar being before it, when the census was made on the plains of Moab, Num. xxvi. 27.

History is almost as silent regarding the acts of the tribe during the long period of Egyptian bondage and the desert journey as it is regarding the patriarch Zebulun himself. It does not appear to

THE CHANCEL OF THE CHURCH OF WECHGELBURGH, BAVARIA.

have been signalized in any way. A quiet, steady demeanor seems to have been the chief characteristic of the people.

The position and physical character of Zebulun's destined territory in the land of promise had been sketched in the prophetic blessing of Jacob: "Zebulun shall dwell on the coast of seas; and he shall be for a shore of ships; and his side will be to Zidon," Gen. xlix. 13. Though Issachar was an elder brother, Jacob seems to have already acknowledged the political superiority of Zebulun by placing him first in order. Zebulun's territory was one of the richest and most beautiful sections of Western Palestine. Joshua defines its borders with his usual minuteness, though, in consequence of the disappearance of many old cities, it cannot now be entirely identified. Its position, however, and general extent are clear enough. Asher and Naphtali bounded it on the north and Issachar

on the south. It stretched across the country from the Sea of Galilee on the east to the maritime plain of Phœnicia on the west, embracing a large strip of Esdraelon, a portion of the plain of Akka, the whole of the rich upland plain of Batauf, with the fertile table-land between it and the great basin of the Sea of Galilee. The beautiful wooded hills and ridges extending from Tabor, by Nazareth and Sefiriyeh, to the plain of Akka were also in Zebulun. It touched Carmel on the south-west; and though it did not actually reach to the shore of the Mediterranean, its sides joined the narrow maritime territory of Phœnicia, to which Jacob, according to common Eastern custom, gives the name of its chief city, Zidon: "And his side will be to Zidon." Its opposite extremity resting on the shore of the Sea of Galilee, the words of Jacob were fulfilled: "Zebulun shall dwell on the coast of seas." His fishermen on the Sea of Galilee and his merchants navigating the Mediterranean, in company with their Phœnician neighbors, illustrate remarkably the other blessing: "He shall be for a shore of ships."

The tribe of Zebulun, though not mentioned, appears to have shared the fate of the other northern tribes at the invasion of the country by Tiglath-pileser, 2 Ki. xvii. 18, 24. From this time the history of the distinct tribe ceases. With the exception of the Levites, the whole were amalgamated into one nation, and on the return from exile were called Jews. The land of Zebulun, however, occupied a distinguished place in New Testament times. It formed the chief scene of our Lord's life and labors. Nazareth and Cana were in it, and it embraced a section of the shore of the Sea of Galilee, where so many of the miracles of Christ were performed and so many of his discourses and parables spoken. Then was fulfilled the prophecy of Isaiah: "The land Zabulon and the land Nephthalim, the way of the sea, beyond Jordan, Galilee of the Gentiles; the people which sat in darkness saw great light; and to them which sat in the region and shadow of death light is sprung up," Isa. ix. 1, 2; Matt. iv. 15, 16.

**ZEBULUNITES** (zeb'u-lun-ites), Num. xxvi. 27, the descendants of Zebulun.

**ZECHARIAH** (zek-a-ri'ah). 1. High-priest in the time of Joash, king of Judah. He was son, or perhaps grandson, of Jehoiada and Jehosheba. Zechariah could not bear to see the evil courses into which the monarch eventually fell, and by which the return of the people to their old idolatries was facilitated, if not encouraged. Therefore, when the people were assembled at one of the solemn festivals, he took the opportunity of lifting up his voice against the growing corruptions. This was in the presence of the king, in the court of the temple. The people were enraged at his honest boldness, and with the connivance of the king they seized the pontiff and stoned him to death, even in that holy spot, "between the temple and the altar." His dying cry was not that of the first Christian martyr, "Lord, lay not this sin to their charge," Acts vii. 60, but "The Lord look upon it, and require it," 2 Chr. xxiv. 20-22. It is to this dreadful affair that our Lord alludes in Matt. xxiii. 35; Luke xi. 51. At least this is the opinion of the best interpreters, and that which has most probability in its favor.

2. One "who had understanding in the visions of God," 2 Chr. xxvi. 7. It is doubtful whether this eulogium indicates a prophet, or simply describes one eminent for his piety and faith. During his

lifetime Uzziah, king of Judah, was guided by his counsels, and prospered, but went wrong when death had deprived him of his wise guidance. Nothing is known of this Zechariah's history. It is possible that he may be the same whose daughter became the wife of Ahaz and mother of Hezekiah, 2 Ki. xvi. 1, 2.

3. Son of Jeberechiah, a person whom, together with Urijah the high-priest, Isaiah took as a legal witness of his marriage with "the prophetess," Isa. viii. 2. This was in the reign of Ahaz, and the choice of the prophet shows that Zechariah was a person of consequence. Some confound him with the preceding, but the distance of time will not admit their identity. He may, however, have

moment is recorded: the son of Meshelemiah, a Korhite, a tabernacle gate-keeper, 1 Chr. ix. 21; xxvi. 2; a Levite in David's temple band, one of those appointed to play with psalteries, also a gate-keeper, and possibly the same as the preceding, 1 Chr. xv. 18, 20; a son of Jehoshaphat, also one of the princes of Judah appointed in that king's reign to teach the people the law of God, 2 Chr. xxi. 2; xvii. 7; a Kohathite Levite in Josiah's time, also a ruler of the temple in the same reign, 2 Chr. xxxiv. 12; xxxv. 8; one of the family of Asaph in Hezekiah's time, 2 Chr. xxix. 13; a son of Jehiel, 1 Chr. ix. 37; and not a few of the returned captives, Ezra viii. 3, 11, 16; x. 26; Neh. xi. 4, 5, 12; xii. 16, etc.

DAVID'S CHARGE TO SOLOMON.

been the descendant of Asaph, named in 2 Chr. xxix. 13.

4. The eleventh in order of the minor prophets, was, like Jeremiah and Ezekiel, of the priestly race, his grandfather Iddo being the chief of one of the classes of priests who returned from Babylon with Zerubbabel and Joshua, see Neh. xii. 4, at which time Zechariah must have been very young. He was contemporary with Haggai, and co-operated with him in exhorting and encouraging the Jews to rebuild the temple and to restore its public ordinances. But in addition to this, he was commissioned to deliver many important prophecies relating to the future.

5. Besides the preceding, an immense number of persons are incidentally noticed as bearing the name of Zechariah, but of whom nothing of any

**ZECHARIAH, THE BOOK OF.** The prophecies of Zechariah, like those of Daniel, extend to the "times of the Gentiles," Luke xxiii. 24; but in Zechariah the history of the chosen people forms the centre of his predictions, and that history is set forth both in direct prophecy and in symbolical acts and visions.

Although the language and style of this book are by no means obscure, there is considerable difficulty in explaining its visions and prophecies. Yet some portions are very clear, and they diffuse light around them. Much, too, may be learned from a comparison with the writings of the earlier prophets, to which repeated allusions may be found.

The book of Zechariah may be divided into three parts:

I. The first part, ch. i-vi., contains a series of eight visions, which were communicated to the prophet in the second year of Darius, revealing the dispensations of God's providence relative both to the Jews and to the nations which had oppressed them.

II. The next part, ch. vii., viii., contains prophecies of prosperity and enlargement to Jerusalem, intermixed with warnings and exhortations.

III. The remaining six chapters contain a series of predictions unfolding the future history of the people of God from that period to the end of the world, with which are mingled many prophecies relating to the person, character and work of the Messiah, the promulgation of the gospel, the call-

push the enemy till they were consumed. Zedekiah opposed the faithful prophet Micah, and struck him, with a taunting question. He was rebuked, and told to expect a day of shame and fear, 1 Ki. xxii. 11, 24, 25. We are told nothing more of him.

2. Son of Josiah, the twentieth and last king of Judah, was, in the place of his brother Jehoiakim, set on the throne by Nebuchadnezzar, who changed his name from Mattaniah to that by which he is ordinarily spoken of. As the vassal of the Babylonian monarch, he was compelled to take an oath of allegiance to him, which, however, he observed only till an opportunity offered for throwing off his yoke. Success in such an undertaking was not

lem effectually withstand Nebuchadnezzar. At the end of that time, however, the city was stormed and taken, B. C. 588, when Zedekiah, who had fled, was captured on the road to Jericho. Judgment was speedily executed; his sons were slain before his eyes, and he himself was deprived of sight and sent in chains to Babylon, where he died in prison, 2 Ki. xxiv. 17; xxv. 1; Jer. xxviii. xxxiv., xxxvii., xxxviii., xxxix., lii.; Ezek. xvii. 15.

3. A false prophet put to death by Nebuchadnezzar, Jer. xxix. 21, 22. 4. One of the princes of Jehoiakim's court, Jer. xxxvi. 12.

**ZEEB** (ze'eb), a prince of Midian slain by the Ephraimites after the rout of the Midianitish army by Gideon, Jud. vii. 25; viii. 3.

**ZEEB**, a wine-press, so called because the Ephraimites killed Zeeb there, Jud. vii. 25.

**ZEISBERGER** (dzis'ber-ger), DAVID, was born in 1721, in Moravia, and emigrated to Georgia, where he arrived in 1738. After some time he removed to Pennsylvania, where he became one of the founders of the Moravian settlements at Bethlehem and Nazareth. He left Pennsylvania for Ohio, where he became a missionary preacher among the Indians; and he continued with indefatigable zeal in this work during life. He died at Goshen, which is situated on the Muskingum River, in Ohio, in the year 1808. He was characterized by great piety and industry; and while sedulously engaged as a preacher, he found time to prepare a great number of small works in the language of the Delaware Indians, including grammars, histories, sermons, dictionaries and a considerable number of Biblical subjects. The godliness and simplicity, the zeal and energy and the untiring devotion of this excellent man were well known and greatly appreciated in his own day, and his memory is still cherished.

**ZELAH** (ze'lah), a town of Benjamin where Saul and Jonathan were buried, Josh. xviii. 28.

**ZELEK** (ze'lek), one of David's warriors, 2 Sam. xxiii. 37.

**ZELOPHEHAD** (ze-lof'e-had), a descendant of Manasseh who died in the wilderness, leaving only daughters. To them, therefore, his inheritance was allotted, and certain regulations were in consequence made in regard to heiresses, Num. xxvi. 33; xxvii. 1, 7; Josh. xvii. 3.

**ZELOTES** (ze-lo'teez), an epithet of Simon the apostle, Luke vi. 15, corresponding to "Canaanite," or, as it should rather be, "Canaanite," the zealous. See SIMON, 2.

**ZELZAH** (zel'zah), a place by the border of Benjamin, not far from Rachel's sepulchre, 1 Sam. x. 2.

**ZEMARAIM** (zem-a-ra'im). 1. A town of Benjamin, Josh. xviii. 22, possibly *es-Sumrah*, four miles north of Jericho. 2. A hill or summit in Mount Ephraim, which extended to or into the territory of Benjamin, and might have its name from No. 1, 2 Chr. xiii. 4.

**ZEMARITE** (zem'a-rite), a tribe mentioned among the descendants of Canaan, and doubtless forming part of the population by which the land was anciently occupied, Gen. x. 18. They appear

THE PRODIGAL SON.

ing of the Gentiles, and the final glory and blessedness of the Church of God, uniting Jew and Gentile in one holy community under their great High-priest and King, ch. ix.-xiv.

**ZEDAD** (ze'dad), a place on the northern frontier of Palestine, Num. xxxiv. 8. It is probably the large village east of the road from Damascus to Hums, now called *Sadad*.

**ZEDECHIAS** (zed-e-ki'as), 1 Esd. i. 46, King Zedekiah.

**ZEDEKIAH** (zed-e-ki'ah). 1. A false prophet who encouraged Ahab to go against the Syrians at Ramoth-gilead, promising him victory, and by the symbol of artificial horns declaring that he should

likely to attend his efforts. His heart was not right before God, and therefore was he left without divine succor. Corrupt and weak, he gave himself up into the hands of his nobles and lent an ear to false prophets, while the faithful lessons of Jeremiah were unwelcome and repaid by incarceration. Like all of his class, he was unable to follow good, and became the slave of wicked men, afraid alike of his own nobility and of his foreign enemies. By his folly and wickedness he brought the State to the brink of ruin. Yet the danger did not open his eyes. Instead of looking to Jehovah, he threw himself for support on Egypt when the Chaldean came into the land and laid siege to his capital. The siege was begun on the tenth day of the tenth month, in the ninth year of his reign. For a year and a half did Jerusa-

THE ANGEL VISITS JOSEPH, THE HUSBAND OF MARY.

Tit. iii. 13. He was, we imagine, a Hebrew jurist or teacher of the law to whom the title of his old profession was still given.

**ZENDER** (zen'der), JOACHIM DENIS LAURENT, M.D., was born in 1805, at Paris, in France. He was educated in the College Royal de Louis le Grand, whence he passed to the celebrated theological seminary of St. Sulpice. He emigrated to the United States in the year 1828, and became a teacher in several Roman institutions. He turned his attention to medicine, and at length, in 1844, he was ordained to the ministry in the Protestant Church, and he collected a congregation to which he preached in the French language. His published works were of a general character, intended to be of use to French settlers in the United States, while several of them had a medical character. He was eminent as a linguist.

**ZENO** (ze'no), the Greek philosopher, founder of the Stoic School, was born at Citium, a small town in Cyprus. The date of his birth is uncertain, but it was probably about B. C. 355. He taught at Athens for fifty-eight years. His pupils assembled in the painted colonnade or *stoa*, whence they received the name of Stoics. The aim of Zeno was to found a system of human knowledge which should take the place of the skepticism then prevalent, and arrest if possible the decay which he saw fast spreading over Greek civilization. He had some of the best qualities of the early Romans—manly energy, severe simplicity of life and profound regard for moral obligation. His philosophy, therefore, had a practical rather than a speculative aim. He derived all know-

ledge from sensation and reflection—the exercise of reason upon impressions received through the senses; taught that the highest aim of man is to live according to right reason; that the way to virtue (perfect manhood) is through wisdom; that virtue alone is the ground of blessedness; that all good actions are equally good, and all evil ones equally evil; that the passions must be eradicated and tranquillity secured by "apathy" (freedom from passion). The system of the Stoics was more fully developed by the great followers of Zeno, among whom were Cleanthes, his pupil and successor, Chrysippus, Diogenes of Babylon and others. Many great thinkers and noble characters went forth from this school, and its doctrines were peculiarly attractive to the noblest Romans. But the system also produced many examples of extravagant egotism, pride and asperity, and some of its most distinguished adherents availed themselves of the liberty it gave them of putting an end to their own lives. Zeno is said to have done so, in consequence of an accident as he quitted the *stoa*. The date of his death is probably about B. C. 263. After his death the Athenians are said to have honored him by the decree of a crown of gold, a public funeral and a statue of brass.

**ZENO**, emperor of the East, was proclaimed emperor in A. D. 474. He had no capacity for government and led a sensual, corrupt life; but he undertook to interfere in ecclesiastical affairs, and attempted, by the publication, in 482, of his famous *Henoticon*, to put an end to the miserable disputes and disgraceful disorders of the churches.

between the Arvadite and the Hamathite; so also at 1 Chr. i. 16. Of the Zemarites nothing is known, unless we have traces of them in the town and mount of Zemiraim mentioned immediately before.

**ZEMIRA** (ze-mi'rah), a descendant of Benjamin, 1 Chr. vii. 8.

**ZENAN**. See ZAAANAN.

**ZENAS** (ze'nas), a Christian whom Paul, writing to Titus, wished him to bring with him,

THE SERMON ON THE MOUNT.

But instead of leading to union, this concordat was the fruitful germ of new divisions. Zeno died A. D. 491.

**ZEPHANIAH** (ze-fa-ni'ah). 1. The second priest in the reign of Zedekiah, who had succeeded in the place of Jehoiada, and was slain at Riblah after Jerusalem was taken, 2 Ki. xxv. 18-21. 2. A Kohathite Levite, 1 Chr. vi. 36. 3. The ninth in order of the minor prophets. All our knowledge of him is derived from the title to his book, which informs us that he prophesied in the reign of Josiah and records the names of his ancestors through four generations. Though the name of the head of the family is the same in Hebrew as that of the pious king Hezekiah, there is no rea-

son to suppose that he was the same person. The description which Zephaniah gives, ch. i. 4, of the disorders prevailing among the Jewish people has led some to suppose that his messages must have been delivered before the great reformation which Josiah effected in the eighteenth year of his reign. But the prophecy may be of later date, for that reformation was evidently very partial, enforced by the example and authority of the monarch, but not heartily entered into by the princes and people. 4. The father of one or more persons concerned in a symbolical action, Zech. vi. 10, 14.

**ZEPHANIAH, THE BOOK OF.** This book may be divided into three parts, which are, however, intimately connected with one another:

twin brother of Pharez, sons of Judah and Tamar, Gen. xxxviii. 30, from whom sprung the family of the Zarhites, Num. xxvi. 20; perhaps also Izrahites, 2 Chr. xxvii. 8. 2. A son of Reuel and grandson of Esau, who also was one of the dukes or chieftains of Edom, Gen. xxxvi. 17. 3. A son of Simeon, according to 1 Chr. iv. 24; but in Gen. xlvii. 10 he bears the name of Zohar. 4. A Levite of the family of Gershon, the son of Iddo, 1 Chr. vi. 21. 5. The Cushite king or leader who invaded Judah in the tenth year of King Asa, B. C. 941, with a vast host of men. Asa defeated them in the valley of Zephathah at Mareshah, utterly routed them, pursued them to Gerar and carried back much plunder from that neighborhood. We are left uncertain as to the country

I. Denunciations of the sins and punishments of Judah, with a call to repentance, ch. i.; ii. 1-3.

II. Exemplary judgments upon neighboring nations, ch. ii. 4-15.

III. Severe rebukes and threatenings against Jerusalem, followed by gracious promises of restoration under the gospel, ch. iii.

**ZEPHATH.** See HORMAH.

**ZEPHATHAH** (ze-fa'thah), a valley where King Asa met and overcame the Ethiopian host, 2 Chr. xix. 10. It was by Mareshah in the territory of Judah.

**ZEPHI** (ze-fi), or **ZEPHO** (ze-fo), one of the sons of Eliphaz, Esau's son, Gen. xxxvi. 11, 15.

**ZEPHON** (ze-fon), one of the sons of Gad, Num. xxvi. 15; called also Ziphion, Gen. xlv. 16.

**ZEPHONITES** (ze-fon-ites), a family of Gad, descendants of Zephon, Num. xxvi. 15.

**ZER** (zur), a city of Naphtali, Josh. xix. 35.

**ZERAH** (ze-rah), or **ZARAH** (za'rah). 1. The

THE SERMON AT THE SEA-SIDE.

from which Zerah came. The term Cushite or Ethiopian may imply that he was of Arabian Cush, the principal objection to which is that history affords no indication that Arabia had at that epoch any king so powerful as Zerah. That he was of Abyssinia or African Ethiopia is another conjecture, which is resisted by the difficulty of seeing how this huge host could have obtained a passage through Egypt, as it must have done to reach Judaea. If we could suppose, with Champollion, that Zerah the Cushite was the then king of Egypt, of an Ethiopian dynasty, this difficulty would be satisfactorily met. In fact, it is now often stated that he was the same with Osorkon I., the son and successor of the Shishak who invaded Judaea twenty-five years before, in the time of Rehoboam. This is a tempting explanation, but cannot be received without question, and it is not deemed satisfactory by Rosellini, Wilkinson, Sharpe and others. In fact, no conclusion that can be relied upon has yet been exhibited.

**ZERAHIAH** (ze-ra-hi'ah). 1. A priest of the line of Eleazar, 1 Chr. vi. 6, 51. 2. One whose son headed a party who returned from Babylon with Ezra, Ezra viii. 4.

219

**ZERED** (zer'ed), or **ZARED** (za'red), a brook or valley communicating with the Dead Sea near its south-east extremity. It marked the period of the wilderness sojourn on the one side as Kadesh did on the other, Dent. ii. 14; Num. xxi. 12. The *Wady el Akhy* is now generally supposed to be ancient Zered.

**ZEREDA** (ze-re'da), or **ZEREDATHAH** (ze-re-da'thah), a town of Ephraim in the plain of Jordan, the birthplace of Jeroboam I., 1 Ki. xi. 26. Possibly it may be identical with Zaretan, Josh. iii. 16, Zererath, Jud. vii. 22, Zartanah, 1 Ki. iv. 12, Zarthan, 1 Ki. vii. 46. But Zarthan was not far from Beth-shan.

**ZERERATH** (ze-er'ath) occurs in Jud. vii. 22, and is doubtless identical with ZEREDA.

**ZERESH** (ze'resh), the wife of Haman, Esth. v. 10, 14; vi. 13.

**ZERETH** (ze'reth), one of the descendants of Judah, 1 Chr. iv. 7.

**ZERI.** See IZRI.

**ZEROR** (ze-ror'), a Benjamite, one of Saul's ancestors, 1 Sam. ix. 1.

**ZERUAH** (ze-ru'ah), the mother of Jeroboam I., 1 Ki. ix. 26.

**ZERUBBABEL** (ze-rub'ba-bel), son of Shealtiel, of the royal house of David, 1 Chr. iii., was the leader of the first colony of Jews that returned from captivity to their native land under the permission of Cyrus, carrying with them the precious vessels belonging to the service of God. With the aid of Joshua and his body of priests, Zerubbabel proceeded, on his arrival in Palestine, to rebuild the fallen city, beginning with the altar of burnt-offerings, in order that the daily services might be restored. The Samaritans, however, having been offended at being expressly excluded from a share in the land, did all they could to hinder the work, and even procured from the Persian court an order that it should be stopped. Accordingly, everything remained suspended till the second year of Darius Hystaspis, A. D. 521, when the restoration was resumed and carried to completion, according to Josephus, owing to the influence of Zerubbabel with the Persian monarch.

THE PEOPLE OF NAZARETH SEEK TO CAST JESUS FROM THE PRECIPICE.

**ZERUIAH** (zer-u-i'ah), daughter of Jesse, sister of David, 1 Chr. ii. 16, and mother of Joab, Abishai and Asahel, 2 Sam. ii. 18; iii. 39.

**ZETHAM** (ze'tham), a Levite, 1 Chr. xxiii. 8.

**ZETHAN** (ze'than), a Benjamite chieftain, 1 Chr. vii. 10.

**ZETHAR** (ze'thar), one of the seven chamberlains or eunuchs at the court of Ahasuerus, Esth. i. 10.

**ZIA** (zi'ah), a Gadite, 1 Chr. v. 13.

**ZIBA** (zi'bah), a servant of the house of Saul, or, according to the statement of Josephus, a slave to whom Saul had given his liberty. His history and character have already been discussed in the article MEPHIBOSHETH. In 2 Sam. ix. 10 he is said to have had fifteen sons and twenty servants.

**ZIBEON** (zib'e-on), a son of Seir the Horite, called a Hivite, Gen. xxxvi. 2, 14, 20, 24, 29.

**ZIBIA** (zib'yah), a Benjamite, 1 Chr. viii. 9.

**ZIBIAH** (zib'yah), the mother of Jehoash, or Joash, king of Judah, 2 Ki. xii. 1.

**ZICHRI** (zik'ri), a very common name among the Israelites, some of whom appear to have been valiant soldiers, but none otherwise distinguished. A son of Izhar (improperly spelled *Zithri* in the common copies of the Authorized Version), Ex. vi. 21; a Benjamite of the sons of Shimei, 1 Chr. viii. 19; other Benjamites, 1 Chr. viii. 23, 27; an Ephraimite in the army of Pekah, and a hero, 2 Chr. xxviii. 7; and several persons of other families, 1 Chr. ix. 15; xxvi. 25; xxvii. 16; 2 Chr. xvii. 16; xxiii. 1; Neh. xii. 17.

**ZIDDIM** (zid'dim), a city of Naphtali, Josh. xix. 35, possibly *Hattin*, at the foot of the hill so called.

**ZIDKIJAH** (zid-ki'jah), one who sealed the covenant, Neh. x. 1. His name appears immediately after that of Nehemiah.

**ZIDON**. See SIDON.

**ZIDONIANS** (zi-do'ne-anz), 1 Chr. xxii. 4, inhabitants of Zidon. See SIDONIANS.

**ZIF**. See MONTHS.

**ZIHA** (zi'hah). 1. One whose descendants, Nethinim, returned with Zerubbabel, Ezra ii. 43; Neh. vii. 46. 2. A person, perhaps the representative or descendant of No. 1, who was a ruler of the Nethinim, Neh. xi. 21.

**ZIIM** (zi'im), Isa. xlii. 21, margin. This word, from a root signifying dryness, means inhabitants of the desert, both men, as "they that dwell in the wilderness," Ps. lxxii. 9, and perhaps Isa. xxiii. 13, and animals, various kinds of wild beasts, Ps. lxxiv. 14; Isa. xlii. 21; xxxiv. 14; Jer. l. 39.

**ZIKLAG** (zik'lag), a city belonging to the tribe of Simeon, Josh. xv. 31, but at times subject to the Philistines of Gath, whose king, Achish, bestowed it upon David for a residence; after which it pertained to Judah, 1 Sam. xxvii. 6; 2 Sam. i. 1; Neh. xi. 28.

While David was absent with his men to join Achish, Ziklag was burned and plundered by the Amalekites; and on his return, after receiving the spoil from them, he remained here till called to assume the crown after the death of Saul. It was

during his stay in this place that he was joined by many considerable and valiant persons, whose adhesion to his cause was of much importance to him, and who were ever after held in high esteem in his court and army.

**ZILLAH** (zil'lah), one of the wives of Lamech, of the line of Cain, Gen. iv. 19, 22, 23.

**ZILPAH** (zil'pah), the handmaid of Leah, whom she gave as a concubine to Jacob. Her sons were Gad and Asher, Gen. xxix. 24; xxxv. 26.

**ZILTHAI** (zil'thai). 1. A Benjamite, 1 Chr. viii. 20. 2. A chieftain of Manasseh who joined David at Ziklag, 1 Chr. xii. 20.

**ZIMMAH** (zim'mah). 1. A Levite of the family of Gershon, 1 Chr. vi. 20, 42. 2. A Gershonite Levite; perhaps the same person as No. 1 is intended, 2 Chr. xxix. 12.

**ZIMRAN** (zim'ran), one of the sons of Abraham by Keturah, Gen. xxv. 2. Probably the Zamzeri, a tribe in the interior of Arabia, were descended from him.

**ZIMRI** (zim'ri). 1. A Simeonite chief slain by Phinehas for his open sin with a Midianitish woman, Num. xxv. 14. 2. A captain under Elah, king of Israel, who conspired against his master and slew him in Tirzah. Zimri ascended the throne, and destroyed all the house of Baasha, but he reigned only seven days; for the soldiery made Omri king, who marched against Tirzah; and Zimri, finding resistance vain, shut himself in the palace, fired it and perished, 928 B.C., 1 Ki. xvi. 9-20. His fate served to point a sarcasm of Jezebel against Jehu as he, having slain two kings, was entering Jezreel, 2 Ki. ix. 31. 3. A descendant of Judah, of the family of Zerach, 1 Chr. ii. 6. He is the person called Zabdi in Josh. vii. 1, 17, 18. 4. One of Saul's posterity, 1 Chr. viii. 36; ix. 42.

**ZIMRI**, some place or district whose kings are threatened, Jer. xxv. 25. It has been supposed to be Zabram, a city between Mecca and Medina; but it is mentioned with Elam and Media, and is clearly distinguished from Arabia.

**ZIN**, a desert on the south of Palestine and

CHRIST UPON THE SEA.

westward from Idumnea, in which was situated the city of Kadesh-barnea, Num. xiii. 21. Its locality is therefore fixed by the considerations which determine the site of Kadesh to the western part of the Arabah, south of the Dead Sea.

**ZINAH**. See ZIZAH.

**ZINZENDORF** (zin'zen-dorf), NICOLAUS LUDWIG VON, founder of the Moravian settlement of Herrnhut, and restorer of the sect, was son of George Louis, Count von Zinzendorf, Saxon minister of state, and was born at Dresden in 1700. He was piously brought up, and fell early under the influence of the Pietist teacher Spener. He was educated under the care of Francke, the phil-

anthropist, at Halle, and at the University of Wittenberg, and in opposition to the wish of his friends resolved to enter the Church. For a short time he led, it is said, a loose and immoral life. After a stay of three years at Wittenberg, during which he gained the friendship of Frederick von Watteville, a young Swiss noble, and the missionary Ziegenbalg, he visited Holland and France, making the acquaintance of many eminent persons and winning general esteem. After his return to Saxony, in 1721, he married a sister of his friend, the count of Reuss Ebersdorff, and soon after, he generously offered a home on his estate to such of the Moravian Brethren as wished to escape the persecutions of the Austrian government. The settlers, few, poor and industrious, established

CHRIST CURES THE LEPERS.

themselves on the spot afterward so celebrated under the name Herrnhut. Nine years later his father, Count von Zinzendorf, carried out the project he had long cherished of sending missionaries to the heathen, and the first were sent to Greenland. Ordained minister of the Lutheran Church in 1734, he was banished from Sweden, and soon after from Saxony; traveled in Holland, Livonia and Prussia; had several interviews with the king, Frederick William I., and was ordained bishop. In 1737 he was in London, where he held meetings, made John Wesley's acquaintance and got a Moravian society established. After a visit to the West Indies, where he rendered great services to the missionaries, he made a journey through the British colonies of North America, gained the esteem of the Friends, traveled among the red Indians and founded a Moravian settlement at Bethlehem. In 1747 he was allowed to return to Saxony. He made a second visit to England and America, and after traveling again in Holland and Switzerland married a second wife and spent his last years peacefully at Herrnhut. He died there, 9th May, 1760, and his funeral was

attended by Brethren from all parts of the world. He was author of many short religious works and many hymns.

**ZION.** See JERUSALEM.

**ZIOR** (zi'or), a city in the mountains of Judah, Josh. xv. 54.

**ZIPH** (zif), one of the posterity of Judah, 1 Chr. iv. 16.

**ZIPH**, the name of a city in the tribe of Judah, Josh. xv. 55, and of a desert in its vicinity, 1 Sam. xxiii. 14, 15. It is mentioned by Jerome, but had not been since noticed till Dr. Robinson found the name in the Tell Zif (Hill of Zif), which occurs about four miles and a half south by east from Hebron, and is a round eminence about a hundred feet high, situated in a plain. A site also called Sif lies about ten minutes east of this, upon a low hill or ridge between two small wadis, which commence here and run toward the Dead Sea. There is now little to be seen besides broken walls and

foundations mostly of unhewn stones, but indicative of solidity.

**ZIPHAH** (zi'fah), one of the descendants of Judah, 1 Chr. iv. 16.

**ZIPHIMS** (zi'fims), the inhabitants of Ziph, Ps. liv., title.

**ZIPHION** (zif'e-on), one of the sons of Gad, Gen. xlv. 16. He is called Zephon in Num. xxvi. 15.

**ZIPHITES** (zi'fites), the inhabitants of Ziph, 1 Sam. xxiii. 19; xxvi. 1.

**ZIPHRON** (zif'ron), a city in the North of Palestine, Num. xxxiv. 9, said still to bear its ancient name.

**ZIPPOR** (zip'por), the father of Balak, king of Moab, Num. xxii. 2, 4, 10, 16.

**ZIPPORAH** (zip'po-rah), the wife of Moses, the daughter of Jethro or Raguel, Ex. ii. 21; iv.

20, 25; xviii. 2. There need be nothing added to what has been already given in the article MOSES.

**ZITHRI** (zith'ri), a Levite, son of Uzziel, Ex. vi. 22. The introduction of the name into the verse preceding is a mistake. See ZICHRI, 1.

**ZIZ**, a pass, probably not far from En-gedi, the modern 'Ain Jidy, where Jehoshaphat met the Moabites and others who were marching to attack him, 2 Chr. xx. 16.

**ZIZA** (zi'za). 1. A chieftain of Simeon, 1 Chr. iv. 37. 2. One of the sons of Rehoboam, 2 Chr. xi. 20.

**ZIZAH** (zi'zah), a Gershonite Levite, 1 Chr. xxiii. 11. He is also, 1 Chr. xxiii. 10, called, probably by corruption of the name, Zina.

**ZIZKA** (ziz'kah), JOHANN, the Hussite leader, was born at Trocnow, in Bohemia, about 1360 or 1380. He was of a noble family, and became a page at the court of King Wenceslaus; but soon disgusted with the frivolity and vice he witnessed, he entered on a soldier's life. He served in the English army in France; then in the Polish army, and greatly distinguished himself at the famous battle of Tannenberg, in which the Teutonic knights were finally defeated; next fought against the Turks, and in 1415 distinguished himself in the English army at Agincourt. That same year the Reformers John Huss and Jerome of Prague, countrymen of Zizka, and whose doctrines he held, were burnt at Constance. Failing to rouse the king, whose chamberlain he was, to decisive action, Zizka resolved to take arms himself as the defender of the Hussites. A body of troops was organized, and the terrible Hussite war began with a riot at Prague, in July, 1419. Zizka took the chief command, built fortresses and trained the troops, took Prague in 1420, and won a great victory over the emperor Sigismund, who attacked him on Mount Wittkow, since named Zizka-Berg, in July. In the following year he made himself master of the citadel of Prague, and soon after lost his remaining eye: he had lost one in his childhood. He nevertheless continued to hold the command and to beat the imperial armies, and among all the battles and engage-

CHRIST DRIVES THE TRADERS OUT OF THE TEMPLE.

ments he fought he was only once defeated. The emperor at last treated with him on equal terms, granted freedom of worship to the Hussites and appointed their hero governor of Bohemia. Zizka tarnished his fame by the cruelties he practiced on the enemies of his faith; and like some other men called to like grave tasks, justified his course on the ground that he was the agent of divine Providence in inflicting vengeance. The treaty with the emperor was not completed when Zizka, engaged in the siege of a castle near Czaslau, was seized with the plague, and died there, October 12, 1404. His remains were interred at Czaslau, and the emperor Ferdinand I., visiting the church in 1554, is said to have gone with terror from the town to sleep elsewhere. The awe inspired by the name of this great soldier is illustrated by the

myths which have grown up around it. The war between the Catholics and the Hussites continued for eleven years after Zizka's death.

**ZOAN** (zo'an), a very ancient city of Lower Egypt, called by the Greeks Tanis, both the Hebrew and Greek names being derived from the same Egyptian word which has the meaning above given. Zoan, the Avaris of Egyptian history, was seated on the eastern side of the Tanitic arm of the Nile. We are told that it was built seven years later than Hebron, Num. xiii. 22. It is further mentioned as having been the scene—at least the district around it, "the field of Zoan"—of the marvelous deeds performed in order to the deliverance of Israel, Ps. lxxviii. 12, 43. Its importance appears by the way in which the prophets

CHRIST BLESSES THE CHILDREN.

speak of it, Isa. xix. 11, 13; xxx. 4; Ezek. xxx. 14. Zoan was the chief town of a nome or province, and would seem to have been the metropolis of some (the twenty-first and twenty-third) of the dynasties of Egyptian kings. There are extensive ruins yet existing at a place called *Sân* or *Zân*, which are the remains of this great city.

**ZOAR** (zo'ar), one of the five cities of the plain, originally called Beza, Gen. xiii. 10; xiv. 2, 8. When the other cities were destroyed, this was spared on Lot's intercession; it was but small, and it would give him shelter, Gen. xix. 20-30. Zoar was the limit of Moses' view in one direction, Deut. xxxiv. 3. It once belonged to Moab, Isa. xv. 5; but in post-exilic times it was seized by the Arabs, and it probably formed part of the dominion of Aretas. Its position was, according to some, south-east of the Dead Sea, where ruins have been noted by late travelers. But though there must yet rest an uncertainty upon the matter, it is more probable that Zoar was at the northern end of the sea, on the eastern side. It was near Sodom, within a moderate walk, which Lot performed in a morning, Gen. xix. 15, 20, 23. The country around could be seen from a hill by Beth-

el, Gen. xiii. 10, which is not the case with the country about the southern part of the Dead Sea; and, further, it was the "plain of Jordan," the Jordan valley, that Lot chose for his residence, an appellation which would not have been given to a district miles away from the river.

**ZOBA** (zo'ba), or **ZOBAB** (zo'bah), a part of Syria which formed a separate kingdom in the earlier days of the Hebrew monarchy. The kings of it are represented as making war successively on Saul, 1 Sam. xiv. 47, and David, 2 Sam. viii. 3; x. 6. The region is nowhere well defined; but it seems, from the two latter passages referred to and 1 Ki. xi. 24, to have adjoined the territory of Damascus, and to have stretched toward the Euphrates; therefore probably somewhat to the east of what was afterward called Cœle-Syria.

**ZOBEBAB** (zo'be-bah), one of the descendants of Judah, 1 Chr. iv. 8.

**ZOEGA** (zo-e'ga), GEORG, a celebrated Danish archaeologist, was born in 1755, and educated at Altona and Göttingen, after which he traveled through Germany, Switzerland, Italy, France and

England. On his return his great learning and ability recommended him to the king, who sent him on a numismatic tour through Europe. He finally fixed his residence at Rome as the agent of the king of Denmark, who appointed him, in 1802, professor of the University of Kiel. Pius VII. employed him to interpret the hieroglyphics on the obelisks at Rome, the result of which was his magnificent folio, "On the Origin and Use of Obelisks." Several other works, chiefly on antiquities, were published by him. He died in 1809.

**ZOHAR** (zo'har). 1. The father of Ephron the Hittite, Gen. xxiii. 8; xxv. 9. 2. One of the sons of Simeon, Gen. xvi. 10. He is also called Zerah, Num. xxvi. 13.

**ZOHELETH** (zo'he-leth), a stone by Eurogel, 1 Ki. i. 9.

**ZOHETH** (zo'heth), one of the descendants of Judah, 1 Chr. iv. 20.

**ZOPHAH** (zo'phah), a chief of Asher, 1 Chr. vii. 35, 36.

**ZOPHAI** (zo'pha-i), a Kohathite Levite, ancestor of the prophet Samuel, 1 Chr. vi. 26. He is called also Zuph, 1 Chr. vi. 35.

**ZOPHAR** (zo'far), one of Job's friends, called "the Naamathite." His speeches are rough and cutting, and he has less to say than the other interlocutors, Job ii. 11; xi. 1; xx. 1; xlii. 9.

**ZOPHIM** (zo'fim), a place whither Balak brought Balaam, from which only the extremity of the Israelitish camp could be seen, Num. xxiii. 14. See also RAMAH, 2.

**ZORAH** (zo'rah), a town reckoned as in the plain of Judah, Josh. xv. 33, but inhabited by Danites, Josh. xix. 41, not far from Eshtaol, and chiefly celebrated as the birthplace of Samson, Jud. xiii. 2, 25; xviii. 2, 8, 11. The site may still be recognized under the name of Surah, situated upon a spur of the mountains running into the plain north of Beth-shemesh.

**ZORATHITES** (zo'rath-ites), 1 Chr. iv. 2, a family of Judah, possibly inhabitants of Zorah.

**ZOREAH** (zo're-ah), Josh. xv. 33. See ZORAH.

**ZORITES** (zor'ites), 1 Chr. ii. 54, probably inhabitants of Zorah.

**ZOROASTER** (zo-ro-as'-ter), who is styled the "Father of Magianism," was probably a mythical personage. This supposition is rendered all the more likely from the circumstance that seven countries claimed him as a native, and that the period of his birth can be assigned to no distinct date. The doctrine of two principles—Ormuzd, the good principle, and Ahri-man, the evil principle—formed the basis of his system.

**ZOROBABEL**. See ZERUBBABEL.

**ZOSIMUS** (zo'se-mus) was a Greek historian who flourished in the fifth century, under Theodosius the Younger, and was a violent enemy of the Christians. He wrote a history of the Roman emperors, in six books, beginning with Augustus and ending with Honorius, edited at Oxford in 1679, and by Cellarius in 1696. The style is highly commended by Photius. Lennclavius translated the work into Latin. The only value that attaches to such works lies in the fact that they tell us the grounds on which the heathen opposed Christian-

JUDAS BARGAINING TO BETRAY THE LORD.—See engraving on page 1050.

ity; and as in the case of Porphyry and Julian, we now know that their arguments were utterly childish and absurd, generally resting on ignorance and misrepresentation.

**ZOUCH** (zouch), DR. THOMAS, a divine and biographer, was born in Yorkshire, in 1737, received his education at Trinity College, Cambridge, became rector of Scrayingham and prebendary of Durham, refused the bishopric of Carlisle in 1808 on account of his advanced age, and died in 1815. Among his works are—"The Crucifixion," a Seatonian prize poem; "An Inquiry into the Prophetic Character of the Romans."

**ZUAR** (zu'ar), the father of Nethaneel, prince of Issachar, Num. i. 8; ii. 5.

**ZUBLY** (zub'le), JOHN JOACHIM, D.D., was born in 1724, at St. Gall, in Switzerland. He was ordained to the ministry in 1744. The time of his arrival in America is not precisely known, but in 1760 he took charge of the church in Savannah, Georgia, which is known as the Independent Presbyterian. He was an admirable linguist, and accordingly he preached in German, in French and in English to the people of these nationalities who were settled in Savannah and the neighborhood. When the Revolutionary troubles broke out, he took the side of the colonies; but he refused his assent to the separation and ultimate independence of the colonies, and accordingly he became exceedingly unpopular. He had been appointed a delegate to the Continental Congress, and he was a member at Philadelphia in 1775-76; but like

THE CRUCIFIXION.

**ZURISHADDAI** (zu-re-shad'di), the father of Shelumiel, prince of Simeon, Num. i. 6; ii. 12.

**ZUZIMS** (zu'zimz), **THE**, a people mentioned but once, and quite incidentally, in connection with the expedition of Chedorlamer and his marauding party. On their way to Mount Seir, it is said, they attacked, among others, the "Zuzim, in Ham," Gen. xiv. 5. It is conjectured by Gesenius, Ewald and others that they may have been the same as the Zamzumim, chiefly on the ground

of a certain similarity in the names, the Zuzim of Ham being regarded as an abbreviation of the Zamzumim of Ammon. The conjecture, even if true, would add little to our knowledge; but our materials are too scanty to enable us to form any judgment of its probability, as the references in Genesis to these ancient tribes are exceedingly vague and general.

**ZWINGLI** (zwing'g'l), or **ZWINGLI** (zwing'gle), **ULRICH**, the great Reformer of Switzerland, was born at the hamlet of Wildhaus, in the Tockenburg, January 1, 1484, seven weeks after the birth of Luther. His father, an Alpine herdsman, was *amman* of the commune, and highly respected for his character as well as his office. Ulrich showed high intellectual endowments in his earliest years, was brought up piously, and after receiving instruction from his uncle, parish priest of Wesen, at the age of eighteen he was sent to school at Basle, and thence he went to Berne, where he acquired a knowledge of Greek and Hebrew, and at Vienna he studied philosophy and divinity. He applied himself to scholastic theology, but gave it up in disgust, as a mere waste of time, and soon after rejoiced to hear the teaching of Thomas Witten-

bach. Zwingli eagerly studied the classics, and became one of the best scholars of his time. In 1506 he was ordained priest, and accepted the place of pastor of Glarus, which he filled with zeal and devotedness for ten years. During this period, thoughts were working in his mind which were the germs of the Reformation to come. He twice accompanied the Swiss auxiliaries to the wars in Italy, fought at the battle of Marignano, and used his influence with his countrymen to dissuade them from foreign military service. In 1514 he visited Erasmus at Basle, and was greatly influenced by his writings. His visits to Italy were of service to him in the same way that such visits were to Luther, making clear to him the evils, errors and corruptions of the Church, and the necessity of reform. The year 1516 Zwingli has noted as the period of the commencement of the Swiss Reformation. That same year he removed to the secluded monastery of Einsiedle, of which he was appointed priest and preacher. His clear and eloquent announcement of Scriptural truth astonished his new hearers and drew crowds from the surrounding country to hear him. When the friar Sansom appeared in Switzerland and carried on with matchless impudence the traffic in indulgences, Zwingli boldly opposed him, so that he was refused admission at several places. In the following year, 1519, through his high reputation, Zwingli was appointed preacher at the cathedral of Zurich, and was thus brought into the centre of the political movements of Switzerland. His preaching produced immense excitement by its novelty, freshness, sincerity and truthfulness; but while most were charmed, not a few were alarmed and angry. In 1522 began the action of the court of Rome against the Reformation in Switzerland; the bishop of Constance by letter to the chapter at Zurich attempted to stop the preaching of Zwingli. The latter replied in his "Architeles," and the attempt failed. But an order of the Diet was soon after obtained which prohibited preaching against the monks. Mean-

others, he opposed extreme measures, and left the city. He was in Savannah in 1779, when that city was besieged by the American and French armies, and he lost much of his property. He died in South Carolina, in the year 1781, and his remains were interred at Savannah. He was an earnest man, of an ardent temperament and an emotional nature, a zealous laborer and a pious man. He published a little work entitled "The Real Christian's Hope in Death" and several sermons.

**ZUPH** (zuf). See **SEA**, **RED SEA**.

**ZUPH**, a Levite, 1 Sam. i. 1. See **ZOPHAI**.

**ZUPH**, the district about Ramathaim-zophim, 1 Sam. ix. 5. See **RAMAH**, 2. Possibly the name is preserved in *Saba*, five or six miles west of Jerusalem.

**ZUR** (zur). 1. One of the Midianitish kings or chiefs slain by the Israelites, Num. xxv. 15; xxxi. 8. 2. A Benjamite, 1 Chr. viii. 30; ix. 36.

**ZURIEL** (zu're-el), the chief of the families of Merari, Num. iii. 35.

while, enmity was growing into persecution, and the Reformer was sometimes overwhelmed with the forebodings of evil to come and the failure of his holiest hopes. Early in 1523 a conference between the advocates and opponents of the new doctrines was held at Zurich by order of the Great Council; but the discussions, which lasted three days, left the controversy as it was, the Reformers arguing on the basis of Scripture and their opponents from the canon law, and there being no first principles in common to them. Not long after the Reformation was publicly established in Zurich, pictures and statues were taken out of the churches, and instead of the mass a simple form of celebrating the Lord's Supper was adopted. Education was provided for and convents were suppressed, just regard being had to the interests of their inmates. In 1528 Zwingli attended the important conference of Baden. Zwingli and Luther differed in their views of the eucharist, the former regarding it as a simple commemoration of the death of Christ, and the bread and the wine were only symbols of the Saviour's *absent* body, while Luther held that there was a presence of Christ, though in an incomprehensible manner. The Reformers continued friends until 1525, when Zwingli published his "Commentary on True and False Religion," in which he set forth his views on the Lord's Supper. Ecolampadius and others followed him, and then Luther declared this view to be dangerous. The controversy went on until at length, on the suggestion of the landgrave of Hesse, they met at Marburg; but these great men could not agree, but before they parted the Swiss and German theologians signed their mutual consent to fourteen articles expressing the essential doctrines of Christianity, and expressing a hope that the difference about the *presence* in the euchar-

CHRIST APPEARS TO HIS APOSTLES AFTER HIS RESURRECTION.

ist would not interrupt their harmony. Two years later the long-suppressed enmity of the cantons which remained Catholic broke out in open war against Zurich and Berne. Delay, indecision and half heartedness among the citizens of Zurich made their cause hopeless, and at the battle of Cappel their handful of disorderly troops was easily destroyed or dispersed by the superior numbers and discipline of the Catholic army. Zwingli fell on that field, October 11, 1531. His body was discovered, burnt, quartered, and his ashes mingled with those of swine and scattered to the winds.

His published works consist of commentaries on various books of the Old and New Testaments and

of controversial or theological tracts. On the subjects of the divine decrees, original sin, the state of infants dying without baptism and the future state of virtuous pagans he differed to some extent from several of his contemporaries. Owing to his controversy with Luther, his followers were called Sacramentarians, but the name which they themselves assumed was that of Evangelicals; and they are also called by the name of the Reformed Churches of Switzerland, as distinct from that of Protestants, which applies more particularly to the German Reformed Churches in consequence of the protest delivered to the Diet of Spire in April, 1529.

APPENDIX

TO

POTTER'S COMPLETE BIBLE ENCYCLOPEDIA.

# APPENDIX.

## THE CHRISTIAN DISPENSATION

AS TYPIFIED IN

### THE OLD TESTAMENT, ESPECIALLY IN THE MOSAIC RITES AND CEREMONIES.\*

#### The Origin and Scope of Types.

As all things lie naked and open before God, as His thought is Eternal, as He is One, there is a unity in his whole scheme, there is one grand idea harmonizing the minutest details of His plan—a plan which bridges over all time, as it reaches from eternity to eternity. As God has made the visible universe and controls all events with reference, ultimately, to spiritual beings and spiritual ends, it is natural that his thought and plan, so far as they are revealed in one era, should look to something in the times to come. Hence it is that in the realm of Nature, and yet more in God's peculiar Revelation of Himself in the Kingdom of Grace, there is a constant typical reproduction, a repetition of the Divine idea in new degrees of clearness, so that every present is an antitype of some past and a type of some future. Man, in nature, is the antitype of ages of premonition and promise. Nature herself is the type of Grace, and Grace, under the Old Dispensation, is the type of Grace under the New. "In the Divine works the least blade of grass reveals the most perfect symmetry; in God's works, even the most insignificant, there is the closest adherence." "The Bible is one Book—one grand thought, which embraces the infinite, divine whole in it, the thought which is the spring of the ages, the measure of all that is past and of all that is to come." "When a flower springs up, the spirit which is to shape it is already in the seed, and with every leaf that opens, that hidden something which is the reason of its shape is more and more revealed." "The whole Old Testament is one grand Prophecy, one grand type of that which was to come and has come."

#### Special Meaning of the Word Type.

The word type is a Greek word in an English shape. It originally means anything produced by a blow—a print, a figure, shape, form, pattern, sample. The word type is used with various degrees of latitude. Sometimes it is employed in a sense sufficiently wide to comprehend every sort of figurative allusion which the ingenuity of the interpreter can trace in Holy Scripture. In its proper theological sense, a type is a person, a thing or an event, which either in whole or in part is divinely meant and appointed as the symbol of a person, a thing or an event not yet revealed. It

\* This article is from the pen of the Rev. Charles P. Krauth, D.D., LL.D., Vice-Provost of the University of Pennsylvania, and Norton Professor of Theology in the Lutheran Theological Seminary, Philadelphia, author of "The Conservative Reformation and its Theology," "Berkeley's Principles, with Prolegomena and Annotations," etc.

is one reality hiding for a time another reality. It is a prophecy, but it is not put into language. The lamb is a symbol of Christ. The Paschal Lamb is a type of Christ. In the natural, instinctive innocence and gentleness of every lamb, the mind can trace an analogy to the moral innocence and gentleness of our Lord. But the Paschal Lamb is divinely appointed, in part at least, for the very purpose of symbolizing the sacrifice made and the redemption wrought by Christ. We can apply the symbol of a lamb to any one who is innocent and gentle, but the type of the Paschal Lamb can be applied to our Saviour alone. We can call a little child a lamb, but we cannot call it a Paschal Lamb. We generally mark the antitype with the definite article. Thus we say Christ is the Paschal Lamb, the Atoning Sacrifice, the High Priest. A type, then, is a prophetic similitude, meant in God's mind and expressed in some other way than by words. It is a prophecy in things. It is the shadow of something coming, and, therefore, can be cast only by a substance: "Which are a shadow of things to come, but the body is of Christ," Col. ii. 17. "There are things done," says Augustine, "but prophetically done; they are on earth, but they are of heaven; they are through men, but they come from God."

#### Interpretation of Types.

Great care should be taken that we do not assume as types what are not types. Nothing is a type unless the Bible asserts or implies that it is, or unless it comes clearly within the scope of the same principles on which these assertions rest in other cases. The Bible settles all the principles, but it has not room for all the details. We are to get types out of the Bible, on Bible principles, not to put them into the Bible on our own. We are not to treat the types with an ill-regulated fancy which will make the Scriptures suffer for the fault of the expositor.

But it is also possible to err in the other extreme. We may mistake a rationalistic spirit of depreciation or a constitutional prosiness for sobriety of judgment. The imagination has its perils, but so has the lack of imagination. "Too sharp is dull," but dull is also dull. We must not run into the error of transfusing our own fancies into the divine record, but neither must we be insensible to the glorious richness of its poetry of symbol, allegory and type, in which there is not simply an expression of truth, but a transfiguration of it. The Bible is not only mind to mind, but is also heart to heart—God's mind and heart to ours. Nor for the space of a solitary word are we to forget whose mind and heart we have to deal with in

the Bible. That construction of the whole is most probable, all other things being equal, which is most constant with the majesty, the depth, the omniscience, of the divine mind, the largeness, the tenderness, the pity, of the divine heart. The range of the interpreter is to be widened by the divine range, the divine range not to be narrowed by the meanness and barrenness of the expositor. There is a common guilt and a common curse to him who adds and to him who takes away. He who takes away, robs the hungry of bread; he who adds, puts husk or poison to the lips of the trusting.

But even in the sober development of undoubted types we should carefully distinguish between the points of comparison which are distinctly asserted in the Holy Scriptures themselves (and we mean here to embrace the Old Testament also, which has many elucidations of typical reference), and those which are mere inferences or conjectures of the interpreter, however able and plausible they may be. The one interpretation is infallible, the other is at best simply probable. In the divine application and explanation of types there is a characteristic economy and repression, while the general tendency of expositors has been toward profusion and extravagance.

#### The Mosaic Types.

"We have found Him of whom Moses in the law and the prophets did write." "Had ye believed Moses ye would have believed me, for he wrote of me." "Beginning at Moses and all the prophets, he expounded unto them in all the Scriptures the things concerning himself." "All things which are written in the law of Moses and in the prophets and in the Psalms concerning me." All the Books of Moses have by pre-eminence a direct connection with the person and work of Messiah; they are the fountain-head of prophecy. Moses is the germ of all the Prophets, as Christ is the germ of all the Apostles.

Genesis records the Fall of Man, from which arose the necessity of sending a Redeemer; it shows the *certainly* and *character* of His coming in the promises made of God to the Patriarchs, and sets forth the example of their faith in a Saviour to come, and in the earliest history of the Church presents materials for the edification of the Church of Christ to the end of time. An old divine well said that no better title could be given to Genesis than this: "Book of the Gospel, touching the promises concerning Christ."

Exodus, in the history of the liberation from Egypt, shadows the Deliverance wrought by Christ, his character as the true Paschal Lamb and the Bread which came from Heaven, and

shows in type the nature of his Priesthood and Propitiatory Sacrifice.

The Key to LEVITICUS is given in the Epistle to the Hebrews, which shows that Christ and His Redemptory Work are veiled under the whole body of the types of the Cereemonial Law.

The BOOK OF NUMBERS adds to the treasures of typical theology the type of the Brazen Serpent, the Red Heifer and the Smitten Rock.

The BOOK OF DEUTERONOMY is the repetition and sealing of the Law and of the Promises concerning Christ.

#### Division and Classification of the Mosaic Types.

With reference to time, the types may be classified as the Pre-Mosaic, the Mosaic and the Post-Mosaic. We confine ourselves here mainly to the second class. They have been arranged in the order suggested by Christ's Person and Office, His Priesthood, Sacrifice and Benefits. In a still more completely methodical way they have been arranged in the order of a complete system of divinity. Hulsins arranges them as—I. Typical Sacraments: the Tree of Life; the Tree of the Knowledge of Good and Evil; Circumcision; the Paschal Supper. II. Miracles: Noah's Ark; the Passage of the Red Sea; the Pillar of Cloud and Fire; the Manna; the Smitten Rock. III. Persons: Melchizedek; Jacob and Esau; Moses; the Priests; Levites; (Nethinims; Nazarites; Rehebrates; Prophets; Interpreters; Wise Men; Scribes; Disputers; Rabbis; Pharisees; Essenes; Sadducees; Herodians; Galileans; Samaritans; Publicans). IV. Sacrifices. V. Ablutions. VI. Instruments: the Ark of the Covenant; Altars; the Ephod. VII. Places: the Tabernacle; the Temple; Court of the Gentiles; High Places and Groves; Gates; Cities of Refuge (Synagogues and Schools). VIII. Festivals. IX. Visions. X. Enemies.

The most natural, most comprehensive and easily remembered division of the Mosaic types is that which classifies them by their associations and connections with—I. Sacred Places. II. Edifices. III. Structures. IV. Persons. V. Offices. VI. Things. VII. Acts. VIII. Times and Occasions. IX. Events; and this is the division we shall follow.

#### I. TYPES RELATED TO HOLY PLACES.

From its natural circumference to its divinely appointed centre, the Promised Land was considered holy. The sanctity intensified as it approached the centre, the holy passing into the more holy, the more holy into the most holy. The entire land was holy; Jerusalem was specially holy in the land; the temple was the holiest point in Jerusalem, and by various gradations within the temple was reached the place within the veil, the holy of holies, the holiest of all.

##### 1. The Holy Land

Was given by God to His covenant people. It was to be the place of their rest. It was separate from all lands; it was little, but glorious. It was a land flowing with milk and honey, rich in its products—land of the palm, the fig, the olive and the vine. It was wonderfully guarded and blessed. Covered with flocks and herds, with its waving forests and its fertile lowlands, watered by numerous streams and rivers, washed by the Midland Ocean of the Mediterranean and by inland seas, it

once supported a population of twenty millions, with a thousand cities and towns. The Holy Land was a typical land in all these respects, and a source of numerous images of the New Testament Church on Earth, and yet more of that Church in its heavenly glory. The Israelite passes through the desert of the world to the peace of the Church, through the desert of life to the joy of heaven. "These all died in faith, not having received the promises, but having seen them afar off, and were persuaded of them, and embraced them, and confessed that they were strangers and pilgrims on the earth," etc., Heb. xi. 13-16.

##### 2. Salem or Jerusalem.

Salem, "peace," has merged its name in Jerusalem, the hallowed city, which not alone the Jew and the Christian reverence, but which the Mohammedan calls "the place of the Sanctuary," the blessed Sanctity, "the Holy." Jerusalem is "the city of the great King," city of the Temple and of the Ark, devoted to God's glory, and the only place in which the full ritual of His worship could be observed. God had chosen it that His name might be there. The fond old legendary faith of the Jew was that in Jerusalem no serpent or scorpion could hurt, no fever could burn, that nothing polluting was allowed to enter it, that no traces of the dead were left in it. "Glorious things are spoken of thee, O city of God." It is a type of the Jerusalem which is above, the great, the holy city, the heavenly, the city of the living God, the free, the mother of us all, Gal. iv. 26; Heb. xii. 22, the New Jerusalem, which cometh down out of heaven from God prepared as a bride adorned for her husband, the name of which is written on him that overcometh, Rev. iii. 12; xxi. 2, 10-27.

##### 3. Zion or Sion,

In its widest sense, was the whole mountain range on which Jerusalem lay. In a more restricted sense, it was the highest part of the range. It was the city of David, God's holy hill, the place of His choice, His desire, His founding and His dwelling, the place of sacred song and gladness, the point from which the law went forth. It was to Jerusalem as the soul is to the body. The glory of Jerusalem was that Zion was in it. It was the centre of the centre and heart of the heart. The whole land was counted its daughter. It was type of the Church of the New Testament, the Kingdom of the Messiah into which all nations were to be gathered. On Zion God has placed His Kingly Son, Ps. ii. 6. Zion is the habitation of the Lord, Ps. ix. 12. Help and the Redeemer comes from Zion, Ps. xiv. 7; Isa. lix. 20; Rom. xi. 26. God shines forth from it, Ps. l. 2. In Zion the Chief Corner-stone is laid, tried, elect, precious and sure, Isa. xxviii. 16; Rom. ix. 33; 1 Pet. ii. 6. To the daughter of Zion comes her King, meek and having salvation, Zech. ix. 9; Matt. xx. 5. As the Church on earth becomes the glorified Church in heaven, Zion is type of the celestial glory which shines in the city of our God, Heb. xii. 22. Beautiful for situation, the joy of the whole earth is this Zion. This is Jehovah's rest for ever. On this Mount Sion stands this Lamb, and with Him stand the happy thousands on whose forehead His Father's name is written. The redeemed of the Lord shall return and come with singing unto Zion, and everlasting joy shall be on their head. They shall obtain gladness and joy, and sorrow and mourning shall flee away. Her priests shall be clothed with the spotless robes of salvation through a Saviour's righteousness, and her saints

shall shout aloud for joy, Ps. xlviii. 2; cxxxii. 13, 14; Isa. li. 11; Rev. xiv. 1.

#### II. TYPICAL EDIFICES.

The Tabernacle, with its various parts, Ex. xxvi., xxxvi., was a Temple within a Tent, or a Tent whose chief part was a Temple. The Tabernacle proper was distinct from the Tent, as the interior from the exterior, the shrine from the Temple at large. Two terms are used in the original to mark the difference between the Tent and the Tabernacle in the stricter sense in which it was the dwelling-place of the Most High. See the passages in which the tent or covering is distinguished from the Tabernacle, as Ex. xxvi. 7, 12, 13; xxxv. 11, and in other places. Our Authorized Version ordinarily translates both these terms by Tabernacle. But one is the Tabernacle Tent, the other the Tent Tabernacle. The Tabernacle Tent is called the Tent or Tabernacle of the testimony or witness, and the Tabernacle of the congregation or assembly. The Tent-Tabernacle was the movable Sanctuary and palace of the King of Kings. The Tabernacle as moving, was an emblem of the Church in her militant and wandering state, yet as the abode of God it was a shadow of heaven where God shall tabernacle among His saints, Rev. xxi. 3. As the place of God's personal special indwelling and manifestation it was the type of Christ, the Word who became flesh and tabernacled among us, John i. 14. Within the tent of His humanity was the Tabernacle-Shrine of His Deity.

The firm linkings of the Tabernacle are like the bonds of the saints; its Artificers, trained of God, are like faithful ministers; the men and women who gave to it, and worked for it, are like believers who conjoin their gifts and toils in building up the Church. The cloud and fire which covered the tabernacle are emblems of the divine protection by day and night; the excellence of the shittim wood, Ex. xxv. 5, 10, 13, 23, 28, its hardness and freedom from corruption point to the firmness and incorruptness that become saints who are the body of Christ.

In its fluctuation as a preparation for the fixedness of the Temple which followed it, it is like our earthly house of this Tabernacle, 2 Cor. v. 1, 4, which we put off, 2 Pet. i. 14, that we may pass into the abiding house of our Father, the Temple not made with hands, and may in due time be clothed upon with our house which is from heaven—in corruption and immortality. But the Tabernacle itself was but a reduced copy of another typical temple. It was a miniature of the Universe, the great Temple of the Most High. The Outer Court of the Tabernacle corresponds with the natural World, the Holy Place with the Church, the Most Holy with Heaven. The whole Universe is but a revelation of God in various degrees. The lowest revelation is in Nature, the mediate is in His Word and in His Church, the supremest is in Heaven, and these three grades of revelation involve three grades of fellowship with God, the faintest through nature, the intermediate through grace, the most perfect in glory. But man himself is a miniature of the Universe, man is himself a Tabernacle, and Luther has traced in man the same triple idea. Man's body is the Outer Court, his soul, his powers of understanding and of knowledge is the Holy Place, his spirit is the Holy of Holies. "Man is the glory of God." See 1 Cor. iii. 16, 17.

#### The Parts and Divisions of the Tabernacle.

The main parts and divisions of the Tabernacle were—

1. The Court, Ex. xxvii. 9-19; xxxviii. 9-31, the outer or great Court, the open space around the Tabernacle proper. We may call it the Tabernacle Tent.

2. The Holy Place, Ex. xxviii. 33, or Sanctuary, Lev. iv. 6, the first or outer chamber of the Tabernacle proper through which was the entrance into—

3. The Most Holy Place, Ex. xxviii. 33, 34, the Holiest of all, Heb. ix. 3, the inner apartment, which, in conjunction with the Holy Place, formed the Tabernacle proper, or Tent Tabernacle. They were separated by a veil.

1. The Outer Court or Great Court was the Tabernacle Tent or open space in front of and at the sides of the Tabernacle. It was curtained in, and was opened at the top. It contained the Brazen Laver for the ablution of the priests and the Brazen Altar for burnt-offerings. In the permanent shape it took in the Temple it was divided into two parts separated by a wall. Within the wall was the Court of the Jews and of the Proselytes. Outside of the dividing wall was the Court of the Gentiles. The Gentiles were forbidden under penalty of death to pass within the wall. In the Court within the wall our Lord and his Apostles taught; it was into this Paul was charged as having brought the Greeks, Acts xxi. 28. It was from the part outside of the wall, the Court of the Gentiles, that our Lord drove the traffickers and money-changers, Matt. xxi. John ii. The Court of the Gentiles typified the vocation of the nation into the Church of our Lord. They who had beheld expectant, found that in Christ the dividing wall was broken down; "in Christ Jesus there is neither Jew nor Greek," Gal. iii. 28. They "who sometimes were afar off are made nigh. He is our peace who hath made both one, and hath broken down the middle wall of partition between us . . . to make in himself of twain one new man, so making peace," Eph. ii. 11-19.

2. The Holy Place was the outer apartment or chamber of the Tabernacle proper. None but the priests were allowed to enter it. In the morning it was entered to offer incense on the altar which stood there, and to extinguish the lamps of the golden candlestick, which were lighted again in the evening. On the Sabbath the show-bread was changed.

3. The Most Holy or Holiest, the Holy of Holies or Oracle, was a type of the heavenly sanctuary, the central point of God's revelation of himself, the place of the immediate presence of the manifested Jehovah. Within the Most Holy was the Ark of the Covenant, which was the Propitiatory or Mercy Seat overshadowed by the Cherubim. The High-Priest alone entered it, and to him it was allowed to enter only on the day of Atonement, which came but once a year.

The Jewish Talmudists and Rabbins held that the "Tabernacle was meant to be a book of deeper wisdom, and of something more glorious than itself, and hence shadowed heavenly and eternal things." A common opinion among the Jews is that the three parts of the Tabernacle signify the three parts of the Universe. The Court open to the elements signifies the world, in which men of all classes come together. The Holy Place represents the starry heavens. The Most Holy Place is Heaven where God sits enthroned

among the angels, of whom, by pre-eminence, the Cherubim are figures.

4. The Veil separated the Holy of Holies from the Holy Place, "the Holy Ghost this signifying that the way into the holiest of all was not yet made manifest, while as the first Tabernacle was yet standing," Heb. ix. 8. When our Lord yielded up the ghost, "the veil of the temple was rent in twain from the top to the bottom," Matt. xxvii. 51. In this act was implied that the Father had accepted the sacrifice of His Son as finished and perfect. The Type had vanished in the Antitype; the true High-Priest had superseded the shadow; the real Veil, the Flesh of Christ, had been rent; the true Atoning Blood had been sprinkled; the new and living Way opened by which, not alone from the Holy Place but from the outer Court, all might have boldness to enter into the holiest by the blood of Jesus. The Typical mysteries had vanished. Jew and Gentile are one—the moral Universe has uninterrupted access to the throne and heart of God.

#### III. TYPICAL STRUCTURES.

Of durable parts of the furnishing of the Typical Edifices.

THE ALTARS. There were two altars in the Tabernacle. 1. The first was the Brazen Altar, the Altar of Burnt Offering. It stood within the Court, the first great object facing the entrance. In passing from the beginning to the end of the Tabernacle, the order would be—first, the great and only Altar for Atoning Sacrifice; second, the Laver for washing; third, the Holy Place with the light of its Golden Candlestick on one side, the food of its Shew-bread on the other, the Priest of its Altar of Incense between, but advanced toward the Veil, then, within the Veil, the Type of Heaven itself. The great Altar stood under the open heavens, accessible to all. The fire for its sacrifice had fallen direct from God, and was never allowed to go out.

Is there not a system of theology in this order? First, is the Atoning Sacrifice of an all-sufficient Saviour, which gives character and efficacy to all else. It is open as the heavens, and free to all. God has accepted it. Its efficacy changes not. In the arrangement of the application and results of His Sacrifice, we have first the Laver of Holy Baptism and of Regeneration, the Illumination of the Holy Spirit, and the nourishment with the Flesh of our Lord which is the Bread from Heaven, and then the Thanksgiving into which all the life of the Christian rises,—until at last he enters within the Heavenly Veil, into which the great Fore-runner has passed before him.

2. The Second or Golden Altar, stood in the Holy Place centrally, before the Veil, so that at the parting of the Veil it seemed to be common to both the Holy Place and the Most Holy, Heb. ix. 4. No sacrifices were offered on it. But once in a year, on the Great Day of Atonement, the High Priest sprinkled on the horns of it the blood of the sin-offering, Ex. xxx. 10. Every morning and night incense was burned on it.

The Great Altar represents Christ in His Atoning Sacrifice, the Golden Altar represents Him in His Intercessory character. The sweet Incense which arose in a cloud to cover the Mercy-Seat typified the Prayers of all saints accepted through Him, and the worship which in every place is to be offered by Him to Jehovah's name, Mal. i. 11; Rev. viii. 3. Christ is at once Priest, Sacrifice

and Altar. There was but one Altar for the whole Burnt-Offering, as there is but one Propitiatory Sacrifice for the race through all time. On this Altar were laid the gifts of God's people. The Altar sanctified their gifts, as Christ sanctifies ours. All the vessels of the Altar typified the application and method of receiving the benefits purchased for us by Christ. The Horns of the Altar show that it was to be clung to, as well as fled to; the penitent fear is to be followed by the believing trust.

3. The Brazen Laver stood between the Altar of Atonement and the entrance to the Holy Place. In its pure waters the Priests were to wash away their pollutions, under penalty of death for neglect. It typified the need of the Washing of Regeneration, the Laver of a true Baptism, the Sanctifying work of the Holy Spirit, the purchase and necessary sequence of the Sacrifice of Christ. The Laver was constructed of what had been mirrors, Ex. xxxviii. 8. The mirror could reflect, and thus make its holder more perfectly aware of, the impurities he had contracted on his face and vestments, and thus could prepare him for the more effectual application of the cleansing. The Laver, with its burnished surface, may have become one vast mirror, a mirror of mirrors which may have helped to point out to him who approached any lack of conformity with the external demands of the law. So he who comes to the cleansing must know himself, and act upon that knowledge, James i. 23, 25.

Though we be Priests of one God, and in His service, we must at each approach seek a re-application of the blood of cleansing. "I will wash my hands in innocency; so will I compass thine altar, O Lord," Ps. xxvi. 6. The Christian needs not merely that great forgiveness which is once for all, and that washing of the Holy Ghost which is once for all, but needs the daily forgiveness of the trespasses of the day, the washing of the hands which are busy in life's work, the washing of the feet, which are soiled upon the road we traverse, Ex. xxx. 19. "He that has had that great bathing of regeneration still needs renewed applications of the spiritual washing, John xiii. 1-10.

The Holy Spirit is the applier of the washing, for He takes of the things that are Christ's and makes them ours; but Christ's riven side is the source of the purifying flood—coming "not by water only, but by water and blood." "The Spirit and the water and the blood, these three agree in one," 1 John v. 6, 7. He is the Fountain opened for sin and for uncleanness, Zech. xiii. 1. All His loved ones are washed, sanctified and justified in His name, 1 Cor. vi. 11. For Christ loved the Church, and gave himself for it, that He might sanctify and cleanse it with the washing of water—by the washing of regeneration, and renewing of the Holy Ghost by the word, that He might present it to himself a glorious Church, holy and without blemish, Eph. v. 26; Tit. iii. 5.

4. The Golden Candlestick, in the Holy Place on the south side. On it the lamps were placed. It typifies the Church, dark in itself, but illumined by the presence and Spirit of Christ. Christ illumines the Church that the Church may enlighten the world.

Its seven parts mark its various functions and the adaptations of its various members to them. Christ is in the midst of them. The light symbolizes Him, at whose coming Zion is to arise and shine. He is the Glory of the Lord who arises upon her—a Light to lighten the Gentiles—the true Light which enlighteneth every

man—the Light of the world—the Light of life. The arrangement was that of a vine-cluster of lights, about a centre. Christ is the central light, but his people are by His Grace the light of the world. The ornaments of the Candlestick, the golden flowers and fruits, add to its uses, the beauty of art copying nature, for nature and art are in their truest places when hallowed to the service of Christ. The perfumes of the alabaster box shed upon the head of our Lord are not wasted. The various instruments and arrangements connected with the Golden Candlestick were meant to keep the flame in its pure brightness, to typify the continuous brightness of the light of Grace which shines upon us, and to remind us to let our light “so shine.”

5. The Golden Table stood on the north side of the Holy Place. It was designed for holding the Shew-Bread. It symbolizes the Church as that Holy Place in which Israel comes before God in the Sacrifice of Thanksgiving, and receives from God the Sacrament of Blessing, being nourished and sustained by the grace of God.

6. The Ark of the Covenant was in the Holy of Holies, as described Ex. xxv., xxxvii. It was prepared under the influence of the Spirit of God, in accordance with the model shown to Moses in the Mount. It was constructed of the choicest wood, and covered and lined with gold.

Inside of the Ark was placed the Testimony, or Two Tables of the Law. The book of the Law, the urn which held the manna, and Aaron's rod which budded, were placed beside the Ark. The ceremonial object of the Ark was that it might be a sacramental token of the special presence of God.

As a type of Christ, the Ark symbolizes His gracious presence as God, in the Temple of His Church. Where the Ark went, divine strength and triumph attended it. It held the tables of the Law, and Christ came not to destroy the Law, but to fulfill it. The Law is beneath the Gospel, and the Gospel rests on the Law.

7. The Mercy-Seat, or Propitiatory, was the cover of the Ark of the Covenant. It was of pure gold throughout, Ex. xxv. 17. It was conceived of as a typical footstool of the throne of God, whence He revealed His mercy, for we seek mercy at the feet of our God. It was, with the Cherubim, the crowning glory of the Ark, which represented the Law. The Mercy-Seat rested on the Law, and yet was above it. That it ordinarily was in the thick darkness of the innermost shrine points to the King invisible, hidden impenetrably till the light of His own mercy reveals Him, at the entrance of the Supreme High Priest into the Holiest of all.

God is in glory among the angels, but earth is His footstool, a lower part, but a true part, of His throne. The High-Priest himself would have been smitten to death, had he come unbidden into the Holy Place, within the veil before the Mercy-Seat, Lev. xvi. 2. When God appeared in the eloud upon the Mercy-Seat, the High-Priest was to approach with the censer, that the cloud of incense might cover the Mercy-Seat, that he die not. He was to sprinkle of the blood of the sin-offerings upon the Mercy-Seat and before it, Lev. xvi. 11-15. It was of gold, the most precious of metals; pure gold without alloy; no mere gilding or plating, but massive gold to the centre—emblem of the precious and pure mercy of God to which we have access through the atoning blood, and the High-Priesthood of our Lord. “There will I meet with thee and commune with thee,” v. 22. “Let us therefore come boldly unto the throne of grace,

that we may obtain mercy and find grace to help in time of need,” Heb. iv. 16.

8. The Cherubim (the word is the Hebrew plural of Cherub) were two figures of gold, placed at the ends of the Mercy-Seat. Their faces were turned toward it, and their wings were expanded so as to touch above it. They symbolized the majesty of Jehovah, to whom all the created powers of the Universe, whether angelic, human, or physical, render homage and service—and all of which are interested, each in its own way, the highest the most deeply, in the great mystery of which the Mercy-Seat is the centre. They are the living things around the Throne. The Cherubim are not images of angels; they are symbols of angels, in common with the rest of God's creatures, and of angels by pre-eminence, as the highest of God's creatures.

#### IV. TYPICAL PERSONS.

The Old Testament presents to us Typical Persons, “for,” says Augustine, “the life of these men of old, like their tongues, was prophetic.”

I. **Adam** was a type of Christ. The old writers place such parallels as these: 1. Adam was the father of the whole race, from whom the whole race derives its natural life, as Christ is the source of the regenerate, new-born life of the world. 2. Adam was formed of the virgin earth, Christ sprang from a pure Virgin. 3. Adam was formed in the image of God, Christ is the express image of His person. 4. In Adam a body derived from earth and a spirit given from heaven were united, in Christ were personally blended the human and divine: “the second Man, is the Lord from heaven.” 5. Adam was constituted lord of the earth, to Christ all power is given, all things are delivered into His hands. 6. Adam was the guardian of Eden, Christ is the opener and restorer of Paradise. 7. Adam was endowed with peculiar gifts of understanding, Christ is the possessor of all knowledge. 8. Adam unfallen was spotless, Christ is holy, harmless, undefiled and separate from sinners.

Abel, Noah, Melchizedek, Abraham, Joseph, Jonah, David and Solomon have also furnished many suggestions to those who love to trace the substance of the New Testament in the shadows of the Old.

II. In the history of **Abel**, many points of association with our Lord and his Church have been found. The name Abel itself speaks of the life of mourning, to which the Man of sorrows was called. Abel was a keeper of sheep, and Christ is the great Shepherd. Abel in his offering showed forth the idea of sin felt and forsaken, of Atoning Sacrifice, of God's redeeming love; and these are the great central ideas of the dispensation of our Lord. Abel and his offering were regarded with acceptance by Jehovah, as Christ was the object of His infinite love, and His sacrifice was received with the infinite complacency of the Father. Abel was the object of malicious hate on the part of his brother, as Christ was of His own race and of the unregenerate world. It was the hate which purity excites in the corrupt heart. “Cain was of that wicked one, and slew his brother. And wherefore slew he him? Because his own works were evil, and his brother's righteous.” Abel also embodied the great New Testament centre of personal salvation—Justification by Faith. “By Faith Abel offered unto God a more excellent sacrifice than Cain, by which he obtained witness that he was

righteous, God testifying of his gifts; and by it, he being dead, yet speaketh.”

But there is contrast as well as parallel. The blood of Abel cried for vengeance against his murderer. The dying Jesus prayed for His enemies—“Father, forgive them.” The plea of His blood united with the intercession of His prayer for them and for us, and “we are come to the blood of sprinkling that speaketh better things than that of Abel,” Gen. iv. 10; Heb. xii. 24.

III. **Enoch** in his translation foreshadowed the passing of our Lord bodily into the heavens. So also did **Elijah**, but in both these cases death was passed by, not overcome. Their life was made secure only by the certainty that Christ would vanquish the enemy who, though evaded, lingered in unbroken night in the rear.

IV. **Noah** was, as it were, a second Adam, the new father of the spared race, and a new type of Christ. The Ark is a type of the Church. The deluge which at once destroyed and saved is a type of that holy Baptism “of water and of the spirit,” which in its divine efficacy, rightly received and used, destroys the old Adam, and raises the souls that are saved, into newness of life, 1 Peter iii. 20-22.

V. The most wonderful of the personal types of Christ, is **Melchizedek**, and, next to our Lord himself, the most mysterious personage of history. “Bearing a title which Jews in after ages would recognize as designating their own sovereign, bearing gifts which recall to Christians the Lord's Supper, this Canaanite crosses for a moment the path of Abram, and is unhesitatingly recognized as a person of higher spiritual rank than the ‘friend of God.’ Disappearing as suddenly as he came in, he is lost to the sacred writings for a thousand years; and then a few emphatic words for another moment bring him into sight as a type of the coming Lord of David. Once more, after another thousand years, the Hebrew Christians are taught to see in him a proof that it was the consistent purpose of God to abolish the Levitical priesthood.” He was not Enoch, nor Shem, nor Ham, nor Messiah the Son of God, nor the Holy Spirit. Conjecture has exhausted itself—and we know simply what the Book itself reveals. No hand of man or angel can draw the curtain farther away. His character, personal and official, was not fixed by his human relations, for in the land of the Canaanites he shines in the pure light of a righteous king, a prince of peace, a priest of the Most High. Melchizedek: “first being by interpretation king of righteousness”—and “righteousness shall be the girdle of His loins”—“and this is his name whereby he shall be called, THE LORD OUR RIGHTEOUSNESS.” “After that also, king of Salem, which is, king of peace”—and when He came, angels sang, “Peace upon earth.” He is the “Prince of Peace.” Melchizedek brings forth not an atoning sacrifice, but bread and wine for the nourishment and reviving of his great guest, Abraham, the father and type of believers, as Christ offers to the world the bread of heaven, the wine of rejoicing, and gives them supremely in giving himself, John vi. 55, 56. He was priest uniting in type the regal and sacerdotal, as does our Lord the priest-king. “He shall be a priest upon his throne,” Zech. vi. 13. He was priest of the Most High God, towering in his majesty in a world utterly lapsed into idolatry. He stands before Abraham and reveals in the promise of his mystic office that in which Faith sees as present a far-off day, and rejoices in it. “And he blessed Abram, blessed him that had the promises, and without all

contradiction the less is blessed of the greater.” And Abram gave him tithes of all, and in Abram the tribe which was afterward exempted from tithes-paying, and received tithes, pays them to this priest who rises above the Levitical priesthood.

Melchizedek was, as priest, “without father, without mother, without descent or pedigree.” His priesthood was not determined like the Levitical by natural descent—required and rested in no registry in authentication of parentage, but typified our Lord's as directly given from heaven. Christ sprang from a tribe which was as a tribe devoid of all claim to the priesthood, Heb. vii. 14.

Melchizedek, as priest, had “neither beginning of days nor end of life.” His term of priesthood was not fixed by his age, beginning its days because his natural days were of this or that number, nor ending because his natural days had reached a certain bound. Ordained of God, individually his priesthood began, in God's purpose, with his very being, and ran on throughout all his life. His priestly life, as such, had no end. “Made like unto the Son of God, he abideth a priest continually,” Heb. vii. 3. “Thou art a priest for ever after the order of Melchizedek.”

The priests under the Law “were many priests, because they were not suffered to continue by reason of death; but this man because he continueth for ever, hath an unchangeable priesthood—passing not from one to another. Wherefore he is able also to save to the uttermost—and for evermore—them that come unto God by him, seeing he ever liveth to make intercession for them,” Heb. vii. 23-25.

VI. **Abram** was first a “high father,” like a mountain standing in its grandeur, and towering in solitude. But he became **Abraham**, the “father of a multitude.” He stood no longer alone. The whole assembly of the faithful rose around him. He is the father and exemplar of all the faithful.

VII. **Isaac** recalls the offering made by God's love for the salvation of the World. Abraham was tested; but, at the decisive moment, God provided a sacrifice which was accepted for Isaac. But that provision itself was possible, and answered its ends, only because God would not spare himself what He spared Abraham. “God so loved the world that He gave His only-begotten Son;” He spared not His own Son. When God's best beloved lay on the Altar, no substitute was found for Him, but He endured the anguish, and died to redeem us.

VIII. **Joseph** suggested many parallels. Like Christ, “he came unto his own, and his own received him not.” Rejected, he rose to the throne, forgave his brethren, saved them, enriched them, and exalted them.

In the Mosaic economy, in connection with the richest typical period, the most prominent names are Moses, Aaron and Joshua.

IX. **Moses**, like Christ, was saved from the death which was threatened in his infancy by the hatred of a cruel king; like Christ, renounced riches and kingly power to suffer humiliation, poverty and sorrow for his people's sake and God's glory; like Christ, led forth Israel from bondage, fed them with heavenly bread, refreshed them with living water, guided them to victory, interceded for them, taught them God's most holy will, was the mediator of the Covenant confirmed with blood, reared the Tabernacle of the Highest in the world—was Prophet, Priest and King. He was the founder and the highest representative of his race before God, as he was the representative

of God to his people—and Christ is our Advocate with the Father, and the Revealer of the Father to us.

X. **Aaron's** typical character is so merged in his High-Priesthood as to make a distinct treatment of it unnecessary. The office of Moses was unique and he had no successors. There arose no prophet like unto him—until the Supreme Prophet came, like him, yet as the light of noon-tide is like the light of dawn. The office of Aaron was a general one, and was transmitted—there was an order of Aaron, but no order of Moses. In Moses the office was embodied in the man, in Aaron the man was lost in the office, and we shall therefore in its place consider it rather than him.

XI. **Joshua** is typical of Christ in his name, which means “Jehovah Saviour.” He was the servant of Moses, as Christ was the minister of the circumcision, Gal. iv. 4. He was full of the spirit of wisdom, Deut. xxxiv. 9, the spirit which rested without measure on Christ. He finished what Moses began, he brought the people of God into the Land of Promise, by his victories secured it to them, and put them in possession of its rest. Christ's people in him find rest for their souls, inherit the incorruptible, the undefiled and unfading Kingdom of Heaven.

XII. **David** was a type of Christ. He was the great representative monarch of Israel, the victor over its enemies, the establisher of its kingdom, and, in his true, uncorrupted character, the “man after God's heart.” He is the type of Christ, as Christ is related to the Church militant—the Church in her warfare, both assailing evil and assailed by it.

XIII. As David typifies Christ as the Captain of our Salvation, coming for a time to bring not peace upon earth, but a sword, so **Solomon** typifies our Lord as the Prince of Peace, Head of the Church triumphant, its enemies subdued, tranquillity and joy in all its borders. With Solomon the Tabernacle, once wandering, is fixed—is transfigured into the Temple. This typifies the final glory of Christ's Kingdom in the New Jerusalem, where every part shall be so supremely holy that degrees of sanctity shall pass away. There shall be no temple therein, for all shall be Temple. “The Lord God Almighty and the Lamb are the temple of it,” Rev. xxi. 22.

XIV. But not only were these individuals typical, **Israel** itself, as a Nation, was a typical race. The old Church foreshadowed the new in its trials, deliverance and glories. These types of the old Israel are bound to the antitypes of the new Israel. Israel was a race of kings and priests—and we are, like them, a royal priesthood, an holy nation, a peculiar people, to show forth the praises of Him who hath called us out of darkness into His marvelous light, 1 Pet. ii. 9.

#### V. TYPICAL OFFICIAL PERSONS.

1. The **High-Priest** was alone in his order. He is not called the highest, as if the others were like him, except in degree—as if they were high, and higher, and he simply highest. He is the High-Priest; “the chief” or head priest, Jer. xii. 24, and “chief over the chief of the Levites,” Num. iii. 32. His office endured through his entire life. He was supreme in the Church. He was to possess the highest endowments of person, body, mind and character.

The anointing of the High-Priest, by which he was solemnly consecrated to his office, was differ-

ent from all the other anointings. His head, not his raiment, was anointed, and the anointing was not by sprinkling but by copious *outpouring*. “God hath anointed thee with the oil of gladness above thy fellows,” Ps. xlv. 7; Heb. i. 9. The High-Priest is designated as “the priest that is anointed,” the Messiah Priest, Lev. iv. 3. “God anointed Jesus with the Holy Ghost and with power,” Acts x. 38. “God giveth not the spirit by measure unto Him,” John iii. 34.

The garments of the High-Priest were of the richest kind “for glory and for beauty,” Ex. xxviii. 2. “He beautified him,” says Sirach, “with comely ornaments, and clothed him with a robe of glory. He put upon him perfect glory, and strengthened him with rich garments.” The same writer, describing a High-Priest “in his coming forth from behind the veil,” says: “He was as the morning star in the midst of a cloud, and as the moon at the full; as the sun shining upon the Temple of the Most High, and as the rainbow giving light in the bright clouds; and as the flavor of roses in the spring of the year, as lilies by the rivers of waters, and as the branches of the frankincense tree in the time of summer; as fire and incense in the censer, and as a vessel of beaten gold, set with all manner of precious stones, and as a fair olive-tree budding forth fruit, and as a cypress-tree which groweth up to the clouds. When he put on the robe of honor, and was clothed with the perfection of glory, when he went up to the holy altar, he made the garment of holiness honorable,” Ecclus. xlv. 7; 1. 6-11. The High-Priest's dress consisted of four parts in common with the other Priests, while four parts (to wit, the breastplate, the ephod, the ephod robe and mitre) were peculiar to him.

The High-Priest, in his exalted office and personal dignity, foreshadows the glory of the person and office of our Lord. He sought and announced the will of God by Urim and Thummim; he consecrated and initiated the Priests and Levites; he presided in the sacred conventions and directed in all matters of religion. The High-Priest alone went into the Second Tabernacle, “once every year, not without blood, which he offered for himself and for the errors of the people; but Christ being come, an High-Priest of good things to come by a greater and more perfect tabernacle, not made with hands, neither by the blood of goats and calves, but by His own blood, He entered in once into the Holy Place, having obtained eternal redemption for us,” Heb. ix.

The High-Priest was to abstain, at the times of deepest sorrow, from the ordinary manifestations of grief. He was, shadowing Christ, to show his separateness, even in the sphere of his sympathy. The High-Priest could marry only a pure virgin and might marry the daughter of a king—as Christ takes to Himself His Church, the virgin daughter of the great King. Not till the death of the High-Priest could those who had taken refuge in the appointed cities leave them, and Christ died “that through death He might deliver them who through fear of death were all their lifetime subject to bondage,” Heb. ii. 14, 15.

2. The **Priests**, Ex. xix., typically represent that spiritual priesthood into which all believers are called by God for His service and into which they are introduced by Christ, Ex. xix. 6; 1 Pet. ii. 5-9; Rev. i. 6, to offer up spiritual sacrifices. The tip of the ear, the thumb and the foot of the priests were anointed, as symbols of the total consecration of the whole priesthood, not alone in

soul and spirit, but in body also—in all its senses, activities and powers. The Priest's hands were to be filled when they approached the altar, as the hand of the believer brings to God the offerings of gifts and of holy works, of religion and of charity. The official duties of the Tabernacle, the benediction of the people, the proclamation of the Festivals, the sounding of the trumpet, the teaching of the Law, the bearing of the Ark, point to the various forms of fidelity and usefulness in all believers, and pre-eminently in the Ministers of the Gospel. The various peculiar personal duties of the Priests set forth the sanctity, sobriety and purity which become all Christians, and especially all Ministers.

When the Priests were to be consecrated, their old garments were to be laid aside, as we must put off the old before we can put on the new. Their bodies were washed with clean water, Ex. xxix. 4, and we are to "draw near, having our hearts sprinkled from an evil conscience, and our bodies washed with pure water," Heb. x. 22. "Christ has washed us from our sins, and made us priests unto God," Rev. i. 5, 6. The same precious oil which was poured upon the High-Priest, and which was never to be used except for holy things and holy persons, was sprinkled upon the Priests—they had the unction of the Highest, though in a less degree—as every believer receives the anointing of God, 1 John v. 20, 27, in due measure, from the fullness of Him, on whom it descends without measure. After the washing and unction, the vestments were put upon them. They were not, under penalty of death, to drink wine nor strong drink when they went into the Tabernacle—as we, for love's sake, are to touch nothing which may be attended by dishonor to God, and become a cause of stumbling to our fellow-men. The Priest's person was to be without blemish and his life without spot—and we are to be holy, as He which hath called us is holy. We are "a chosen generation, a royal priesthood, a holy nation, a peculiar people, that we should show forth the praises of Him who hath called us out of darkness into his marvelous light," 1 Pet. ii. 9.

3. The **Levites** or Priestly race, Ex. vi. 25, typify the same general truths that are typified by the Priests, but they show forth more especially the great element of willing aid, the harmony of the lesser gifts with the greater—that, while there are differences of administration, there is one Spirit.

4. The **Prophets** were teachers of the people, expounders and applicators of the Word of God, reformers of the Church, utterers of predictions, preachers of the Law and Gospel, and performers of miracles. In this they typified the great Prophet, the Teacher of the world—who sent forth also His faithful Ministers, as the Father sent Him.

5. The **Nazarites**, Num. vi. 2-21, typify the self-sacrificing separation voluntarily made, in God's service, supremely by Christ, but, after His most blessed example, by all who are truly His.

6. The **Kings**, Ex. xv. 18; Deut. vii. 14, 15. The regal office of our Lord is typified in its true grandeur in the theocracy, when Jehovah was temporal King of His people, and in the particular kings of a later time its various features are shown forth—especially in David and Solomon.

## VI. TYPICAL THINGS, NATURAL AND ARTIFICIAL.

1. The **Animals** which God accepted in sacrifice, were to be clean and therefore proper as food,

were gentle and domesticated, or associated with man and free from imperfections. These animals were:

1. The Ox; the Bull, the Bullock, the Heifer and Calf.
2. The Sheep; the Ram, the Lamb.
3. The Goat; the Kid.
4. The Turtle-dove; the Pigeon.

These all symbolize the gentleness, meekness and spotlessness of the One True Sacrifice, the Lamb of God, who was led as a sheep to the slaughter; who was like a lamb dumb before his shearers; whose innocent and precious blood, as of a lamb without blemish or spot, was shed for men, and whose flesh is given for the life, and is the food, of the world.

2. The **Oil** was to be of the most perfect purity, prepared direct from the fruit of the Olive—the tree of peace, the token of pardon. It fed the flame—as the Holy Ghost supplies all grace. The anointing oil, reviving and consecrating, typifies the oil of joy, shed in supremest measure on Christ, our High-Priest and King. Healing, it typifies the saving application made by the Good Samaritan to the wounds of our sinful nature. Fragrant, it symbolizes the acceptableness of the offering brought by devout hearts—and it is like pure Love, which hallows all it touches.

3. The **Vestments**, or holy garments of the High-Priest, are the subject of very minute directions, Ex. xxviii. Clothing should express character, personal or official, and be in harmony with it. The glory and beauty of the Priestly robes symbolize the majesty and loveliness of Christ in his Person, Office and Work, whom God hath clothed with the garments of salvation, and hath covered with the robe of righteousness, Isa. xi. 10. The most precious materials, the most vivid and significant colors, the most exquisite workmanship, symbolizing the highest glories of earth and heaven, combined to give to the garments of the High-Priest a fitness for association with his work—in which he typified our Lord, who unites in His Nature, His Person and Character all that is fairest in the two worlds—who is "chiefest among ten thousand and altogether lovely."

4. The **Urim and Thummim**, lights and perfections, Manifestation or Revelation and Truth, were precious stones set in the Breastplate which the High-Priest was to put on when he went in before the Lord, Ex. xxviii. 30; Lev. viii. 3; Num. xxvii. 21; Deut. xxiii. 8. They point to Christ as the Manifestor of the mind of God, the source of guidance and relief in all the perplexities of His Church and of His people.

5. The "**Plate of Pure Gold**" in the shape of an open blossom, with "Holiness to Jehovah," engraved thereon, was to be put on the Mitre of the High-Priest. This symbolizes the perfect consecration of the Great High-Priest.

6. The **Girdle** reminds us of Him of whom the Prophet says: "Righteousness shall be the girdle of his loins, and faithfulness the girdle of his veins," Isa. xi. 5.

7. The **Vestments** of the Priests shared in the glory and beauty of those of the High-Priest, yet were inferior—to symbolize the fact that though His glory is given by Christ to His priestly people, He yet in all things has the pre-eminence.

8. The **Incense**, rising in clouds from the burning coals, is like the prayers and praises of the saints which soar heavenward from hearts kindled by devotion. Most of all, it is like the interces-

sory prayer of the great Mediator, through which all other prayer is acceptable to God.

9. The **Colors** were of the richest and most expressive nature. Principal among them were Blue, Purple, Scarlet, Crimson, Red, Golden and White.

The Blue was the deep, dark blue of the Oriental sky. It was a natural symbol of heaven and the heavenly, of the habitation of God, and of the softened revelation of his grace and glory.

The Purple was associated with the supremest dignity, with exalted position, and therefore symbolized the regal position of God as King of Israel. The clothing of our Lord with the purple robe was unconscious confession and undesigned prophecy, Matt. xxvii. 28; John xix. 2.

Scarlet, Crimson, blood-Red, was the symbol of life and energy, of the absolute energy, and immortal life of God, and of His love which imparts life and energy.

Josephus considers the four colors, White, Purple, Blue and Scarlet, as symbolizing the four great elemental parts of the Universe—the earth, yielding the flax for the white linen; the sea, from which was taken the costly shell-fish of the purple; the blue, air; and the deep-red, fire.

In a brilliant and ingenious little book, lately published under the title "Solar Hieroglyphics," the whole symbolism of light and color is developed in a very suggestive manner.

White was the color of the curtains of the fine-twined linen of the Tabernacle, Ex. xxvi. 1, and of the ephod of the priests, Ex. xxviii. 5, 6. It is the color of the apparel in Angelic manifestations, Matt. xxviii. 3; Mark xvi. 5; John xx. 12. To the Bride of Christ is granted that she shall be arrayed in fine linen, clean and white; for the fine linen is the righteousness of saints. The armies in Heaven follow the Word of God upon white horses, clothed in fine linen, white and clean, Rev. xix. 8, 14. It is the symbol of triumph. When Messiah goes forth conquering and to conquer He sits upon a white horse, Rev. vi. 2; xix. 11. It is the symbol of his Eternal Deity: "His head and His hair was white like wool, as white as snow," Rev. i. 14. When He comes wearing His golden crown, and bearing the sickle for the earth's final reaping, He sits upon a white cloud, Rev. xiv. 14. Through the Book of Revelation, white is the Saviour's color, it belongs alone to Him and to them who are His. In the Transfiguration, which was a temporary revelation of our Lord in "the form of God," His "raiment was white as the light, and glistening," Matt. xvii. 2; Mark ix. 3; Luke ix. 29. White is the symbol of beauty and innocence: of majesty and glory: of eternity, wisdom, righteousness and holiness: of prosperity and gladness. It was a special symbol of the sanctity and majesty of God as the Holy and Glorious One of Israel. It shadowed forth the sanctification of God through Israel, and of Israel by God; but most of all the attributes of the revealing Jehovah, the incarnate Son of God, our Saviour.

10. The **Perfumes** embraced the sweetest principal spices: Stacte, Onycha, Galbanum, Ex. xxx. 34; Myrrh, Frankincense, Cassia, Cinnamon. The preparation of these was of the most careful kind. They typified the fragrance of holiness, and the attractiveness of the supremely holy Saviour.

11. The **Shew-bread** figured the Body of our Lord, as the Bread from Heaven, John vi., and its place the presentation of our Lord's ascended Body before the throne of the Majesty in the Heavens.

12. The **Hyssop**, with Cedar-wood and scarlet,

was the instrument of purgation, typical of the applying instrumentality of the blood of sprinkling, with which he that is purged is truly clean, Ps. li. 7.

Among the other plants and fruits which come into the typical world, are the fruits at large which were given to the Lord: the Almonds of Aaron's budding rod; the Pomegranates (images of the fragrance of truth and the fruitfulness of life) which were wrought on the hem of the Ephod, Ex. xxviii. 33, and suggested the form of the knobs on the Golden Candlestick, Ex. xxvi. 31; the Vine, Grapes and Wine.

## VII. TYPICAL ACTS.

God, as holy King, dwells in holy places, and is served by holy persons. In these places, these persons bring before him holy things in **Holy Acts**. These holy acts are:—1. The presentation of Sacrifices and Offerings. 2. The Sacrificial Feasts and sacrifices and offerings. 3. The giving of First-Fruits. 4. The paying of tithes, or tenth-parts. 5. The making of vows. 6. The investitures. 7. The purifications under the law.

### Sacrifices as Typical Acts.

1. The Sacrifices are divided into seven classes:
  - a. The Holocaust, or whole Burnt-Offering.
  - b. The Sin-Offering, the Sacrifice or Offering for Sin, Heb. x. 6, 8.
  - c. Trespass-Offering, Lev. v. 15.
  - d. Thank-Offering, or Peace-Offering, Ex. xx. 24.
  - e. The First-Born, First-Begotten, Ex. xiii. 2.
  - f. Tithes of Beasts, Lev. xxvii. 32.
  - g. The Paschal Lamb, Ex. xii.

These have been reduced to three general classes: the SELF-DEDICATORY, the EUCHARISTIC and the EXPIATORY.

The order of the ceremonial actions presented many points of typical suggestion:

First was the bringing or presentation of the Sacrifice. The hands were laid upon the head of the victim, and confession of sin was made, or, in the Thank-Offering, praise was given to God. The victim was slain. The blood was sprinkled. There was a waving and a heaving of the parts of the Sacrifice. The parts were laid on the altar; were salted; were laid upon the fire; certain parts of the Sacrifice were eaten, some by the Priests, others by those who brought the victims. The Sacrifice was consumed with fire.

The following points may be noticed in the Sacrifices as types:

1. All Expiatory Sacrifices were types of the One Atoning Sacrifice, made for the sins of the whole world, by our Lord, through His most perfect obedience, His sufferings, and His death on the Cross.

2. The system of Sacrifices was ordained for the cleansing of men from sin, and "now once in the end of the world hath Christ appeared to put away sin by the sacrifice of Himself," Heb. ix. 26.

3. All the Sacrifices were to be perfect and spotless. "Whatsoever hath a blemish, that shall ye not offer; for it shall not be acceptable for you," Lev. xxii. 19, 20. "This is the offering, two lambs without spot," Num. xxviii. 3. Christ offered himself without spot to God, Heb. ix. 14. He is a Lamb without blemish and without spot, 1 Pet. i. 19.

4. The person offering was to confess his sins,

Lev. v. 5; and if we confess our sins, God is faithful and just to forgive us our sins and to cleanse us from all unrighteousness, 1 John i. 9.

5. He was to put his hand on the head of the Burnt-Offering, Lev. i. 4. It was a solemn act of transfer, in which, in faith in God's assurance, he realized that the penalty of his guilt was to be laid upon a True Sacrifice, of which the ritual Sacrifice was a type. "Surely He hath borne our griefs and carried our sorrows. He was wounded for our transgressions, He was bruised for our iniquities, the chastisement of our peace was upon Him; and with His stripes we are healed. . . . The Lord hath laid on Him the iniquity of us all," Isa. liii. 4-6. Faith is the hand of the soul, the power by which it lays hold. By it resting on Christ, we rejoice in the assurance that He has taken our sins on His sinless head; "that God hath made Him to be sin for us, who knew no sin, that we might be made the righteousness of God in Him," 2 Cor. v. 21.

6. The victim was slain, Ex. xxix. 11. Our Lord was brought as a lamb to the slaughter, Isa. liii. 7, Acts viii. 32. In the midst of the throne He stands, a Lamb as it had been slain. In the new song, they sing "Thou wast slain, and hast redeemed us to God by thy blood. Worthy is the Lamb that was slain to reclaim power, and riches, and wisdom, and strength, and honor, and glory, and blessing. The names of God's children are written in the Book of Life of the Lamb slain from the foundation of the world."

7. The victim was slain *before the Lord*, by His appointment, in the way, at the time and place, appointed by Him, God looking upon it and accepting it. Christ is no self-elected, self-imposed sacrifice, but is the Lamb ordained and accepted of God.

8. It was slain at the *door of the Tabernacle*—brought within the sphere of the supernatural, and standing in relations not of this world. The sacrificial efficacy of Christ's blood is not derived from the ideas and relations of the world of nature. The sphere in which His sacrifice is operative is that of the True Tabernacle which the Lord pitched and not man, a greater and more perfect Tabernacle, not made with hands, the temple of the tabernacle of the testimony in heaven, Rev. xv. 5.

9. The blood was taken. This, says our Lord, is my blood of the New Testament—the New Testament is my blood.

10. The blood was *taken*, for the Sacrifice was not only to be made, but was to be *applied*. "Take," says our Lord—"this is my body." The glorious distinctive work of the Spirit is the work of reception in order to impartation. "He shall glorify me; for He shall receive (take) of mine, and shall show it unto you." The Sacrifice made would not avail, if it were not a sacrifice taken and applied.

11. The blood was applied to the *Altar* also. Nothing of earth is so pure as not to need the cleansing power of the atoning blood. None of the attendant things, separable from Christ's work, added to its efficacy. He hallows the Cross, not the Cross Him, and all He sanctifies are things of association with Him. The Cross is itself the dark and accursed instrument of torture and murder. Yet the blood which has sprinkled has made it a symbol of the world's hope and joy. "God forbid that I should glory save in the cross of our Lord Jesus Christ, by whom the world is crucified unto me, and I unto the world."

12. The blood was applied with the *finger*. This symbolizes the divine care, and the solicitous ex-

actness and perfect adaptation in the application of the atoning blood. The Bible speaks of the arm of God, the hand of God, and the finger of God, Luke xi. 20. All these express power, but the finger is the instrument of power as most minutely and specifically directed; it marks individualizing power.

13. A portion of the blood was *poured out* at the bottom of the Altar, Ex. xxix. 12. The blood of our great Sacrifice was freely poured forth for men, and the Altar of the world's redemption has the blood of Christ on it, and at its base.

14. The typical Sacrifice was considered in two great aspects: First, as typical of the Saviour's merit—its richest portions, expressive of value, were laid upon the Altar and received there of God, Ex. xxix. 13. Secondly, as typical of the odiousness of sin—Christ as our representative was made sin and a curse for us, and representatively bore the wrath of God, Ex. xxix. 14. "The bodies of those beasts, whose blood is brought into the sanctuary by the High-Priest for sin, are burned without the camp; wherefore Jesus also, that he might sanctify the people with His own blood, suffered without the gate," Heb. xiii. 11, 12.

15. The blood was *sprinkled*. Sprinkling is the act of distribution. The efficacy of the Atonement is as broad as it is specific. It is applied to each alone; it is applied to the many in masses. As the finger marks the perfection of its adaptation, the sprinkling marks its freeness. Messiah is to sprinkle many nations, Isa. lii. 15. The blood of Christ is that blood of sprinkling which speaketh better things than the blood of Abel, Heb. xii. 24; by it we have our hearts sprinkled from an evil conscience, Heb. x. 22; for we are chosen unto sprinkling of the blood of Jesus, 1 Pet. i. 2.

16. The blood was to be sprinkled *seven times*. Seven is the number symbolic of perfection. The blood of Christ is perfect in its virtue; God uses the means for its perfect application, and it cleanses from all sin.

17. When the High-Priest entered into the Most Holy Place, he was to take of the blood of the bullock, and sprinkle it with his finger *upon the Mercy-Seat* eastward; and before the *Mercy-Seat* he was to sprinkle of the blood with his finger seven times. He was then to kill the Goat of the Sin-Offering, that was for the people, and bring his blood within the veil, and sprinkle it also upon the Mercy-Seat and before it, and thus make an atonement for the Holy Place, because of the uncleanness of the children of Israel, and because of their transgressions in all their sins, Lev. xvi. 14-16. These typical acts closely associate the efficacy of Christ's blood with His efficacy as Intercessor, His redemption with His character as the Propitiation (the Mercy-Seat), for God has set Him forth to be a Propitiation (or Mercy-Seat) through faith in His blood, Rom. iii. 25. We approach the Father by approaching Christ. The atoning blood of Christ gives Him the character of the Mercy-Seat. Where Christ is, there, says God, "will I meet with thee, and I will commune with thee from above the Mercy-Seat," Ex. xxv. 14-22. Christ is our mighty intercessor in the Heaven of heavens, in which He appears and pleads the merit of His blood.

It was to be sprinkled *eastward*, toward the sun-rising—emblem of spiritual hope and joy, suggestive of the bright and Morning Star, Rev. xxii. 16, and of the rising of the Sun of Righteousness, with healing in His wings, Mal. iv. 2, and of the tender mercy of our God; whereby the Day-spring from on high hath visited us, to give light to them that

sit in darkness and in the shadow of death, to guide the feet of the perplexed into the way of peace," Luke i. 78, 79. The blood of Christ is a power within the Veil. The type foreshadowed the acceptance in the highest Heaven of what was done on Earth, and our hope enters with our Forerunner, Christ, into that which is within the Veil, Heb. vi. 19, 20. The great underlying thought is, that the Atoning blood of Christ touches heaven as well as earth, is to God-ward as well as to Man-ward, is not a mere appeal to man, but is a governmental necessity of God, that it is not needed alone to reconcile us to the Father—as much of the shallow thinking of the hour considers it—but also is needed to reconcile the Father to us. The sacrifice of Christ is not merely an *at-one-ment*, as the means of bringing about unity, but it is a *propitiation*. Christ is the *propitiation* for our sins, sent by the Father to this great end, 1 John ii. 2, iv. 10—that is, there is just wrath to be averted, undeserved favor to be conciliated, equity to be harmonized with pity. Christ is our absolute need, for we should perish without Him; but He is also the relative need of God—that is, God's administration needs Christ for the voluntary ends of its all-embracing mercy. The Atonement is not a mere argument from God reconciled in advance of it, and aiming by it at a mere breaking down of our reluctance to be at peace with Him, but it is the mighty instrument by which God is reconciled; by which His holiness can be harmonized with His pity; by which God might be just, and yet the justifier of him which believeth in Jesus.

18. One of the most striking acts of the sacrificial ritual was the *waving* and *heaving up* of the offerings. They were put on the hands of the Priests and waved, shaken to and fro, for a wave-offering before the Lord, Ex. xxix. 24-27. As the waving was from side to side, the heaving was an upward motion. The offering was swung to and fro, and then with the impetus thus given was raised aloft. The sheaf of first-fruits was also to be waved before the Lord, to be accepted for the people, on the morrow after the Sabbath, Lev. xxiii. 11, 12. The lamb for the poor man's trespass-offering was to be waved to make an atonement for him, Lev. xiv. 21-24. Waving and heaving formed one of the most striking and common actions of the ritual.

The taking of the offerings into the priestly hands marked them at once as separated from their natural connections. The wave-offering was the accompaniment of peace-offerings. The Rabbis explain the heaving of the shoulder as an acknowledgment that God has His throne in Heaven, the waving of the breast that He is present in every quarter of the Earth. The one rite testified to His eternal majesty on high, the other to His being among and with His people.

19. Every oblation of the Meat-Offering was seasoned with salt. They were not to suffer the salt of the covenant of their God to be lacking. With all their offerings they were to offer salt, Lev. ii. 13. Salt is the symbol of resistance to change, hence the symbol of covenant relation, of personal incorruption, of preservation through grace.

20. The consummation of the sacrificial act was by fire, it was burned to ashes. Fire is the instrument of divine resumption. It breaks up the fruits and relations of the object seized by it, and restores them to their elemental conditions. It destroys corruption, it restores purity. By it God accepts that which is pleasing to Him, and destroys that which He abhors. Fire is the image

of the work of the Spirit; it is also the image of the destruction of the lost. Fire accepts the sacrifice as offered to God; it destroys it as representative of sin and guilt. It images the intense and consuming sorrows and sufferings of the Saviour in His passion and bloody death.

21. The Expiatory Sacrifices were always to be accompanied by the Eucharistic Sacrifices, to symbolize the duty of showing forth the praises of Him who has redeemed us. The Meat-Offerings, the Peace- or Thank-Offering, and the other Eucharistic Sacrifices were a sign of thankful services. "The characteristic ceremony in the Peace-Offering was the eating of the flesh by the sacrificer (after the fat had been burnt before the Lord, and breast and shoulder given to the Priest). It betokened the enjoyment of communion with God 'at the table of the Lord' in the gifts which His mercy had bestowed."

22. "It is clear that the idea of sacrifice is a complex idea, involving the propitiatory, and the dedication and the eucharistic elements. Any one of them taken by itself, would lead to error and superstition. The propitiatory alone would tend to the idea of atonement by sacrifice for sin, or being effectual without any condition of repentance and faith; the self-dedication, taken alone, ignores the barrier of sin between man and God, and undermines the whole idea of atonement; the eucharistic alone leads to the notion that mere gifts can satisfy God's service, and is easily perverted into the heathenish attempt to 'bribe' God by vows and offerings."

The Sacrifices of the Mosaic Economy open with the **Passover**, which is pre-eminently typical of the Paschal Festival of the New Testament, because in the Passover, we have a Sacrifice, which prepares the way for a Sacrament, the Passover being both Sacrifice and Sacrament. In a Sacrifice we give to God, in a Sacrament God gives to us; in a Sacrifice we impart, in a Sacrament we receive. The typical relation between Christ and the Paschal Lamb may be presented in this—

TABLE OF PARALLELS.

THE PASCHAL LAMB.	CHRIST.
1. Was to be a male of the flock.	1. Was to be a true man.
2. Without spot.	2. Without sin.
3. Slain and roasted.	3. Suffered and was crucified, "our passover is sacrificed for us," 1 Cor. v. 7.
4. His legs were not to be broken.	4. Not a bone of Him was broken.
5. Was to be slain between the evenings.	5. Died in the third hour of the afternoon.
6. The lintel and posts were to be struck with the blood.	6. His blood is sprinkled for the saving of the soul, Heb. xii. 24; 1 Pet. i. 2.
7. The destroyer was not suffered to come in where the blood was sprinkled.	7. The blood of sprinkling speaketh better things than that of Abel.
8. The lamb was to be eaten entire.	8. Christ is ours, and is to be taken wholly.
9. To be eaten without leaven.	9. "Let us keep the feast with the unleavened bread of sincerity and truth," 1 Cor. vii. 8.
10. To be eaten with bitter herbs.	10. Bitter is the bondage from which Christ redeems us.
11. To be eaten in haste, with the loins girded as for a journey.	11. "Let your loins be girded about, and ye yourselves like unto men who wait for their Lord," Luke xii. 35, 36.
12. To be eaten by those only who were in the covenant.	12. Christ in the power of His saving blood is received only by those embraced in the new covenant.

Next to the Paschal Lamb in the uniqueness and richness of suggestion is the **Red Heifer**, Num. xix. 2-10. The points that have been specially noted in regard to the Red Heifer in the original and the later ritual, are these:

a. The Heifer of pure red color was very rare in Palestine, and of great price. The Red Heifer of this rite was to be without spot or blemish, no yoke was to have come upon her.

b. The Heifer was to be given the Priest of special dignity, the Sagani or representative of the High-Priest, who at the time of the institution of the rule, was Eleazar, the son of Aaron.

c. The Heifer was taken to Mount Olivet to be slain there. The pile of wood on which the body was to be burned faced toward the Temple.

d. When the Red Heifer had been slain the Priest took the blood with his left hand, dipped into it his finger, and sprinkled of her blood directly before the tabernacle or temple seven times, with his eyes turned to its eastern gate.

e. The Heifer was then completely burned in his sight. The skin, the flesh, the blood, everything was burned. During the burning, cedar-wood, hyssop, and scarlet wool were cast into the flame.

f. The Ashes of the Heifer were carefully gathered, and separated into three parts. One part was kept on Mount Olivet, and was mingled with living water, and used to purify the children of Israel. Another part was taken to the Temple for the purification of the Priests. The third part was reserved as a memorial.

g. The burning of the Red Heifer was a rite of very rare occurrence. The Jewish doctors say that it took place but once in the era of the first Temple (including the time of the Tabernacle), and this while Moses was living. The other eight occasions were during the time of the second Temple.

There are great writers on Typology who consider the Red Heifer the most complete of the Types of Christ.

The red color marks the hue of sin, Isa. i. 18, which Christ bore in its penalty and curse as our representative. The Heifer, though bearing the hue of sin, was to be without spot or blemish, and Christ, though He was made sin for us, knew no sin, He was without spot or blemish, holy, harmless, undefiled, and separate from sinners, Heb. vii. 26; 2 Cor. v. 21. The Heifer was to have known no yoke, and Christ's submission to the Law was purely spontaneous. He was "made under the law, to redeem them that were under the law." He lay down His life of Himself. The Red Heifer was slain outside of the camp in the presence of all the people. "The bodies of those beasts whose blood is brought into the sanctuary by the High-Priest for sin, are burned without the camp. Wherefore Jesus also, that He might sanctify the people with His own blood, suffered without the gate. Let us go forth therefore unto Him without the camp bearing His reproach," Heb. xiii. 11-13. On the Mount of Olives the first blood-shedding of the Atonement took place, where our Saviour's blood fell, mingled with His sweat, to the ground. Nor is it a mere matter of accidental coincidence that the chief priestly actor in the Sacrifice of Christ was not Annas, who was the High-priest, but Caiaphas, his son-in-law, who was His Sagani or vicar. The purification by the sprinkling of the ashes of the Heifer points to the cleansing efficacy of the sacrifice of Christ: "For if the blood of bulls and of goats, and the ashes of an heifer sprinkling the unclean, sanctifieth to the purifying of the flesh; how

much more shall the blood of Christ, who through the eternal Spirit offered Himself without spot to God, purge your conscience from dead works to serve the living God?" Heb. ix. 13, 14.

The sense of the need of sacrifice has "been deeply rooted in men's hearts, and has been from the beginning accepted and sanctioned by God, and made by Him one channel of His revelation. In virtue of that sanction it has a value partly symbolical, partly actual, but in all respects derived from the one True Sacrifice of which it was the type. All its ideas are capable of full explanation only by the light reflected back from the Antitype."

## VIII. TYPICAL TIMES AND OCCASIONS.

The typical times and occasions may be classified with respect to the frequency of occurrence, as, daily, the times of daily service; weekly, the Sabbath; monthly, the New Moon; annual, the three great Festivals, the Passover, the Pentecost, and the Feast of Tabernacles; the New Year or Day of Trumpets, and the Day of Atonement; every fifty years, the Year of Jubilee.

1. Every day a bullock was to be offered for a Sin-Offering for Atonement. It was to be day by day continually, Ex. xxix. 36. Two lambs were to be offered, one in the morning, the other in the evening. It was an affecting confession of a need constantly existing and never met—"the Priest offering oftentimes the same sacrifices which can never take away sins."

2. The Sabbath shadowed that rest of soul which is to be found in Christ, Matt. xi. 28, and the Sabbatism of that holy and eternal rest into which God receives His people when the world's whole work of toil is past for ever, Heb. iii. 3, and they rest from their labors, Rev. xiv. 13.

3. The New Moon was the calendar of all infant nations. The sun marked the day, the moon the month, and the division of the lunar month into quarters gave the weeks. The New Moons are constantly referred to by Moses as already familiar to the people in sacred connections. The New Moon called the people to thanksgiving for the mercies of the month, the mercies which came from the Father of light, in whom is no variableness nor shadow of turning. It gave the great lesson of finding in all the visible and changing the reminders of what we owe to the invisible God, and to our unchanging and faithful Saviour.

4. The day of the Passover was Israel's birthday as a distinct and chosen nation, and shadowed forth the transition of the New Testament Israel into the glorious liberty purchased by Christ's Death and sealed by His Resurrection. Its typology centres in the Paschal Lamb and the Paschal Supper.

5. Pentecost came on the fiftieth day after the second day of the Passover. It is called the Feast of Weeks and Feast of the Seventh, because it followed the seven weeks—the seven sevens—after the Passover. It was also called the Feast of Harvest, because by the time of its coming the harvest, which began at the Passover, was ended. It occurs at the general time of the giving of the Law on Sinai, and hence the Rabbis call it the Day of the Giving of the Law.

On Pentecost, the fiftieth day after our Lord's Resurrection, the Spirit was poured out upon the disciples. It marks the harvest consummation of the great work begun at the Paschal Sacrifice of the Lamb of God. It was to be kept with a tribute

of a free-will offering according as the Lord had blessed the giver, and thus taught us to honor the Lord with our substance, to lay by us in store as God hath prospered us, knowing that if there be a willing mind it is accepted of God, according to that a man hath, Deut. xvi. 9, 10; Prov. iii. 9; 1 Cor. xvi. 2; 2 Cor. viii. 12.

The wave-loaves of fine flour offered at this feast were to be baked with leaven, for leaven not only symbolizes change and corruption, but also symbolizes self-diffusing, self-assimilating power, and in this latter aspect "the Kingdom of Heaven is like leaven, which a woman took and hid in three measures of meal till the whole was leavened," Lev. xxiii. 17; Matt. xiii. 33. And in this way the link of association is made between the typical reference of this Festival to the Pentecostal effusion of the Spirit and the Parable of the Leaven. The Pentecost points out *who* it is, by whose most blessed work the Gospel is to be spread abroad in all the world, even the Holy Ghost, and the Parable points out *how* and *through what* the work is done, even the Word of God, with its self-diffusing, all-assimilating, all-leavening power.

Here also, as in all types, by the very nature of the case, there are contrasts as well as likenesses. For as we know of *what* a shadow is the shadow, by its *likeness* to the thing which casts it—so we also know that it is the shadow, and not the thing itself, by its *contrast* with that thing. We know the shadow of a man by its conformity, so far as its nature allows, with the man who casts it; but it is so unlike him that we contrast it even more than we compare it with him. Contrast the giving of the Old Covenant with the smoking and trembling mountain, the trembling and appalled people, its thunders and lightnings, its awful trumpet-peal as if the judgments of a violated law were already bursting on the world—contrast these with the gentler, yet no less expressive tokens of the Christian Pentecost, the rushing mighty wind, emblem of the Spirit in His world-wide breathings, the eleven tongues of fire, which told of the divine flames which human tongues taught of God were to kindle. The Old Pentecost commemorated the giving of a Law written on those stones which imaged the hardness of the natural heart, the New Pentecost was accompanied by the outpouring of that Spirit, who takes away the heart of stone, and on the tenderer heart, the heart of flesh, which is his own work, writes the New Law of Love, Heb. xii. 14-24. The offering of the firstlings in the Old speaks of that more glorious bringing in of the first-fruits of the new Pentecost, the Gentiles and Jews (each in their own way, prepared by Providence for the grace of the Common Father of men), who were among the redeemed at the first outpouring, Rom. xvi. 5; Rev. xiv. 4.

6. The Day of Atonements (the Hebrew word is always in the plural), Lev. xxiii. 27, was one of special solemnity and humiliation. The Talmud calls it "the Day." It was no feast or festival. On this day only, the High-Priest was permitted to enter the Holy of Holies. After observing every precaution necessary for the strictest purity, he bathed, robed himself in white, offered sacrifice for himself and for the people. He burned incense in the Most Holy, so that the mercy-seat was hidden by clouds of smoke, and sprinkled the blood before the mercy-seat seven times, toward the East. Passing from the Most Holy into the Holy Place, where none but he was permitted at this time, he purified it by sprinkling blood on the Altar of incense. The rites involved

all the chosen race, beginning with the High-Priest and his family and ending with the entire people. It was kept five days before the Feast of Tabernacles, in its atoning significance and deep sadness preparing for that great feast of rejoicing. It was the Kyrie before the Gloria in Excelsis. It tells us that the shedding of blood is needed for Remission, and that the penitent seeking of pardon is the pathway to the assurance of faith. The great central act in the part of the High-Priest points to Christ, who "is not entered into holy places made with hands, which are the figures of the true; but into heaven itself, now to appear in the presence of God for us; nor yet that He should offer Himself often, as the High-Priest entereth into the holy place every year with the blood of others; for then must He often have suffered since the foundation of the world: but now once in the end of the world hath He appeared to put away sin by the sacrifice of Himself," Heb. ix. 24-26.

7. The Day of Preparation for the Day of Atonements was "a memorial of blowing of trumpets." On that day in the Tabernacles, and subsequently in the Temple, were blown, from early dawn until night, not the silver trumpets of gladness, but the winding trumpets of rams' horns. It was a sound of sadness they gave forth, and was meant to call men to that penitential preparation which is needed for the day of Expiation. The Word has its note of sadness as well as of joy. The Word makes tears before it dries them. Only in the heart saddened by a true repentance, claimed by the fore-running Law, springs up the joyous assurance of the Gospel flowing from faith in the Atonement. It was also called the beginning of the year, because it was fixed for the first day of the month Tisri, which, though the seventh month ecclesiastically, was the first month of the civil year. It was related to the great day for which it made men ready as the ministry of John the Baptist was to the work of our Lord. It prefigured a ministry of preparation, a going before the face of the Lord—a lifting up of the voice like a trumpet to show God's people their transgressions, and the house of Jacob their sins, Luke i. 76; Isa. lviii. 1.

8. The Feast of Tabernacles is also called the Feast of Ingathering. It commemorates trials and changes past, and toil rewarded by the gathering of its fruits. As the Day of Trumpets immediately preceded and prepared for the Day of Atonements, the Feast of Tabernacles followed that day of deep and awful significance—as it were the rejoicing in the results which Faith embraced and made her own. As the Day of Atonements was the greatest of days in its sadness, the Feast of Tabernacles, the Day of the Festival of Tabernacles, was the greatest of days in its joys, it was the Feast of feasts. Philo calls it "the greatest of Feasts." It is the Feast, as by pre-eminence sacred and happy. The tabernacles of the jubilant people were made of fresh, leafy boughs, as remembrances of the sole shelter which their fathers could find when they were fugitives from Egypt. The Exodus itself was the fruit of a long period of Providential toil and pain. But the Festival commemorated also the ingathered fruits of the earth, the *exodus*, the outcome of man's toil and pain.

The Passover is the Festival of the Church's birth, the Pentecost is the Festival of her adult endowment, the Feast of the Tabernacles points to the great Festival of her finished Redemption in Heaven, the Redemption which waited on the Day

of Atonement for the world. The wilderness is passed; the changing booth, the hasty tabernacle has been exchanged for the eternal mansions; the full ripe fruit has been gathered in; the eternal rejoicing has been entered on. "They that sow in tears shall reap in joy. He that goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him." "They shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat. For the Lamb which is in the midst of the throne shall feed them, and shall lead them unto living fountains of waters; and God shall wipe away all tears from their eyes."

9. The **Sabbath Year**, Lev. xxv. 2, took place every seventh year. It was a year of Sabbaths. It applied to the year the same general principles which held good of the weekly Sabbath and its typology. The people were to allow the land to be still, and thus were to be taught implicit trust in God. They were to be taught tenderness to the poor, and regard even to the beasts of the field. Some Jewish and some Christian writers have connected with this Festival the idea of a Sabbath Year of the World. The connecting of the Sabbath Year specially with the manumission of servants has arisen from a failure to notice that the Hebrew servant was to be released after six years, dating from any time at which his servitude began, Ex. xxi. 2; Deut. xv. 12.

10. The **Year of Jubilee** followed the seven sevens of the seventh years, Lev. xxv., xxvii. It was the great year of rest, following on the seventh Sabbath Year. It was a time of holy gladness, of music, of family reunion, of restitution and restoration of what had been forbidden and lost, of release from burdens and slavery, of free forgiveness, and of bounteous giving. It was meant to symbolize the acceptable year of the Lord, the time of the Advent of Christ, and that time of consummation when all Sabbaths of the week and year shall find their antitype in the Jubilee of Heaven.

The **Feast of Tabernacles** shadows heavenly joy in its relation to the past, the Year of Jubilee shows what it is in itself, eternal rest from all ill, eternal immunity from all burdens and sorrows, eternal gladness. The Year of Jubilee is the Year of Restoration—of Paradise Restored. The inheritance once forfeited is resumed for ever. "Blessed are the dead which die in the Lord from henceforth: Yea, saith the Spirit, that they may rest from their labors; and their works do follow them." "The ransomed of the Lord shall return, and come to Zion with songs and everlasting joy upon their heads: they shall obtain joy and gladness, and sorrow and sighing shall flee away."

#### IX. THE TYPICAL EVENTS; OR, HISTORICAL TYPES.

1. That "history repeats itself," simply means that God acts in unity and harmony with Himself; that His plans widen, but that there are no breaks in them. The first appearance of a thought of God in history, gives us a type of what will recur in innumerable combinations, but in unchanged essence and principle, again and again, till time shall be no more. Hence, history, which relatively to the past is prophecy fulfilled, is relatively to the future prophecy unfulfilled, just as a blossom is a bud fulfilled, and a fruit unfulfilled. Moses was the greatest of prophets, not in the number of his prophecies, in the narrow sense of the word prophecy, but as the giver, beyond all men of the pro-

phetic olden time, of the facts, the principles, the laws and institutions which shadow the future. The most prophetic part of the Old Testament is the Pentateuch, and the most prophetic book of the Pentateuch is Genesis—it is the great nursery for the primal plants of all prophecy and of all history. All prophecy and all history grow out of the Book Genesis. Read and studied carefully in view of this scope, its interest is much enhanced.

2. The **Creation of the World** has furnished suggestions almost ample enough in themselves for a System of Christian Divinity. It presents many images of the New Creation in individuals and in the world, of the Regeneration, whether that word means the total work of the New Dispensation, or the miniature of that work which the Holy Spirit traces in each believer. The original Creation has also been used as a type of the Resurrection of man, both spiritual and bodily.

The first Creation was the direct work of God; all the persons of the Trinity were active in it, each after his own distinctive character; it was followed by order out of chaos, light from darkness, life from deadness; it moved in beautiful progression, each step preparing for the next; it ended in the production of man in God's image. It was attended by God's benediction, and succeeded by His Sabbath rest, on a world with no taint of sin or sorrow on it. All these are images of the New Creation in its beginnings, advance and consummation.

3. The **Planting of the Garden of Eden**, or Paradise, has always been among the favorite themes of typical suggestions. Augustine makes Paradise the "indicator of the future of the Church. Paradise is the Church; its four rivers are the four Gospels; its fruit trees the saints; the fruits are their holy works; the tree of life is the Holy of Holies, even Christ; the tree of the knowledge of good and evil is the free will of man." In the Church, as in Paradise, we hear the voice of God and He walks with us, we have the purest joys, the sweetest privileges given to man on earth. But the Church militant is but a prophecy of the Church triumphant, and Paradise is a type of the Church in heaven, yet more than of the Church on earth. Paradise is an image of the sinless beauty and joy of the world of the Redeemed. There are the true Tree of Life, and the river of God, the streams of whose living waters burst forth from beneath the throne of God, and the Lamb, Rev. ii. 7; xxii. 1. There the incarnate God reveals his presence for ever among His saints.

4. The building of the **Ark** presents many points of parallel with the Christian Church. Like the Ark, the Church is designed to save God's children from the flood of wrath which sweeps over the world of the godless; in the Church the saved form one family; the Church is planned and constructed by divine guidance, on the model divinely prescribed; the storms which destroy all the evil only ensure the Church's rising higher and resting more securely above all perils—"the gates of hell shall not prevail against her." Like the Ark, the Church is sailless and rudderless, yet moves and is guided, ever aright, by God's hand of Providence and Grace. The world of the godless which is not willing to be saved by the Ark yet often bears a part in building it—they that deride it shall yet seek, too late and in vain, to be saved by it. Wealth and genius and skill have been made tributary to the work of the Church; but they who possessed them were often

led by an overruling Providence to use them for the welfare of others, neglecting their own.

5. The appearing of **Jehovah in the Burning Bush**, Ex. iii. The Bush represents the Church as a thing of life, yet of lowliness. The bush which burned but was not consumed, imaged the Church of the past and of the future, which, amid the fire of tribulation, in which God permits His people to be tested, is not destroyed. Our God is a fire—consuming to His enemies, purifying and illumining to His children. To the good and the bad alike come sorrows; but while the sorrow of the world worketh death, the light affliction which is but for a moment works a far more exceeding and eternal weight of glory for those who look in faith at the things which are unseen to the natural eye, 2 Cor. iv. 17.

But the mode of God's manifestation in this case was in keeping with His whole manner of self-revelation. The invisible God appears in the visible, the Creator in the created, the exalted in the lowly; and in this broader scope of construction the burning bush is a shadow of that whose perfect consummation is in the incarnation of Christ, where the lowly humanity shone unconsumed, in the glorious brightness of the Deity.

6. The sojourn of **Israel in Egypt** presents many interesting analogies to the Church. In distress and oppression Israel was not forgotten. All things were ripening for its redemption, and when the hour of God's deliverance came, the line was drawn between Egypt, the rich and proud oppressor, and Israel the lowly. Darkness was thick over the one, light in all the dwellings of the other; the angel of death smote the one, and passed over the other; the first-born of the one died, from the king's palace to the beggar's wayside, in the house of the other the parents and the first-born were rejoicing in the coming deliverance. In the Exodus the one stood stricken and trembling, the other went forth with a high hand, singing, The Lord hath triumphed gloriously!

7. The movement of the **Pillar of Cloud** and of **Fire**, Ex. xiii., was a type of Christ as God hidden and revealed in humanity, guiding His Church through the wilderness to the Land of Rest. The pillar of cloud and fire was associated with the angel of the divine presence, or the manifested Jehovah. It was cloud by day to temper the glare; it was fire by night to relieve the darkness. From it the Lord looked forth to trouble His enemies, and to comfort His people. It went before His people as their guide through the wilderness. They went in safety only as they followed it. Like our Lord, it presented a union of the natural with the divine; the Deity dwelt within the cloud of humanity. God veils and reveals Himself in clouds. At the Transfiguration, a cloud was around our Lord and His heavenly visitants. At His Ascension, a cloud received Him out of their sight, and He shall come again in the clouds of heaven, and we shall be caught up into the clouds to meet our Lord in the air. The luminous cloud is the special token of the divine presence.

8. The **Crossing of the Red Sea**, Ex. xiv., was a type of Holy Baptism, which sunders and consecrates, which separates the Church from the world. "All our fathers were under the cloud, and all passed through the sea; and were all baptized unto Moses in the cloud and in the sea," 1 Cor. x. 1, 2. It was their baptism out of slavery into national life.

9. The falling of the **Manna** is directly connected with Christ as given for the life of the world, both by our Lord Himself and by St. Paul. In John

vi. 32 and the following verses, our Lord contrasts the giving of Himself as the antitype and verity, with the giving of the Manna as the type and shadow. St. Paul, 1 Cor. x. 3, says: "Our fathers did all eat the same spiritual meat." In the Manna, which in virtue of its typical relation is "spiritual meat," they had the type of which Christ is the reality. He is the bread of God "which cometh down from heaven, and giveth life unto the world." "Manna," says an old divine, "tasted like honey. Thus is Christ to them that love him, honey to the heart, melody to the lips [mel in corde, in ore melos]." The Manna has also been compared to the Gospel, to the Eucharist, and to the joys of Eternal Life, Rev. ii. 17.

10. The **Smitten of the Rock**, Ex. xvii. "Our fathers did all drink the same spiritual drink: for they drank of that spiritual rock that followed them: and that rock was Christ," 1 Cor. x. 4. Type of the Smitten Rock of our Salvation, the source of our life, of the water of which he who drinketh thirsts no more, John vi. 35. He was smitten by the Law—"the law was given by Moses." To the stroke flowed forth responsive the blessings of salvation, "Grace and Truth came by Jesus Christ."

11. The **Budding of Aaron's Rod** and its being laid in the Ark, Num. xvii., Heb. ix. 4, typified Christ in His lowliness, Isa. xi. 1, and in His rejection, Ps. xxii. 16, and then in the glory of His return to life; His exaltation to eternal triumph, "believed on in the world;" His perpetual appearing in heaven, "received up into glory."

12. The making and lifting up of the **Brazen Serpent**, Num. xxi. 9, points first to the nature and source of sin, of the deadly wound inflicted by this old Serpent, whose head was to be bruised by the Seed of the woman. The healing Serpent was appointed by God; it bore an external similarity to that which did the harm, as Christ appeared in the "likeness of sinful flesh," and was made sin and a curse for us. The remedy was simple: It was only look and live. It was meant for all: "Every one that is bitten;" "God so loved the world;" "Our Lord Jesus Christ by the grace of God tasted death for every man." Its power was the power of a divine promise offered to every one, and actually received in its benefits by all who believed—"When he looketh upon it, he shall live."

"As Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up, that whosoever believeth in Him should not perish, but have eternal life," John iii. 14 15. The Symbol

MOSES SMITING THE ROCK.

of Humiliation became the Standard of Triumph. The Cross of Christ is the glory of His Church.

13. The construction of **Solomon's Temple**. While the Temple differed in no essential respect from the Tabernacle in its typology, it yet in certain respects presented the same points at a more advanced stage. In some measure, the Temple brought forth more perfectly the idea of the finished structure of God, the Church triumphant, fixed and secure. "In the erection of the Temple," says Gerhard, "no sound of axe or hammer

was heard; and it is by the Word and the Cross in this life, the living stones are made ready to be laid in the heavenly Jerusalem"—the sounds that indicate trial and fitting will not be heard there. The preparations of Providence often seem full of agitation; its consummations are made in calm. Fire, Earthquake and Storm, the bowing of the cedars, the rocking of the mountain, the rending of the rock, go before, the still small voice comes after, but God comes in the voice. God uses the former to prepare the way for the latter.

### X. THE SECONDARY PURPOSES OF THE CEREMONIAL LAW.

1. We have seen that Christ is the supreme end of the Ceremonial Law. Its grand object was to foreshadow Him, and to prepare the way for His work. But the Law had other objects, subordinate yet real; relatively small yet absolutely great; "not glorious" with respect to the "glory that excelleth," yet with respect to all other glory full of brightness.

2. The Ceremonial Rites bound together the people of God, brought them into public assemblies for common worship, and knit them closely together by the most sacred ties. There is no external bond like that of common religious usages.

3. They were marks of the profession of one Religion, the confession of one Faith. They distinguished the Mosaic polity from that of all other nations. These Ceremonies were a hedge of separation, "a middle wall of partition," between Israel and the Gentiles with their idolatrous rites. "What nation is there so great that hath statutes and judgments so righteous as all this law, which I set before you this day?" "He hath not dealt so with any nation: and as for his judgments, they have not known them," Deut. iv. 8; Ps. cxlvi. 20; Eph. ii. 14.

4. They reminded men of sin, and continually and earnestly warned them of its various kinds, its guilt and punishment, Heb. x. 3. The Ceremonial Law was the divine means of profoundly moral ends.

5. They were a solemn and constant test and exercise of obedience toward God. They helped to educate the chosen race in the worship of God, and in a true, heartfelt service of Him.

6. They were disciplinary, involving a correction of the tendency of the people to fall into the idolatrous habit of the surrounding nations, Deut. xii. 30. They were at once as a fire to purify and make the nation ductile, and as the mould into which the metal was to flow and be set.

7. They were the means of support to the Ministry, by the portion of the sacrifices, the tithes, and other forms of provision for their needs.

8. Rightly used, they excited the expectations, quickened the desires, and prepared the heart of the people for the advent of the "Mighty God, the Father of the era to come, the Prince of Peace." The Law was their Schoolmaster as it is ours, to lead them, as it leads us, to Christ, that they, even as we, might be justified by Faith. "Wherefore then serveth the law? It was added because of transgressions, till the seed should come to whom the promise was made. Is the law then against the promises of God? God forbid: for if there had been a law given which could have given life, verily righteousness should have been by the law. But the Scripture hath concluded all under sin, that the promise by faith of Jesus Christ might be given to them that believe," Gal. iii. 19-22.

### XI. ABROGATION OF THE CEREMONIAL LAW.

1. The Jew maintains that the Ceremonial Law is still in force—that the something it shadows has not come to take its place. The whole typical explanation given by the Christian Church involves that the Ceremonial is fulfilled in Christ, and is therefore abrogated by Him.

2. The Ceremonial Law shows by its very nature that it is capable of change and of abrogation.

The Moral Law is written in man's nature as a responsible being, and in its essential character is unchangeable. It is the Law of all time, the Law of heaven as well as of earth, of angels as well as of men, the Law for God, as well as the law of God. It is that Law the complete conformity with which is the revelation of God's absolute holiness. It is not imposed on God, but is the necessary presupposition of His perfection. Ceremonial Laws are but legal means, deriving their authority from the will of the giver, requiring changes as circumstances change, and necessarily ceasing altogether as soon as the circumstances which originated them cease altogether.

3. The circumstances which originated the Ceremonial Law, and which made it so necessary and useful, have entirely ceased. It was to furnish a shadow of Christ and His kingdom, and Christ and His kingdom have come. It was to separate Israel wholly from the idolatry of the Pagan religion, and this, its work, has been done for ages. Israel, once insanely Polytheistic in its tendencies, is now inflexibly Monotheistic. Whatever of good the Old Dispensation bore in it, is reproduced far more perfectly in the New. With the passing away of the reason, passes away the Law itself.

4. The performance of the Ceremonial Law has long ceased to be possible. The persons, the places, the forms of it are lost. The Holy Land is held by the oppressors of the Jews, the Temple is gone, the Jewish race is scattered over the world. The tribe of Levi cannot be distinguished from other tribes, still less the family of Aaron be sundered from the other families as the Ceremonial Law requires. It is true the Jewish race have been driven from the Holy Land before—but their dispersion was but for a limited and stated time—this dispersion has existed for many centuries. The distinctions were not effaced which were necessary, now they have vanished. Is it said the Jews are yet to return to their old home to restore the ancient ritual? We shall not enter into the question of the unfulfilled prophecies connected with this great and profoundly interesting race, but would ask the thoughtful Jew one question: Is it conceivable that the Jewish race, if they had Palestine in possession, would, if they could, restore the minutiae of the Levitical ceremonies? Is there one Jew in a thousand so little influenced by the growth of religious ideas, that he could go back to animal sacrifices, and the burdensome details of the Mosaic Ceremonial Law? The cultivated Jewish thought of the world, if it does not coincide with the Christian thought, moves at least in parallelism with it. The Jew is nowhere so much at home as he is in the lands of Biblical Christianity, and if Palestine were thrown open to the Jews to-day, but with the understanding that they who returned to it were to conform strictly to the Levitical Law, Palestine in a little time would have fewer Jews in it than it has now.

5. The Old Testament itself teaches that the Ceremonial Law is to be abrogated, Ps. cx. 3, 4. See Heb. vii. 11, 12; Jeremiah xxxi. 32; Dan. ix. 27.

6. The new Testament teaches the same doctrine repeatedly, Gal. iv. 1-3; Eph. iv. 14; Col. ii. 14.

7. The New Testament economy is so diverse from the Old, that the distinctive ceremonies of the Old cannot be retained in the New, even by way of memorial.

8. Many of the greatest Jewish divines have confessed that when Messiah comes he will abrogate the Ceremonial Law.

9. But while the Ceremonial Law is abrogated as law, it still is rich in teaching and suggestion.

It is still profitable for doctrine. If we cannot use the lock without the key, neither can we use the key without the lock. We must study the New Testament to understand the Old; we must study the Old Testament to understand the New.

10. The ceremonial law, so far as it rests on principles which are unchanged by time, the broad general principles of all worship, may furnish useful hints to be employed wisely in the exercise of Christian liberty, by the people of God through all ages. Its reverence, its care of God's prescription, its humility, its sense of sin, its confession of need of atonement, its self-sacrifice, and personal consecration, its order, propriety, and richness of significance,—these are lessons, in perpetual freshness, and are "written for our learning." If we love it most for Christ's sake, yet should we love it no little for its own.

11. There is a sadness which lingers around fallen glory, though that glory, in its own nature, was destined to a necessary decay. The Mosaic Economy is the most majestic, the most wonderful, of superseded things. It was, as the Apostle well styles it, "glorious." The name of Moses is one of the greatest in the records of the race. He lifted a race of slaves to such a freedom as the world had not conceived of: he gave, to the demoralized victims of lawless tyranny, a law which has been the wonder of all ages. He so preserved and fixed the result of his grand work, that the race which bears the impress of it has shown the intensest moral tenacity in the annals of nations. Every Jew is a living monument of the amazing power of the Mosaic Statutes. A race which at first seemed destined to lose itself in the morass of the surrounding idolatry, now holds its wonderful existence, like a stream of fresh water which flows through the Ocean without mingling with its current. So completely does Moses prepare the way for his Divine successor, that in the actual order of Providence, it is no extravagance to say, No Moses, no Christ, as it is supremely true, also, that, had there been no Christ in God's plan, there would have been no Moses. Moses and Christ are correlates in Redemption. Hence, in the New Testament the name of Moses is one which is treated with profound reverence. In the Epistle to the Hebrews, the Apostle, as he shows that Christ, as He is above Angels, must be in person God: so he shows that, as He is in office above Moses, He must be in office Messiah. "Wherefore, holy brethren, partakers of the heavenly calling, consider the Apostle and High-Priest of our profession Jesus Christ, who was faithful to him that appointed (him that made him), as also Moses was faithful in all his house. For this man was counted worthy of more glory than Moses, inasmuch as he who hath builded the house, hath more honor than the house; for every house is builded by some man, but he that hath built all things is God. And Moses verily was faithful in all his house, as a servant, for a testimony of those things which were to be spoken after; but Christ as a Son over his own house; whose house are we, if we hold fast the confidence, and the rejoicing of the hope firm unto the end."

"CONSIDER the Apostle and High-Priest of our profession." On that matchless One, who blends the glory of the heavenly with the charm of a perfect human sympathy, who is very God of very God, and very man, born of the Virgin to our low estate—on him fix the eyes of your understanding. Gaze on him till the light of his form brings you within its own transfiguring power, till the applying Spirit transforms you by his light and changes you into the same image from glory to glory.

1. The Civil law had reference to persons and things. A. Laws of persons. (a) Father and son, where obstinate disobedience on the part of the latter was held to be a capital offence. Still, the parent had not an irresponsible authority, as the voice of the congregation is recognized. Among children the right of the first-born to one half of the inheritance was ratified, and this arrangement was not to be modified by partiality. Daughters could inherit when there were no males in the family, but they were obliged to marry in their own tribe, while unmarried daughters were left in the hands of their fathers, Num. xxx. 3-5.

(b) Husband and wife. Such was the authority of the husband that the wife could not in her own right be independent, but a divorced wife was freed from the control of the husband, and a widow did not return again under the control of her father. A slave wife was not actual property, and she was set free if ill treated. Slander against a woman was subjected to a heavy fine; and arrangement was made in the case of the death of a husband without children to perpetuate

the family. (c) Master and slave. If a slave was lamed by his master, he obtained his freedom; and if he died under punishment, a certain penalty was enforced. Hebrew slaves were freed at the Sabbatical year, and at the Jubilee year he and his children were set free; from a resident alien a slave could be redeemed, while foreign slaves were held as property, and slaves which had escaped from other nations were not to be returned.

B. Laws of things. (a) All land was the property of God alone, and the persons who cultivated it were held to be his tenants. All land sold returned to its original possessors at the Jubilee year, and hence the price of all land, if sold, was viewed in reference to the distance of time from the Jubilee. Then, again, in order to protect the Levites, who were devoted to the public service of God, the Levitical suburbs were inalienable, and the houses of the Levites were redeemable at all times. As to the line of inheritance, descent was to sons, then daughters, then brothers, next uncles on the father's side, and finally next kinsmen.

(b) Debts to Israelites were released at the Sabbatical year, and benevolence by lending to the needy was encouraged, while pledges on securities for repayment were not to be enforced with cruelty. (c) On the subject of taxation legislation was specific and clear. A tax was to be paid for the tabernacle service, and tithes of all produce were to be set apart for the support of the Levites, while a second tithe was to be given every third year for religious festivals, and first-fruits of corn, wine and oil were to be offered at Jerusalem, and portion was to be reserved for the priests. Still further, the firstlings of clean beasts, the redemption-money of man and of unclean beasts were also set apart for the support of the priests, thus securing an adequate maintenance for those who were set apart from secular life for the public worship and service of God. The dependence of the poor on labor was duly recognized, and it was ordered that wages should be paid daily.

2. Criminal laws may be viewed as offences against God and against man. The first, second, third and fourth enactments of the Decalogue contained the legislation in relation to the duty of man toward God, the King and Lord of all. Acknowledgment of false gods and all idolatry were forbidden. Witchcraft, divination and the introduction of will-worship into the service of God were forbidden. Blasphemy was strictly forbidden, and the sanctity of the Sabbath day was enjoined under the strictest penalties. In all cases the punishment of death by stoning or lapidation was to be inflicted.

As to offences against man, disobedience to parents, cursing or striking them were sternly forbidden, and such as thus transgressed were to be publicly judged and stoned. Rebellion against the just authority of the priests was to be visited with a similar penalty. Assault was punished by an assessment of damages or by the law of retaliation. Accidental homicide was provided for in the institution of the cities of refuge. Death by negligence was punished by death. If a slave died under punishment, the penalty was death, Ex. xxi. 20, 21, and actual murder was punished by death, without any satisfaction or safety from reprieve or the protection of sanctuary.

The crime of adultery was visited by the death of both the offenders, and the rape of a married or an unmarried woman who was betrothed entailed the death of the offender, Deut. xxii. 13-27. In the case of an unbetrothed woman marriage, with a dowry, was admitted as a compensation, or the pay-

ment of a full dowry in case the offer of marriage was refused, but unlawful or incestuous marriages were to be prevented by the penalty of death; and where the law was neglected, then such marriages were announced as being contrary to the will of God, and no progeny was to be expected. The crime of *theft* was punished by double or fourfold restitution, and a burglar or night robber might be killed, Ex. xxii. 1-4. Injury done to things lent, or trespass, was to be compensated according to the wrong done. Death was the punishment of kidnapping, and perversion of justice was strictly forbidden.

False witness was severely punished, and slander against the chastity of a wife entailed a fine and prevented a divorce.

3. Judicial and constitutional laws. The exigencies of society led to the appointment of local judges for all ordinary matters. During the sojourn in the wilderness it was needful that rulers should not only be appointed for thousands and for fifties, but even for tens. From the decision of these judges important cases could be appealed to the judgment of Moses, but in small matters their award was final. In settling in the promised land a similar course was adopted, and judges were localized all over the country. They were generally appointed out of the Levites because of their intimate acquaintance of the law. Appeals were permitted to the priests at the holy place, and their sentence had to be received as final. In capital cases two witnesses were required. The principle of personal responsibility was recognized, and punishment was not to be extended to a whole family where only one member was guilty.

As to the Royal power, provision was early made with a view to its limitation. It was evidently shown that their heavenly King did not desire that the Israelites should become an aggressive people, and seek to extend their territorial power by subjugating the surrounding nations. Intimation was made in Deut. xvii. 14 that the time would come when the outward form of their government might be changed, and very express stipulations were made with a view to restrain the ambition of the sovereign, and even to prevent an assimilation of the royal state to that of the courts in surrounding heathen lands. Even the multiplication of horses was forbidden, lest the king should accumulate a large force of cavalry, and thus become dangerous at home, as well as aggressive to his neighbors. The Israelites were to be a secluded people to whom was committed the sacred deposit of the truth; but like all nations, they required the administration of law. The king, therefore, had the power of taxation, of compulsory service, and he could declare war, although he was forbidden to be despotic. Before the establishment of the monarchy the heads of the tribes seemed to be clothed with great authority, and even at a later period they exercised a decided authority over both the king and the priests. To the sovereign it appertained to secure a royal revenue from the confiscation of the lands of criminals, from bond service, from flocks and herds, from commerce, from tribute paid by foreigners, and from the produce of domain lands. Such is a brief condensation of the legislation under which for centuries the Jews lived and flourished—a system which aimed at purity, integrity, peace and rectitude between man and man; which indicated the importance of rule and obedience in civil society; which bound the people and held them together for ages, while it lifted their minds beyond this life to the great King and Ruler of all, in whom they lived and moved and had their being, the Lord of all.

### 3. Inhabitants of the Country.

When the land of Canaan was first promised to the seed of Abraham, Gen. x. 15-18, the people who inhabited it were—the Sidonians, on the north-west, afterward famous for commerce; the Hittites, on the south-west, near Hebron; the Jebusites, at Jebus, afterward at Jerusalem; the Amorites, between the Hittites and the Dead Sea; the Girgashites, near the sea of Tiberias; the Hivites, at Hermon; the Arkites, at Arka, opposite the north extremity of Lebanon; the Sinites, south of the Arkites; the Arvadites, at Arvad, in the island of Aradus and its neighborhood; the Zemarites, south of the Arvadites; and the Hamathites, at Hamath, in the northern extremity of the land.

### 4. Divisions of the Land.

The following are the principal divisions to which this country has been subject:

1. JOSHUA, upon the conquest of the land, divided it into twelve portions, which were distributed among the twelve tribes, by lot, according to their families; so that in this division every tribe and every family received their lot and share by themselves, distinct from all the other tribes. In this division among the tribes, the *northern* parts were assigned to the tribes of Asher, Naphtali, Zebulun and Issachar; the *middle* parts to that of Ephraim and the half-tribe of Manasseh; the *southern* parts to those of Judah, Dan, Benjamin and Simeon; and the country beyond Jordan to those of Reuben, Gad and the other half-tribe of Manasseh. The relative situation of the tribes will be seen by consulting a map of Judea. The tribe of Levi, who would make a thirteenth, being selected for the immediate service of God, possessed no lands, but was dispersed among the other tribes. Forty-eight cities, thence called *Levitical cities*, were appropriated to the residence of this tribe, Num. xxxv. 7, with the tenths and first-fruits of the estates of their brethren. Of the cities assigned to the Levites, the Kohathites received twenty-three, the Gershonites thirteen and the Merarites twelve. Some writers have supposed that all the Levitical cities were cities of refuge. But this is a mistake; for among the cities given to the Levites, Num. xxxv. 6, only six are appointed to be cities of refuge, whither the inadvertent manslayer might flee, and find an asylum from his pursuers, and be secreted from the effects of private revenge, till cleared or condemned by a legal process. And it is observable that the Israelites are commanded to "prepare the way"—i. e., to make the road good—"that every slayer may fly thither" without impediment, and with all expedition, Deut. xix. 3. The rabbins inform us, among other circumstances, that at every cross-road was set up an inscription—"Refuge, Refuge." It was, probably, in allusion to this circumstance that John the Baptist is described as "the voice of one crying in the wilderness, Prepare ye the way of the Lord, make his paths straight." He was the Messiah's forerunner, and in that character was to remove the obstacles to men's flying to him as their Asylum, and obtaining the salvation of God.

2. SOLOMON was the next who made a considerable division of the land, separating it into twelve provinces or districts, and placing each under a peculiar officer: the name of these, and also of the cantons over which they presided, will be found in 1 Ki. iv. 7-19.

3. REHOBAM'S accession to the throne was soon followed by the revolt of the ten tribes, who

erected themselves into a separate kingdom, under Jeroboam, and were distinguished as the *kingdom of Israel*, while the tribes of Judah and Benjamin, continuing faithful to Rehoboam, formed the *kingdom of Judah*. The latter kingdom contained all the *southern* parts of the land, consisting of the allotments of the tribes of Judah and Benjamin, and so much of the territories of Dan and Simeon as were intermixed with that of Judah. The royal city, during the continuance of this kingdom, was Jerusalem, in the tribe of Benjamin. The former kingdom contained all the *middle* and *northern* parts of the land, with the country beyond Jordan, consisting of the rest of the tribes; its capital was Samaria, in the tribe of Ephraim, situated about thirty miles north of Jerusalem. This division ceased on the subversion of the kingdom of Israel by Shalmaneser, king of Assyria (B. C. 723), after it had flourished two hundred and fifty years.

4. The ROMANS were in possession of the land during the times of the New Testament history, when we find several great divisions. Thus the whole space between the Mediterranean and the river Jordan had three—viz., JUDEA, on the south; SAMARIA, in the middle; and GALILEE, on the north; and the space between Jordan and the heights of Gilead had two, viz., PEREA and IDUMEA.

(1) JUDEA, which was the southernmost division, and comprehended the original portions of the tribes of Judah, Benjamin, Simeon and Dan. The following is the account which Josephus has given of this part of the country: "The southern parts, if they be measured lengthwise, are bound by a village, adjoining the confines of Arabia, called by the Jews who dwell there, *Jordan*; and its northern limit, where it joins Samaria, is the village Annath; its breadth, however, is extended from the river Jordan to Joppa, on the shore of the Mediterranean. The city of Jerusalem is situated in the very middle, on which account some have, with sagacity enough, called that city the 'navel' of the country. Nor is Judea destitute of such delicacies as come from the sea, since its maritime places extend as far as Ptolemais. It was divided into eleven portions, of which the royal city of Jerusalem was the chief, and presided over the neighboring country, as the head over the body. As for the other cities, which were inferior to it, they presided over their several toparchies. Goplna was the second of them; Acrabatta the next; after them Thamna, Lydda, Emmaus, Pella, Idumæa, Engedi, Herodium and Jericho; and after these came Jamnia and Joppa, as presiding over the neighboring people. From the Mishna we learn that this division was considered under four aspects, viz. the western, which lay along the Mediterranean, and in which was the land of the Philistines; the mountainous or pastoral district; the plain, which lay farther east, and inclined toward Jordan; and the vale or flat, which bordered on the banks of that river. The whole of this division was often denominated the *south country*, because it lay to the south of Samaria, and was, as before stated, the most southern division of the Holy Land."

(2) SAMARIA was the middle division of the country on this side Jordan. It began at Annath and Acrabatta (a day's journey north of Jerusalem), and extended to Ginea, in the Great Plain. The following is Josephus' description of it: "It is entirely of the same nature as Judea, for both countries are made up of hills and valleys, are moist enough for agriculture, and are very fertile. They have abundance of trees, and are full of an-

numal fruit, both that which grows wild and that which is the effect of cultivation. They are naturally watered by many streams, but derive their chief moisture from rain water, preserved in reservoirs during the dry season, of which they have no want; and as for those streams which they have, their waters are exceeding sweet. By reason also of the excellent grass which they have, their cattle yield more milk than those in other places; and what is the greatest sign of excellency and abundance, they each of them are very full of people." Mr. Buckingham, who visited this spot in 1816, says: "The description given of the face of the country, its soil and productions, as resembling that of Judea, is so far true that both are composed of abrupt and rugged hills, and differ essentially from the plains of Galilee. But while in Judea the hills are mostly as bare as the imagination can paint them, and a few of the narrow valleys only are fertile, in Samaria the very summits of the eminences are as well clothed as the sides of them. These, with the luxuriant valleys which they enclose, present scenes of unbroken verdure in almost every point of view, which are delightfully variegated by the picturesque forms of the hills and vales themselves, enriched by the occasional sight of wood and water, in clusters of olive and other trees, and rills and torrents running among them. From the Life of Josephus we learn that the length of Samaria, from north to south, was three days' journey; for he states "that it is absolutely necessary for those who would go quickly to Jerusalem (from Galilee) to pass through that country; for in that road they might in three days' time go from Galilee to Jerusalem." We see also from this that there was a natural as well as a moral reason for the evangelist saying of Christ, John iv. 4, that "He must needs go through Samaria" to Jerusalem. This province comprehended the original possessions of Ephraim and Manasseh."

(3) GALILEE was the most northern division of Palestine, and contained the inheritances of Issachar, Zebulun, Naphtali, Asher and part of that belonging to the eastern half-tribe of Manasseh. It was one of the most extensive provinces of the Holy Land, and is divided by Josephus into the *Upper* and the *Lower* Galilee. The *Upper Galilee* abounded in mountains, and was eminently understood by the term "Galilee of the Gentiles," or "Galilee of the Nations," as the mountainous nature of the country enabled those who possessed the fastnesses to defend themselves against invaders. Strabo enumerates among its inhabitants Egyptians, Arabians and Phœnicians. It extended principally beyond Jordan, inclining toward the Trachonitis, Libanus and Batanea. In proof of this, Calmet has noticed, among other things, that *Judas Gaulonitis* is called the *Galilean*, Acts v. 37; and we know that Gaulon was beyond Jordan. So also was Bethsaida; but the disciples who were of this city were called *Galileans*. The testimony of Josephus is to the same effect, who assigns the limits of the entire Galilee thus: "It is terminated westerly by Ptolemais and Carnel (which do not belong to Galilee); on the south by the country of Samaria and Scythopolis, on the river Jordan; on the east by the cantons of *Hippas, Gadara and Gaulon*; on the north by the confines of the Tyrians." The *Lower Galilee* contains the plain of Esdraelon, which is nearly fifty miles in length and twenty in breadth. It is described by Dr. Clarke as one vast meadow, covered with the richest pasture, enclosed on all sides by the mountains, and not having a single house or a tree

within its extent. Josephus describes Galilee as very populous, containing two hundred and four cities and towns, the least of which contained fifteen thousand inhabitants. The district of Galilee, as Dr. Wells remarks, was most honored with our Saviour's presence. It was here that he was conceived; it was hither that Joseph and Mary returned with him, then a child, out of Egypt; it was here he settled, and lived with his reputed father, and the Blessed Virgin, his mother, till he began to be about thirty years of age, and was baptized of John; it was hither he returned after his baptism and temptation by the devil; and after his entrance upon his public ministry, though he frequently visited the other provinces, yet it was here that his dwelling-place was, whence he was called "a Galilean;" and, lastly, it was here our Lord made his first appearance to the eleven disciples after his resurrection. To all which may be added that the most considerable part, if not all, of his apostles, were of this country; whence they are all styled by the angels, "men of Galilee," Acts i. 11.

5. The divisions east of the Jordan were, PEREA on the north, and IDUMEA on the south.

(1) PEREA, properly so called, had its limits thus: Philadelphia, east; the Jordan, west; Machæron, south; and Pella, north. But under the appellation of Perea is sometimes included the whole country east of the Jordan (except the extreme south), comprising the cantons of Perea, on the south; Batanea and Gaulonitis, in the middle; and Abilene, Iturea, Trachonitis and Auranitis, on the north. The whole of this district was a fruitful country, abounding with pines, olive trees, palm trees, and other plants, which grew in the fields in great plenty and perfection; and even in the excessive hot seasons it was well watered and refreshed with springs and torrents from the mountains. The following is the language in which it is described by Mr. Buckingham: "We had no sooner passed the summit of the second range (of hills beyond the Jordan), going down on its east side by a very gentle descent, than we found ourselves on plains of nearly as high a level as the summits of the hills themselves, and certainly eight hundred feet, at least, above the streams of the Jordan. The character of the country, too, was quite different from anything I had seen in Palestine, from my first landing at Soor to the present moment. We were now in a land of extraordinary richness, abounding with the most beautiful prospects, clothed with thick forests, varied with verdant slopes and possessing extensive plains of a fine red soil, now covered with thistles as the best proof of its fertility, and yielding in nothing to the celebrated plains of Zebulun and Esdraelon, in Galilee and Samaria. We continued our way to the north-east through a country the beauty of which so surprised us that we often asked each other what were our sensations, as if to ascertain the reality of what we saw, and persuade each other, by mutual confessions of our delight, that the picture before us was not an optical illusion. The landscape alone, which varied at every turn, and gave us new beauties from every different point of view, was, of itself, worth all the pains of an excursion to the eastward of Jordan to obtain a sight of; and the park-like scenes that sometimes softened the romantic wildness of the general character as a whole reminded us of similar spots in less neglected lands." Of the district of Batanea the same traveler thus speaks: "We continued our way over this elevated tract, continuing to behold, with surprise and admiration, a beautiful country

on all sides of us; its plains covered with a fertile soil, its hills clothed with forests, at every new turn presenting the most magnificent landscapes that could be imagined. Among the trees the oak was frequently seen, and we know that this territory produced them of old. In enumerating the sources whence the supplies of Tyre were drawn in the time of her great wealth and naval splendor, the prophet says, 'Of the oaks of Bashan have they made thine oars,' Ezek. xxvii. 6. Some learned commentators, indeed, believing that no oaks grew in these supposed desert regions, have translated this word by *alders*, to prevent the appearance of inaccuracy in the inspired writer. The expression of the 'fat bulls of Bashan,' which occurs more than once in the Scriptures, seemed to us equally inconsistent, as applied to the beasts of a country generally thought to be a desert, in common with the whole tract which is laid down in our modern maps as such, between the Jordan and Euphrates; but we could now fully comprehend not only that the bulls of this luxuriant country might be proverbially fat, but that its possessors, too, might be a race renowned for strength and comeliness of person."

(2) IDUMEA.—This province composed the extreme south part of the land, and also a small part of Arabia. During the captivity at Babylon, it seems to have been possessed by the neighboring Idumæans. Being conquered by the victorious arms of the Maccæes, these people embraced Judaism, and thus became incorporated into the body of the Jewish nation. The tract inhabited by them retained the name of Idumæa not only during the time of the New Testament history, Mark iii. 3, but also for a considerable time afterward.

6. The following table will supply the means of comparing the division of Palestine amongst the twelve tribes with that adopted by the Romans during the first three centuries of the Christian era, and with that adopted by the Turks at the present day:

Canaanitish Division.	Israelitish Division.	Roman Division.	Turkish Division.
Sidonians .....	Tribe of Asher (in Libanus).	Upper Galilee .....	{ <i>Tsafud</i> (ancient Galilee). <i>Belad Sherkuf</i> (ancient Trachonitis, with Belad-Haran, Auranitis, etc.)
Unknown .....	{ Naphtali (N. W. of the lake of Gennesareth). Zebulun (N. W. of the lake of Gennesareth). Issachar (Valley of Esdraelon, Mount Tabor) .....		
Perizzites .....	{ Half-tribe of Manasseh (Dora and Cesarea).	Lower Galilee .....	{ <i>Arela</i> . <i>Nablous</i> .
The same .....	Ephraim (Shechem, Samaria).		
Hivites .....	Benjamin (Jericho, Jerusalem)	Samaria .....	{ <i>El-Kods</i> (Jerusalem, Jericho, etc.). <i>El-Khalil</i> (Hebron, and the S. of Judea). <i>Gaza</i> or <i>Palestine</i> (the seacoast).
The same .....	Judah (Hebron, Judea Proper)		
Jebusites .....	Simeon (S. W. of Judah).	Judea .....	{ <i>El-Ghaur</i> (ancient Perea). <i>El-Sharrat</i> (S. and S. E. of the Dead Sea, with <i>El-Djibal</i> , the ancient Gabbala).
Amorites, Hittites .....	Dan (Joppa).		
Philistines .....	Reuben (Perea, Heshbon).	Perea .....	{ <i>El-Ghaur</i> (ancient Perea). <i>El-Sharrat</i> (S. and S. E. of the Dead Sea, with <i>El-Djibal</i> , the ancient Gabbala).
Moabites .....	Gad (Decapolis, Ammonites).		
Ammonites, Gilead .....	Half-tribe of Manasseh (Gaulonitis, Batanea).		
Kingdom of Bashan .....			

7. We cannot, of course, pretend to mark these divisions with anything like precision, much less to mark their geographical agreement with each other; but what we have done will answer all the purposes of historical comparison.

### 5. The Face of the Country.

Under a wise and salutary government, the produce of the Holy Land would exceed all calculation: its perennial harvest, the salubrity of its air, its limpid springs, its rivers, lakes and matchless plains, its hills and vales,—all these, added to the serenity of its climate, prove this land to be, indeed, a field which the Lord hath blessed. God hath given it of the dew of heaven, and the fatness of the earth, and plenty of corn and wine. The limestone rocks and valleys are even now to be seen entirely covered with plantations of figs, vines and olive trees; scarcely a single spot seems to be

neglected. The hills, from their bases to their utmost summits, are entirely covered with gardens, and in a high state of agricultural perfection. Even the sides of the most barren mountains are rendered fertile by being divided into terraces, like steps rising one above another. In many parts of the land the scenery is peculiarly grand. Lofty mountains give an outline of the most magnificent character; flowing beds of secondary hills soften the romantic wildness of the picture; gentle slopes clothed with wood give a rich variety of tints, hardly to be imitated by the pencil; deep valleys, filled with murmuring streams and verdant meadows, offer all the luxuriance of cultivation; and herds and flocks give life and animation to scenes as grand, as beautiful and as highly picturesque as the genius or taste of a Claude could either invent or desire.

### 1. RIVERS, LAKES AND SEAS.

1. The *Jordan*, or *river of Dan*, rises under the lofty peaks of the Anti-libanus. The Lake of Phiala, so called as resembling a *bowl*, whence it takes its rise, is about fifteen miles north-east of Cesarea. Philip the tetrarch, having thrown a quantity of chaff into the spring of Phiala, which issued out at Panium, a subterranean passage between the two springs was thereby discovered, and Phiala ascertained to be the true source of Jordan.

(1.) At its embouchure the stream is deep and rapid, rolling a volume of waters from two to three hundred feet in width, with a current so violent that an expert swimmer finds it impracticable to cross it. Dr. Shaw describes it, indeed, as not more than thirty yards broad, and Maundrell as only about twenty yards over; but they speak of its appearance at some distance from the mouth, where the pilgrims bathe. The former affirms that it runs about two miles an hour, and Chateaubriand represents it as sluggish, reluctantly creeping to the Dead Sea; while the latter speaks of its violent and turbid current—"too rapid to be swam against;" in which he is supported by Pococke, who describes

it as "deep and very rapid, wider than the Tiber at Rome, and perhaps about as wide as the Thames at Windsor; the water turbid." But these variations may easily be accounted for by observing that the writers not only visited different parts of the river, but went at different times of the year.

(2.) There is no doubt that anciently, at certain seasons, this river overflowed its inner bank. Josh. iii. 15; 1 Chr. xix. 15; Jer. xlix. 19; 1. 44. "But at present," says Maundrell, "whether it be that the river has, by its rapidity of current, worn its channel deeper than it was formerly, or whether, because its waters are diverted some other way, it seems to have forgot its ancient greatness; for we could discern no sign or probability of such overflows when we were there, which was on the 30th of March, being the proper time for these inundations. Nay, so far was the river from overflowing that it ran at least two yards below the

brink of its channel." It is nevertheless a fact that the Jordan still rises to a height of from nine to ten perpendicular feet between the months of January and March—a height quite sufficient to produce very extensive inundation when its channel was shallower than it now is.

(3.) The course and channel of this river have been accurately described by Maundrell, Buckingham, Burckhardt and other recent travelers. Mr. Buckingham observes that the whole of the plain, from the mountains of Judea on the west to those of Arabia on the east, may be called the vale of Jordan, in a general way; but in the centre of the plain, which is at least ten miles broad, the Jordan runs in another, still lower valley, perhaps a mile broad in some of the widest parts, and a furlong in the narrowest. There are close thickets all along the edge of the stream, as well as upon this lower plain, which would afford ample shelter for wild beasts; and as the Jordan might overflow its banks, when swollen with rains sufficiently to inundate this lower plain, though it could never reach the upper one, it was most probably from these that the lions were driven out by the inundations, which gave rise to the prophet's simile, Jer. xlix. 19; 1. 44. Mr. Burckhardt is more particular as to the exact course of the river: "The valley of the Jordan, or El Ghor, which may be said to begin at the north extremity of the Lake of Tiberias, has near Bysan [Bethshan, or Scythopolis] a direction of north by east, and south by west. Its breadth is about two hours. The great number of rivulets which descend from the mountains on both sides and form numerous pools of stagnant water, produce in many places a pleasing verdure, and a luxuriant growth of wild herbage and grass; but the greater part of the ground is a parched desert, of which a few spots only are cultivated by the Bedouins. In the neighborhood of Bysan the soil is entirely of marl; there are very few trees; but wherever there is water high reeds are found. The river Jordan, on issuing from the Lake of Tiberias, flows for about three hours near the western hills, and then turns toward the eastern, on which side it continues its course for several hours. The river flows in a valley of about a quarter of an hour in breadth, which is considerably lower than the rest of the plain of the Ghor: this low valley is covered with its high trees of a luxuriant verdure, which affords a striking contrast with the sandy slopes that border it on both sides. The river where we passed it was about eighty paces broad, and about three feet deep: this, it must be recollected, was in the midst of summer. In the winter it inundates the plain in the bottom of the narrow valley, but never rises to the level of the upper plain of the Ghor, which is at least forty feet above the level of the river. The river is fordable in many places during summer, but the few spots where it may be crossed in the rainy season are known only to the Arabs." It abounds with fish.

2. The *Lake of Tiberias*, or *Sea of Galilee*, was called, in more early times, the *Sea of Chinnereth*, from a city of that name seated on it, belonging to the children of Naphtali, Josh. xix. 35; and the edge of this sea on the other side of Jordan, east, was made the western boundary of the portion of Gad, who occupied all the cities of Gilead and half the land of the children of Ammon, Josh. xiii. 24-27. Gennesareth is considered by Calmet and Buckingham to have been the original name of this *Sea of Chinnereth*, gradually corrupted; Galilee was the name given to it from its situation on the eastern borders of that division of Palestine;

and Tiberias, which is its most modern name, must have been bestowed on it after the building of the city bearing the same name by Herod. It is computed to be about eighteen miles in length, and from five to six in breadth. The description which Josephus has left us of this beautiful sheet of water is, like all the other pictures drawn by him, admirably faithful in the detail of local features: "Now, this Lake of Gennesareth is so called from the country adjoining to it. Its breadth is forty furlongs, and its length one hundred and forty; its waters are sweet and very agreeable for drinking, for they are finer than the thick waters of other fens; the lake is also pure, and on every side ends directly at the shores and at the sand; and it is also of a temperate nature when you draw it up, and of a more gentle nature than river or fountain water, and yet always cooler than one could expect in so diffuse a place as this is. Now, when this water is kept in the open air, it is as cold as that snow which the country people are accustomed to make by night in summer. There are several kinds of fish in it, different both to the taste and sight from those elsewhere." Dr. Clarke speaks of the uncommon grandeur of the memorable scenery of this spot. He describes the lake as being longer and finer than any of the Cumberland and Westmoreland lakes, although, perhaps, inferior to Loch Lomond. It does not possess the vastness of the Lake of Geneva, although it much resembles it in certain points of view. In picturesque beauty he states it to come nearest to the Lake of Como in Italy, although it is destitute of anything similar to the islands by which that majestic piece of water is adorned. Viewing it from Tel Hoom, Mr. Buckingham says, "Its appearance is still grand. The barren aspect of the mountains on each side, and the total absence of wood, give, however, a cast of dullness to the picture, which is increased to melancholy by the dead cast of its waters and the silence which reigns throughout its whole extent, where not a boat or vessel of any kind is to be found. The waters of this lake, lying in a deep basin, surrounded on all sides with lofty hills, excepting only the narrow entrance and outlets of the Jordan at each extreme, are protected from long-continued tempests, and, like the Dead Sea, with which they communicate, are never violently agitated for any length of time. The same local features, however, render it occasionally subject to whirlwinds, squalls and sudden gusts from the hollow of the mountains, which, as in every other similar basin, are of short duration, and the most furious gust is instantly succeeded by a calm. A storm of this description is evidently alluded to by the evangelist, where he says, "There came down a storm of wind on the lake, and they were filled with water, and were in jeopardy: then He arose, and rebuked the wind and the raging of the water; and they ceased, and there was a calm." Luke viii. 23, 24. It was the old opinion that the waters of the Jordan passed through the lake without mingling with it, and Pococke thought he noticed the stream to be of a different color. The fact is that the water of the lake is clear, while that of the Jordan is muddy, and, of course, the strong current, in passing through the former, imparts to it a tinge of its own color.

3. The *Dead Sea*, or *Lake Asphaltites*, variously called in Scripture the *Sea of the Plain*, the *Salt Sea* and the *East Sea*, Dent. iii. 17; iv. 49; Num. xxxiv. 3; Josh. xv. 5; Ezek. xlvii. 18, is surrounded by high hills on three sides, some of them exhibit-

ing frightful precipices, and on the north it is bounded by the plain of Jericho, through which the Jordan flows into it. The Kedron, Arnon and Zerka rush down the hills in torrents, and, along with other streams, discharge themselves into the lake. Its real size is not satisfactorily ascertained, ancient and modern writers materially disagreeing in their statements. Josephus affirms it to be seventy-two miles long and eighteen broad. Diodorus states it at sixty-two miles long and seven and a half broad. But the calculation of Pliny is much greater, for he says it is one hundred miles long and twenty-five wide in the broadest part. Maundrell and Dr. Clarke agree with Josephus, and Pococke decides with Diodorus, whereas Mr. Bankes confidently affirms that its utmost extent does not exceed thirty miles. Yet as the editor of the "Modern Traveler" has judiciously remarked, the ancients were well acquainted with this sea. Josephus, Julius Africanus and Pausanias describe it from their own ocular evidence. Are we to conclude that the lake has contracted its dimensions, so as to be only half its ancient length? Supposing any change to have taken place in the depth of its basin, in the lapse of ages, during which the bituminous stores contained in the subterranean chambers of the abyss have been in a process of decomposition, this is not impossible. For as the whole of the plain is a flat, on a level with the sea, it is extremely probable that the waters anciently covered that whole extent; and a comparatively slight subsidence of the sea would convert the shallow into a marshy, and at length arid, plain. The waters of the Dead Sea are clear and limpid, but their specific gravity exceeds that of all other water known. Josephus and Tacitus say that no fish can live in them; and we are without satisfactory evidence that the lake contains any living thing. The mud is black, thick and fetid, and no plant vegetates in the water, which is reputed to have a petrifying quality. Neither do plants grow in the immediate vicinity of the lake, where everything is dull, cheerless and inanimate, whence it is supposed to have derived the name of the *Dead Sea*. The water is extremely acrid, and the earth surrounding it is deeply impregnated with the same qualities, too predominant to admit of vegetable life, and even the air is saturated with them. Great quantities of asphaltum and sulphur are found on the edges of the lake, as well as a kind of stone or coal, which on attrition exhales an intolerable odor and burns like bitumen: this is used by the inhabitants of the country for paving churches, mosques and other places of public resort. As the lake is at certain seasons covered with a thick, dark mist, which is dissipated with the rays of the sun, some writers have alleged that black and sulphureous exhalations are constantly issuing from the water. Numerous swallows skim along the surface, and thence take up the water necessary to build their nests. An uncommon love of exaggeration is testified in all the older narratives, and in some of modern date, of the nature and properties of the water.

(1) The circumstance of this lake constantly receiving the waters of the Jordan, which Shaw computes to be about six million ninety thousand tons daily, without overflowing its banks, although there is no visible outlet, induced Reland, Pococke and other writers to suppose that it must throw off its superfluous waters by some subterranean channel. Dr. Halley has shown that the effect of evaporation in a hot climate will satisfactorily account for the phenomenon. The specific gravity of the

water is found to be very great. Pococke, Van Egmont, Heyman and Captain Mangles affirm that it is sufficiently buoyant to sustain persons who could not swim on its surface. And the question of its specific gravity has been set at rest by the chemical analysis of the waters made by Dr. Marcey, whence it was found to be one thousand two hundred and eleven, that of fresh water being one thousand.

(2) The Dead Sea was produced by the exercise of divine wrath; and the Scriptural account is explicit that "the Lord rained upon Sodom and upon Gomorrah brimstone and fire from heaven," Gen. xix. 24, which may be safely interpreted as implying a shower of inflamed sulphur or nitre.

(3) The valley of the Jordan extends from the source of that river to the Dead Sea, and then, encompassing that lake on its western and eastern sides, is continued from its southern extremity to the Elanitic Gulf of the Red Sea. This southern ghor, or valley, is supposed by Mr. Leake to have been the ancient course of the Jordan, before the destruction of Sodom and Gomorrah, when the basin containing the Dead Sea was probably formed, and, consequently, that instead of its waters being evaporated, as they are now, they then emptied themselves into the Elanitic Gulf. The direction of the valley, and the immense volume of water contained in the Jordan, render this conjecture extremely probable; but if this at any time was the course of the Jordan, there has been such a depression in the ravine or basin of the Dead Sea as has changed the level of the region, as the plane of the ghor on the south of the sea sinks rapidly toward that water.

4. The *Arnon* is noticed here chiefly for the purpose of correcting an error relative to its course which has been copied from D'Auvill into most of our maps of Palestine. This river takes its rise at a short distance to the north-east of Katrane, north of Kerek (the ancient Karak Moaba), runs in a north-west direction (not a south-west or west direction, as generally but erroneously represented in maps) into the Dead Sea, passing by Ar, and consequently turning toward the valley in the plains of Moab and to the top of Pisgah, "which looketh toward Jeshimon." Num. xxi. 14-20. It now divides the province of Belka from that of Kerek, as it formerly divided the small kingdoms of the Moabites and Amorites.

## II. MOUNTAINS.

1. *Lebanon*, called by the Greeks and Latins *Libanus*, is a long chain of limestone mountains extending from the neighborhood of Sidon westward to that of Damascus eastward, and forming the northern boundary of the Holy Land, consists of two principal ranges, and forms a kind of horseshoe in its length, beginning three or four leagues from the Mediterranean, above Smyrna, and running from north toward Sidon; from thence bending from west to east toward Damascus, and returning from the south, northward, from the strait of Damascus, as far as Laodicea. The western part of this chain is properly *Libanus*; the other part, eastward, extends from south to north, and is by the Greeks called *Anti-Libanus*, because it is over against the other. Lebanon is composed of four enclosures of mountains, which rise one on the other. The first is very rich in grain and fruits; the second is barren, abounding in thorns, rocks and flints; the third, though higher than this, enjoys a perpetual spring, the trees being always green and the orchards filled with fruit; the fourth is so

high that it is constantly covered with snow, and is uninhabitable in consequence of the extreme cold. The most elevated summit of one of these ridges was called by the Hebrews *Hermon*, by the Sidonians *Sirion*, and by the Amorites *Shenir*, Dent. iii. 9. Volney says, "Scarcely do we depart from Larneca in Cyprus, which is thirty leagues distant, before we discover its summit, capped with snow. Now, since it is well known that snow, in this latitude, requires an elevation of fifteen or sixteen hundred fathoms, we may conclude that to be the height of Lebanon, and that it is consequently much lower than the Alps, or even the Pyrenees. Its stately cedars are now considerably reduced, and verging fast to utter extinction. In less than half a century more probably not one of these sylvan monuments will be standing."

2. *Carmel* is a range of hills extending six or eight miles, nearly north and south, coming from the plain of Esdraelon, and ending in the promontory or cape which forms the bay of Acco. Its greatest height does not exceed fifteen hundred feet. It has on the east a fine plain, watered by the Kishon, and on the west a narrower plain, descending to the sea. The summits of the hills abound with oaks and other trees; and a few wild vines and olive trees may still be found, some stumps of which are very large, indicating its ancient state of cultivation, to which an allusion occurs in Amos i. 2, where it is denounced, as a punishment upon Israel, that "the top of Carmel shall wither." On its top Elijah sacrificed; and Amos says of it, "If they hide themselves in the top of Carmel, I will search and take them out thence," Amos ix. 3. But as the height of the mountain will not altogether account for the expression "hide themselves," here is probably allusion to its numerous caves, natural and artificial, which seem to have been places of refuge in the time of Elijah, and caves have been inhabited and hollowed here by anchorites in modern times. "The excellency of Carmel," Isa. xxxv. 2, if this district be alluded to, may denote either the vineyards or olive grounds that once clothed the sides of the mountains, or the rich pastures afforded by the range of hills, and which rendered it the habitation of shepherds, Amos i. 2.

3. *Tabor* is a large hill, rather than a mountain, rising in the plain of Esdraelon, in Galilee, about three and a quarter hours distant from Tiberias. Its shape is that of a truncated cone, and according to Burckhardt, it is entirely calcareous. Pococke says, "It is one of the finest hills I ever beheld, being a rich soil that produces excellent herbage, and is most beautifully adorned with groves and clumps of trees. The ascent is so easy that we rode up the northern side by a winding road. Some authors mention it as being about four miles high, others as about two; the latter may be true as to the winding ascent up the hill, but Mr. Buckingham is of opinion that its real height cannot exceed two thousand feet. The top of it, which is not half a mile long, and near a quarter of a mile broad, is encompassed by a wall, which Josephus built in forty days; there was also a wall along the middle of it, which divided the southern part, on which the city stood, from the northern part, which is lower and is called the *meidan*, or place, being probably used for exercises when there was a city here, which Josephus mentions by the name of *Artaburion*. Within the outer wall, on the north side, are several deep fosses, out of which it is probable the stones were dug to build the walls; and these fosses seem to have answered the end of cisterns

to preserve the rain-water, and were also some defence to the city. There are likewise a great number of cisterns under ground for preserving the rain-water. To the south, where the ascent was more easy, there are fosses cut on the outside to render the access to the walls more difficult. Some of the gates also of the city remain, as one to the west and a smaller one to the south. Antiochus, king of Syria, took the fortress on the top of this hill. Vespasian also got possession of it, and after that Josephus fortified it with strong walls.

(1) During the greater part of the summer, Tabor is covered in the morning with thick clouds, which disperse toward mid-day, and in the night dews fall very copiously. In the wooded parts of the mountain are wild boars, ounces and great numbers of red partridges. Haselquist enumerates among the productions of this mountain the oak, the carob tree, the turpentine tree, the holly, the myrtle, the ivy, oats, onion, artichoke, rue, sage, poppy, wormwood, etc.; and Van Egmont states that its verdure is beautiful, being everywhere decorated with small oak trees, and the ground universally enameled with a variety of plants and flowers, except on the south side, where it is not so fully covered with verdure. The prospects from the summit of Tabor are very extensive, and are also singularly beautiful. "We had on the north-west," says Mr. Buckingham, "a view of the Mediterranean Sea, whose blue surface filled up an open space left by a downward bent in the outline of the western hills; to the west and north-west a smaller portion of its waters were seen; and on the west again the slender line of its distant horizon was just perceptible over the range of land near the sea-coast. From the west to the south the plain of Esdraelon extended over a large space, being bounded on the south by the range of hills generally considered to be Hermon, whose dews are poetically celebrated, Ps. cxxxiii. 3, and having, in the same direction, nearer the foot of Tabor, the springs of *Ain-el-Shehar*, which sends a perceptible stream through its centre and forms the brook Kishon of antiquity, Ps. lxxxiii. 9. From the south-east to the east is the plain of Galilee, being almost a continuation of Esdraelon, and, like it, appearing to be highly cultivated, being now ploughed for seed throughout. Beneath the range of this supposed Hermon is seated Endor, famed for the witch who raised the ghost of Samuel, 1 Sam. xxviii., and Nain, equally celebrated as the place at which Jesus raised the only son of a widow from death to life and restored him to his afflicted parent, Luke vii. 11-15. The range which bounds the eastern view is thought to be the mountains of Gilboa, where Saul, setting an example of self-destruction to his armor-bearer and his three sons, fell on his own sword rather than fall into the hands of the uncircumcised Philistines by whom he was defeated, 1 Sam. xxxi. The *Sea of Tiberias*, or the *Lake of Gennesareth*, famed as the seat of many miracles, is seen at the north-east, filling the hollow of a deep valley, and contrasting its light-blue waters with the dark-brown shades of the barren hills by which it is hemmed around. Here, too, the steep is pointed out down which the herd of swine who were possessed by the legions of devils ran headlong into the sea, Luke viii. 33. In the same direction, below, on the plain of Galilee, and about an hour's distance from Mount Tabor, there is a cluster of buildings, used as a bazaar for cattle; somewhat farther on is a rising ground, from which it is said Christ delivered the Sermon on the Mount; and the whole view in this quarter is bounded by

the high range of *Gebel-el-Telj*, or the mountain of snow. The city of Saphet, supposed to be the ancient Bethulia, a city said to be seen far and near, and thought to be alluded to in the apophthegm, "a city set on a hill cannot be hid," Matt. v. 14, is also pointed out in this direction. To the north were the stony hills over which we had journeyed thither, and these completed this truly grand and interesting panoramic view.

(2) Since the time of Jerome this mountain has been considered as the scene of the transfiguration, and there are three altars, which are said to mark the site of the three tabernacles proposed to be erected by Peter when he beheld the Saviour's glory, as also a grot, where they say Christ charged his disciples not to tell the transactions they had witnessed till after he should be glorified. This story, however, is devoid of probability, for the journey which the Saviour is said to have taken for the purpose of exhibiting his glory to the disciples places the scene of transfiguration much farther to the north, amid the solitudes of some of the spurs of the Hermon range, which projected southward into the land.

4. The *mountains of Israel*, or *Ephraim*, were situate in the very centre of the Holy Land and opposite to the mountains of Judah. The soil of both is fertile, excepting those ridges of the mountains of Israel that look toward the region of the Jordan, which are both rugged and difficult of ascent, and the chain extending from the Mount of Olives, near Jerusalem, to the plain of Jericho. The whole of this road is considered to be the most dangerous in Palestine; the very aspect of the scenery, indeed, is sufficient, on the one hand, to tempt to robbery and murder, and, on the other, to inspire a dread of it in those who have to pass this way. The bold, projecting mass of rocks, the dark shadows in which everything lies buried below, the towering height of the cliffs above and the forbidding desolation which everywhere reigns around present a picture which is quite in harmony throughout all its parts. With what propriety did our Saviour choose this spot as the scene of that delightful tale of compassion recorded by Luke x. 30-34! One must be amid these wild and gloomy solitudes, surrounded by an armed band, and feel the impatience of the traveler who rushes on to catch a new view at every pass and turn; one must be alarmed at the very stamp of the horses' hoofs resounding through the caverned rocks and at the savage shouts of the footmen, scarcely less loud than the echoing thunder produced by the discharge of their pieces in the valleys; one must witness all this upon the spot before the full force and beauty of the admirable story of the good Samaritan can be perceived. Here, pillage, wounds and death would be accompanied with double terror from the frightful aspect of everything around. Here, the unfeeling act of passing by a fellow-creature in distress, as the priest and Levite are said to have done, strikes one with horror, as an act too inhuman. And here, too, the compassion of the good Samaritan is doubly virtuous from the purity of the motive which must have led to it, in a spot where no eyes were fixed on him to draw forth the performance of any duty, and from the bravery which was necessary to admit of a man's exposing himself by such delay to the risk of a similar fate to that from which he was endeavoring to rescue a fellow-creature. The most elevated summit of this ridge, which appears to be the same that was anciently called the *rock of Rimmon*, Jud. xx. 45-47, is at present known by the name of *Quar-*

*antania*, and is supposed to have been the scene of our Saviour's temptation. The mountains of Ebal and Gerizim are situated, the former to the north and the latter to the south of Sichem or Napolose, whose streets run parallel to the latter mountain, which overlooks the town. The cave of Adullam, mentioned in 1 Sam. xxii. 42, is in the mountains of Judah.

5. The *mountains of Gilead* are on the east side of the Jordan, and extend from Hermon south to Arabia Petrea. The northern part of this chain, known by the name of *Bushan*, was celebrated for its stately oaks and numerous herds of cattle. The scenery of this elevated tract is described as being extremely beautiful. In the southern parts of these mountains were the *Abarim*, or passes, the most eminent of which were Pisgah and Nebo, which form a continued chain and command a view of the whole land of Canaan, Num. xxvii. 12, 13.

### III. VALLEYS, PLAINS AND DESERTS.

1. The *Valley of Hinnom*, lying at the foot of Mount Moriah and rendered memorable by the idolatrous and inhuman worship there paid to Moloch, see 2 Ki. xxiii. 10; 2 Chr. xxviii. 3. To render the valley truly detestable, the bodies of those executed for flagitious crimes and of animals that died of disease were cast into it; and that the pestilential vapors which filled the air might not endanger the surrounding country, fires were almost constantly kept burning there. On the south side of the valley, near where it meets with the valley of Jehoshaphat, is shown the spot of ground formerly called the *Potter's Field*, but afterward *Aeldama*, or the *field of blood*, Matt. xxvii. 7, 8.

2. The *Valley of Jehoshaphat*, also called the *Valley of Kedron*, lies between the foot of Mount Moriah, as a continuation of Sion, on the east, where the temple of Solomon stood, and on which the eastern front of the city walls leads along. It is about three-fourths of a mile in width, and has on its eastern side the Mount of Olives, and the brook Kedron running through it in winter with great impetuosity. The traveler is here shown the well of Nehemiah, where the prophet is said to have restored the fire of the altar after the Babylonian captivity. There are also a great number of gravestones with inscriptions in Hebrew characters, and among the rest two interesting antiquities, reputed to be the tomb of Zacharias and the pillar of Absalom, see 2 Sam. xviii. 18. Independently of the celebrity of this valley as the scene of other important and interesting events, the prophet Joel has chosen it for the place of a pleading between God and the enemies of his people, Joel iii. 1, 2. By many Jews and Mohammedans this passage is applied to the general resurrection. Hence the former consider it as the highest honor to obtain a place for their bones to be deposited in the Valley of Jehoshaphat, and the latter have left a stone jutting out of the wall of the city for the accommodation of their prophet, who, they say, is to sit on it and call the whole world from below to judgment.

3. The *Vale of Siddim* is the once fruitful spot upon which formerly stood the five cities of the plain, Gen. xiii. 10, 11. After their destruction it was turned into the Salt Sea, Gen. xiv. 3, or, as it is called by the Arabs, *Bahar Loth*, or Sea of Lot.

4. The *Valley of Mamre*, situate about two miles from Hebron, south, is celebrated in sacred history for Abraham's entertaining three angels under an oak, Gen. xviii. It was a fertile and pleasant place.

5. The *Valley of Elah*, or the *Terebinthine Vale*, is

in the south-west of Canaan and about three miles from Bethlehem, on the road to Joppa. It is renowned as the field of the victory of David over the uncircumcised champion of the Philistines, who had "defied the armies of the living God," 1 Sam. xvii. "Nothing has ever occurred," says Dr. Clarke, "to alter the appearance of the country. The very brook whence David chose his 'five smooth stones' has been noticed by many a thirsty pilgrim, journeying from Jaffa to Jerusalem, all of whom must pass in their way. The ruins of goodly edifices attest the religious veneration entertained in later periods for the hallowed spot; but even these are now become so insignificant that they are scarcely discernible, and nothing can be observed to interrupt the native dignity of this memorable scene."

6. The *Plain* is a tract which extends from Gaza to Joppa, and forms part of the *plain of the Mediterranean*, which reaches from the brook Bezor to Mount Carmel, on the shore of the Mediterranean, whence it takes its name. The part lying between Joppa and Carmel was called *Sharon*.

7. The *plain of Esdraelon*, the *Great Plain*, or the *Vale of Israel*, we have already spoken of as being of vast extent, and having on its northern side the abruptly rising *Tabor*. It has been a chosen place for encampment in every contest carried on in the country, from the days of Nabuchodonosor, king of the Assyrians, in the history of whose war with Arphaxad it is mentioned as "the great plain of Esdraelon," Judith i. 8, until the disastrous march of Napoleon Bonaparte from Egypt into Syria. Jews, Gentiles, Saracens, Christians, Frenchmen, Egyptians, Persians, Druses, Turks and Arabs, warriors out of every nation which is under heaven, have pitched their tents in the plain of Esdraelon and have beheld the various banners of their nations wet with the dews of Tabor and of Hermon.

8. The *region round about Jordan* extended from the Sea of Tiberias to the Dead Sea, on each side of the Jordan. Of this district the plain of Jericho forms a part. Josephus says its length is two hundred and thirty furlongs, and its breadth one hundred and twenty, being divided in the midst by Jordan. It is much burned up in the summer-time, and in consequence of the extraordinary heat contains very unwholesome air. It is all destitute of water, excepting the river of Jordan.

9. The *wilderness of Judaea* began near Jericho, and extended along the shores of the Jordan and the Dead Sea to the mountains of Edom. It is necessary to state that the Hebrews gave the name of *desert* or *wilderness* to all parts that were not cultivated or thickly inhabited, because we find many parts of this region very far from being a wilderness. Here John the Baptist was educated, and began to proclaim the approach of the Messiah's reign, Matt. iii. 1.

10. The *Desert*, so frequently mentioned during the forty years' wanderings of the Israelites, extended from the east side of the Red Sea to the confines of the land of Canaan, and is known as part of the vast *desert of Arabia*.

### 6. Atmosphere and other Phenomena.

1. From the description already given of the geographical situation and local features of Judaea, it will be obvious that there must be much variation in the climate in different parts of the land. The country running along the sea-coast must have its temperature cooled by its proximity to a large body of water; the valley of the Jordan, surrounded by high and barren mountains, must be excessively

hot; while the country on the ridges of mountains, on either side the Jordan, will be frequently exposed to a chilling air. The day and night in these climates are directly opposite to each other; for while the former is excessively hot, the latter is intensely cold, see Gen. xxxi. 40. This is occasioned by the copious precipitation of vapor which follows the setting of a vertical sun; and so abundant are these dews that we are informed by travelers that they have been frequently wetted to the skin by them. There is a fine and touching allusion to the early evaporation of the dew under the warmth of the rising sun in Hos. vi. 4. The rains in Judaea are very different from what they are among us. For months together they are unknown, coming down generally at stated times in spring and autumn, called the *former* and the *latter* rain, Dent. xi. 14; Hos. vi. 3. It not unfrequently happens that they rush down in such torrents as to destroy soil, grain, houses, flocks and herds, Matt. vii. 25-27. Nor are snow and hail unknown in Judaea. In winter the dew often assumes the appearance of hoar-frost, and on eminences the snow is sometimes seen to lie for a considerable time. The hail is sometimes exceedingly large, falling in such masses as to destroy fields of corn and trees and endanger the lives of animals. Bruce saw hailstones in Abyssinia as large as a nutmeg, and Moses speaks of the "very grievous hail" which destroyed the cattle of the Egyptians, Ex. ix. 18, etc.

2. In respect to the winds, though their general character is calm and temperate, yet are they subject to occasional visitations of cold and storm. As in other countries, they were classed by the four quarters whence they came—viz., east, west, north and south. Hence the general name for them in Scripture is the four winds; and when they are named individually, they are distinguished by their peculiar qualities. Thus, the *east wind* is particularly tempestuous and dangerous in the Mediterranean, Ps. xlviii. 7. Isaiah also alludes to it, ch. xxvii. 8. Such a storm is well known to modern mariners by the name of "a Levanter," Levant [or "Rising"—i. e., of the sun] meaning that country which lies at the east end of the Mediterranean; and what makes it interesting to the Christian scholar is that this very wind is the euroclydon, or stormy north-east wind which was so fatal to the ship in which Paul and his companions were when sailing to Rome, Acts xxvii. 14. The east wind is also accounted, both in Egypt and Judaea, and as Roberts adds in India also, very hurtful to vegetation, as being the cause of blight, Gen. xli. 6; Ezek. xvii. 10; x. 12; Hos. viii. 15; because of its cold and drying quality; carrying off the insensible perspiration from the extremities of plants more rapidly than it could be supplied by the general ascent of the sap, and thereby withering them in a short time. In the summer, however, its leading feature was very different, being very dry and hot; and it was from that quarter, as well as from the south, that they had the suffocating *hot wind* and the *samel*, see Jon. iv. 8. The *west wind*, coming from the Mediterranean, is called in Exodus x. 19 (Heb.) "a wind from the sea." It was for this reason that a cloud from the west betokened a shower, Luke xii. 54; and after a drought, in the days of Elijah, a cloud like a man's hand rising from the sea was the sign of a hurricane of wind and rain, 1 Ki. xviii. 44, 45. It would appear that thunder and lightning came also in the direction of the east and west, for our Saviour alludes to it in Matt. xxiv. 27 when he says, "As the lightning cometh out of the east and shineth even unto the west, so

shall also the coming of the Son of man be." The *north wind* was cold and drying. Hence Solomon says, "It driveth away rain," Prov. xxv. 23; and Job tells us that "cold and fair weather are from the north," Prov. xxxvii. 9, 22. In Eccles. xliii. 17, 20, the north storm and whirlwind are described as terrible; and even without the whirlwind, we are told that "when the cold north wind bloweth and the water is congealed into ice, it abideth upon every gathering together of water and clothe the water as with a breastplate." The *south wind* came from Arabia and commonly brought heat, Job xxxvii. 17; Luke xii. 55, but it also brought whirlwinds, Job i. 19; xxvii. 9; Isa. xxi. 1; Zech. ix. 14. And from that quarter, as well as from the east, came the *hot winds* and the *samel*. It would appear from our translation that the spouse thought the north and south winds of advantage to her garden, for she says, Song Sol. iv. 16: "Awake, O north wind, and come, thou south; blow upon my garden, that the spices thereof may flow out." The south winds in Judaea are moderate or destructive, according to the season.

3. Tornadoes, or whirlwinds, are also referred to in Scripture, and have been often fatal to travelers by overwhelming them in columns of moving sand. The *hot wind* of the desert, which, when it continues for any length of time, is destructive of life, is not unknown in Judaea, and it is probable that by such a "blast" Sennacherib's army was destroyed, 2 Kings xix. 7. The Arabic version has "a hot, pestilential wind." It is in allusion to this phenomenon that our Saviour is said to be "as a hiding-place from the wind," Isa. xxxii. 2. But the most fatal blast to which the inhabitants of Eastern countries are subject is known by the name of the *simoon* or *samel*. Travelers thus describe it: After the air has been unusually heated for several days, the sky suddenly loses its common serenity and becomes dark and gloomy, while the sun assumes a violet color. The approach of the wind is rapid, and is indicated by a redness in the air; and when so near as to become visible, it resembles a sheet of purple-colored smoke, about twenty yards in breadth and twelve feet above the surface of the earth, moving in a direct line. The only means of preservation from it is to lie flat, with the face upon the ground, till it is past, though it sometimes happens that persons are destroyed before they have had time to do this. The event mentions one of these winds, which, in 1665, suffocated four thousand persons, and another in 1668, which suffocated twenty thousand in one night.

4. There is another singular appearance in the atmosphere of Judaea and other Eastern countries called the *mirage* or *serab*, to which allusion is made in Isa. xxxv. 7, and by Jeremiah when in pouring forth his complaint to God for mercies deferred he says, "Wilt thou be altogether unto me as waters that be not seen," Jer. xv. 18, marg.—i. e., which have no reality, as the expression is rendered in the Septuagint.

5. From Ps. cxxi. 6 it has been inferred that the *coup de soleil*, or stroke of the sun, was not unknown in Judaea; indeed, there is manifest mention of it in Judith viii. 3, and it is probable that there is an allusion to it in Isa. xlix. 10 and Rev. vii. 16, where, in describing the happiness of the saints, the inspired writers say, "The sun shall not light on them, nor any heat."

6. We cannot close this section, however, without observing the Israelites considered that most uncertain of all things, the *weather*, as under the immediate superintendence, care and administration of the CREATOR, Matt. v. 45; Acts xiv. 17;

Jer. v. 24; Ps. cxxxv. 7; clvii. 16-18; Nah. i. 5, 6. But notwithstanding this, the husbandman was not to be dismayed; he was to forsake his sins, to put his trust in God, to do his own part, and to leave the event with God, Eccles. xi. 4; 1 Cor. iii. 7.

7. From this summary sketch the reader will be in some measure prepared to appreciate the fidelity with which Moses describes Canaan to his people as "a land flowing with milk and honey," "a good land, and a land of brooks of water, of fountains and depths, that spring out of valleys and hills; a land of wheat, and barley, and vines, and fig trees, and pomegranates; a land of oil-olive; a land wherein they should eat bread without scarceness," and where they should "not lack any good thing," Deut. viii. 7-9.

Such is an accurate description of the territory, the climate and the general appearance of Palestine, which for ages has been downtrodden and desolate. The power of the false prophet has swayed its destinies, and in every aspect it has been a power for evil. With immense capacities for productiveness, the land has been largely untillied. Wars have swept over it in desolating waves that left ruin behind them. Its towns and its villages have been left desolate, and the places which many of them occupied are unknown. Even its very climate has been affected; for the cutting down of the trees which grew on its hillsides, and which promoted the presence of rain in the atmosphere, and thus tended to fertility of the soil, has produced results most disastrous in their character. The insecurity, the incertitude and the presence of oppression which are felt through the provinces of Asia Minor, and which have brought the fair land of that part of the Turkish empire into a state of misery which must be seen to be understood, have in a great measure left their impress on Palestine also. Hence, with a capacity for sustaining a numerous population, the powers of the land are not called into activity, and one evil becomes the parent of another. So long as the control of Turkey is supreme over the country, the misery which is everywhere apparent must continue to prevail; and in all this who does not see that in these great calamities that have so long been permitted to afflict this region there is an evident, even a literal, fulfillment of the predictions which thousands of years ago were announced by the inspired lawgiver, and which warned of certain judgments to both the people and their land? Dent. xxviii.; xxix. 22-28. Indeed, the very desolation of the land has by some skeptics been held as a proof that at no time could so great a population have existed in it as the Old Testament has recorded.

A memorable incident is worthy of note. Volney, after having expressed his surprise at beholding so many ruins in the southern part of the country, stated that they indicated the fact that a crowded population must at one time have existed in the land; yet having traveled more extensively and witnessed its desolation, he forgot his own former statement, and ignored altogether the fact that he had before his eyes the evident fulfillment of prophecy, and in the spirit of the skeptic he recklessly assails the accuracy of the word of God. The policy of the European nations, their dread of an ascendancy of either Russia, France or any European power at Constantinople, at Alexandria or on the stream of the Euphrates, lengthens out the lease of power and misrule which the Turk is still exercising, and so long as that power remains Judaea must submit, and the world may see that the Lord hath brought against this land "all the curses that are written in this book," Deut. xxix. 27.

# A CONCISE HISTORY OF THE HEBREWS

FROM THE

## COMMENCEMENT OF THE BABYLONISH CAPTIVITY.

### THE BABYLONISH CAPTIVITY.

Daniel, Ezekiel, Haggai, Tobit.

Date { A. M. 3398-3468.  
B. C. 606-536.

THE time usually taken as the seventy years, Jer. xxv. 1, 11, 12; xxix. 10, of the Babylonish captivity began with the first capture of the Holy City by Nebuchadnezzar in the fourth year of Jehoiakim, B. C. 606, when large numbers of the Jews were transported to Babylon and the country around, and ended with the first year of Cyrus, B. C. 536, when he issued his decree for the restoration of the temple, Ezra i. 1, 2. For the first nineteen years of this time two of the last three kings of Judah, Jehoiakim and Zedekiah, kept up some show of the ancient kingdom, though they were only tributaries to Nebuchadnezzar; but the power of the Jews as an independent nation was finally broken by the defeat of Josiah at Megiddo and the removal of all their best men to Babylon four years afterward. The reigns of the last three kings of Judah are therefore included within the seventy years of the captivity. Two other periods of seventy years may be observed: [1] From the burning of the temple by Nebuzar-adan, B. C. 588, to the decree of Darius for its restoration, B. C. 519; and [2] from the last expedition of Nebuzar-adan and the captivity of the last of the people, B. C. 584, to the rededication of the temple by Ezra, B. C. 515.

Thus for seventy years the independent national life of the Jews was utterly extinguished, although twenty of those years were vainly spent, contrary to the prophetic warnings of Jeremiah and Ezekiel, in attempting to restore it. For the greater part of those seventy years the southern part at least of the Holy Land lay desolate and uninhabited, for it was never colonized, as the northern half had been; Jerusalem was in ruins, and no sacrifices were offered nor psalms of praise sung where the glorious service of the temple had been carried on for five centuries. The solitary exception was the mournful procession of eighty men who went to carry offerings and incense to the ruined temple the year after its destruction, Jer. xli. 5.

These seventy years of desolation for Judah and of captivity for the Jews are associated by the writer of the second book of Chronicles with that neglect of the weekly and septennial sabbatical rest which had been so often protested against by the prophets, Isa. lviii. 13; Ezek. xx. 12, 13; xxii. 8, 26; Neh. xiii. 18. This neglect had been predicted as one chief cause of the Jews' calamities by Moses, Lev. xxvi. 34, 35, and his words are taken up by the historian: "For as long as she lay desolate she kept sabbath to fulfill threescore and ten years," 2 Chron. xxxvi. 21. The time seems to refer to the five centuries of the monarchy, the captivities in the times of the judges perhaps being reckoned as the punishment due to preceding ages of neglect. Thus from Saul's accession to the be-

ginning of the captivity, B. C. 1095-606, was 490 years. If these 490 years are taken as natural years of 365½ days each, they will be found to contain seventy sabbatical years and 25,567½ weekly sabbaths, those days amounting to exactly seventy natural years. During these seventy years there is no history for the Holy Land, and that of her people is the history of the captives in Assyria.

The records of their captivity are very scanty, yet a few important facts are known which may lead us, as in the case of the "wanderings" in the desert, to some general idea of their position.

1. The captive nation seems soon to have settled down in Chaldea under a conviction (at first difficult to arrive at, but made certain by the prophecies of Ezekiel and Jeremiah) that the sojourn there, though it would come to an end at last, would extend over many years. Numbers of them were doubtless employed upon the great works which Nebuchadnezzar was carrying on in Babylon and its neighborhood. The great city was at that time being built, and the "craftsmen and smiths" who are so particularly mentioned in the account of the earlier captives, 2 Kings xxiv. 13, 14, would be sure to be employed in connection with such a work. It has also been thought that Chebar, on whose banks Ezekiel saw his visions, was the great canal constructed by Nebuchadnezzar, and that the prophet-priest was ministering to a body of his countrymen engaged on the excavations. Such labors as these would lead to hardships and sufferings of the kind indicated beforehand by the prophecy of Isaiah, in which the Chaldeans are said to have shown no mercy to their captives, Isa. xlvii. 6, and to have made them to howl, Isa. lii. 5, with their severities.

But after a time, and apparently very early in the captivity, the Jews acquired positions among their conquerors which are inconsistent with any long continuance of such severities. Thus Jeremiah's letter to them in the beginning of Zedekiah's reign indicates the possession by them of full liberty and civil rights: "Thus saith the Lord of hosts, . . . Build ye houses and dwell in them; and plant gardens and eat the fruit of them; take ye wives, and beget sons and daughters; and take wives for your sons, and give your daughters to husbands, that they may bear sons and daughters; that ye may be increased there and not diminished. And seek the peace of the city whither I have caused you to be carried away captives, and pray unto the Lord for it; for in the peace thereof shall ye have peace," Jer. xxix. 5-7. Such indications of prosperous settlement are illustrated by the book of Tobit, although the Israelites of whom the story is told belonged to the earlier captivity of the ten tribes. It is still more strongly illustrated by the positions to which Shadrach, Meshach and Abednego, Daniel, Mordecai, Esther, Ezra and Nehemiah rose—positions of the greatest honor and responsibility.

2. Their distinctive nationality was maintained by the Jews during the whole of the seventy years'

absence from Judah. (1.) During the whole of the time they carefully preserved the registers of their genealogies, the forty-two thousand who returned with Zerubbabel all being identified as belonging to particular families in the book of Ezra, and a very few indeed being mentioned as having "sought their register among those that were reckoned by genealogy, but they were not found," Ezra ii. 1-62; Neh. vii. 7-64. These genealogies are a continuation of the system regularly maintained among the Jews in previous times, 1 Chr. ix. 1, and even as they are still preserved show continuous lines from Adam to the end of the captivity, 1 Chr. i.-viii., and two such lines at least, Matt. i. 1-16; Luke iii. 23-38, thenceforward to the time of our Lord. (2.) Besides the organization thus indicated by the maintenance of the national registers, the captive Jews are also said to have recognized one of their number as supreme ruler, under the title of the "Prince of the Captivity." Whether such an officer would be appointed during the forty years that King Jehoiachin lived in Babylon may be doubted, but his son Salathiel is spoken of as "the captain of the people," 2 Esd. v. 16, and Zerubbabel, the son of Salathiel (whose Chaldean name was Sheshbazzar), is called "the prince of Judah," Ezra i. 8, and as such was no doubt chosen to lead the captive nation back to Judah, Ezra i. 11; ii. 1; v. 2, 16, and to be the governor of the country when they had arrived there, Ezra v. 14. This prince, or head, of the captivity, was called by a Chaldean title "The Rhesa," and it is alleged by the Jews that the head of David's descendants was recognized as such down to a much later date. (3.) The captive nation maintained its religious customs as far as they could be maintained under the circumstances. Hence, Haman speaks of them as a people whose "laws are diverse from all people," Esth. iii. 8, while the steadfastness of Shadrach, Meshach, Abednego and Daniel in refusing to worship any but the Lord is familiar to every reader of the Bible. They had no temple, no place for sacrifices, no Zion where to sing the Lord's song; but they had their high-priests—as Jeshua—and their other priests and Levites. Every Jew also would re-echo the sad strain, "If I forget thee, O Jerusalem, let my right hand forget her cunning;" and it would not be Daniel alone who would kneel down three times a day to pray and give thanks before his God, with his windows open toward the Holy City, Dan. vi. 10; compare Isa. lxiv.

3. But God's continued care for his people is conspicuous above all other facts in the scanty records of the captivity. In the beginning of it "God brought Daniel into favor and tender love with the prince of the eunuchs," and enabled both Daniel and the other three captives to remain steadfast to their religion. He also gave "these four children knowledge and skill in all learning and wisdom," so that they were at a very early age placed in the highest positions of government,

Dan. i. 9-21; ii. 49. When in later years they were attacked by the jealous Chaldeans for not worshipping Nebuchadnezzar's great image of world-empire, the Lord protected them by a marvelous miracle in the fierce furnace into which they were cast, and the angel of his presence walked with them in the midst of the flames, Dan. iii. 25, giving the Jews as clear a manifestation of the divine providence by which they were led and guarded, as ever they had received in previous ages of their national existence. Not less conspicuous was the preservation of Daniel in the lions' den many years afterward, Dan. vi. 22.

The succession of prophets was also kept up among the Jews in Babylon. Ezekiel, who was carried captive with Jehoiachin in B. C. 598, prophesied during at least twenty years, B. C. 594-573, declaring most important events in the future history of his nation, the restoration of the people to Judah, the rebuilding of the city and temple, the destruction of their enemies and the coming of Messiah. But perhaps there is nothing which so strongly exhibits God's continued care and love for his people as the history of Daniel himself, whose life extended over the whole of its duration.

For Daniel the prophet occupies a very remarkable position in Jewish history, being not only a "seer" of future events, but a statesman of the highest rank, filling the position of viceroy to Nebuchadnezzar and his successors during the reign of two dynasties and for little less than seventy years. His prophecies were delivered chiefly in the years B. C. 555-534, but he was appointed "ruler over the whole province of Babylon, and chief of the governors over all the wise men of Babylon," as early as B. C. 603 (the middle of the reign of Jehoiakim); he "prospered in the reign of Darius," so that he was made, B. C. 538, the first of the three presidents who were set over the one hundred and twenty princes of the empire, being in fact "prime minister"—like Joseph in Egypt—and his prosperity continuing "in the reign of Cyrus the Persian;" he probably retained that great office until the close of his life, when he could scarcely be less than ninety years of age. Thus all the while the people of God were in captivity in a strange land the chief ruler of that land was one of themselves, and one whose faithfulness to the ancient Church of God was so great that even in his middle life he is joined with Noah and Job by the word of God himself, Ezek. xiv. 14, as being one of the most righteous of his saints. It can scarcely be doubted that this strange political arrangement was part of the divine providence by which the Jews were to be preserved for their restoration, and it is very significant that, the exact time prophesied for that restoration having been ascertained by Daniel, Dan. ix. 2, it was he who interceded with God for its fulfillment, and to whom the angel Gabriel was sent with the announcement that the time was come, Dan. ix. 24, that the people of God should be restored to their land, and that four hundred and eighty-three years after the rebuilding of the earthly Jerusalem had begun the Messiah himself should begin to build therein an eternal city of God.\* To Daniel also was revealed, as to one well versed in the affairs of em-

\* This prophecy is that seven weeks and threescore and two weeks of years will elapse between "the going forth of the commandment to restore and to build Jerusalem unto the Messiah the Prince," Dan. ix. 25. These four hundred and eighty-three years begin with the arrival of Ezra at Jerusalem, B. C. 457, Ezra vii. 8, and end with our Lord's ministry, which began A. D. 27, when he "began to be about thirty years of age."

pires, the general course of the world's political history between his own time and that of our Lord. Thus the great image seen by Nebuchadnezzar in his dream, Dan. ii. 31-35, was divinely interpreted to Daniel as signifying the great world-empire of those ages. The "head of fine gold" was the Babylonian empire itself; the "breast and arms of silver" were the Medo-Persian empire into which it should descend; the "belly and thighs of brass" were the Grecian empire to be founded by Alexander the Great; the "legs of iron, and feet part of iron and part of clay," were the Roman empire and its outlying possessions; the "stone cut out of the mountain without hands" was the kingdom of God built upon the Rock of the Messiah's divine nature, by which the world-power should be broken in pieces, Dan. ii. 36-45, by "the kingdoms of this world" becoming "the kingdoms of the Lord and of his Christ." Mysteries of a still more distant future grafted on to the same interval of universal empire were entrusted to Daniel, but their entire revelation was sealed up until the time of their fulfillment should draw near, Dan. vii.-xii.

Thus the Lord kept up a witness of his continued presence with Israel—(1) By his visible protection of the three young princes in the furnace; (2) By his providential ordering of the political circumstances of the Babylonish empire for the advantage of his people; and (3) By prophetic revelations exceeding in divine significance any that had ever before been made to the world. So he did fulfill his ancient words spoken by Moses: "And yet for all that, when they be in the land of their enemies, I will not cast them away. . . . But I will for their sakes remember the covenant of their ancestors," Lev. xxvi. 44. That signs of such supernatural protection were evident to the heathen themselves is shown by the words of

### CHRONOLOGY OF THE CAPTIVITY.

	B. C.	
Jeremiah	606	Nabopolassar's 19th year
	604	Nebuchadnezzar's 1st year
	603	Daniel and 3 friends made satraps [Cyrus born]
	599	
	598	Tyre besieged
	597	
	594	
	590	[Pharaoh-Hophra's 1st year]
	589	
	588	Old Tyre taken
Ezekiel	585	
	584	
	573	Nebuchadnezzar devastates Egypt
	570	Nebuchadnezzar's madness begins
	561	Evil-Merodach's 1st year
	559	Neriglissar's 1st year
	556	Laborosoarchod's 8 months' reign
	555	Nabonedus' 1st year
	541	Belshazzar, viceroy to his father Nabonedus
	539	Babylon besieged
Daniel	538	Babylon taken
	538	Darius' [Astyages] 1st year
	536	Cyrus' 1st year

Haman's wife and his wise men: "If Mordecai be of the seed of the Jews, before whom thou hast begun to fall, thou shalt not prevail against him, but shalt surely fall before him," Esth. vi. 13.

Nebuchadnezzar ruled the great empire of Babylon for the first forty-five years of the captivity (B. C. 605-562), and for nearly half of that time the Jewish kingdom was allowed still to exist as a province of Babylon, ruled by the Jewish viceroys Jehoiakim and Zedekiah, the last remnant of the Jews not being taken to Babylon until twenty-three years from the beginning of the captivity, in the year B. C. 584. From this time there is a complete blank in the Biblical history of both the Jews and the Chaldeans; and little more is known of the latter from any other source than that about B. C. 572 Nebuchadnezzar de-

tated Egypt, according to prophecies spoken by Ezekiel fifteen and seventeen years before, Ezek. xxix.-xxxiii., putting Pharaoh-Hophra to death, and setting up Amasis as vice-king over the desolated country. It seems to have been the year after this Egyptian expedition, when his conquests were completed, and when the vast but never completed city of Babylon was growing up in its magnificence, that the vision of Nebuchadnezzar, as interpreted by Daniel, iv. 4-27, was fulfilled, and that he was prostrated for seven years under a fearful and rare disease called lycanthropy, in which the afflicted person imagines himself to be a beast, and adopts the habits of the ox, wolf or other animals to which his madness likens him, Dan. iv. 28-37. "For four years," says Nebuchadnezzar, in an inscription which gives an account of this affliction, "the seat of my kingdom did not rejoice my heart; in all my dominions I did not build a high place of power; the precious treasures of my kingdom I did not lay up"—words that well agree with the account which his words also give of it in the book of Daniel. Shortly after the recovery of his reason—perhaps about two years—the great Babylonian emperor died, B. C. 561, and was succeeded by his son Evil-Merodach. The captive Jehoiachin was immediately released from his prison by Evil-Merodach, and royal honor given to him as the most important of all the captive sovereigns who resided at Babylon, 2 Ki. xxv. 27-30. Evil-Merodach was put to death—and perhaps Jehoiachin with him, compare Jer. lii. 31 and xxii. 24—by conspirators after a two years' reign, B. C. 560, his throne being usurped by Neriglissar first, and afterward by Neriglissar's son, Laborosoarchod. But in B. C. 555 Nabonedus—or Labynetius, perhaps the son of Evil-Merodach—displaced the latter, and reigned until the conquest of Babylon, B. C. 539,

placed the empire in the hands of Darius the Mede, known as Astyages. He was the son of Cyaxares, or Ahasuerus, Dan. ix. 1, and uncle of Cyrus the Persian, under whom, B. C. 536, the empire was placed.

The capture of Babylon (of which Belshazzar, the son of Nabonedus, was viceroy), and the transfer of the empire to the Medes and Persians, does not seem to have affected the position of the Jews, for Daniel occupied the same high position under Darius as he had occupied under Belshazzar and Nebuchadnezzar, Dan. ii. 49; vi. 1, 2. But those who had followed the words of the prophets were now beginning to look forward to some act of God by which the captivity would be brought to a close. So Daniel records of himself that in the first year of Darius, B. C. 538, he "understood by books the number of the years whereof the

word of the Lord came to Jeremiah the prophet that he would accomplish seventy years in the desolations of Jerusalem." Then on behalf of himself and his people he confessed the national sins which had brought so many years' humiliation and sorrow upon them, and presented his supplication before the Lord his God for the holy mountain of his God, Dan. ix. 1-20. And while he was doing so, the angel Gabriel, who had visited him before, came to announce to him that at the end of seventy prophetic weeks—i. e., years—the punishment of the people's transgression would be completed, and the nation restored to its own land until the coming of the Messiah.

Thus, although Daniel was not to see his native land again, he was permitted to see the dawn of Israel's restoration; and from the position which he occupied as prime minister of Cyrus, there can be little doubt that he was the chief instrument by which the great king was stirred up to accomplish it. For himself the word was, "Go thou thy way till the end be;" but with the blessed waiting of Paradise revealed, "for thou shalt not rest, and stand in thy lot at the end of the days."

#### FROM THE END OF THE CAPTIVITY TO THE CLOSE OF THE OLD TESTAMENT.

Ezra, Nehemiah, Esther, Haggai, Zechariah, Malachi.

Date { A. M. 3468-3670.  
B. C. 536-420.

The books of Ezra, Nehemiah and Esther are the latest of the historical books of the Old Testament, bringing down its history to the close of the captivity.

Ezra and Nehemiah wrote the books which go by their names; but in the Greek Septuagint version they are called the first and second books of Esdras, which is the Greek form of the name of Ezra, and in both the Greek and Latin they are supplemented by the third and fourth of Esdras, which are contained in our Apocrypha. Of these latter the first is an historical book in which portions of Ezra and Nehemiah are incorporated with other histories or legends; the second is a book of visions (once called the Apocalypse of Ezra) which some consider to have been written in the century before our Lord.

Esther was probably written by either Ezra or Mordecai. To it also there is a supplement in Greek and Latin Bibles which is called in our Apocrypha "the rest of the book of Esther;" but these chapters are of later date than the original book by two or three centuries.

More than a century before the captivity began, and nearly two centuries before it ended, both were made the subject of distinct prophecies. The vineyard of the well-beloved in a very fruitful hill was to be "laid waste," and God's people are spoken of prophetically as already "gone into captivity," a nation of conquerors having come down against them like overwhelming waters, Isa. v. 1, 6, 13, 26-30. The cities were to be wasted, without inhabitant and the houses without man, and the land to be utterly desolate, the Lord having removed men far away, so that there was a great forsaking in the midst of the land. "But yet it shall be a tenth, and it shall return," Isa. vi. 11-13. A little later word was sent to Ahaz that the Lord would bring upon his people and his father's house days such as had not been since the day that Ephraim departed from Judah, the prophecy now pointing

out whence the invader would come, "even the king of Assyria," by whom the Lord would shave Judaea as with a hired razor, Isa. vii. 17-20. He should "bring up upon them the waters of the river, strong and many, even the king of Assyria and all his glory, and he shall come up over all his channels, and go over all his banks, and pass through Judah," Isa. viii. 7, 8. "O Assyria, the rod of mine anger, and the staff in their hand is mine indignation." But no sooner had the full terribleness of the punishment been revealed than the words of prophecy looked onward to mercy: "The remnant shall return, even the remnant of Jacob, unto the mighty God. For though thy people Israel be as the sand of the sea, yet a remnant of them shall return; the consumption decreed shall overflow with righteousness," Isa. x. 22. The prophecy passes on into a prophecy of the return of all the human race from the captivity of its great enemy under the leadership of Christ, Isa. xi., yet all through the definite idea of Assyria is kept in view, Isa. xi. 16, and the destruction of Babylon definitely predicted, Isa. xiii. 14.

About half a century later, but still one hundred and seventy-eight years before the end of the captivity, B. C. 712, Isaiah was inspired to speak to Jerusalem as to a city that had been utterly ruined and desolated: "Thou shalt be inhabited: and to the cities of Judah, Ye shall be built, and I will raise up the decayed places thereof;" and although one hundred and thirteen years were yet to pass before the year arrived in which Cyrus would be born, B. C. 599, he was spoken of by name: "That saith of Cyrus, He is my shepherd, and shall perform all my pleasure, even saying to Jerusalem, Thou shalt be built, and to the temple, Thy foundation shall be laid. . . . Thus saith the Lord to his anointed, to Cyrus, whose right hand I have holden to subdue nations before him," Isa. xlv. 28; xlv. 1. It is to be observed that the prophecy in this case merges into one of the Messiah, and that the Lord's "anointed," "Cyrus," is immediately suggestive of the Lord's "Christ the Lord;" in Greek kuros, nearly answering to kurios.

This latter prophecy is said by Josephus to have been read by Cyrus; and as he was in such intimate relations with the prophet Daniel, who was his prime minister, nothing is more likely than that it should be brought to the king's knowledge when Daniel knew that the seventy years appointed for the captivity had nearly come to an end.

By such means "the Lord stirred up the spirit of Cyrus" to bring about the fulfillment of these and many similar prophecies respecting the restoration of Israel. Almost as soon, therefore, as he had become an independent sovereign by the death of Darius, in his "first year," B. C. 536, Cyrus made a proclamation throughout all his kingdom and put it in writing, declaring the Lord God of heaven had given him all the kingdoms of the earth, and had charged him to build him an house at Jerusalem which is in Judah. Let, therefore, any Jews who desired to do so, return to Jerusalem and set about this good work, and let all assist them with silver, gold, goods, cattle, and other freewill offerings, 2 Chr. xxxvi. 22, 23; Ezra i. 1, 4; vi. 3-5.

Upon this proclamation being made, a number of the chief of the fathers of Judah and Benjamin, the priests and the Levites, gathered under Zerubbabel, the grandson of Jehoiachin (who is called "the prince of Judah," as representing the royal line of that kingdom, and whose name at the

Chaldean court was Sheshbazzar), and so many of the people responded that a great emigration of Jews took place to the number of forty-two thousand three hundred and sixty, besides seven thousand three hundred and thirty-seven servants, as if in exact fulfillment of Isaiah's words, "Go ye forth of Babylon, . . . with a voice of singing declare ye . . . the Lord hath redeemed his servant Jacob," Isa. xlviii. 20. It is added that there were among them two hundred singing men and singing women, Ezra ii. 1, 64, 65. Cyrus also restored to Zerubbabel five thousand four hundred vessels of gold and silver belonging to the temple at Jerusalem, which Nebuchadnezzar had placed in the temple of Bel at Babylon, 2 Chr. xxxvi. 7; Ezra i. 7-11; and so well provided were the returning captives that their beasts of burden numbered more than eight thousand, Ezra ii. 66, 67.

Shortly after the arrival of this great caravan at Jerusalem, "when the seventh month was come," the people, who had scattered themselves at first "in the cities," "gathered themselves together as one man" to celebrate the rebuilding of the altar and the restoration of the daily sacrifice. They then celebrated the Feast of Tabernacles, "and afterward offered the continual burnt-offering, both of the new moons and of all the set feasts of the Lord that were consecrated, and of every one that willingly offered a freewill offering unto the Lord," Ezra iii. 1-6.

The next care of Zerubbabel and of Jeshua the high-priest was to prepare for rebuilding the temple. Within a year after their return these preparations were so forward that the foundation was laid with solemn services of praise, the ancient refrain being once more heard on Mount Moriah—"Give thanks unto the Lord, for he is gracious; for his mercy endureth for ever toward Israel," Ezra iii. 8-11; Ps. cxxxvi. 1; 1 Chr. xvi. 34. But the shouts of joy were mingled with "the noise of weeping," for many "ancient men" wept to think of the glories that they had seen, and which they had no hope of ever seeing restored, Ezra iii. 12, 13.

When the Jews returned to Judaea, they found it still unoccupied, no forced immigration having been made for the purpose of replacing its ancient inhabitants, as in the case of the part of Palestine inhabited by the ten tribes. "For as long as the land lay desolate she kept sabbath, to fulfill three-score and ten years," 2 Chr. xxxvi. 21. But they also came into contact with a new nation, known to later ages as Samaritans, which had grown up during the last decline of the Jewish monarchy and the seventy years' captivity.

During the reigns of Hezekiah and Manasseh these northern districts of the Holy Land were occupied only by those few Israelites who had escaped to Judaea before Shalmanezar had accomplished the desolation of their country and sent the bulk of the ten tribes captive to Media, B. C. 721. On the retirement of Shalmanezar these fugitives returned to the southern parts of their land adjoining Judah, and formed "the remnant of Israel" who dwelt in Manasseh and Ephraim, 2 Chr. xxxiv. 9. Shortly after the return of King Manasseh from his captivity in Nineveh (about B. C. 678), Esar-haddon, the son of Shalmanezar, colonized the desolate land of the ten tribes with immigrants from Babylon, Cuthah, Ava, Hamath and Sepharvaim, 2 Ki. xvii. 24; Ezra iv. 2, 9, 10—countries and cities which the Assyrians had conquered—according to the well-known custom of the great Eastern empires. These immigrants and the small "remnant of Is-

rael" intermarried, compare Ezra ix.; x., and by the time that the Babylonish captivity had ended they had become a mixed people, bearing traces both of their heathen and their Israelitish origin. Thus "every nation made gods of their own, and put them in the houses of the high places which the Samaritans had made," and at the same time some rays of true religion shone on the land through the teaching of a priest of Israel, sent from Nineveh by Esar-haddon to "teach them the manner of the God of the land," who had visited the immigrants with a plague of lions. So this mixed people "feared the Lord, and served their own gods; . . . unto this day they do after the former manners. . . . So these nations feared the Lord, and served their graven images, both their children and their children's children: as did their fathers, so do they unto this day," 2 Ki. xvii. 24-41. In later days there was a larger infusion of Judaism through the influence of the revived worship of God in Judaea, the knowledge of the Pentateuch, the influx of refugee Jews and the increase of a Jewish population north of the Samaritans in Galilee.

A rival temple to that at Jerusalem was built on Mount Gerizim by Sanballat in B. C. 408, a rival priesthood established by Manasseh, a priest expelled from Judah by Nehemiah for an unlawful marriage, Neh. xiii. 28, and many of the customs of the Mosaic law prevailed from that time among the Samaritans. The temple was destroyed by John Hyrcanus three centuries afterward, B. C. 109, but to this day a remnant of the Samaritans offer sacrifices on the nights of the three great Jewish festivals every year amidst the ruins of the ancient Samaria.

Disagreements between this new nation and the returned Jews began to arise immediately after the refoundation of the temple, and seriously hindered its progress for fifteen years. As soon as the Samaritans heard of what was going on at Jerusalem they sent to Zerubbabel and his council, desiring that they might be permitted to take part in building the temple, alleging as their reason, "for we seek your God, as ye do; and we do sacrifice unto him since the days of Esar-haddon, king of Assur, which brought us up hither," Ezra iv. 1, 2. This request was refused by Zerubbabel, Jeshua and the Sanhedrim, with the words, "Ye have nothing to do with us to build an house unto our God"—words similar to those afterward used by Nehemiah: "Ye have no portion, nor right, nor memorial, in Jerusalem," Neh. ii. 20, and which indicate the spirit that existed toward the Samaritans on the part of the Jews ever after, "for the Jews have no dealings with the Samaritans," John iv. 9. The refusal led to opposition: "The people of the land weakened the hands of the people of Judah, and troubled them in building, and hired counselors against them, to frustrate their purpose, all the days of Cyrus king of Persia," Ezra iv. 4, 5. In the time of Cambyses—called Ahasuerus by Ezra—the Samaritan rulers represented to him that the returned Jews were rebuilding "the rebellious and the bad city" with a view to rebellion, and requested that search might be made in the records of the empire to show how "this city is a rebellious city, and hurtful unto kings and provinces, and that they have moved sedition within the same of old time; for which cause was this city destroyed." And they added that if Jerusalem was re-established the empire would lose all its possessions west of the Euphrates, Ezra iv. 7-16. The reply to this came

during the eight months' reign (B. C. 522) of the usurper known as the Pseudo-Smerdis, and states that, a search among the records of Babylon having confirmed the statements of the Samaritan rulers, they were to stop the works going on at Jerusalem. This was at once done, notwithstanding some resistance on the part of the Jews, and for about two years the temple and the walls of the city rose no higher out of their ruins, Ezra iv. 23, 24.

The prophet Haggai, B. C. 520, was then sent by God with words of encouragement and rebuke, bidding Zerubbabel and Jeshua to resume the work: "Is it time for you, O ye, to dwell in your ceiled houses, and this house lie waste? . . . Go up to the mountain, and bring wood, and build the house; and I will take pleasure in it, and I will be glorified, saith the Lord." And when, thus commanded, the people "came and did work in the house of the Lord of hosts, their God," Haggai brought "the Lord's message unto the people, saying, I am with you, saith the Lord," Hag. i. 1-15. He was also, a few weeks later, bidden to declare that although those who saw the temple in its first glory might weep at the comparison of what was now being done, Ezra iii. 12, yet "the glory of this latter house shall be greater than of the former, saith the Lord of hosts, and in this place will I give peace, saith the Lord of hosts," Hag. ii. 1-9. Later on in the year the prophet was directed to point to the coming harvest as a sign of the Lord's renewed blessing on Israel, Hag. ii. 10-19, and afterward to close his prophecy with a prediction of the overthrow of Babylon, Hag. ii. 20-23.

Zechariah the prophet, B. C. 520-487, took up the words of Haggai in the latter part of the same year, declaring, "Thus saith the Lord of hosts, My cities through prosperity shall yet be spread abroad; and the Lord shall yet comfort Zion, and shall yet choose Jerusalem. . . . Sing and rejoice, O daughter of Zion: for, lo, I come, and I will dwell in the midst of thee, saith the Lord," Zech. i. 17; ii. 10. This prophet also saw a vision of "Joshua the high-priest standing before the angel of the Lord, and Satan standing at his right hand to resist him." But the Lord rebuked Satan, and Joshua had the splendid robes of the high-priesthood put upon him in the place of the "filthy garments" in which he had been clad, Zech. iii. 1-10. To Zerubbabel he was bidden to say, "The hands of Zerubbabel have laid the foundations of the house; his hands shall also finish it," Zech. iv. 9. Thus were the prophets sent to strengthen the hands of the reviving nation, and to convince them that the God of their fathers was still manifesting his love toward his people Israel.

Under such encouragement Zerubbabel and Jeshua disregarded the decree of the usurper Ahasuerus, and began to build again in the second year of Darius Hystaspes, B. C. 520, notwithstanding the opposition of Tatnai, the satrap of the province of Syria and Palestine, and of Shethar-boznai, the commander of the army. This opposition was, however, very different from that of the Samaritans; and when Zerubbabel declared that he was acting under a decree of Cyrus, the satrap at once referred the matter to Babylon to see whether such a decree had really been granted, Ezra v. 1-17. Search being made, the decree of Cyrus was found in "the house of the rolls" at Ecbatana, and was incorporated in a new decree by Darius which gave full power to the governor of the Jews "to build this house of God in his place," and directed the satrap of the province to assist the work out of the public tribute with

everything that was needed for building or for the purpose of the sacrifices, Ezra v. 1-12. This remarkable decree was issued by Darius Hystaspes B. C. 519, just seventy years after the burning of the temple by Nebuzar-adan in the reign of Nebuchadnezzar. It was carried out without any hesitation by Tatnai and Shethar-boznai, and with such efficient aid the second temple was completed on the third day of the last month, Adar, in the sixth year of Darius, B. C. 516, the same year in which Babylon, having risen in rebellion against him, had been still further reduced in importance and strength, according to Jeremiah's prophecy, Jer. xxv. 12, 13, by a second siege and capture, and by the partial destruction of its enormous walls.

The rededication of the temple took place with a festival which began in the end of the year B. C. 516, and ended with the passover on the twenty-first day of the first month, Nisan, of B. C. 515. Great burnt sacrifices were offered—"an hundred bullocks, two hundred rams, four hundred lambs"—and a sin-offering was offered for the whole of the twelve tribes (not for Judah and Benjamin only) of "twelve he-goats, according to the number of the tribes of Israel," Ezra vi. 16-22. This rededication of the temple was seventy years from the year B. C. 584, when the last remnant of the Jews were carried away to Babylon by Nebuzar-adan.

For more than half a century after the rededication of the Temple, Holy Scripture is silent respecting the Jews, this interval taking in the reigns of Darius Hystaspes and of Xerxes, stirring times in which the western world was fast pushing forward its claims to supplant the eastern in the march of civilization and power. In the latter part of the reign of Xerxes, or in the early part of the reign of Artaxerxes Longimanus, who came to the throne of the Persian empire in B. C. 465, the veil is lifted once more to tell us of the plot of Haman for the destruction of the Jews who remained in Media, and of the good providence of God in thwarting his wicked design by the influence of Mordecai and his niece Esther, the queen either of Xerxes or of Artaxerxes. The danger from which the Jews so nearly escaped probably suggested to many of them to seek permission to follow the example of the previous generation and to return to Judaea, such permission being more likely to have been granted by the influence of "the queen sitting by the king," Neh. ii. 6, than by any other means.

The second restoration of captive Jews to Judaea took place under the leadership of Ezra, in the seventh year of Artaxerxes, B. C. 457, Ezra and his companions beginning their journey from Babylon on the first day of the first month (about the end of March), and reaching Jerusalem four months afterward, on the first day of the fifth month, Ezra vii. 8, 9. From this date is computed the sixty-nine weeks or four hundred and eighty-three years which were to elapse before the beginning of the Messiah's ministry, which was in A. D. 27, Dan. ix. 25. Artaxerxes had decreed that "all they of the people of Israel, and of his priests and Levites," which were in his realm, should have full liberty to go with Ezra, and had made large offerings of silver and gold for the use of the temple, which were added to those of the Jews themselves. He also gave him authority to draw further upon the treasurers of the provinces of Syria and Palestine to the extent of one hundred talents of silver, one hundred measures of wheat, one hundred baths of wine, one hundred baths of oil, and salt, without limit. In addition to these great offerings, he exempted from taxation

all who were employed in the ministrations of the temple, and made Ezra governor of all the Jews who lived west of the Euphrates, Ezra vii. 11-26. The number of Jews who accompanied Ezra is reckoned by him as seventeen hundred and fifty-four, a small number, probably, compared with that of those who still remained in the land of their exile, Ezra viii. 1-20, but this does not include the women, and is perhaps only the number of adult men.

The only act of Ezra's government mentioned at this time is the separation of the Jews from the Gentile wives whom they had married, Ezra ix.; x., and it is probable that he returned to the court of Artaxerxes as soon as this and corresponding reforms had been effected at the end of the year, having by that time completed his commission "to inquire concerning Judah and Jerusalem," and to "set magistrates and judges" over the Jews, Ezra vii. 14-25.

During the twelve years, B. C. 457-445, that followed, great troubles came upon the Jews, the wall of Jerusalem being broken down and the gates burned with fire in some of the attacks made upon it by their enemies, probably by Sanballat, the governor of Samaria, Neh. i. 3. Intelligence of this coming to Nehemiah, the cupbearer of Artaxerxes, he interceded with God for his people, and then brought their troubles before the king, "the queen also" (perhaps Esther) "sitting by him," petitioning that he might be sent to Jerusalem with a commission to rebuild the city walls, the palace of the governor, and the house in which he wished to live during his sojourn there, Neh. ii. 1-8. Notwithstanding the authority thus given to him by Artaxerxes, Nehemiah met with great opposition from "Sanballat, and Tobiah, and the Arabians, and the Ammonites, and the Ashdodites," who even "conspired together to come and fight against Jerusalem" and hinder its fortification. "Nevertheless," says Nehemiah, "we made our prayer unto our God and set a watch against them day and night," and "every one with one of his hands wrought in the work, and with the other hand held a weapon," while of himself and his chosen guard he adds, "None of us put off our clothes saving that every one put them off for washing," Neh. iv. 1-23. This energy of Nehemiah so communicated itself to the people that in fifty-two days, on the 25th day of Elul, the beginning of October, the ruined walls had been effectively repaired, and not long afterward the gates were hung in their places, so that the city would be properly protected against any assault from without, Neh. vi. 15; vii. 1-3. But the city was large and its inhabitants few, and it was long before the houses were built, Neh. vii. 4. To repopulate the city more thoroughly, it was determined that they should "cast lots to bring one of ten to dwell in Jerusalem the holy city and nine to dwell in other cities. And the people blessed all the men that willingly offered themselves to dwell at Jerusalem," Neh. xi. 1, 2.

Ezra was again at Jerusalem at this time, and he caused all the people to be assembled together in "the street that is before the water-gate" while he read to them from an elevated "bema," or platform pulpit, on which he and other chief men stood, the "book of the law" day by day for seven days while they were celebrating the Feast of Tabernacles, Neh. viii. 1-18, which they seem suddenly to have begun on hearing the account of it read to them. At the end of the festival (instead of before it, as would usually have been the custom) they kept the great fast of the day of atonement, and

when it was over solemnly renewed the covenant between the nation and God, "and entered into a curse and into an oath to walk in God's law which was given by Moses the servant of God, and to observe and do all the commandments of the Lord our Lord and his judgments and his statutes," Neh. ix. 1, 38; x. 29.

Nehemiah remained at Jerusalem for twelve years, returning to the court of Artaxerxes in the thirty-second year of his reign, B. C. 433, and "after certain days" he obtained leave of the king to go again to Jerusalem, Neh. v. 14; xiii. 6, 7. But little is said of this second visit, and nothing further whatever is recorded respecting Ezra, who is supposed to have died on his way back to Babylon, both he and Nehemiah thus passing suddenly out of the scriptural history.

The prophet Malachi is believed to have prophesied at some time between B. C. 425 and B. C. 400, and tradition has identified him without sufficient evidence with Ezra. His prophecy seems to have been intended to complete the Old Testament, for its distinct predictions of the Messiah and his dispensation, Mal. iii.; iv., and his last words, which are a prophecy of John the Baptist's preaching, Mal. iv. 5, 6; Luke i. 17, make it a link between the old and the new dispensation such as can hardly have been accidental.

## HISTORY OF THE JEWS BETWEEN THE OLD AND NEW TESTAMENTS.

### I. and II. Maccabees, Josephus.

Date { A. M. 3679-4000.  
B. C. 334-4.

The vast empire established by Nebuchadnezzar gathered into itself the whole Semitic race; and while it extinguished many sovereignties by conquest, it also extinguished many nationalities by the system of captivities. Such seems to have been the object for which it was permitted by God's providence, its existence being a preparation for the use of European civilization under the Greeks and Romans, and coming to an end when the Aryan race had begun to lay the foundations of the later world; for Cyrus, being a Persian (although related on his mother's side to the Medes), represents the transition epoch in which power was passing from the Semitic to the Aryan race. But the Jews were altogether an exceptional race. They survived all the other nationalities of the Eastern world; and the prophecy of Jeremiah was literally fulfilled: "Fear thou not, O Jacob, my servant, saith the Lord, for I am with thee; for I will make a full end of all the nations whither I have driven thee, but I will not make a full end of thee, but correct thee in measure; yet will I not leave thee wholly unpunished," Jer. xvi. 28. Hence, although the national existence of most of the people who had been neighbors to the Jews in the times of their ancient history was obliterated by the empire formed under Nebuchadnezzar, and although the conquests of Alexander the Great, which extinguished the empire, still more confused the nationalities of the Eastern world, yet the Hebrew race still retained its hold upon the Holy Land, and though punished was not brought to a full end.

Singularly little is known, however, of the history of the Jews for the two centuries and a half after the close of the Old Testament, during which they remained under the rule of the Persian kings, B. C. 535-334. The Ptolemies, B. C. 323-205, and the first and second Antiochus, B. C. 205-168, and

the few incidents of these times, are known to us only on the authority of Josephus.

### The Jews still under the Persian Empire.

[B. C. 420-334.]

For nearly a century after Nehemiah and Ezra the Holy Land continued to be a part of the great empire founded by Nebuchadnezzar, but ruled for two hundred years by Persian sovereigns. During that century the Jews seem to have lived quietly, developing their own resources, but taking no part in the wars or politics of the empire and making no attempts to regain their independence. Their government seems to have been rarely interfered with by the satraps of the province of which Palestine formed a part, and the local head of the nation was the high-priest. But twice only do any incidents of Jewish history crop out during this century.

[B. C. 366.] The first of these incidents is the rivalry between Jeshua and Jonathan, Neh. xii. 11-22, sons of Joiada and grandsons of Eliashib, for the high-priesthood. Of its details Josephus gives no account, but its result was the murder of Jeshua by Jonathan, apparently in defending himself from an attempt of the latter to deprive him of his office as high-priest. Upon this the Persian satrap Bagoses, a friend and supporter of the murdered man, came to Jerusalem, forced his way into the temple, and imposed upon the Jews a new tribute of fifty shekels for every lamb that was sacrificed, probably intended as a fine of one hundred shekels a day.

[B. C. 332.] Josephus also gives an account of a visit of Alexander the Great to Jerusalem, which took place after his defeat of Darius at Issus, and his capture of Damascus, New Tyre and Gaza. According to the Jewish historian, Alexander marched on the Holy City with the intention of punishing Jaddua, the high-priest (son of Jonathan), for his refusal to recognize Alexander as his sovereign while Darius, to whom he had taken an oath of allegiance, was living. But on his approach to Jerusalem the conqueror was met by a long procession of the priests and people, with Jaddua at their head in his blue and scarlet robes and wearing his mitre, on which was engraved the holy name. Alexander recognized in the high-priest's dress that of a person whom he had seen in a dream which he had before leaving Macedonia for the conquest of Asia, and who had promised him success. Falling down at his feet, therefore, he acknowledged him to be the servant and messenger of the supreme God, and entering the Holy City offered sacrifice in the temple under his direction.

Jaddua then showed Alexander the book of Daniel, with its prophecies respecting himself and his subjugation of the Persian empire, Dan. vii. 6; viii. 3-8, 20, 21; xi. 3, thus bringing him to a still further recognition of the God of Israel, by agreeing that the Jews should be left free in all parts of his empire to observe their own laws. After a short stay at Jerusalem, Alexander then marched southward on his way to Egypt.

### The Jews under the Greek Kings of Egypt.

[B. C. 323-205.]

The empire handed down almost entire from Nebuchadnezzar to Alexander the Great was broken up after the death of the latter, B. C. 323, into several kingdoms, of which one was the kingdom of Syria, stretching from the Euphrates to the Mediterranean and including the Holy Land.

In the division of Alexander's dominions among his four successors, the Diadochi, this extensive province was assigned to Laomedon, Dan. viii. 8-22, when "they all put crowns upon themselves," 1 Macc. i. 9, but was wrested out of his hands, B. C. 320, by Ptolemy Soter, the first Greek sovereign of Egypt. By the stratagem of entering Jerusalem on a Sabbath for the pretended purpose of offering sacrifice as Alexander had done, Ptolemy gained quiet possession of the Holy City, and eventually of Palestine. He then took many of the Jews and Samaritans to Egypt, where by this forced, and by subsequent voluntary, immigration, many Jewish colonies were formed throughout the country, the largest of all being that of Alexandria, where a Hebrew population had already been partially established by Alexander. For about twenty years afterward the possession of the Holy Land was disputed by Antigonos, who had established his authority over a large part of Asia Minor; but his wars with Ptolemy do not seem to have penetrated to Jerusalem, and it was finally settled as a dependency of Egypt by the victory of Ptolemy and the other three successors of Alexander over Antigonos at Ipsus, B. C. 301.

It was during the reign of Ptolemy Soter, B. C. 323-285, that the high-priest Simon the Just flourished, whose government is so highly lauded by Jesus the son of Sirach; and how much prosperity and freedom the Jews enjoyed under the rule of Ptolemy is shown by his repair and fortification of the temple, and of the city itself, Eccus. i. 1-4.

The second Greek king of Egypt, Ptolemy Philadelphus, B. C. 285-247, was very favorably disposed toward the Jews. He liberated all of them who had been sold into slavery in Egypt, paying four hundred and sixty talents out of his treasury for the purpose, and sent magnificent offerings to the temple of vessels of gold and silver, together with money for sacrifices, and a golden table for the show-bread. The object of this liberality is stated to have been the obtaining a Greek version of the sacred books for his newly-formed library at Alexandria. And whether there is any historical truth or not in the narrative of Aristæus that this version was made by seventy-two elders sent to Egypt from Jerusalem by the high-priest, it is certain that the Septuagint, or Greek version of the Old Testament, was made some time during the reign of Ptolemy Philadelphus. This Greek version of the Septuagint had a great work to do in preparing the way for European Christianity, and was used by our Lord and his apostles as a faithful representative of the original Scriptures.

The third Greek sovereign of Egypt, Ptolemy Evergetes, B. C. 247-222, was equally friendly to his Jewish subjects; but Onias, the high-priest, brought them into great danger, B. C. 226, by refusing or neglecting to collect and pay the annual tribute of twenty talents which had always been paid under the rule of the Ptolemies. The danger was averted by the astute policy of Joseph, the high-priest's nephew, who went to Alexandria, and winning favor with the king and queen obtained a commission as civil governor of Judæa upon condition of paying sixteen thousand talents to the Egyptian treasury out of the taxes laid on the Jews, instead of the eight thousand talents which were usually paid by the farmers of the revenue. Joseph continued to occupy the post thus given him for twenty-two years, as long as the Holy Land continued under the rule of the Ptolemies.

Ptolemy Philopator, B. C. 222-205, the fourth

of these Greek kings of Egypt, was engaged in a long contest with Antiochus the Great, king of Syria, who laid claim to Judæa as part of the dominions assigned to his ancestor Seleucus Nicator on the partition of Alexander's empire which followed the defeat of Antigonos at the battle of Ipsus. Antiochus was defeated by Ptolemy at the battle of Raphia, near Gaza, B. C. 217, and for a time the latter thus secured his authority over Judæa. But he alienated the Jews after his victory by endeavoring to penetrate to the temple itself, and even to the holy of holies, while he was offering sacrifices in the outer court of the Gentiles, as his predecessors had done. As tradition has recorded an incident in the life of William the Conqueror that he was prevented by a miracle for attempting a profane act in the cathedral at Durham, so it is reported that a supernatural terror prevented Antiochus from carrying out his intention, but on his return to Alexandria he revenged himself by a persecution of the Egyptian Jews.

The fifth Ptolemy, Epiphanes, B. C. 205-181, was the last of the Ptolemies who reigned over Judæa. Being only a child at his father's death, Antiochus the Great and Philip V., king of Macedonia, combined their strength to divide the Egyptian dominions between them, the Holy Land falling to the share of the king of Syria. For a time Antiochus maintained his authority over Judæa; but the guardians of the young Ptolemy Epiphanes appealing to the Romans (who had just completed the Second Punic War by Scipio's defeat of Hannibal), Egypt was taken under their protection and forces sent under a general named Scopas to recover the province. Scopas at first succeeded in reinstating the Egyptian rule, and after having retaken Jerusalem, B. C. 199, placed a garrison there. But in the next campaign he was defeated and captured by Antiochus, who thus, B. C. 198, re-established his authority over Judæa. Five years afterward, B. C. 193, he gave his daughter Cleopatra in marriage to Ptolemy Epiphanes, and assigned Palestine and Cælo-Syria as her dower, but it does not appear that the agreement was ever carried out; and thus the Holy Land passed altogether from the hands of the Greek sovereigns of Egypt into those of the Greek sovereigns of Syria.

### The Jews under the Greek Kings of Syria.

[B. C. 205-168.]

Antiochus the Great carried on a long war with the Romans; but when peace was made between them, B. C. 188, the latter confirmed to him the possession of Palestine. In the following year he was killed while attempting to plunder the temple of Bel, at Elymais, and was succeeded by Seleucus Philopator, his eldest son, B. C. 187-175. Seleucus IV. was greatly burdened by the immense tribute exacted from his father by the Romans, which he collected with difficulty. Having heard that great riches were stored up in the treasury of the temple, he sent Heliodorus, his treasurer, to take possession of the money, although he had hitherto contributed largely to the expenses of the temple service, 2 Macc. iii. 1-7. The high-priest represented that part of this treasure was laid up for the relief of widows and orphans, while four hundred talents of silver and two hundred talents of gold were the property of "a man of great dignity," who had placed it there to be protected by the sacredness of the place. Onias, the high-priest, and the other priests declared that it was impossible to give up the money thus entrusted to

their care; and when Heliodorus attempted to remove it to the king's treasury, he was prevented by the appearance of a terrible horseman clad in golden armor, who caused two attendants to scourge him almost to death as he lay prostrate on the ground. This apparition is narrated as supernatural by the author of the second book of Maccabees; but if it was so, we must rather believe it as intended to prevent some profanation of the temple than as a divine interposition to save a rich Jew's gold, 2 Macc. iii. 8-40. The jealousies arising out of this transaction led to much disorder in Jerusalem, and eventually led to appeals for the interference of the Syrian king, which brought great misery on the Jews, 2 Macc. iv. 1-6. It thus appears that the money-getting and money-keeping shrewdness of the Jews was already conspicuous. Such a use of the temple was plainly turning it profanely into a bank, as in our Lord's day. The national worship of gold had superseded the ancient national idolatry.

Antiochus Epiphanes—that is, "the illustrious"—B. C. 175-164, seized on the throne of Syria upon the assassination of his brother Seleucus by Heliodorus, his nephew Demetrius, the lawful heir, being detained as a hostage at Rome. It was of him that Daniel prophesied as coming out of one of the four kingdoms of the Diadochi, the "little horn" which "waxed great, even to the host of heaven; and cast down some of the host and of the stars to the ground, and stamped upon them. Yea, he magnified himself even to the Prince of the host, and by him was the daily sacrifice taken away, and the place of his sanctuary was cast down," Dan. viii. 9-26. So fierce and uncompromising was his opposition to God's true religion as maintained among the Jews that the prophet's vision of his iniquitous career passes on into a prophecy of the great Antichrist who will come in "the end of years, . . . at the time of the end," to oppose the religion of the Messiah, Dan. xi. 5-45.

When Antiochus Epiphanes began his reign over Syria and the Holy Land, the Jews were divided into two parties by the jealousies before referred to, the one party following Simon, who had caused the visit of Heliodorus by informing Apollonius, the viceroy of Seleucus, of the treasure at Jerusalem, and the other party following Onias, the high-priest, who had opposed the attempt to remove it. "But when their hatred went so far that by one of Simon's faction murders were committed, Onias, seeing the danger of this contention, and that Apollonius, as being the governor of Cælo-Syria and Phœnicia, did rage and increase Simon's malice, went to the king Seleucus at Antioch," "not to be an accuser of his countrymen, but seeking the good of all, both public and private; for he saw that it was impossible that the state should continue quiet, and Simon leave his folly, unless the king did look thereto," 2 Macc. iv. 1-6. At this crisis Seleucus died, and the high-priest Onias found a worse enemy than Simon in his own brother Jeshua, who offered Antiochus four hundred and forty talents of silver to be appointed in the place of Onias. Jeshua was therefore made high-priest, and Onias, being deposed, was kept prisoner at Antioch.

The new high-priest was a great promoter of Greek customs. He changed his name from Jeshua to Jason, and made it his one object to break up the nationality of the Jews. As a curious illustration of the means he adopted, it may be mentioned that he made the young Jews "wear a hat," instead of the national turban, 2 Macc. iv.

12, and he paid Antiochus one hundred and fifty more talents of silver for the privilege of building "a place for exercise," a gymnasium, in which the young Jews might be trained to the athletic sports of the Greeks, and for the further privilege of calling "them of Jerusalem by the name of Antiochians." When this "place of exercise" was built, its attractions were so great that the priests actually forsook their duties in the temple for the sake of spending their time over "the game of Discus," 2 Macc. iv. 7-17. This profanity was followed up by a gross act of idolatry, Jason sending an offering of "three hundred drachms of silver to the sacrifice of Hercules" at Tyre—an act which so scandalized even his own messengers that they diverted the offering from its purpose, and gave it as a contribution toward "the making of galleys."

After three years the profane high-priest Jason was superseded by Menelaus, a brother of Simon, who made a bid to Antiochus for the office of three hundred talents more than the tribute paid by Jason. To raise this he sold some of the golden vessels of the temple to the Tyrians and others; and to make his own position more secure, he brought about the murder of Onias by Andronicus, the governor of Antioch. The murder was quickly avenged by Antiochus, whose friendship and respect Onias had won, and who caused Andronicus to be put to death in the very place at Antioch where he had slain the high-priest. But this was the last act of friendship which Antiochus Epiphanes ever showed toward the Jews, 2 Macc. iv. 33-38.

On a report that the king of Syria was dead, B. C. 170, Jason, the displaced high-priest, attacked Menelaus his supplanter at the head of a thousand of his friends. Jason was eventually driven out of Judaea, but not before Menelaus had given Antiochus to understand that Jerusalem had revolted against his authority. He was at the time engaged in Egypt on a campaign against Ptolemy Philometor, but he at once marched on Jerusalem "in a furious mind," took the city by assault, and in three days massacred eighty thousand men, women and children, sending many thousands more into slavery, 2 Macc. v. 11-14. He also plundered the temple of all its holy vessels and treasure; and not content with this, polluted it by a mock sacrifice of swine upon the altar and by defiling the sanctuary, 1 Macc. i. 10-28; 2 Macc. v. 15-21; Joseph. Antiq., xii. vi. § 4. Thus he fulfilled the prophecy of Daniel by causing the daily sacrifice to cease and by desolating the house of the Lord, Dan. viii. 10-12.

This great profanity and cruelty of Antiochus Epiphanes was followed up two years later by another great slaughter of the Jews at Jerusalem, Apollonius being sent there with orders to put every man to death and to carry away the women and children. The city was now almost destroyed by fire, and a garrison was placed in Mount Zion to prevent the return of any of the inhabitants, or their resort to the ruined and desecrated temple, 1 Macc. i. 29-40; 2 Macc. v. 24-26.

At the same time Antiochus issued a decree "to his whole kingdom that all should be one people, and every one should leave his laws." The Syrian heathen at once conformed to Greek usages, and so also did the Samaritans, who voluntarily dedicated their temple on Gerizim to "Jupiter" as "the Defender of Strangers," Joseph. Antiq., xii. v. § 5. At Jerusalem the temple of the Lord was also changed into a temple of Zeus, or Jupiter Olympius, altars were set up throughout Judaea

to the same heathen myth, and most rigid measures were taken everywhere to substitute the idolatrous follies of the Greeks for the true religion of God, 1 Macc. i. 41-60; 2 Macc. vi. 1-8.

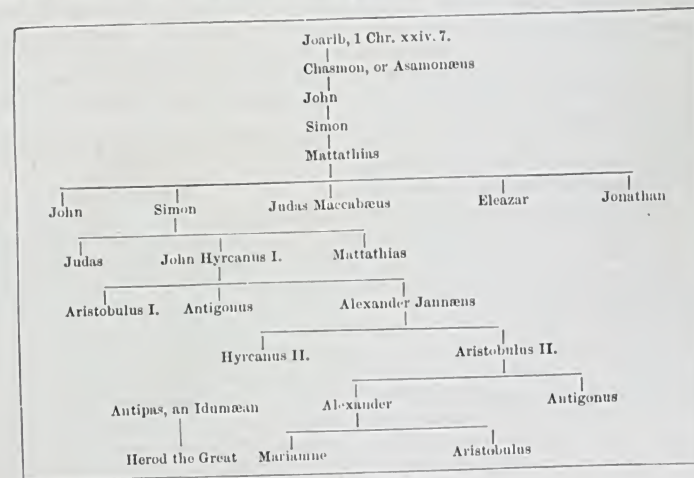

Thus resulted the terrible persecution through which the faithful Jews had to pass, and which foreshadowed the future persecutions by which Christians will be tried under Antichrist, Dan. xii. 1; Matt. xxiv. 21. Women who circumcised their children were put to death, their infants being first hanged around their necks; those who refused to conform to the test of apostasy by eating the forbidden swine's flesh suffered the same fate, 1 Macc. i. 60-73; others who had concealed themselves in a cave "were all burnt together," 2 Macc. vi. 11; old men, like Eleazar the scribe, of ninety years of age, were beaten to death on the rack, 2 Macc. vi. 19, 31; Heb. xi. 35; young men, like the seven brethren, were hacked to pieces and tortured with fire, their brave mothers sharing their fate, 2 Macc. vii. 1-42; and these all died in faith, not "accepting deliverance" when offered by their persecutors, "that they might obtain a better resurrection."

Thus did Antiochus Epiphanes endeavor to uproot the ancient faith of the Jews; and such miseries did the traitor shepherds who had forsaken their priestly duties bring upon the people whom they had misled. It was, however, this very persecution which stirred up the decaying nationality of the Jews, and out of the midst of it there sprung up that patriotic resistance of the Maccabees which ended in extinguishing the dominion of the Syro-Grecian kings over Judaea, and in giving a century of troubled independence to the Jews before their nation was drawn into the all-gathering vortex of the Roman empire.

#### The Jews under the Maccabees and their Descendants.

[B. C. 168-63.]

Mattathias, B. C. 168-166, the first leader of the revolt against Antiochus Epiphanes, was a very

#### The Maccabees.

Judas Maccabæus, B. C. 166-161, soon found himself at the head of six thousand men, with which small but zealous army he was able to attack the Syrian garrison by night, and by quick marches and well-managed surprises to "put to flight no small number of his enemies," 2 Macc. viii. 1-7. Growing in power, he defeated and slew Apollo-

\* The Chasidim were the precursors of the Pharisees.

"Malleus Sutorum," and "Charles Martel." The pedigree of the family and its connection with the Herodian kings may be seen by the annexed table.

At the time when Apollonius had slaughtered so many of the Jews in Jerusalem, Mattathias and his five sons retired to their family town of Modin (*Latron*), on the road between Jerusalem and Joppa. Shortly afterward, while they were mourning in sackcloth the desolation of their country, the king's officers came to Modin to compel the people to apostatize by sacrificing to Jupiter Olympius. Mattathias was called upon to offer first as the chief man of the city, but he boldly refused to do so; and when one of the Jewish townsmen came to the altar for the purpose, a fiery zeal seized the old man, "and his veins trembled, neither could he forbear to show his anger according to judgment, wherefore he ran and slew him upon the altar." He also killed the king's chief commissioner and pulled down the altar; and having called upon all the faithful Jews of the town to join him in the revolt, he and his sons fled to the wilderness, where they fortified themselves in the caves of the rocks, as David had done so long past days, 1 Macc. ii. 1-30. Many others took the same course; and when attacked on a Sabbath by a detachment of the garrison sent from Jerusalem, a thousand men, women and children were slain because they considered it unlawful to resist on the day of rest, which led Mattathias and his friends to decree that even on the Sabbath they would defend their lives by fighting if necessary, 1 Macc. ii. 31-41.

Mattathias and his company were soon joined by the Assideans (*Chasidim*),\* a body of brave men who bound themselves to a strict observance of the law, come what would; and thus reinforced, they went from town to town, destroying the heathen altars and restoring the customs of the Mosaic law. While this good work was going on Mattathias died, B. C. 166, at the patriarchal age of one hundred and forty-six, appointing his third son, Judas, as his successor.

nus, who advanced against him from Samaria, and Seron the governor of Cælo-Syria, who attacked him at Beth-horon, 1 Macc. iii. 1-24.

These successes compelled Antiochus Epiphanes to take vigorous steps for the recovery of Judaea; and the only way by which he could obtain funds for his army in consequence of his luxurious extravagance being by a personal visit to Persia, he left Lysias as the viceroy of Syria, giving him strict orders to send an army into Judaea "to destroy and root out the strength of Israel, and the remnant of Jerusalem, and to take away their memorial from that place, to place strangers in all their quarters, and divide their land by lot." So certain did it seem that these intentions would be accomplished that when an army of forty thousand infantry and seven thousand cavalry marched into Judaea under Gorgias and Nicanor, a multitude of Syrian merchants accompanied them, with large sums of money, for the purpose of buying the Jews as slaves. Judas was able, however, to resist every attack that was made upon his small army, and by means of stratagem and quick movements he eventually succeeded in totally defeating both generals, driving them out of Judaea, taking possession of their rich camp, and sending into slavery the very slave-dealers who had come to buy the expected Jewish captives, 1 Macc. iii. 38; iv. 1-23; 2 Macc. viii. 8-25. A few months later Lysias himself, having led an army of sixty thousand foot and three thousand horse against Judas, was as completely defeated, the Jewish army having now considerably increased in numbers, and venturing to meet their foes at Bethsur, in the South of Judaea, and on the borders of Edom, 1 Macc. iv. 26-34. These successes secured to Judas the possession of Jerusalem. It had lain "void as a wilderness," and a Syrian garrison occupying the castle, the Jews had not been able to approach nearer to it than the heights of Mizpeh, 1 Macc. iii. 42-54.

The restoration of the temple and its services was now therefore the great object of Judas and his faithful friends and followers. There had been years of neglect, and the desolation of the sanctuary was so great that there were "shrubs growing in the courts as in a forest, or in one of the mountains." The altar of burnt sacrifice had been profaned by the erection on it of an idol altar, the priests' chamber had been pulled down, and many of the holy vessels were taken away. Such a cleansing of the sanctuary was therefore necessary as had taken place in the great reformation of Hezekiah. As had then been done, the priests "bare out the defiled stones to an unclean place," probably to the brook Kidron; but the great altar was taken down and its stones placed in a corner within the temple enclosure "until there should come a prophet to show what should be done with them." A new altar was built, like the former one of unhewn stones, the vessels necessary for divine service were provided, and everything prepared for a solemn act of rededication. This took place on the third anniversary of the day on which Antiochus Epiphanes had profaned the temple, Chisleu 25th, about the middle of our December, B. C. 166; and the day was afterward kept as the "Feast of Dedication" down to the time of our Lord, John x. 22. "Thus was there very great gladness among the people, for that the reproach of the heathen was put away," 1 Macc. iv. 36-59; 2 Macc. x. 1-8.

Judas Maccabæus did not, however, end his days in peace. A Syrian garrison still held the fortress on Zion; and Antiochus Epiphanes dying a miserable death in Persia, B. C. 164, which he acknow-

ledged to be a punishment for what he had done in Judaea, 1 Macc. vi. 1-16, his successor, Antiochus Eupator, B. C. 164-162, though but a child, was placed at the head of an army by Lysias for the purpose of relieving it. He marched into Idumæa with one hundred thousand foot, twenty thousand cavalry and thirty-two elephants, the latter of which caused great terror to the Jews. The Maccabæe brothers led their forces to meet Lysias at Bethsura; but although Eleazar, the fourth son of Mattathias, nobly sacrificed himself to secure the victory by killing the king's elephant and thus causing confusion among the troops, Judas was obliged to retreat toward Jerusalem. There he was besieged for some time, and eventually came to terms with Antiochus. The Syrians broke the treaty by destroying a wall lately built by Judas between the fortress of Zion and the temple, 1 Macc. vi. 17-63.

Antiochus Eupator and Lysias were put to death shortly after this by Demetrius Soter, B. C. 162-150, the son of Seleucus, who had been supplanted by his uncle Antiochus Epiphanes. He maintained peace with the Jews for a time, but the high-priest Alcimus (Joachim), an usurper, set up by the Syrians in the place of Onias, was a bitter enemy of Judas, endeavoring to reintroduce the Greek customs, which the latter had suppressed, and calling in the aid of a Syrian army under Nicanor to support him. Judas twice defeated Nicanor, although his own army was reduced to very small numbers, and in the second battle at Avasa near Beth-horon the Syrian general was himself slain, 1 Macc. vii. 1-50; 2 Macc. xiv.; xv. With the account of his death the second book of Maccabees ends.

After this victory Judas Maccabæus sent ambassadors to the Romans, B. C. 161, this being the first time that they were ever brought into contact with the Jews. A treaty of alliance offensive and defensive was executed, a most interesting account of it being given in the first book of Maccabees, 1 Macc. viii. 1-32. But before the return of the ambassadors another great Syrian army had been sent into Judaea under Bacchides, and overcome by numbers Judas Maccabæus died a brave soldier's death at Eleasa, only eight hundred of his followers remaining. His brothers Jonathan and Simon recovered his body and buried him in the sepulchre of the Maccabees at Modin, all Israel mourning for him many days, and saying, "How is the valiant man fallen that delivered Israel?" 1 Macc. ix. 1-22.

Jonathan Maccabæus, B. C. 161-144, the youngest son of Mattathias, was entreated by the Jews to take the place of his brother, the eldest son John being treacherously slain by some of the Nabathean Arabs. Early in his rule the usurping high-priest Alcimus died a miserable death while pulling down the walls which surrounded the temple; and this, following upon a partial defeat which Bacchides had sustained from Jonathan at the Jordan, led the former to retire to Antioch and make peace with the Jews, 1 Macc. ix. 23-73. In his eighth year, B. C. 153, he became high-priest, the office having been unoccupied since the death of Alcimus. At the same time he was invested by Alexander Balas, the *de facto* king of Syria, with a crown and a royal robe, and thus became a "prince-bishop," the first of those royal high-priests of the Asmonæan line who governed the Jews until the Roman conquest, 1 Macc. x. 1-21. "So the king honored him, and made him a duke and partaker of his dominion," 1 Macc. x. 65. It is worthy of note that a remarkable ar-

rangement of a similar character prevailed in more modern times, for the bishops of Durham from the time of the Conquest until the reign of Victoria held a princely as well as an episcopal rank, and their mitre was united with a ducal coronet.

In the wars of succession between the grandson Seleucus and those of Antiochus Epiphanes the Jews were considered as important allies, and were conciliated by both sides, 1 Macc. xi. They also completed the treaty with Rome and another with the Lacedæmonians, 1 Macc. xii. 1-23. But in the seventeenth year of his rule, B. C. 144, Jonathan Maccabæus was treacherously put to death by Tryphon, a Syrian general, who had decoyed him, with a guard of one thousand men, to Ptolemais, 1 Macc. xii. 24-53; xiii. 1-23.

Simon Maccabæus, B. C. 144-135, the second son of Mattathias, succeeded his brother as high-priest and prince of the Jews. His rule was one of great prosperity, peaceful times enabling him to develop the resources of his country, 1 Macc. xiv. 4-15. He renewed the treaties made by Judas and Jonathan with the Romans and the Lacedæmonians, 1 Macc. xiv. 16-24; xv. 15-21, and established himself on terms of equal friendship with the king of Syria, 1 Macc. xv. 1-23, although he was attacked by the latter in the close of his reign. Like all his brothers, Simon died a violent death, he and his two sons being slain by his son-in-law Ptolemy at Jericho while seated at a banquet to which they had been invited by him, 1 Macc. xvi. 11-16. With his death closes the first book of Maccabees.

John Hyrcanus, B. C. 135-106, was the second son of Simon, and succeeded his father as prince-bishop of Judaea. The Syrian king Antiochus Sidetes reduced him for five years, B. C. 133-128, to a much humbler position than that which had been maintained by his father, and after a siege he was compelled to dismantle the fortifications of Jerusalem and to accompany the king on his campaigns in a kind of honorable restraint. But on the death of Antiochus the Greek kingdom of Syria was reduced to a state of anarchy from which it never recovered. John Hyrcanus then re-established his authority, and the Jews acquired a condition of independence such as they had not enjoyed since the days of Josiah. In the latter half of his life John Hyrcanus assumed the position of an independent sovereign, which in reality he was, and took the title of "prince of Israel." He died after a thirty years' rule in B. C. 106, intending his widow to take the civil government of the nation, and thus endeavoring in reality to separate it from the high-priesthood and establish a secular sovereignty.

#### The Asmonæan Kings.

Aristobulus I., B. C. 106-104, the son of John Hyrcanus, set aside his father's will, and leaving his mother, the intended queen, to starve to death in prison, assumed the position and title of king, thus founding the Asmonæan monarchy, which lasted for seventy years. He signalized his short reign by the conquest of the Hauran (*Auranitis*), a tract of country in which the sources of the Jordan are situated, and which is spoken of in the New Testament as Iturea, Luke iii. 1. Driven home by illness, his last hours were sullied by one of those shocking crimes so common in Jewish history; for becoming jealous of the popularity which Antigonus his brother had won, he unintentionally led to his assassination in the subterranean passage which led from the palace to

the temple. When told of what had happened, he was so horror-struck that he broke a blood-vessel and died full of remorse.

Alexander Jannæus, B. C. 104-79, his elder brother, succeeded to the Jewish throne, establishing himself there by the murder of the only remaining son of Hyrcanus. During part of his reign, Judea suffered much from being made the battle-ground between the armies of Cleopatra and her son Ptolemy, whom she had driven from Egypt. Alexander's forces were terribly defeated by Ptolemy, but he was restored to his kingdom by Cleopatra. A cruel tyrant, he was hated by the Jews; and being insulted by some of them in the temple, at the feast of tabernacles, he caused as many as six thousand to be slaughtered. He was also extremely profligate, notwithstanding his office as high-priest, and the story is told of his sitting at a banquet surrounded by courtesans to witness the crucifixion of eight hundred of his rebel subjects. Alexander died of ague while engaged at the siege of Ragaba, and made the same arrangement as had been made by Hyrcanus, leaving the sovereignty to his widow, Alexandra, and the high-priesthood to his eldest son, Hyrcanus.

Alexandra, B. C. 79-69, was queen of Judea for ten years, but nothing remarkable occurred during her reign. Her chief cares were to prevent a recurrence of civil war and to secure the crown for her youngest son, Aristobulus. The former she succeeded in doing by conciliating the Pharisees, or anti-Hellenizing party, her husband having been their bitter opponent and belonging to the sect of the Sadducees, the free-thinking party, which encouraged the introduction of Greek customs and Greek skepticism. The Pharisees sprung from the Assideans (*Chasidim*—"The Pious"), or strict observers of the law, who joined Judas Maccabæus, the name Pharisee (*Perishim*—"The Separated") being only a later appellation of the sect. They maintained the necessity of very exact observance of the Mosaic law, which they supplemented by the Mishna, a collection of many minute traditions as to the manner of its observance. Such traditional exactness became, in the hands of covetous and immoral Jews, a means of evading rather than observing the principles of the law; but the Pharisees were the chief supporters of the religion and nationality of the Jews in their latter days, and hence the true representatives of Judaism. The Sadducees—i. e., "Zadokites"—are of unknown origin, though probably founded by a person named Zadok. They repudiated the ascetic system of the Pharisees, denied the existence of angels and spirits, disbelieved the resurrection of the dead, and, while they professed to take the Mosaic law as their only guide in faith and practice, shut their eyes to its true significance and lived on a system of negations which made them an easy prey to philosophical infidelity. To secure the crown for Aristobulus, Alexandra made him popular by giving him the command of an expedition against Damasens, in which he proved himself a successful general. Alexandra died at the age of seventy-three, about seventy years before the birth of our Lord.

Hyrcanus II., B. C. 69, the eldest son of Alexander Jannæus, and high-priest during the ten years of his mother Alexandra's reign, assumed the position of king also at her death. But he was almost immediately dethroned by his brother Aristobulus, being deprived of the high-priesthood as well as the crown. After a long struggle he obtained the throne again under the Romans;

and his daughter Alexandra marrying Alexander the son of Aristobulus, the two lines were united in their daughter Mariamne, the wife of Herod the Great.

Aristobulus II., B. C. 69-63, was the last of the independent kings of Judea, and had a troubled and uncertain reign of only six years. On the deposition of Hyrcanus he was persuaded by an Idumæan named Antipater, the father of Herod the Great, to fly to the court of Aretas, king of Idumæa (*Arabia Petraea*). Aretas espoused the cause of Hyrcanus, and entered Judea with a force of fifty thousand men for the purpose of replacing him on the throne. Aristobulus was defeated; and the city being taken by the Idumæan army, he and his adherents were besieged in the temple. At this time Scaurus, a Roman general, had been left in the government of Damasens by Pompey, who had just reduced the kingdom of Syria to the position of a Roman province. Aristobulus and Hyrcanus both appealed to Scaurus as arbitrator; and when he decided in favor of the former, Aretas was obliged to retire from Jerusalem, suffering a severe defeat from Aristobulus, who pursued him on his retreat.

In the following year, B. C. 63, Pompey himself came to Damasens, and the two brothers submitted their claims again to him in person. This appeal to a conquering Roman general had the result which might have been expected. Giving no decision, he marched into Idumæa and took possession of it for Rome. Thence he sent Gabinius before him to take possession of Jerusalem as the key of Judea. The city offered some resistance, and Aristobulus was besieged for three months in the temple; Pompey himself eventually took the temple by assault, and sent Aristobulus and his two sons and two daughters prisoners to Rome. As many as twelve thousand of the Jews were slaughtered in this assault, including many priests at the altar. Pompey went so far as to enter the holy of holies; but before leaving Jerusalem he commanded the temple to be purified and its divine service restored.

The Jews under the Romans.

Judea was now, B. C. 63, annexed by Pompey to the new Roman province of Syria, and never

Alexander, the eldest son of Aristobulus, escaped from his guard on the way to Rome, and gathered an army of eighty thousand men to recover Judea. He was defeated by Gabinius; and Crassus, the next consul of Syria, plundered Jerusalem and the temple. The civil wars of the Romans led to the death of both Aristobulus and Alexander; and thus the youngest son Antigonus was left as the last male representative of the family of John Hyrcanus. Hyrcanus II. was restored to the rule of Jerusalem under the title of ethnarch, but Antipater the Idumæan, son of Antipas the last king of Arabia Petraea, was placed over his head as procurator of Judea, and Phasaël, the eldest son of Antipater, commanded the Roman garrison of the Holy City.

Antigonus obtained the temporary sovereignty of Jerusalem, B. C. 40-37, by aid of the Parthian army, which for a time wrested Syria out of the hands of the Romans, Hyrcanus and Phasaël being thrown into prison, where Phasaël dashed his brains out against the walls of his dungeon, and Hyrcanus was made incapable of ever again holding the high-priesthood by the amputation of his ears. Antigonus was besieged in Jerusalem by a large Roman force under the command of Herod, the youngest brother of Phasaël, and being taken prisoner, was sent to Rome, where he was put to death by Mark Antony. Thus ended, B. C. 37, the last shadow of the Asmonean dynasty, just a generation before the birth of our Lord.

Herod the Great, B. C. 37, was the second son of Antipater, and was made tetrarch of Galilee by his father at a very early age. While his brother Phasaël was yet in power at Jerusalem, Herod married Mariamne, the granddaughter of Hyrcanus II., the titular king of Judea, and thus became, after the death of Antigonus, the representative of the Asmonean kings. Although an Idumæan by birth, he had, with his father and brothers, become a proselyte to Judaism; and being an intimate friend of Antony and many other distinguished Romans, he was always sure of support from the Roman power. Thus he was able to establish himself in almost the position of a native king and at the same time to keep the full confidence of the conqueror of Judea. His reign extended some months beyond our Lord's birth;

again recovered its independence. He left Hyrcanus II. nominally king in the place of the exiled Aristobulus, but the royal authority was merely that of a subordinate to the procurator of Syria.

and having been distinguished by such cruelties throughout that the emperor Augustus used the bitter sarcasm, "It is better to be Herod's hog than his son," nearly his last act was that of

slaughtering the holy innocents of Bethlehem, in the expectation of destroying among them Him who was "born King of the Jews," and whom he supposed to be a rival for his throne. Herod's great work for the Jews was the restoration of the temple, a magnificent undertaking almost rivaling that of Solomon, which was begun about twenty years before our Lord's birth, and which was still going on during the time of his ministry, though completed as to the main fabric some years before the death of Herod.

The history of the Jews during the reign of Herod was what it had been during the whole century before—a history full of discord, faction, cruelty and vice. Morality and faith were being more and more undermined as the end of the nation's independent existence drew on; and the strong language used by St. John the Baptist and by our blessed Lord indicates a hopeless and almost incurable degeneracy. Yet even during these last times of declension and wickedness there was a day-dawn of the Messiah's work in the general expectation that arose of his coming; and as there were in the days of Ahab seven thousand faithful, so in the days of Herod there were doubtless many men and women like Simeon and Anna "that waited for the Consolation of Israel, and looked for Redemption in Jerusalem."

Herod the Great died in the seventieth year of his age, having reigned thirty-seven years from the time of his being declared king at Rome, and thirty-four years after the death of Antigonus. It appears from Josephus that his demise was shortly before the paschal feast, which was always in the spring-time, and it would seem that only five days after the execution of Antipater, Herod died. He was fully aware of the hatred which the Jews entertained toward him, and he knew that instead of sorrow there would be widespread rejoicing when people would hear of his death. With a view to gratify the intense cruelty of his nature, to disappoint the public expectation and to produce a wholesale mourning, he formed a scheme which for cold-blooded treachery and atrocity has few parallels in history, and which, doubtless, is not surpassed in enormity by any wickedness that ever entered into the depraved heart of man. He issued a citation to the leading Jews all over the kingdom, commanding them on pain of death to appear at Jericho, where he then lay daily expecting his end. On their arrival he shut them all up in the circus; he sent for his sister Salome and her husband Alexas, whom he enjoined to have them all slain without mercy as soon as he was dead; for this, said he, will provide mourners for my funeral all over the land, and make the Jews in every family lament at my death, whether they will or no. His sister and her husband were obliged to assent to the murderous command; but when the savage tyrant was dead, they repented their engagement and determined that they would not be the executioners of so bloody a design; whereupon they opened the gates of the circus and permitted the captives to return to their homes without injury. This desperate purpose of the dying man has been referred to as illustrating the ferocity of his nature, and as showing how likely that he would be so relentless as to issue the decree for the murder of the children in and around Bethlehem with a view to cut off any one who might arise to dispute his power.

Much has been said about the horrible nature of his death, which evidently resulted from the licentious and debauched life which he had led, and which produced a total breaking up of his physical frame. Eusebius, the ecclesiastical histo-

rian, quotes freely from Josephus, whose narrative he accepts as trustworthy; and according to these witnesses, the hand of God was especially visible in the unusual calamity which ended in Herod's death. His disease became very violent. He labored under a heavy burning fever, which, strange to say, was accompanied with an unusual desire for food of the richest character which no supply could gratify. He suffered from great ulceration of the bowels, and the pain which resulted was excruciating and most tormenting. Ulcers broke out in the lower part of his body, and decomposition set in while he was alive. Labored, heavy breathing oppressed and convulsions tormented him; and thus smitten for his enormities, he died.

Historians and moralists have recognized in the death of Herod a case parallel to the last scenes of the careers of Antiochus Epiphanes, of Galerius Maximianus and of Philip II. of Spain.

Polybius, in addition to Josephus, records the fearful agonies of Antiochus. The heathen historian set them down as a judgment on him because of his sacrilegious attempt on the temple of Diana in Elymais, but it is worthy of note that the author of the books of Maccabees and Josephus trace his suffering to the immediate hand of God; the heathen Polybius confirms their statements respecting the unwonted character of his disease. Eusebius and Lactantius both detail the unusual calamities which overtook Galerius Maximianus, who was the author of the tenth and the most relentless of the great persecutions of the early Christians, while Mezeray records the sufferings, both mental and bodily, which fell on Philip II., a persecutor as fell and relentless as either of these heartless murderers, and who slaughtered as many of the saints of God as either of these reckless men.

For the better understanding of the New Testament it is necessary that the family of Herod the Great should be described. He had nine wives and many children. Three of his sons he put to death. Of those mentioned in Scripture the following—Archelaus, Matt. ii. 22, and Herod Antipas, Matt. xiv. 1, 3, 6; Mark vi.; Luke iii.; viii.; ix.; xiii.; Acts iv. 27—were the sons of Malthace. By Cleopatra, another wife, he had Philip, Luke iii. 1; and by Mariamne, the daughter of Simon the high-priest, he had Herod Philip, Matt. xiv. 3; Mark vi. 17. Aristobulus, whom Herod put to death, had by Berenice, his wife, King Agrippa (who slew James the brother of John, Acts xii. 1, 2, and afterward was smitten of God at Caesarea, Acts xii. 20-23), and Herodias, his sister, Matt. xiv. 3; Mark vi. 17, who first married Herod Philip her uncle ("Josep. Antiq.," Book xviii. c. 7), and afterward eloped from him to marry Herod Antipas, his brother. By her first husband she had Salome, Matt. xiv. 6-11; Mark vi. 21-28, who danced off the head of John the Baptist for reproving Herod Antipas for his incestuous adultery with her mother. Of this King Agrippa I. was born King Agrippa II., Acts xxv., xxvi. (before whom Paul pleaded his cause), and his two sisters, Drusilla and Bernice, the first of whom was wife to Felix, the procurator or governor of Judea, Acts xxiv. 24, and the other was present with her brother at Caesarea, Acts xxv. 23, when Paul's cause was heard there before him. Herod's kingdom after his death was divided between Archelaus, Herod Antipas and Philip, his above-mentioned sons.

During the ethnarchy or government of Archelaus in his province Joseph and Mary returned out of Egypt and settled at Nazareth, a secluded village in Israel, where they would be safe in retire-

ment; and here Jesus resided until the period arrived when he entered on his public ministrations. Archelaus having committed many aggravated offences in his administration, ambassadors from the Jews and the Samaritans went to Rome to accuse him, whereupon he was summoned to appear before Augustus; and the result was his deposition from office, the confiscation of his goods and his banishment to Vienna in Gallia after ten years of tyrannous misrule.

Whereupon Augustus appointed Publius Sulpitius Quirinus to be president of Syria, and sent him into the East to seize on the country which Archelaus had reigned over and reduce it to a Roman province. The Greek method of spelling this governor's name is by St. Luke given as Cyrenius, and Strabo spells it *Kurios* (book xii.). Coponius, a Roman of the equestrian order, was sent with him to assume the government of it, under the title of procurator of Judea. Arriving at Jerusalem, they seized all the goods of Archelaus, according to the sentence of Augustus; and having set aside much of the Jewish forms of government, Coponius took on him (under the oversight of Cyrenius in Syria) the rule of Judea as a Roman province. After this the power of life and death was taken away, John xviii. 31, from the Jews, and placed in the hands of the Roman procurator and his subordinates. Taxes were paid to the Roman emperor. Eleven years previously an assessment had been made by Sentius Saturninus, but now under Cyrenius it was enforced, because the country had actually in form and reality become a Roman province. The raising of these taxes caused great disturbances among the Jews, many of them refusing to pay, some under the notion that they were to have no king but God, and others that by paying taxes to a foreigner they were violating an express law, Deut. xvii. 15, which prohibited them from acknowledging a stranger as a ruler. Judas of Galilee had been a leader in one of these troubles, and in the time of our Lord it was a popular question whether they should or should not pay tribute to Caesar.

The collection of the taxes was exceedingly obnoxious, and hence the Jews looked on all who took part in the work as apostates, and not fit to be eaten with, or even admitted to common conversation. Hence it is that in the Gospels we find publicans or tax-gatherers and sinners so often conjoined, and our Saviour reproached for intercourse with them.

Jesus in his twelfth year went up to Jerusalem with Joseph and Mary to the passover, and there he first appeared among the doctors in the temple, declaring the truth to them and showing them that he was about his Father's business. Thus this coming of Jesus to the temple was a literal fulfillment of the prophecy of Jacob that "the sceptre should not depart from Juda, nor a lawgiver from between his feet, until Shiloh come." It is agreed on all hands that by Shiloh here is meant the Messiah, and at the time of his coming Cyrenius had reduced Judea to the form of a Roman province. A Roman procurator now governed the land, and the Jewish rule had departed. The fulfillment of the prophecy thus begun was completed when their temple and city were destroyed by Titus, and the nationality they lost has never been restored. Messiah the Prince had come, but they knew him not. In their infatuation and madness they rejected him, praying that his blood might be on them and their children; for eighteen centuries the petition has been answered: Judea lies captive, and Israel is still scattered among the nations.

## KINGS AND PROPHETS OF JUDAH AND ISRAEL, ARRANGED IN PARALLELS.

Malachi.....			NEHEMIAH.....	445					

NOTE.—The glory of Israel ended with the reign of Solomon. The kingdom was thenceforth dismembered. Ten tribes, of which Ephraim was chief, separated and formed the Kingdom of Israel. Judah and Benjamin alone remained faithful to the house of David. Most of the Levites and many out of the other tribes who feared God (2 Chron. 11. 13-36) adhered to Judah. Jeroboam, the first king of Israel, knew why Solomon had been rejected, and yet he established a system of idolatry at Dan and Bethel. The people shared his feelings, and ever afterward idolatry became a part of the national religion. All the kings of Israel were depraved, and the nation copied the conduct of their kings, refusing all reproof. At the captivity, the land was settled by people from the region of Tigris and Euphrates. A cloud of mystery has ever since hung over the fate of the ten tribes. Very different were the destinies of Judah. Of twenty kings, all descendants of David, who for 388 years held the throne, six are mentioned with great praise—Asa, Jehoshaphat, Uzziah, Jotham, Hezekiah and Josiah—while others are commended. Others were fearfully wicked—Jehoram, Ahaz, Manasseh and Amon—introducing idolatrous worship into the temple itself and filling Jerusalem with blood. After the captivity of Judah the country was not colonized, thus leaving the land free for the people to return. Thus, while prophets warned and while threatened judgments were disregarded, the solemn lesson was displayed that when men and nations voluntarily choose evil and reject counsel, they prepare themselves for the retributions that necessarily follow in the Divine government.

## A COMPLETE LIST OF THE HIGH-PRIESTS OF THE HEBREWS,

FROM THE COMMENCEMENT TO THE SUBVERSION OF THEIR STATE AND GOVERNMENT.

BEFORE CHRIST.	ORDER.	1. SUCCESSION, ACCORDING TO SEVERAL PORTIONS OF THE SCRIPTURES.	2. TAKEN FROM 1 CHR. vi. 3-15.	3. FROM JOS. ANT. JUD., l. x. c. 8, l. xx. c. 10.	4. FROM THE JEWISH CHRONICLE, ENTITLED SEDER OLAM.	ORDER.	THE FOLLOWING IS FROM EZRA, NEHEMIAH AND JOSEPHUS.
1490	1	Aaron consecrated.....	Aaron.....	Aaron.....	Aaron.....	36	Eleazar, B.C. 291; under this pontiff the Septuagint translation is said to have been made about B.C. 285; died 276.
1452	2	Eleazar consecrated.....	Eleazar.....	Eleazar.....	Eleazar.....	37	Manasseh, B.C. 276; died 250.
1433	3	Phinehas consecrated.....	Phinehas.....	Phinehas.....	Phinehas.....	38	Onias II., B.C. 250; died 217.
1414	4	Abiezer, or Abishua, } During the rule of the Judges.	Abishua.....	Abiezer.....	Eli.....	39	Simon II., B.C. 217; died 195.
	5	Bukki, }	Bukki.....	Bukki.....	Ahitub.....	40	Onias III., B.C. 195; deposed 175, and died 167.
	6	Uzzi, }	Uzzi.....	Uzzi.....	Abiathar.....	41	Jesus, or Jason, B.C. 175; deposed 172.
1186	7	Eli, of the race of Ishamar, consecrated.	Zerahiah.....	Eli.....	Zadok.....	42	Onias IV., otherwise called Menelaus, B.C. 172; died 163.
1146	8	Ahitub.....	Meraioth.....	Ahitub.....	Ahimaaz, under Rehoboam.	43	Lysimachus, vicegerent of Menelaus, killed B.C. 170.
	9	Abiah.....	Amariah.....	Ahimelech.....	Azariah, under Abiah.	44	Aleimus, Jacimus or Joachim, B.C. 160.
	10	Ahimelech, or Abiathar.....	Ahitub I.....	Abiathar.....	Jehochash, under Jehoshaphat.	45	Onias V. did not exercise his office in Jerusalem, but retired into Egypt, where he built the temple Onion, B.C. 157.
1090	11	Abiathar, Ahimelech or Abimelech.	Zadok I.....	Zadok.....	Jehoiarib, under Jehoram.	46	Judas Maccabeus restored the altar and the sacrifices in 165; died in 153.
1045	12	Zadok consecrated.....	Ahimaaz.....	Ahimaaz.....	Jehoshaphat, under Ahaziah.	47	Jonathan, the Asamonean, brother of Judas Maccabeus, consecrated 153; died 143.
989	13	Ahimaaz.....	Azariah.....	Azariah.....	Jehoiadab, under Joash.	48	Simon Maccabeus, B.C. 143; died 136.
959	14	Azariah, perhaps Amariah of 2 Chron. xix. 11.	Johanan, perhaps Jehoiada of 2 Chron. xxiv. 15.	Azariah.....	Issus.....	49	John Hyrcanus, B.C. 136; died 106.
	15	Johanan, perhaps Jehoiada of 2 Chron. xxiv. 15.	died at the age of one hundred and thirty.			50	Aristobulus, king and pontiff, died 106.
863	16	Azariah, perhaps Zechariah, son of Jehoiada.	Amariah.....	Axioramus.....	Joel, under Uzziah.	51	Alexander Jannæus, king and pontiff, 105.
825	17	Amariah, perhaps Azariah, under Uzziah.	Ahitub II.....	Phideas.....	Jotham, under Joatham.	52	Hyrcanus, from 68 to 42.
768	18	Ahitub II. } under Jotham, king of Judah.	Zadok II.....	Sudeas.....	Uriah, und. Ahaz.	53	Aristobulus, brother of Hyrcanus, usurped the high-priesthood, and held it three years and three months, from 69 to 66.
	19	Zadok II. }	Shallum.....	Neriaiah, under Hezekiah.	Shallum, under Amon.	54	Antigonus, his son, also usurped the office and held it from 42 to 37, when he was taken by Soclus.
734	20	Uriah, under Ahaz.....	Hilkiah.....	Jotham.....	Hosai, under Manasseh.	55	Ananeel of Babylon, made high-priest by Herod, B.C. 37; held the office till 36.
	21	Shallum.....	Azariah.....	Uriah.....	Shallum, under Amon.	56	Aristobulus, the last of the Asamoneans, held the position less than one year, and Ananeel was made high-priest again in 35.
711	22	Azariah, under Hezekiah (2 Chr. xxxi. 10).	Seraiah.....	Neriaiah.....	Hilkiah, under Josiah.	57	Jesus, son of Phabius, deposed B.C. 20.
	23	Hilkiah, under Hezekiah.....	Jehozadak.....	Odeas.....	Azariah, under Jehoiaquim and Zedekiah.	58	Simon, son of Boethus, 20; deposed 5 B.C.
645	24	Eliakim, or Joakim, under Manasseh, continued to live under Josiah, B.C. 609, and longer.	Joshua.....	Sallumus.....	Jehozadak, after the taking of Jerusalem.	59	Matthias, son of Theophilus, B.C. 5; meeting with an accident that prevented the discharge of his duties, Ellem was elevated for one day.
	25	Azariah, perhaps Neriaiah.....		Hilkiah.....	Jesus, son of Joazad, after Captivity.	60	Joazar, son of Simon, B.C. 4; relieved A.D. 1.
608	26	Seraiah, at commencement of Captivity.		Seraiah.....		61	Eleazar, brother of Joazar, A.D. 1.
575	27	put to death.				62	Jesus, son of Siah, A.D. 6; Joazar was restored A.D. 7; deposed 13.
520	28	Jozadak, during Captivity.....		Jozadak.....		63	Ananus, son of Seth, A.D. 13 to 24.
		died.		Jesus, or Joshua.		64	Ishmael, son of Phala, in 24.
		Joshua, or Jesus, son of Jozadak.				65	Eleazar, son of Ananus, made in 24.
						66	Simon, son of Camithus, made high-priest in 25.
						67	Joseph, surnamed Caiaphas, made in 26, and continued till 35.
						68	Jonathan, son of Ananus, made in 35, and continued till 37.
						69	Theophilus, son of Jonathan, made in 37, and continued till 41.
						70	Simon, surnamed Cantharus, and son of Simon Boethus, was made high-priest in 41.
						71	Matthias, son of Ananus, made high-priest in 42.
						72	Elionus, made in 44, and continued till 45. Simon, son of Cantharus, was a second time made high-priest A.D. 45, and deposed the same year.
						73	Joseph, son of Caneus, was made high-priest in A.D. 45, till 57.
						74	Ananias, the son of Nebodens, was made high-priest in the year of the vulgar era 47, and enjoyed the priesthood till 63.
						75	Ismael was ordained high-priest, A.D. 63.
						76	Joseph, surnamed Cabeli, in 63.
						77	Ananus, the son of Ananus, in 63.
						78	Jesus, the son of Ananus, in 64.
						79	Jesus, the son of Gamaliel, in 64.
						80	Matthias, the son of Theophilus, was made high-priest in A.D. 70.
						81	Phannias, the son of Samuel, was made high-priest in 70, the year Jerusalem and the temple were destroyed, and a final period was put to the Jewish priesthood.

## SUCCESSION AFTER THE CAPTIVITY.

THE FOLLOWING IS FROM EZRA, NEHEMIAH AND JOSEPHUS.

- 29 Joachim, under the reign of Xerxes, Jos. Ant., l. ii. 5.  
 30 Eliashib, Joasib or Chasib, consecrated high-priest during governorship of Nehemiah, B.C. 420.  
 31 Joiada, or Judas, Neh. xii. 10, B.C. 413.  
 32 Jonathan, or John, 373.  
 33 Jaddua, or Jaddus, who received Alexander the Great at Jerusalem in B.C. 341, and died in 321.  
 34 Onias I., B.C. 321; died 301.  
 35 Simon I., called the Just, 300; died 291.

# JEWISH HISTORY DURING THE APOCRYPHAL PERIOD: FROM MALACHI TO JOHN THE BAPTIST.

BEFORE CHRIST.	EVENTS IN THE HISTORY OF THE ISRAELITES.	BEFORE CHRIST.	CONTEMPORANEOUS EVENTS IN PERSIA, SYRIA AND EGYPT.	BEFORE CHRIST.	CONTEMPORANEOUS EVENTS IN EUROPE.
413	Joiada, Judas or Jehoiada high priest.	405	Artaxerxes Mnemon, Persia.	404	Euclid.
373	Jonathan, John or Johanan high priest.	401	Death of Cyrus the younger.	401	Retreat of Ten Thousand.
351	Ochus, king of Persia, plants Jews near the Caspian.	381	Artaxerxes Ochus, Persia.	397	Xeuxis.
341	Jaddua high priest.	350	Egypt recovered by Persians.	389	Plato.
332	Alexander, having destroyed Tyre, visits Jerusalem; plants Jews in Alexandria.	335	Darius Codomanus, Persia.	363	Mantineia; death of Epaminondas.
324	Alexander dies; his kingdom divided.	331	Alexander defeats Persia on the Granicus, 334; at Issus, 333; at Arbela, the Persian empire ends.	356	Birth of Alexander.
321	Onias I. high priest.	324	Ptolemy Lagus, Egypt.	345	Aristotle.
320	Ptolemy Lagus captures Jerusalem; plants Jews in Alexandria and Cyrene.	312	Selucus I.; Nicator, Syria.	338	Demosthenes.
312	Selucus obtains Syria; era of the Seleucidae.	312	Empire of Selucus from Antioch to India.	334	Apelles.
306	The dominions of Alexander formed into four kingdoms, as foretold by Daniel.	291	Selucus on the Tigris built.	295	Epicurus.
300	Simon the Just high priest.	285	Dionysius (Alex.) determines solar year.	281	Theocritus.
292	Eleazar high priest.			280	Pyrrhus, king of Epirus, enters Italy.
285	Version of the LXX. commenced at Alexandria.			268	[Berosus, Manetho, Egyptians.]
250	Onias II. high priest.			261	First Punic war.
246	Ptolemy Euergetes offers sacrifices at Jerusalem.	255	P. Philadelph.	258	Regulus prisoner.
216	Ptolemy Philopater, prevented from entering the holy of holies, attempts to destroy the Jews in Alexandria, but is miraculously prevented.	247	P. Euergetes I.	236	Archimedes.
203	Antiochus the Great obtains Palestine.	222	P. Philopater.	220	Plautus.
200	The sect of the Sadducees founded.	205	P. Epiphanes.	224	Colossus of Rhodes overthrown.
199	Seopas, an Egyptian general, recovers Judea to the king of Egypt.	190	First Roman army in Asia.	218	Hannibal.
198	Antiochus regains Judea.			216	Second Punic war.
195	Onias III. high priest.			210	Battle of Cannae.
176	Heliodorus, attempting to plunder the temple, is prevented by an angel.	181	P. Philometh.	202	Zeno.
170	Antiochus Epiphanes takes Jerusalem, slays 40,000 persons and profanes the temple.			190	Hannibal defeated in Africa by Scipio Africanus.
167	Antiochus persecutes the Jews.				Scipio Asiaticus.
165	Judas Maccabeus purifies the temple and institutes the feast of dedication.				
161	Judas Maccabeus slain; his brother Jonathan succeeds.			149	Third Punic war, lasts three years.
149	Onias builds a temple in Egypt like that in Jerusalem.	146	P. Physcon.	148	Carthage destroyed.
144	Jonathan, murdered by Tryphon, is succeeded by Simon his brother, who is made ruler by Demetrius.	144	P. Physcon.	148	Corinth destroyed.
143	The sovereignty and priesthood confirmed by the Jews to Simon and his posterity.			136	Scipio Nasica.
136	Simon murdered; John Hyrcanus his son succeeds him.			133	Tiberius Gracchus.
135	The Pharisees.				
130	John Hyrcanus throws off the Syrian yoke and makes himself independent. He destroys the temple on Mount Gerizim.	116	P. Lathyrus.	111	Jugurthine war (five years).
110	The Essenes.				
106	Aristobulus succeeds his father Hyrcanus and assumes the title of king.			100	Julius Caesar born.
105	Alexander Jannæus succeeds his brother Aristobulus and reigns for 27 years.	88	P. Alexander.	88	Civil war. Marius and Sylla.
78	Jannæus dies. Alexandra his wife succeeds and makes her son Hyrcanus high priest, and favors the Pharisees.	81	P. Auletes?	81	Cicero's first oration.
69	Alexandra dies. Hyrcanus succeeds, but is forced to yield the crown to his younger brother, Aristobulus.			71	Spartacus.
65	Pompey the Great reduces Syria to a Roman province. Hyrcanus endeavors to regain the crown.	55	P. Auletes.	69	Lucullus defeats Mithridates and Tigranes.
63	Pompey, appealed to by Hyrcanus and Aristobulus, decides for the former; he takes Jerusalem and makes Judea tributary.			63	Catiline conspiracy.
57	Aristobulus and his son Alexander, raising disturbances, are vanquished by Gabinius, the Roman governor of Syria.	55	Gabinus.	60	First triumvir.: Pompey, Caesar, Crassus.
54	Crassus plunders the temple.			60	Catullus.
47	Antipater, being appointed by Julius Caesar procurator of Judea, makes his son Herod governor of Galilee, and Phasael, of Jerusalem.	51	Cleopatra.	57	Sallust.
44	Walls of Jerusalem rebuilt.			50	Cornelius Nepos, Varro.
43	Antipater poisoned; Herod and Phasael revenge his death.			49	Battle of Pharsalia.
40	The Parthians, having taken Jerusalem, slay Phasael and place Antigonus, son of Aristobulus, upon the throne. Herod flies to Rome and is appointed king of Judea.			46	Cæsar reforms calendar.
37	Herod takes Jerusalem, beheads Antigonus and is established as king of Judea; reigns 34 years.			44	Cæsar slain. Diodorus Sic.
35	Herod makes Aristobulus, brother of his wife Mariamne, high priest, but afterwards murders him.	30	Made a Roman province by Octavius.	42	Battle of Philippi.
25	Herod rebuilds Samaria and calls it Sebaste.			44	Second triumvir.: Oct., Ant., Lepidus.

## SOCIAL AND DOMESTIC ECONOMY OF THE HEBREWS.

### PURSUIITS.

In primitive ages the keeping of flocks was a principal employment among men, Gen. ii. 15; iii. 17-19; iv. 2. Of equal antiquity is agriculture, a nobler art, which has ever been a prominent source both of the necessities and conveniences of life. Those nations which practiced it at an early period learned its value not only from their own experience, but also from observing the condition of the neighboring countries that were destitute of a knowledge of it. Impressed with the importance of agriculture, Noah, after he had escaped from the deluge, once more bestowed upon it his attention, and there were some of the nomads who were far from neglecting it, Gen. xxvi. 12-14; xxv. 34; xxxvii. 7; Job i. 3.

Those states and nations, especially Babylon and Egypt, which made the cultivation of the soil their chief business, arose in a short period to wealth and power. Nations of indolent hunters and roving nomads have indeed no leisure from wars and wanderings to invent the increased comforts of a settled, industrious, well fed, and therefore fast-multiplying, population. The Hebrews too learned the value of the art while remaining in Egypt, and ever after that time were famous for their industry in the cultivation of the earth.

1. Moses, following the example of the Egyptians, made agriculture the basis of the State. He accordingly apportioned to every citizen a certain quantity of land, and gave him the right of tilling it himself and of transmitting it to his heirs. The person who had thus come into possession could not alienate the property for any longer period than the year of the coming jubilee, a regulation which prevented the rich from coming into possession of large tracts of land, and then leasing them out in small parcels to the poor—a practice which anciently prevailed, and does to this day, in the East. It was another law of Moses that the vender of a piece of land, or his nearest relative, had a right to redeem the land sold whenever he chose by paying the amount of profits up to the year of jubilee, Ruth iv. 4; Jer. xxxii. 7. Another law enacted by Moses on this subject was that the Hebrews, as was the case among the Egyptians after the time of Joseph, Gen. xxxvii. 18, should pay a tax of two-tenths of their income to God, whose servants they were to consider themselves, and whom they were to obey as their king, Lev. xxvii. 30; Deut. xii. 17-19; xiv. 22-29, compare Gen. xxviii. 22. The custom of marking the boundaries of lands by stones, although it prevailed a long time before, Job xxiv. 2, was confirmed and perpetuated in the time of Moses by an express law, and a curse was pronounced against him who without authority removed them. These regulations having been made in respect to the tenure, encumbrances, etc., of landed property, Joshua divided the whole country which he had occupied, first among the respective tribes, and then among individual Hebrews, running it out with the aid of a measuring line, Josh. xvii. 5, 14, comp. Amos vii. 17; Mic.

ii. 5; Ps. lxxviii. 55; Ezra xl. 3. The word *chbl*, a line, is accordingly used by a figure of speech for the heritage itself, Ps. xi. 6; Josh. xvii. 5, 14; xix. 9.

2. The occupation of the husbandman was held in honor, not only for the profits which it brought, but from the circumstance that it was supported and protected by the fundamental laws of the State. All who were not set apart for religious duties, such as the priests and the Levites, whether inhabitants of the country or of towns and cities, were considered by the laws, and were, in fact, agriculturists. The rich and the noble, it is true, in the cultivation of the soil did not always put themselves on a level with their servants, but none were so rich or so noble as to disdain to put their hand to the plough, 1 Sam. xi. 7; 1 Ki. xix. 9; comp. 2 Chr. xxvi. 10. The priests and Levites were indeed engaged in other employments, yet they could not withhold their honor from an occupation which supplied them with their income. The esteem in which agriculture was held diminished as luxury increased, but it never wholly came to an end. Even after the captivity, when many of the Jews had become merchants and mechanics, the esteem and honor attached to this occupation still continued, especially under the dynasty of the Persians, who were agriculturists from motives of religion.

3. The soil of Palestine is very fruitful if the dews and vernal and autumnal rains are not withheld. The country, in opposition to Egypt, is eulogized for its rains, Deut. xi. 10; but the Hebrews, notwithstanding the richness of the soil, endeavored to increase its fertility in various ways. They not only divested it of stones, but watered it by means of canals communicating with the rivers or brooks, and thereby imparted to their fields the richness of gardens, Ps. i. 3; lxxv. 10; Prov. xxi. 1; Isa. xxx. 25; xxxii. 2, 20; Hos. xii. 11. Springs, therefore, fountains and rivulets, were held in as much honor and worth by husbandmen as by shepherds, Josh. xv. 9; Judg. i. 15; and we accordingly find that the land of Canaan was extolled for those fountains of water of which Egypt was destitute. The soil was enriched also, in addition to the method just mentioned, by means of ashes, to which the straw, the stubble, the husks, the brambles and the grass that over-spread the land during the sabbatical year were reduced by fire. Finally, the soil was manured with dung, Ps. lxxxiii. 10; 2 Ki. ix. 37; Isa. xxv. 10; Jer. viii. 2; ix. 22; xvi. 4; xxv. 33; Luke xiv. 34, 35.

4. The culture of the soil was at first very simple, being performed by no other instruments than sharp sticks. By these the ground was loosened until spades and shovels, and not long after ploughs, were invented. All these implements were well known in the time of Moses, Deut. xxxiii. 13; Gen. xlv. 6; Job i. 14. The first plough was doubtless nothing more than a stout limb of a tree, from which projected another shortened and pointed limb. This, being turned into the ground, made the furrows, while at the farther end of the

longer branch was fastened a transverse yoke, to which the oxen were harnessed. At last a handle was added, by which the plough might be guided. So that the plough was composed of four parts—the beam, the yoke, which was attached to the beam, the handle, and what we should call the coulter, 1 Sam. xiii. 20, 21; Mic. iv. 3. Pliny speaks of ploughs constructed with wheels, which in his day were of recent invention. It was necessary for the ploughman constantly and firmly to hold the handle of the plough, which had no wheels, and, that no spot might remain untouched, to lean forward and fix his eyes steadily upon it, Luke ix. 62. The staff by which the coulter was cleared served for an ox-goad. In the East at the present day they use a pole about eight feet in length, at the largest end of which is fixed a flat piece of iron for clearing the plough, and at the other end a spike for spurring the oxen. Hence it appears that a goad might answer the purpose of a spear, which indeed had the same name, 1 Sam. xiii. 21; Jud. iii. 31. Sometimes a scourge was applied to the oxen, Isa. xi. 26; Nah. iii. 2. There seems to have been no other harrow than a thick clump of wood, borne down by a weight or a man sitting upon it and drawn over the ploughed field by oxen, the same which the Egyptians use at the present time. In this way the turfs were broken in pieces and the field leveled. The modern Orientals, except in India, are unacquainted with the cart; but formerly not only wagons, Gen. xlv. 19, 27; Num. vii. 3, 6, 7; 1 Sam. ix. 7, 8, 10, 11, 14; Amos ii. 13; Isa. v. 18; xxviii. 28, and war-like chariots, but also pleasure-carriages, were used, Gen. xli. 43; xlv. 19, 21; 2 Kings v. 9; 2 Sam. xv. 1; Acts viii. 28. All the ancient vehicles were moved upon two wheels only. A solitary instance of four wheels occurs on the Egyptian monuments, the earliest extant. Covered coaches are known to have been used by ladies of distinction, though this circumstance is not mentioned in the Bible.

5. The beasts of burden that endured the toils of agriculture were bulls and cows, he-asses and she-asses, Job i. 14; 1 Sam. vi. 7; Isa. xxx. 24; xxxii. 20. But it was forbidden to yoke an ass with an ox, Deut. xxii. 10. Those animals which in the Scriptures are called oxen were bulls, for the Hebrews were prohibited from castrating, although the law was sometimes violated, Mal. i. 14. Bulls in the warmer climates, especially if they are not greatly pampered, are not so ungovernable but that they may be harnessed to the plough. If, indeed, any became obstinate by rich pasturage, their nostrils were perforated, and a ring made of iron or twisted cord was thrust through, to which was fastened a rope, which impeded his respiration to such a degree that the most turbulent one might easily be managed, 2 Kings xxix. 28; Isa. xxxvii. 29; Ezek. xix. 4; Job xl. 24. By this ring also camels, elephants and lions, taken alive, were rendered manageable. When bulls became old, their flesh was unsuitable for aliment, for which reason they were left to die a natural death; for the old age of these animals, which had been their companions in labor, was treated by the Hebrews with

kindness. Whence it is said that in the Golden Age the slaughter of an ox will be equally criminal with the slaughter of a man, Isa. lvi. 3. Hence, too, among the Hebrews bulls possessed their appropriate dignity, so that trophies were drawn from them by no means destitute of elegance, Num. xxii. 4; Deut. xxiii. 17.

6. Sowing commenced in the latter part of October, at which time, as well as in the months of November and December following, the wheat was committed to the earth. Barley was sown in January and February. The land was ploughed, and the quantity which was ploughed by a yoke of oxen in one day was called a yoke, or an acre, 1 Sam. xiv. 14. The yoke was laid upon the necks and shoulders of the laboring animals, and with ropes was made fast to the beam of the plough. The ox beneath the yoke afforded metaphors expressive of subjugation, Hos. x. 11; Isa. ix. 4; x. 27; Jer. v. 5; xxvii. 2, 8-12; xxx. 8; Nah. i. 13; Ps. exix. 3, 4; Matt. xi. 29, 30. The Syrians, according to Pliny, ploughed shallow. The furrows and the ridges between them were harrowed and leveled, Job xxxix. 10; Isa. xxviii. 24, 25; Hos. x. 11. The seed was most probably committed to the soil in the harrowing, as Pliny relates. Yet it seems to have been customary in some cases formerly, as it is at present, to scatter the seed upon the field once ploughed and cover it by a cross furrow. When it was prohibited by law to sow, either in field or vineyard, seed of a mixed kind, and crops of this nature became sacred—*i. e.*, were given to the priests—without doubt the seed-grain was carefully cleansed from all mixture of tares, so often spoken of. This law by no means referred to a poorer sort of grain, as the Talmudic writers suppose, but what may be called the intoxicating tare, from which the bread and the water in which it was boiled received an incriminating quality, and became very injurious to soundness of mind. The beverage formed by boiling tares and water was called *water of tares*, also *poison water*, Deut. xxix. 18, 19; Ps. lxxix. 21; Jer. viii. 14; xxiii. 15; Hos. x. 4.

7. In Palestine the crops are as far advanced in the month of February as they are in this country in the month of May. At that time, when the grain has reached about a cubit in height, it is frequently so injured by cold winds and frost that it does not ear. The effect thus produced upon the grain is called *blasting*, Gen. xli. 6; Deut. xxviii. 22; 2 Ki. xix. 26. Sometimes, even in November, the crops are so annoyed by easterly winds as to turn yellow and never come to maturity. This calamity is denominated *mildew*, Deut. xxviii. 22; Amos iv. 9; Hag. ii. 17; 1 Ki. viii. 37; 2 Chr. vi. 28; but whether the opinion of the Orientals, that these effects are occasioned by the winds, is founded in truth, cannot, as it seems, be determined. The crops in the southern parts of Palestine and in the plains come to maturity about the middle of April, but in the northern and the mountainous sections they do not become ripe till three weeks after, or even later. The cultivated fields are guarded by watchmen, who sit upon a seat hung in the tree or on a watchtower made of planks and keep off birds, quadrupeds and thieves, Jer. iv. 16, 17; Isa. xxiv. 20. It was lawful for travelers, Deut. xxiii. 25, to strip ears from another's field, and to eat, but they were not to use a sickle. The second day of the passover—*i. e.*, the sixteenth from the first new moon of April—the first handful of ripe barley was carried to the altar, and then the harvest commenced, compare John iv. 35. The barley was first gath-

ered; then the wheat, spelt, millet, etc., Ex. ix. 31, 32; Ruth i. 22; ii. 23. The time of harvest was a festival, which continued from the passover until Pentecost, seven weeks, Deut. xvi. 9-12; Jer. v. 24. The reapers were masters, children, men-servants, maidens and mercenaries, Ruth ii. 4, 8, 21, 23; John iv. 36; James v. 4. Merry and cheerful, they were intent upon their labor, and the song of joy might be heard on every side, Isa. ix. 3; lxi. 7; Ps. cxxvi. 6. Travelers congratulated them on the rich harvest, which was attributed to the beneficence of the Deity, and considered a great honor, while, on the other hand, sterility of the soil was supposed to be a divine punishment and a disgrace, Lev. xxvi. 4; Deut. xi. 14; xxviii. 12-24; Isa. iv. 2; Hag. i. 5-11; Mark iii. 10, 11. Anciently the ears were plucked off or the stalks pulled up by the roots, which is still the custom in some Eastern countries. It was esteemed servile labor by the Pharisees, and a profanation of the Sabbath when done on that day, Matt. xii. 1-5. The Hebrews used the sickle, Deut. xvi. 19; Josh. iii. 13; Jer. i. 16; so that the stubble remained in the earth. The crops, when reaped, were gathered up by the arms and bound in bundles, Gen. xxxvii. 7; Lev. xxiii. 10-15; Job xxiv. 10; Ruth ii. 7, 15, 16; Amos ii. 13; Mic. iv. 12; Jer. ix. 21, 22. At length the bundles were collected into a heap or conveyed away on a wagon, Amos ii. 13; Ps. exxvi. 6. But the corners of the field and the gleanings were required to be left for the poor, Lev. xix. 9; Deut. xxiv. 19; Ruth ii. 2, 23. The land in the East generally yields tenfold, rarely twenty or thirty; but Matt. xiii. 8 says the land yielded thirty, sixty and one hundredfold, and Gen. xxvi. 12 says one hundredfold. Herodotus, Strabo and Pliny mentioned the increase of crops at the rate of one hundred and fifty, two hundred, and even three hundred, fold. This great increase is owing to the circumstance of the kernels being put into the soil at a distance from each other, so as to send out several stalks, Gen. xli. 5, 47, some of which, according to Pliny, N. H. xviii. 21, 55, have from three to four hundred ears; and in Africa, at the present time, they bear at least ten and fifteen.

8. The bundles were transported into the threshing-floor either by hand or by beasts of burden or in wagons, Amos ii. 13, and piled in a heap, Ex. xxii. 6; Jud. xv. 5. A bundle left in the field, even though discovered, was not to be taken up, but left to the poor, Deut. xxiv. 19. The threshing-floor was in the field, in some elevated part of it; it was destitute of walls and covering, and, indeed, was nothing more than a circular space, thirty or forty paces in diameter, where the ground had been leveled and beaten down, Gen. i. 10; 2 Sam. xxiv. 16, 24; Jud. vi. 37, etc. The assemblage of bundles in the floor for threshing was used figuratively to denote reservation for future destruction, Mic. iv. 13; Isa. xxi. 10; Jer. li. 33. The grain was housed in granaries, either in the ground or made like the Egyptian granaries, which are arched chambers, with a hole at top for putting in grain and a door at the bottom for taking it out.

9. Among other objects of agriculture, the vine may justly be considered worthy of particular attention. In some parts of the East—for instance, on the southern shore of the Caspian Sea—these trees grow spontaneously, producing grapes of a pleasant taste, which, in the very first ages of the world, could not but have invited the attention of men to their cultivation. Hence mention is made of wine at an early period, Gen. ix. 21; xiv. 18;

xix. 32-35; xxvii. 25; xlix. 11, 12. The Hebrews were no less diligent in the culture of vineyards than of fields for grain, and the soil of Palestine yielded in great quantities the best of wine. The mountains of Engedi in particular, the valley of salt-pits and the valleys of Eschol and Sorek were celebrated for their grapes. Sorek, indeed, was not only the proper name of a valley, but also of a very fruitful vine, which bore small but uncommonly sweet and pleasant grapes. In the kingdom of Morocco, at the present time, the same vine is called *serki*, the name being slightly altered. In a few instances the wine of Mount Libanus and Helbon is extolled in the Scriptures, Hos. xiv. 7; Ezek. xxvii. 18. In Palestine, even at the present day, the clusters of the vine grow to the weight of twelve pounds; they have large grapes, and they cannot be carried far by one man without being injured, Num. xiii. 24, 25. The grapes of Palestine are mostly red or black; whence originated the phrase "blood of grapes," Gen. xlix. 11; Deut. xxxii. 14; Isa. xxvii. 2. Some vines in Eastern countries, when supported by trees, grow to a great height and magnitude; of such are made the staves and sceptres of kings. The vine growing spontaneously, of which we have spoken, is not that which, in 2 Ki. iv. 39, is called the "wild vine," for that is the *colocynthis*, or wild gourd, which, in Jer. ii. 21, is called "the degenerate" or "strange vine." The vine of Sodom is the *solanum melangena*, the fruit of which, as was said above, is called "the poisonous clusters."

10. Vineyards were generally planted on the declivity of hills and mountains, sometimes in places where the soil had been heaped by art upon the naked rocks, being supported there merely by a wall, Isa. v. 1; Jer. xxxi. 5; Job iii. 18; Amos ix. 13; Mic. i. 6. According to Strabo and Pliny, there were also very fine vineyards in moors and wet lands, in which the vines grew to a very great height. Of the vines that grew upon such a kind of soil were fabricated the sceptre, etc., spoken of above, whilst the branches of other vines were destined to be fuel for the flames, Ezek. xvii. 1-8; xix. 10, 11, 12; xv. 1-5. Vines were commonly propagated by means of suckers. Pliny says vines were of four kinds, viz., those that ran on the ground, those that grew upright of themselves, those that adhered to a single prop, and those that covered a square frame. It is not our design to treat of all these; it may suffice merely to mention that Pliny is by no means correct when he says the custom prevailed in Syria and all Asia of letting the vines run on the ground. This, indeed, accords with Ezek. xvii. 6, 7; but that vines frequently grew to a great height, being supported by trees and props, or standing upright of themselves, the proverbial phrase, which so often occurs, of sitting under one's own vine and fig tree—*i. e.*, enjoying a prosperous and happy life—is sufficient proof, Jer. v. 17; viii. 13; Hos. ii. 12; Mic. iv. 4; Zech. iii. 10. The prohibition, Deut. xxii. 9, to sow vineyards with divers seeds, and the command that what was thus sown should be given to the priests, are not to be understood of the vines, but of herbs, which were sown in the intervals between them. Vineyards were defended by a hedge or wall, Num. xxii. 24; Ps. lxxxviii. 12; Prov. xxiv. 31; Isa. v. 5; xxvii. 2, 3; Jer. xlix. 3; Neh. iv. 3; Matt. xxi. 33, and in them were erected towers, Isa. v. 2; Matt. xxi. 33, which, at the present time in Eastern countries, are thirty feet square and eighty feet high. These towers were for keepers, who defended the vineyards from thieves and from animals, especially

dogs and foxes, Song Sol. i. 6; ii. 15. By the law in Deut. xxiii. 25 the keeper was commanded not to prohibit the passing traveler from plucking the grapes which he wished to eat on his way, provided he did not carry them off in a vessel; and this is still allowed in vine countries.

11. The manner of trimming the vine, and also the singular instrument of the vine-dresser, were well known even in the time of Moses, Lev. xxv. 3, 4. A vintage from new vineyards was forbidden for the first three years, Ex. xxxiv. 26 and Num. xviii. 11, and the grapes also of the fourth year were consecrated to sacred purposes; the vines, therefore, without doubt, during these first years, were so pruned as that few sprouts remained. The Egyptian monuments show that goats were allowed to browse on vines. On the fifth year, when they were first profaned—*i. e.*, put to common use—they had become sturdy and exuberant. Pruning at three several times, viz., in March, April and May, is mentioned not only by Bochart, but by Pliny, and Homer speaks of it as a thing well known. The Hebrews dug their vineyards and gathered out the stones. The young vines, unless trees were at hand, were wound around stakes; and around those vines which ran on the ground were dug narrow trenches in a circular form, to prevent the wandering shoots from mingling with each other. These practices in the cultivation of the vine are to be duly considered in those allegories which are drawn from vineyards, Isa. v. 1-7; xxvii. 2-6; Ps. lxxx. 9-13; Matt. xxi. 33-46.

12. The vintage in Syria commences about the middle of September and continues till the middle of November. But grapes, we are informed, were ripe sometimes even in June and July, which arose, perhaps, from a triple pruning, in which case there was also a third vintage. The first vintage was in August, the second in September and the third in October. The grapes, when not gathered, were sometimes found on the vines until November and December. The Hebrews were required to leave gleanings for the poor, Lev. xix. 10. The season of vintage was a joyful one, Jud. ix. 27; Isa. xvi. 10; Jer. xxv. 30; xlviii. 33. With shoutings on all sides, the grapes were plucked off and carried to the wine-press, which was in the vineyard, Isa. v. 2; Zech. xiv. 10; Hag. ii. 16; Matt. xxi. 33; Rev. xiv. 19, 20. The presses consisted of two receptacles, which were either built of stones and covered with plaster, or hewn out of a large rock. The upper receptacle is nearly eight feet square and four feet high. Into this the grapes are thrown, and trodden out by five men. The juice flows out into the lower receptacle through a grated aperture, which is made in the side near the bottom of the upper one. The treading of the wine-press was laborious and not very favorable to cleanliness; the garments of the persons thus employed were stained with red juice; and yet the employment was a joyful one. It was performed with singing, accompanied with musical instruments.

13. Culinary plants and fruit trees were among the first objects of agriculture. Gardens, accordingly, were very ancient, and have always been numerous. The later Hebrews were invited the more to the cultivation of gardens by the example of the Syrians, whom Pliny extols for this species of agriculture above all other nations. Trees were multiplied by seeds and shoots; they were transplanted, dug around, manured and pruned, Job viii. 16; Isa. xvii. 10. Grafting occurs figuratively in Rom. xi. 17, 24. The gardens

in Persia at the present day are disposed in good order; those in the Ottoman empire are very rude, displaying hardly any indications of art, except a fountain or receptacle of waters, which is never wanting. In the Scriptures gardens are denominated from the prevalence of certain trees, as the garden of nuts, and the garden of Carthaginian apples or pomegranates, Song Sol. vi. 11. The forest of palms also in the plain of Jericho was only a large garden in which other trees were interspersed among the palms. The modern Orientals are no less fond of gardens than were the ancient Hebrews, not only because they yield the richest fruits, but because the shade is very refreshing and the air is cooled by the waters, of which their gardens are never allowed to be destitute. The Hebrews had an attachment to gardens as a place of burial, hence they frequently built sepulchres in them, 2 Ki. ix. 27; xxi. 11; Mark xv. 46; Matt. xxvi. 36; John xviii. 1, 2. A pleasant region is called "a garden of God"—*i. e.*, a region extremely pleasant. The trees which the gardens constantly displayed are often used figuratively for men. Those which are flourishing and fruitful denote the good men; the unfruitful and barren, wicked men; and lofty cedars in particular are the emblems of kings, Job xxix. 19; Ps. i. 3; xlii. 12-14; Hos. xiv. 6, 7; Jer. xvii. 8; Dan. iv. 10-16; Luke xxiii. 31; Matt. iii. 10; vii. 17-20; xii. 33; Ezek. xvii. 3, 4; xxxi. 3, 13. Indeed, an assembly of men is compared to a forest, and a multitude of wicked men to briars, Isa. ix. 10; x. 19, 33, 34; xi. 1.

Agriculture on every seventh year came to an end. Nothing was sown and nothing reaped; the vines and the olives were not pruned; there was no vintage and no gathering of fruits, even of what grew wild; but whatever spontaneous productions there were were left to the poor, the traveler and the wild beast, Lev. xxv. 1-7; Deut. xv. 1-10. The object of this regulation seems to have been to secure the preservation of wild beasts, to let the ground recover its strength, and to teach the Hebrews to be provident of their income and to look out for the future. It is true that extraordinary fruitfulness was promised on the sixth year, but in such a way as not to exclude care and foresight, Lev. xxv. 20-24.

#### DRESS AND USAGES.

We have had occasion to notice the permanency of Eastern customs, and hence the assistance which may be derived from an acquaintance with the various manners and characters of the Orientals as they at present exist in the illustration of the sacred Scriptures.

##### Clothing, etc.

1. The earliest improvement upon the employment of the mere skins of animals as an article of dress was, in all likelihood, a sort of felt-cloth manufactured out of these materials. Later still, the art of weaving was discovered, and a web was formed by combining the hair of animals with threads drawn from wool, cotton or flax, see Gen. xiv. 23; xxxi. 18, 19; xxxvii. 3; xxxviii. 28; xli. 42; xlv. 22; Job vii. 6; xxxi. 20. The Egyptians were very celebrated for such manufactures. The Israelites, while living among them, learned the art, and even excelled their teachers, 1 Chr. iv. 21. While wandering in the Arabian wilderness they prepared the materials for covering the tabernacle, and wrought some of them with embroidery. Cotton cloth was esteemed most val-

uable; next to that, woolen and linen. That which was manufactured from the hair of animals was esteemed of least value. Of *silk* there is no mention made at a very early period, unless, perchance, it be in Ex. xvi. 10, 13. This, however, is clear, that Alexander found silks in Persia; and it is more than probable that the Median dress, which we find was adopted by the Persians under Cyrus, was silk.

2. White was esteemed the most appropriate color for cotton cloth, and purple for the others. The fullers, who had discovered the art of communicating a very splendid white to cloth by the aid of alkali and urine, lived out of the city, Isa. vii. 3, lest their shops should communicate a fetidness to the atmosphere. The purple cotton cloth, which was essentially the same with the celebrated Tyrian purple, was highly esteemed, see Luke xvi. 19; Rev. xviii. 12. It was produced by the blood taken from a vein in the throat of a certain shell-fish. The scarlet color, first mentioned in Gen. xxxviii. 28, and occurring frequently afterward, was very much admired. It was a different color from the shell-fish purple, and was extracted from the insects, or their eggs, found on a species of oak. The hyacinth or dark blue color was extracted from the cuttle-fish, which bears in Hebrew the same name with the color itself, and was highly esteemed, especially among the Assyrians, Ezra xxiii. 6. Black color was used for common wear, and particularly on occasions of mourning. Party-colored cloths were highly esteemed, Gen. xxxvii. 3, 23; 2 Sam. xiii. 18. As far back as the time of Moses we find that cloths were embroidered, sometimes with the colored threads of cotton and linen, and sometimes with threads of gold.

3. In describing the several parts of the Israelites' dress we cannot do better than give Dr. Shaw's account of the Oriental costume, which occurs in his description of the manufactures of Barbary.

(1) The hykes, or blankets, as we should call them, are of different sizes, and of different qualities and degrees of fineness. The usual size of them is six yards long and five or six feet broad, serving the Arab for a complete dress in the day; and as they sleep in their raiment, as the Israelites did of old, Deut. xxiv. 13, it serves also for his bed and covering by night. It is a loose but troublesome garment, becoming frequently disarranged and falling upon the ground, so that the person who wears it is every moment obliged to tuck it up and fold it about his body. This shows the great use of a girdle whenever those wearing the hyke are concerned in any active employment, and in consequence thereof the force of the Scripture injunction of having our loins girded in order to set about it, see Luke xvii. 8; Acts xii. 8; Eph. vi. 14; Rev. i. 13 and xv. 6. The method of wearing these garments, with the use they are at other times put to in serving for coverlets to the beds, should induce us to think the finer sorts of them at least, such as are worn by the ladies and persons of distinction, to be the peplos of the ancients. Ruth's veil, which held six measures of barley, Ruth iii. 15, might be of the like fashion and have served extraordinarily for the same use, as were also the clothes (the upper garments) of the Israelites, Ex. xii. 34, in which they folded up their kneading-troughs and other cumbrous things, as the Moors, Arabs and Kabyles do to this day. Instead of the fibula used by the Romans, the Arabs join together, either by thread or by a wooden bodkin, the two upper corners of this garment; and after having placed these over one of their shoulders, they fold the rest of it about

their bodies. The outer fold serves instead of an apron, in which they carry herbs, loaves, corn, etc., and may illustrate several allusions in Scripture; as gathering the lap full of wild gourds, 2 Ki. iv. 39; giving good measure into the bosom, Ps. lxxix. 12; Luke vi. 38; shaking the lap, Neh. v. 13, etc. The burnoose, which answers to our cloak, is often for warmth worn over the hyke. It is woven in one piece straight about the neck, with a cape or Hippocrates' sleeve for a cover to the head, and wide below like a cloak.

(2) If we except the cape of the burnoose, which is only occasionally used during a shower of rain or in very cold weather, some Arabs and Kabyles go bareheaded, binding their temples only with a narrow fillet to prevent their locks from being troublesome. The turban, as they call a long, narrow web of linen, silk or muslin, is folded round the bottom of these caps, and very properly distinguishes, by the number and fashion of the folds, the several orders and degrees of soldiers, and sometimes of citizens. We find the same dress and ornament of the head, the tiara, as it was called, upon a number of medals, statues and basso relievos of the ancients.

(3) Under the hyke some wear a close-bodied froek or tunic (a jillcoba they call it), with or without sleeves, which differs little probably from the coat of our Saviour, which was woven without seam from the top throughout, John xix. 23, and with which he is said to have been clothed when he is said to lay aside his garments (burnoose and hyke, John xiii. 4), and to take a towel and gird himself. The fisher's coat, John xxi. 7, which Peter girded about him when he is said to be naked, or what he, at the command of the angel, Acts xii. 8, might have girded upon him before he is enjoined to cast his garment about him, was no doubt the same thing. The hyke, or burnoose, or both, being at that time, as now, the proper dress or habit of the Eastern nations, when a person laid them aside or appeared without one or the other, he might very properly be said to be undressed or naked, according to the Eastern manner of expression. These were probably the coats and garments Dorcas had charitably made to clothe poor necessitous objects. It was these upper garments, consisting of a loose square piece of cloth wrapped round the body, which that vast multitude who escorted Jesus in the triumphant procession into the capital spread in the public road by way of carpet. The convenient and uniform shape of the garments made to fit all persons may illustrate a variety of expressions and occurrences in Scripture which, to persons misled by our own fashions, are difficult. Thus we read that the goodly raiment of Esau was put upon Jacob, that Jonathan stripped himself of his garments, that the best robe was brought out and put upon the prodigal son, and that raiment and changes of raiment were often given and immediately put on (as they still continue to be in Eastern nations) without such previous and occasional alterations as would be required amongst us.

(4) The girdles are usually of worsted, very artfully woven into a variety of figures, such as the rich girdles of the virtuous virgins may be supposed to have been, Prov. xxxi. 24. They are made to fold several times about the body; and one end, being doubled back, and sewed along the edge, serves for a purse, agreeably to the acceptation of the *zōnē* in the Scriptures. The Turks make a further use of these girdles by tucking in them their knives and poniards, while the writers and secretaries suspend in them their ink-horns—

a custom as old as the prophet Ezekiel, see Ezek. ix. 2.

(5) It is customary for the Turks and Moors to wear shirts of linen or cotton or gauze underneath the tunic; but the Arabs wear nothing but woolen. The sleeves of these shirts are wide and open, without folds at the neck or wrists, as ours have. Those of the women are oftentimes of the richest gauze, adorned with different colored ribands, interchangeably sewed to each other.

(6) The virgins are distinguished from the matrons by having their drawers made of needlework, striped silk or linen, just as Tamar's garment is described, 2 Sam. xiii. 18. But when the women are at home and in private, then their hykes are laid aside, and sometimes their tunics; and instead of drawers, they bind only a towel about their loins. A Barbary matron, in her undress, appears like Silanus in the *Admiranda*.

(7) When these ladies appear in public, they always fold themselves up so closely in their hykes that even without their veils we could discover very little of their faces. But in the summer months, when they retire to their country-seats, they walk abroad with less caution, though even then, upon the approach of a stranger, they always drop their veils, as Rebekah did upon the sight of Isaac, Gen. xxiv. 65. They all affect to have their hair, the instrument of their pride, Isa. xxii. 12, hanging down to the ground, which, after they have collected into one lock, they bind and plait with riband—a piece of finery disapproved of by the apostle, 1 Pet. iii. 3. Where nature has been less liberal in this ornament, the defect is supplied by art, and foreign hair is procured, to be interwoven with the natural. Absalom's hair, which was sold, 2 Sam. xiv. 26, for two hundred shekels, might have been applied to this use. After the hair is thus plaited, they proceed to dress their heads by tying above the lock just described a triangular piece of linen adorned with various figures in needlework. Among persons of fashion, this is covered with a *surnah*, as they call it (of the like sound with the moon-like ornaments of Isa. iii. 18), which is made in the same triangular shape, of thin, flexible plates of gold and silver, artfully cut through, and engraven in imitation of lace. A handkerchief of crape, gauze, silk or painted linen, bound close over the *surnah*, and falling afterward carelessly upon the favorite lock of hair, completes the head-dress of the Moorish female.

(8) But none of these ladies think themselves completely dressed till they have tinged their eyelids with *Al-ka-hol*—i. e., the powder of lead ore, Jer. iv. 30; 2 Ki. ix. 30; Ezra xxiii. 40. *Kerenhappuc*—i. e., the horn of *pouk*, or lead ore—the name of Job's youngest daughter, was allusive to this custom and practice.

(9) We have seen that the women wore their hair long. On this they lavished all their art, disposing it in various forms and embellishing it with divers ornaments. In the ancient medals, statues and basso relievos we behold those plaited tresses which the apostles Paul and Peter condemn, and see those expensive and fantastic decorations which the ladies of those times bestowed upon their head-dress. This pride of braided and plaited tresses, this ostentation of jewels, this vain display of finery, the apostles interdict, as proofs of a light and little mind and inconsistent with the modesty and decorum of Christian women. The men, on the contrary, wore their hair short; and this circumstance formed a principal distinction

in dress between the sexes, and happily illustrates 1 Cor. xi. 14, 15.

(10) As the Jewish and Grecian ladies never appeared in public without a veil, Paul severely censures the Corinthian women for throwing off the decency and modesty of the sex and exposing themselves and their religion to the satire and calumny of the heathen. The whole passage beautifully and clearly exhibits the distinguishing customs which then prevailed in the different dress and appearance of the sexes, 1 Cor. xi. 4: "I desire you to observe, that of every man the head is Christ; of every woman, the man; and of Christ, the Deity. Now, every man who prays or speaks in public with his head covered, derogates from the dignity of Christ, his head. On the contrary, every woman who prays or speaks in public with her head uncovered, degrades the dignity of the man, who is her head; for this is a singularity as uncharacteristical of the sex as to have the hair entirely cut off. But if a woman will not consent to wear her veil, let her even have her hair cut short like the man; but if it be to the last degree scandalous and indecent for a woman to have her hair cut short or shaved off, let her, for the same reason, be veiled. A man, indeed, ought not to have his head veiled, as he is the glorious image of God; but the woman is only the glorious image of the man. For the man was not formed posterior to the woman, but the woman was formed out of the man. Nor was the man formed for the woman, but the woman for the man. In your assemblies, therefore, the woman ought to wear a veil, on account of the heathen spies who are purposely sent to inspect your conduct. I appeal to you—is it decent for a woman to address the Deity without a veil? Doth not the universal prevalence of modern custom itself teach you that for a man to wear long, flowing tresses, dressed in the manner of women, is the highest indecency and disgrace? But the long and flowing hair of the fair sex is their distinguishing grace and ornament; for this was lavished upon them by the hand of nature for a covering. But if any person appear disposed to litigate and raise disputes on this topic, let him be assured that neither we the apostles urge, nor the churches of God practice, any such custom."

#### Marriage and Treatment of Children.

I. There were several things connected with the nuptials of the Hebrews so essentially different from anything among Europeans that a short notice of them is indispensable.

1. The first thing which merits attention was the method of contracting this sacred obligation—their espousals. It sometimes happened that several years elapsed between the espousals and the marriage of the contracting parties, during which period the bride remained at home with her parents, and was under the same obligations of fidelity to her spouse as if the nuptials had been solemnized, see Matt. i. 18. In general, however, only two or three months elapsed between the time of the espousals and that of the marriage.

Concerning their marriages, Dr. Brown has collected the following particulars from the Jewish writers: 1. On the day of the marriage, the bride was as elegantly attired as her circumstances would permit, and was led by the women into the dressing-chamber, without her veil, and with disheveled hair, marriage-songs being sung before her as she went. There she was placed on a beautiful seat, where they disposed her hair in ringlets and ornamented it with ribands and trinkets. They then

decked her in her wedding attire, and veiled her, like Rebekah, amidst the songs and rejoicings of her attendants. Thus was she "prepared as a bride adorned for her husband," Isa. lxi. 10; Rev. xxi. 2. When the hour of marriage arrived, four persons walked before the bridegroom, carrying a canopy supported by four poles, that if the bride intended to walk home to the bridegroom's house after the ceremony she might walk under it in company with her husband; and in the interim it either stood before the door, or was taken into the court around which the house was built, if the marriage ceremony was to be performed there, all the bride's party exclaiming, "Blessed be he that cometh!" welcoming thus the bridegroom and his friends. During the ceremony, if the father gave away his daughter, he took her by the hand, as Raguel did Sarah when she was married to Tobit, presented her to the bridegroom and said, "Behold, take her after the law of Moses, and lead her away," blessing them, taking paper, writing an instrument of covenant and sealing it, Tob. vii. 13, 14. But if the father did not act as the celebrator, the bride stood on the right hand of the bridegroom, in allusion to Ps. xlv. 9, and the rabbi or helen of the synagogue, who acted as celebrator, took the extremity of the *thelit*, which was about the bridegroom's neck, and covered with it the head of the bride, as Boaz did Ruth, iii. 9, after which he consecrated a cup of wine, the bystanders joining in the ceremony; and the cup being thus blessed, it was given to the two contracting parties. The bridegroom, afterward taking the ring (a modern invention, instead of the sum of money anciently given as the dowry), and putting it on the finger of the bride, said, "Lo, thou art married to me with this ring, according to the form of Moses and of Israel." Two witnesses were then called to hear the marriage contract read; and after they returned, another cup of wine was consecrated and divided among the guests.

2. Matters were next so ordered as to prepare for setting out to the house of the bridegroom; when, if there was a canopy, the bride and bridegroom walked under it (hence says the spouse, "His banner over me was love," Song Sol. ii. 4); but if none, the bride and her companions were veiled, she, however, far deeper than they. Sometimes, also, they used a palanquin and were carried in state from one house to the other; and it seems to have been to this that David alludes in Ps. xlv. 13: "The king's daughter is all glorious within (the palanquin, viz.); her clothing is of wrought gold." And to this Solomon refers when he says of the chariot of the bridegroom that "its wood was of cedar, its pillars of silver, its bottom of gold, its covering of purple, and the midst thereof paved with love, or poetical amorous inscriptions or devices for the daughters of Jerusalem," Song Sol. iii. 9; 10. The marriage processions were commonly in the night, by torchlight; and Lightfoot says they carried before them ten wooden staves, having each of them at top a vessel like a dish, in which was a piece of cloth or wick, dipped in oil, to give light to the company, Matt. xxv. 1. So that the parable of the ten virgins was evidently a delineation of national manners; since they required, in that case, not only to have oil in their lamps, but to have vessels containing a quantity of oil, in order to replenish these lamps from time to time. Indeed, we have several allusions to the same custom in various passages of Scripture. Thus the spouse, when speaking of the bridegroom, says, "My beloved is white and ruddy, the chiefest among ten thousand;" or, as the original expresses it, "light-

ed with ten thousand;" thereby meaning that he dazzled beholders as much as a bridegroom attended with ten thousand lamps, Song Sol. v. 10. And the bridegroom says of the spouse that she is "terrible as an army with banners," or, literally, that she is dazzling as women shone upon with the nuptial lamps, when their rich attire reflected a dazzling lustre. As they went to the bridegroom's house every person who met them gave place to the procession; a cup of wine was carried before them, and they were accompanied with music and dancing, Ps. xlv. 15. Hence, in one of the parables of our Lord, the children, at their sport, when imitating a marriage procession, said, "We have piped unto you and ye have not danced," Luke vii. 32. The praises of the bridegroom were also sung in strains like those in Ruth iv. 11, 12, while the praises of the bride were celebrated in a similar manner. Money was scattered among the crowd to remind them, if need required, that they had been present at the wedding, and barley also was sown before the newly-married couple as denoting their wishes for a numerous progeny.

3. Having reached the house of the bridegroom, they sat down to the marriage supper, each clothed with a wedding garment, Matt. xxii. 11; and etiquette required that the bride and bridegroom should remain silent, while the honors of the table were done by the governor of the feast, John ii. 8, 9. There were two other official persons, called friends of the bridegroom and the bride, John iii. 39, whose office it was to be assisting to them as man and maid, especially at their entry into the nuptial chamber. After the feast was ended mirth and dancing prevailed, Jer. xxxiii. 11, which made the prophet mention the want of them as a mark of desolation, Jer. vii. 34; xvi. 9; xxv. 10, 11; but whether the bride and bridegroom's parties remained together, or were in separate apartments, is not said; the last is most conformable with the manners of the East. When the bridegroom retired, he spread his skirt over his bride to testify the claim which the law had given him, etc. In the case of young persons the marriage-feast lasted seven days, Gen. xxix. 27; Jud. xiv. 12, 17; Job xi. 19, and the bride retained the appellation for thirty days after the ceremony; but in the case of a widow or widower, the feast lasted only three days. It was the custom for the father to give his daughter, when leaving his house, a female slave as a companion, as Laban did to each of his daughters; hence Solomon accounts those extremely poor who had none, Prov. xii. 9.

4. In consequence of the universal prevalence of polygamy in the East, we find the practice, from prudential motives, tolerated, under certain restrictions, by the Mosaic code of laws, see Deut. xxi. 15-17; Ex. xxi. 9, 10, etc. The secondary wives of a man were termed *concubines*, and they differed from the first wife, who was the principal, in two things: (1) Where they had been bond-slaves, they still continued under subjection, and were at the disposal of their proprietors as long as the husband continued to pay their matrimonial duty. If deprived of this, they obtained their freedom, Ex. xxi. 7-11. (2) Their children did not inherit, if we may judge from the cases of Keturah and Hagar, Gen. xxv. 5, 6. The same distinction prevails to this day in the East, except in China, where, as is just, all the children of the father are on the same footing.

5. Upon the same ground that polygamy was tolerated by the Mosaic law, divorce was also allowed, Deut. xxiv. 1-4; Matt. xix. 8, but was to be effected in such a manner as to give an opportu-

ity for the reform of many of those evils that were its necessary attendants where these provisions were not known. It will be seen upon reference to the law above cited that the husband had the power of dissolving the marriage without any legal aid or recognition: "If a man have taken a woman to wife, and she please him not, because he findeth a defect in her, he shall write her a bill of divorce," etc. It is easy to conceive what abuses and disputes might ensue from such a dissolution of marriages; and to prevent these to the utmost extent, Moses ordained, 1. That there should be some written evidence of the transaction actually delivered to the wife by which she might be able to certify on all occasions the truth of her riddance from her first marriage, together with her right to enter into a second. This process no doubt caused many hindrances, as but few Israelites understood the art of writing, so that it became necessary to resort to some judge or literary person in order to have the bill of divorce written; but this delay was probably intended by the legislator. For in this way a marriage could never be dissolved in the first heat of passion, and the husband might perhaps change his mind, and the person employed to write the divorce, probably a priest or a Levite, was perhaps a man of principle, and would previously admonish the husband on the subject.

2. But even the delivery of the bill of divorce did not render the dissolution of the marriage altogether complete. Thereto, by the Mosaic statute, this further circumstance was requisite, that the wife had actually left the husband's house, which, if we may judge from the nature of the case and the manners of the Arabs, must have occasioned a delay of several months; and that man must know nothing of the human mind nor think how often the quarrels of married persons are made up on cool reflection, who can entertain a doubt whether by means of these delays a multitude of intended divorces must not have been prevented.

3. Even after the dissolution of the marriage was complete, if both parties were satisfied to renew the connection, Moses put no obstacle in the way, if only the wife had not married another husband. For the maintenance of a divorced wife the law makes no provision. This may seem to us a case of great hardship, but in a country where polygamy made females scarce, and where slavery was tolerated, it would not be so severely felt. We must not omit to notice that the husband forfeited his right to give a divorce, however, if he had seduced a young woman and been obliged in obedience to the law to marry her, as also if he had falsely accused his wife of unchastity before marriage, Deut. xxii. 19, 29. These provisions had a most beneficial effect. The wife was also allowed to sue if she thought herself aggrieved, and especially if she disliked the person to whom she had been espoused at an early age by her parents. Josephus mentions three instances of divorce by wives, viz., Salome, Herodias and Drusilla.

6. The support of the wife after the husband's death was uniformly provided for without the aid of any express regulations. If she had children, that natural duty which no statute needs to name obliged them to maintain her. If she had not, the nearest relation of her deceased husband was obliged to marry her, or if he declined so to do to resign her to the next more remote; and that so peremptorily that, as we see from Ruth iv. 5, he could not inherit the land of the deceased without taking his childless widow along with it. If she were too old for marriage, still it would seem to have been an incumbent duty on the heir

of the land to support her as fully as if she were his wife. It is evident that this law was far more ancient than the Jewish law, Gen. xxxviii. 8, but it was under this law that it became doubly binding, for it connected the love of preserving a brother's name with the preservation of property in the several families and tribes. In this case no betrothing was required, nor were there any ceremonies, as at ordinary marriages. The husband's brother acquired his sister-in-law by a divine right three months after the husband's death.

7. No regard is paid to equality of rank in marriages among the Orientals, and the meanest slave may be not only the wife, but even the mother, of a king. Hence we find no law prohibiting an Israelite from marrying out of his rank, and still less one that made marriages with persons of a very inferior station nugatory. To the priests alone has Moses laid down any special rule with respect to their marriages; and even these rules relate not to what we call rank, but to other things. The statutes that contain them are found in Lev. xxi. 7, 13, 44. Amidst all the restrictions there laid down, however, there was nothing to hinder a priest, and even the high-priest, from marrying an Israelite of the lowest rank, even one that had from poverty been sold as a slave. It has been a generally-prevailing notion that an Israelite might not marry out of his tribe, but this, as Michaelis has shown, is a mistake directly confuted by the Mosaic writings. It was only in the single case of a daughter being the heiress of her father's land that she was prohibited from marrying out of her tribe in order that the inheritance might not pass to another tribe, Num. xxxvi. This is placed beyond doubt in the case of Mary and Elizabeth, who were relations, but who had married into different tribes. It was even in the power of an Israelite to marry a woman born a heathen, provided she renounced idolatry, as is evident from Deut. xxi. 10-14; but all marriage with Canaanitish women was expressly prohibited, Ex. xxxiv. 16.

8. It is seen from several passages of Scripture that the custom of purchasing the bride prevailed among the descendants of Abraham. Thus Shechem says to Jacob, whose daughter Dinah he wished to espouse, "Ask me never so much dowry and gifts," etc., see also 1 Sam. xviii. 25. The custom still exists in many parts of the East, and hence a numerous family of daughters is a source of great wealth. Where the bridegroom is not possessed of sufficient property to obtain the object of his desire by purchase, he obtains her by servitude. This will illustrate Gen. xxix. 27.

9. This sacred and important obligation was contracted at a very early age among the Jews, in compliance with Eastern customs; and hence the bride calls her husband "the guide of my youth," Prov. ii. 17; see also Prov. v. 18. At the age of eighteen the males could marry, and the females when they were twelve and a day, till which time they were called little maids. Celibacy and sterility were considered great afflictions, and large families are peculiar marks of the providential blessing of God.

II. Among the Jews children were much coveted, both because the inheritance in the tribes was dependent on it, and because each one, especially of the house of David, was anxious to participate in the honor of being the progenitor of the Messiah.

1. From Ezra xvi. 4-9 it is evident that infants newly born were washed in water, anointed with oil, rubbed with salt, swaddled with a long bandage, and then wrapped in comfortable clothing.

2. On the eighth day from the birth of the child the rite of circumcision was performed. Of the design of this ceremony we have spoken in treating of the ceremonial law. It was the initiatory sign and seal of the covenant of peculiarity. It only remains to notice the manner of its performance. The sponsors being chosen and the company assembled, either in the synagogue or in the house, the female employed by the mother brought the child to the door and gave it to the person who was appointed to hold it during the operation. On entering with the child he was hailed with "Blessed be he who comes!" He then sat down and the circumciser effected the operation, blessed the child and gave him the name appointed (if it had not been already given, see Ruth iv. 17; 1 Sam. iv. 21), at the same time repeating Ezra xvi. 6; "I said unto thee, when thou wast in thy blood, Live!" After this the company repeats Ps. exxviii. If the child died before the eighth day, he was circumcised in the cemetery for the purpose of securing his recognition at the resurrection of the just. The girls were carried in the synagogue generally to be named. In both cases it was a time of festivity and rejoicing, though less so in the case of girls than in that of boys.

3. As soon as the children had arrived at a proper age to receive instruction they were taught select sentences from the law by their parents, in conformity with Deut. iv. 9; vi. 7, etc.

4. It was a universal custom among the Jews to teach their children some trade, as appears from the following passage from the Talmud: "What is a father commanded to do to his son? To circumcise him; to redeem him; to teach him the law; to teach him a trade; and to take him a wife. Rabbi Judah said, He who teacheth not his son a trade does as if he taught him to be a thief. And Rabban Gamaliel saith, He who hath a trade in his hand is like a vineyard that is fenced."

5. Among the Hebrews, as indeed among most other nations, the *first-born* enjoyed particular privileges; and wherever polygamy existed, it was necessary to fix them, see Deut. xxi. 15-17. These privileges consisted (1) in a right to the priesthood, which before the law was in the eldest of the family; and (2) in a double portion of the father's property. The double portion is explained two ways: some believe that half the entire inheritance was given to the elder brother, the other half being shared in equal parts among the rest. But the rabbins inform us that the first-born took for his share twice as much as any of his brethren. If the first-born died before the division of the father's inheritance and left any children, his right devolved to his heirs. First-born daughters were not, however, invested with these privileges. The rights of the first-born could be transferred to any other branch of the family upon certain grounds, as in the case of Jacob and Esau, Reuben and Joseph, Adonijah and Solomon.

6. Adoption, strictly speaking, does not appear to have been practiced by the ancient Hebrews. Moses says nothing of it in his laws, and Jacob's adoption of his two grandsons, Ephraim and Manasseh, Gen. xlviii. 1, is rather a kind of substitution by which he intended that they should have each his lot in Israel as if they had been his own sons. But as he gives no inheritance to their father Joseph, the effect of this adoption extended only to their increase of fortune and inheritance—i.e., instead of one part, giving them, or Joseph, whom they represented, two parts. From Esth. ii. 15, however, it is evident that adoption, strictly so called, was not unknown among the Jews,

though we are uncertain how far the privileges of it extended. It is supposed they were much like those of the Roman laws, that adopted children shared the parent's estate with his natural descendants, that they assumed the name of the person who adopted them and became subject to his paternal power. Another kind of adoption among the Israelites consisted in the obligation of a surviving brother to marry the widow of his brother who had died without issue, Deut. xxv. 5, etc.; so that the children of this connection were considered as belonging to his deceased brother and went by his name. Among the Mohammedans the ceremony of adoption is performed by causing the adopted to pass through the shirt of the person who adopts him. Something like this appears among the Hebrews. Elisha adopted Elisha by throwing his mantle over him, 1 Ki. xix. 19; and when he was carried up in a fiery chariot, his mantle, which he let fall, was taken up by Elisha, his spiritual son and adopted successor in the office of prophet, 2 Ki. ii. 13, 15. It should be remarked that Elisha asks not merely to be adopted (for that he had been already), but to be treated as the elder son, to have a double portion of the Spirit conferred upon him. Did the gift of the mantle imply this also? It would seem so by the conduct of Moses, who clothed Eleazar in Aaron's sacred vestments when that high-priest was about to be gathered to his fathers, Num. xx. 26, intimating thereby that Eleazar succeeded in the functions of the priesthood, and was, as it were, adopted to exercise that dignity. The Lord told Shebna, captain of the temple, that he would deprive him of his honorable station, and substitute Eliakim, son of Hilkiah: "I will clothe him with thy robe, saith the Lord, and strengthen him with thy girdle, and I will commit thy government into his hand," Isa. xxii. 21. Paul, in several parts of his writings, exhorts Christians to put on the Lord Jesus, and to put on the new man to denote their adoption as sons of God.

#### Domestic Economy and Repasts.

1. The Jewish people generally lived upon food of the plainest description. Boaz complimented Ruth, who was much his inferior in rank, by permitting her to partake of his meal of bread and vinegar: "And she sat beside the reapers; and he reached her parched corn, and she did eat and was sufficed, and left," Ruth ii. 14. Of as plain and simple a description was the supply of food brought to David and his companions in arms when he had been obliged to fly from Jerusalem. The simplest and most ordinary diet of the Jews prepared by themselves was bread, which was commonly baked in a wooden bowl or kneading-trough, Ex. viii. 3, in which the dough is mixed with leaven or suffered to stand and ferment until it becomes sour. Sometimes their bread was baked on the hearth, Gen. xviii. 6, which is still a common method in the East. Another kind of bread was baked in a shallow earthen vessel like a frying pan, Lev. ii. 7, and some round the outside of a great stone pitcher, properly heated, on which was poured a thin paste of meal and water. Sometimes they bake it in an oven in the ground, four or five feet deep, well plastered with mortar, against the sides of which they place the bread, where it is instantly done.

2. Wine appears to have been a beverage in request amongst the Hebrews, and it was sometimes drunk to such an extent as to cause ebriety—a circumstance which has furnished the prophets with many tropes, see Isa. v. 11-22; xxviii. 1-

11; xlix. 26; Jer. viii. 14; ix. 14; xvi. 48; Deut. xxxii. 42.

(1) Wine was prescribed as part of the daily offering to God under the law, Ex. xxix. 40; Num. xxviii. 7, and it was also used by our Saviour at the institution of the Last Supper, Mark xiv. 35. That wine was drunk on sacramental occasions by the disciples of Christ, at a subsequent period, appears from 1 Cor. xi. 21, where the apostle sharply reproves some of the Corinthian professors of Christianity because they intoxicated themselves at the Holy Supper. In Deut. xiv. 22, 26, the Hebrews are commanded to tithe all their increase or productions, and to eat of this tithe before the Lord in the place where he shall appoint. If the place where they lived should be too distant, however, to permit them to carry up their tithe with them, then they were to sell it, to carry the money with them, and to purchase "oxen, or sheep, or wine, or strong drink, or whatsoever their soul desired," and to eat and rejoice before the Lord. At the wedding-feast in Cana of Galilee, John ii. 2, 11, Jesus turned water into wine for the accommodation of the guests who were present; and Paul directs Timothy to drink a little wine on account of his frequent infirmities, 1 Tim. v. 23. On special occasions of feasting, such as weddings, thanksgivings and the like, the Jews were accustomed to drink wine, and the Scriptures nowhere speak of the custom with disapprobation. When Wisdom invites her guests to a feast, Prov. ix. 2-5, she furnishes her table and "mingles her wine," and cries, "Come, eat of my bread and drink of the wine which I have mingled." The wise man directs that "strong drink" should be "given to him that is ready to perish, and wine unto those that be of heavy hearts," Prov. xxxi. 6.

(2) Professor Stuart, to whom Biblical literature is so much indebted, has recently devoted his attention to the subject of wines and strong drinks, as mentioned and approved of in the Bible, and has labored to prove that the description of wine, the use of which was prescribed and sanctioned by the Almighty and his people, was the unfermented juice of the grape, and not wine produced by the process of fermentation. The inquiry is one that merits all the attention that can be given to it, but it would be out of place to enter upon it here. We will only remark, therefore, that the attempt to show that the approved wine is always called *tiros*, while the fermented, intoxicating and denounced liquor is as uniformly called *ayin*, fails in its object; because in Prov. xxxi. 6, among other places, it is directed that wine (*ayin*) should be given to those who are heavy of heart or bitter of soul.

(3) The vessels used for drinking were, at first, horns; but the Hebrews used horns only for the purpose of performing the ceremony of anointing. The other drinking-vessels were a cup of brass, covered with tin, in form resembling a lily, 1 Ki. vii. 26, and the bowl, resembling a lily also, Ex. xxv. 33, although it seems to have varied in form, for it had many names.

(4) In Eastern countries every preparation of milk is in general request. Coagulated sour milk, which is a most refreshing beverage, is prepared by the infusion of a certain herb, which causes fermentation. Butter is generally produced by putting the milk into a goat's skin, which is so tied up as to prevent the milk from running out, and then hung between the poles of a tent or house, where it is agitated in one uniform direction till a separation is caused between the butter and the milk. Buttermilk is a luxury, and the

chief dessert among the Moors; and when they speak of the extraordinary agreeableness of any dishes, they compare it to buttermilk. It is no wonder, then, that Jael gave it to Sisera, Jud. v. 25.

(5) The Orientals are in the habit of rising early, commonly with the dawn, that they may have leisure to rest or sleep in the middle of the day. As soon as they are up they take breakfast, which consists of bread, fried eggs, cheese, honey and lebad or coagulated sour milk; but sometimes they begin with grapes and other fruits, fresh gathered, and then have for breakfast bread, coffee and good wines, particularly one of an exquisite flavor called muscadell. About eleven o'clock in the forenoon, in winter, they dine, and rather earlier in summer. A piece of red cloth, cut in a round form, is spread upon the divan under the table, to prevent it from being soiled, and a long piece of cloth is laid around to cover the knees of such as sit at table; but the table itself has no covering except the victuals. The dishes, etc., are disposed in proper order around the edges and in the centre. Among the great the dishes are brought in one by one, and after each person has eaten a little they are changed. The pottage of which we read in Scripture was made by cutting boiled meat into small pieces, with rice, flour and parsley, but sometimes of meal and herbs alone; for they eat but little animal food in the East. When they intend to honor any person at table, the master sends him a larger portion, as Joseph did to Benjamin, Gen. xliii. 34. In general, they sup about five o'clock in the winter, and about six in summer. As this much resembles their dinner, it is unnecessary to describe it.

(6) Their mode of eating must not be overlooked. The thick meats they take up with the thumb and the two forefingers, and their milk and pottage is eaten by dipping bread into it. When they drink water at table, it is usually out of shells, horns or cups; but if from a river, they take it from the palm of the hands, or if from a pitcher or the ground, they suck it through their sleeve, for fear of leeches. Wines were formerly very common among the Jews, being kept in leathern bottles, Matt. ix. 17, and cooled by the snow of Lebanon.

(7) Sitting at meals (till near the end of the times of the Old Testament) appears to have been universal, Gen. xliii. 33; Ex. xxxii. 6; 1 Sam. xx. 5; Prov. xxviii. 1; Ezra xlv. etc. The ancient Egyptians sat on their hams at meals, each to a small table; also in chairs. We have the first indications of the change of posture from sitting to lying in Amos vi. 4 and Judith xii. 15, *Greek*. In our Saviour's days the reclining posture at meals had become universal; and every time that sitting at meat is mentioned in the New Testament it ought to have been rendered "lying," to make it accord with the universal practice.

(8) In former times portions were sent to those who were absent, Neh. viii. 10, 12; Esth. ix. 22. It should ever be recollected, too, that the men and women in higher life had separate tables, as is the case in the East at the present day, though this was not the case in ancient Egypt. The custom of the Arabs, also, who never preserve fragments of their meals, but invite the poor to partake of them, may explain the reason why Tobit sent for the poor to partake of his dinner, Tob. ii. 2, and why the poor, the maimed and the blind were invited to the rich man's supper in Luke xiv. 21.

(9) From the Mishna it appears that the Jews had forms of thanksgiving, not only at the eating

of the passover, but before and after ordinary meals, and even on the introduction of many of the dishes. The duty of Christians on this subject is enforced not only by the reason of the thing, and the practice of the Greeks, Romans and Jews, but by the example of our Saviour in Mark viii. 6; John vi. 11, 23; and of Paul in Acts xxvii. 35. In the end of the fifth book of the Apostolical Constitutions is a form of grace or prayer by Christians.

#### Social Intercourse.

I. The common method in the East of doing honor to an inferior seems to have been by presenting him with a change of raiment, Dan. v. 16. Alexander, the son of Antiochus Epiphanes, when he appointed Jonathan Maccabæus high-priest and declared him the king's friend, sent him a purple robe and a crown of gold, 1 Macc. x. 20; and he afterward did him more signal honor by sending him a buckle of gold to wear on the shoulder and to fasten his purple robe, as the use was to give to such as were of the king's blood, 1 Macc. x. 89; see also 1 Macc. xi. 57, 58; 1 Esd. iii. 6. The princes of the East, even at the present day, have many changes of raiment ready, both as an article of wealth and to suit the occasion. This accounts for the ease with which Jehu's mandate was obeyed when he ordered four hundred vestments for the priests of Baal, that none might escape, 2 Ki. x. 22. For a superior to give his own garment to an inferior was esteemed a high mark of regard. Hence Jonathan gave his to David, 1 Sam. xviii. 4. And the following extract from Sir John Malcolm's "History of Persia" may serve to throw some light on Elisha's request to have the mantle of Elijah, 2 Ki. ii. 13: "When the khalifa or teacher of the Scoffees dies, he bequeaths his patched garment, which is all his worldly wealth, to the disciple whom he esteems the most worthy to become his successor, and the moment the latter puts on the holy mantle he is vested with the power of his predecessor."

II. The chief of the marks of disgrace noticed in the Scriptures are, subjecting men to the employment of women, Lam. v. 13; cutting off the beard and plucking off the hair, 2 Sam. x. 5; Isa. l. 6; spitting in the face, Isa. l. 6; clapping the hands, hissing and making significant gestures, Ezra xxv. 6; Job xxvii. 23; Lam. ii. 15; Isa. lvii. 4. But marks of disgrace were not confined to the living. They often extended to the dead by refusing them the rites of sepulture, Rev. xi. 1-12; raising them after they had been interred, Jer. viii. 1; forbidding them to be publicly lamented; allowing them to become the prey of ravenous beasts, Jer. xvi. 5-7; xix. 7; casting them into the common burial-ground, Jer. xxvi. 23; and burning their bones into lime, Amos ii. 1.

III. The modes of address and politeness which custom has established in different nations are various. In Judea, as in the East generally, they were very ceremonious and exact in their outward decorum, and in their mutual behavior they scrupulously observed all the rules and forms in which civility was usually expressed.

Among the Eastern nations it was ever customary for the common people, whenever they approached their prince or any person of dignity, to prostrate themselves. This mode of address obtained also among the Jews. When honored with admittance to their sovereign or introduced to illustrious personages, they fell down at their feet, and continued in this servile posture till they were raised. There occur many instances of this cus-

tom in the Scriptures. The wise men who came from the East, when they saw the child Jesus with his mother Mary, fell down and worshiped him, as did great numbers in after times. It was also customary to kiss the hand or the feet of the person approached, to kiss the hem of his garment or to embrace his feet, Luke vii. 38, 48; Matt. xxviii. 9.

From time immemorial it has also been the universal custom in the East to send presents one to another. No one waits upon a prince or any person of distinction without a present. This is a token of respect never dispensed with. Let the present be ever so mean and inconsiderable, yet the intention of the giver is accepted. Plutarch informs us that a peasant, happening to fall in the way of Artaxerxes the Persian monarch in one of his excursions, having nothing to present to his sovereign, according to Oriental custom, the countrymen immediately ran to an adjacent stream, filled both his hands and offered it to his prince. The monarch smiled and graciously received it, highly pleased with the good disposition the act manifested. All modern books of travels in the East abound with examples of this universally-prevailing custom. "It is accounted uncivil," says Maundrell, "to visit in Syria without an offering in hand. All great men expect it as a kind of tribute to their character and authority, and look upon themselves as affronted and even defrauded when this compliment is omitted. Even in familiar visits among inferiors you will seldom see them come without bringing a flower or an orange or some other token of respect to the person visited, the Turks, in this point, keeping up the ancient Oriental custom, as hinted in 1 Sam. ix. 7, 8: 'If we go,' says Saul, 'what shall we bring the man of God? there is not a present,' etc.; which words are unquestionably to be understood in conformity to this Eastern custom as relating to a token of respect, and not a price of divination."

The same writer thus describes the mode of visiting in the East: "When you would make a visit to a person of quality, you must send one before you with a present to bespeak your admission and to know at what hour your coming may be most seasonable. Being come to the house, the servants meet you at the outermost gate and conduct you toward their lord's or master's apartment, other servants (I suppose of better rank) meeting you in the way at their several stations as you draw nearer to the person you visit. Coming into his room, you find him prepared to receive you, either standing at the edge of the duan, or else lying down at one corner of it, according as he thinks proper to maintain a greater or less distinction. Being come to the side of the duan, you slip off your shoes, and stepping up, take your place, which you must do first at some distance and upon your knees, laying your hand very formally before you. Thus you must remain till the man of quality invites you to draw nearer, and to put yourself in an easier posture, leaning upon the bolster. Being thus fixed, he discourses with you as the occasion offers, the servants standing round all the while in great number, and with the profoundest respect, silence and order imaginable. When you have talked over your business or compliments, or whatever other concern brought you thither, he makes a sign to have things brought in for the entertainment, which is generally a little sweetmeat, a dish of sherbet and another of coffee, all of which are immediately brought in by the servants and tendered to all the guests in order with the greatest care and awfulness imaginable. And they have reason to look well to it; for

should any servant make but the least slip or mistake either in delivering or receiving his dish, it might cost him fifty, perhaps a hundred, drubs on his bare feet to atone for the crime. At last comes the finishing part of your entertainment, which is perfuming the beards of the company, a ceremony which is performed in this manner: They have for this purpose a small silver chafing-dish, covered with a lid full of holes and fixed upon a handsome plate. In this they put some fresh coals, and upon them a piece of lignum aloes, and then, shutting it up, the smoke immediately ascends with a grateful odor through the holes of the cover. It is held under every one's chin, and offered, as it were, a sacrifice to his beard. It is understood to give a civil dismissal to the visitors, intimating to them that the master of the house has business to do or some other avocation that permits them to go away as soon as they please; and the sooner after this ceremony, the better. By this means you may at any time without offence deliver yourself from being detained from your affairs by tedious and unseasonable visits, and from being constrained to use that piece of hypocrisy so common in the world of pressing those to stay longer with you whom perhaps in your heart you wish a great way off for having troubled you so long already."

We collect from several passages in the Old Testament that their salutations and expressions of affection on meeting each other were extremely tedious and tiresome, containing many particular inquiries after the person's welfare and the welfare of his family and friends, and when they parted concluding with many reciprocal wishes of happiness and benediction on each other. Much time was spent in the rigid observance of these ceremonious forms. When our Lord, therefore, in his commission to the seventy, whom he despatched into the towns and villages of Judah to publish the gospel, strictly ordered them to salute no man by the way, Luke x. 4, he designed only by this prohibition that they should suffer nothing to retard and impede them in their progress from one place to another, and that they should not lavish those precious moments which ought to be devoted to the sacred and arduous duties of their office in observing the irksome and unmeaning modes of life. Not that our Lord intended his disciples should studiously violate all common civility and decency and industriously offend against the rules of courteousness and decorum. On the contrary, he commanded them upon their entrance into any house to salute it, Matt. x. 12, and observe the customary form of civility in wishing it peace or universal happiness, Luke x. 5. Elisha, thus despatching his servant Gehazi to recover the son of the Shunammite, strictly enjoins him to make all the expedition possible, 2 Ki. iv. 29. Though the terms of these modes of address and politeness are expressive of the profoundest respect and homage, they soon degenerate, through constant use and frequency of repetition, into mere verbal forms and words of course in which the heart has no share. To those empty insignificant forms which men mechanically repeat at meeting or taking leave of each other there is a beautiful allusion in the following expression of our Lord in his last and consolatory discourse with his disciples when he assured them he would soon leave them and go to the Father: "Peace I leave with you; my peace I give unto you; not as the world giveth I unto you," John xiv. 27. Since I must shortly be torn from you, I now bid you adieu, sincerely wishing you every happiness. Not as the world

giveth I unto you—not in the unmeaning, ceremonial manner the world repeats this salutation, for my wishes of peace and happiness to you are sincere, and my blessing and benediction will devolve upon you every substantial felicity. This throws light upon one of the most beautiful pieces of imagery which the genius and judgment of a writer ever created. In the Epistle to the Hebrews, Heb. xi., the author informs us with what warm, anticipating hopes of the Messiah's future kingdom those great and good men who adorn the annals of former ages were animated. "These all," said he, "died in faith." They closed their eyes upon the world, but they closed them in the transporting assurance that God would accomplish his promises. They had the firmest persuasion that the Messiah would bless the world. By faith they anticipated these happy times and placed themselves in idea in the midst of all their fancied blessedness. They hailed this most auspicious period—saluted it as salutes a friend whose person we recognize at a distance. *These all died in faith*—died in the firm persuasion that God would accomplish these magnificent promises, though they themselves had not enjoyed them, but had only seen them afar off.

The foregoing sections, condensed from the valuable work of Carpenter as modified by Jenks, present a large amount of valuable information which depicts the social life of the Jews with great minuteness, and which enables the reader to understand the topography, climatology and physical condition of that land which of old God gave to Abraham and his descendants, to be a possession for ever. The peculiar characteristics of the Asiatic mind, as distinct from the developments which have been apparent in Western nations, may be seen in the social conditions which are herein described. Repose and permanence prevail in the East. Versatility and change have been marked features in the civilization of the West. The Jew in one age did what his fathers did in a former age. He dressed in their garb, he tilled his fields in the manner of his ancestors, his tent or his house was formed on the model of the shelter which had served the generations that had gone before him. The economy of his home was identical with the usages of other days. That which was good enough for his forefathers was sufficient for his purposes; and thus it has come to pass that a faithful picture of the habits and usages of the Jews in one age may be received as a portraiture of their social condition in another age. The design of the Levitical economy was to keep them, as a people, separated from the nations. Like a field in which was treasured a sacred deposit to be kept in safety the fences were raised high and carried around on every side, so among the Jews their ordinances tended to keep them as a separate people. This result was secured in a remarkable manner; for although they touched on other nations around their boundaries, though their soil was often the battle-ground of mighty nations, still it was with the Jews as it is with the lake when the storm has swept over it. The waves may swell tumultuously for a season while the tempest rages; but once the calm succeeds, the water sinks to its wonted rest. Babylon, Egypt and Syria might contend with each other, and the habits of courtly circles might be modified for a time, but the Jew on the land of his fathers was a Jew all the time; and so it continued notwithstanding partial and local changes until the great tempest arose which swept the unbelieving race from the land that rejected the mercy of Jehovah and refused to accept the Messiah when he came.

## THE CORRECT PRINCIPLES OF BIBLICAL CRITICISM AND INTERPRETATION.

1. THE progress of sacred literature in modern times furnishes a topic of gratifying and instructive inquiry, and is fraught with considerations eminently calculated to excite the gratitude and strengthen the convictions of the Christian student.

2. From the fifth to the fifteenth century Biblical learning was in a deplorably low state. Religious feuds were the disgrace of Christendom. Bitter controversies touching the forms of religion, or, more properly speaking, touching the powers and functions of those who assumed to be its authorized and exclusive propounders and guardians, absorbed the attention of the Christian world. The Scriptures were only resorted to as the arsenal in which were deposited the aggressive arms of the spiritual combatants, and these were used against each other in the most arbitrary and unskillful manner. All desire for true learning became extinct, the principles of interpretation were lost sight of and forgotten, and there were few who could even read, and much less understand, the text of the sacred books. In the twelfth century the Scriptures were torn in pieces between two parties—the scholastic theologians, who, by a perverse use of the Aristotelian philosophy, reduced the doctrines of religion to a number of absurd subtleties, incomprehensible by all minds, not excepting their own; and the Biblical doctors, who, by a system of mystical and allegorical interpretation, perverted and darkened the sublime truths of Scripture, and rendered their meaning a matter of doubt and uncertainty. The religious wars called the Crusades were, however, overruled by Providence to the most beneficial purposes. By introducing into Europe a number of learned Greeks, they originated a spirit of inquiry in Italy and elsewhere, while the universities, which were shortly afterward established, and in which the Oriental languages were cultivated, tended greatly to the revival of learning, and prepared the way for an improved system of Scripture interpretation.

3. As early as the latter end of the fifteenth century some vigorous efforts were made to promote the rational interpretation of the sacred writings. The laborers, however, were few, and the aids they possessed for the elucidation of the text were scanty and imperfect. Early in the seventeenth century their numbers were greatly increased, and we find many names distinguished in the republic of letters who were then successfully cultivating this branch of learning. By the middle of this century the number of Biblical students was considerably augmented and the result of their labors proportionately increased. After all, however, those who were at this time devoted to the pursuit of Scriptural inquiries formed but an insignificant band, and were regarded by their contemporaries as the students of an isolated branch of learning, too uninteresting in aspect and too limited in results to command or reward general attention.

4. Toward the close of the seventeenth century Biblical learning was brought into more general

favor, and assumed a more popular and inviting form. It was no longer viewed as the exclusive possession of the clerical body, but as forming part of the common property of the republic of letters. Numerous and valuable acquisitions were made to the previously existing stock of materials.

5. The enlightened and indefatigable exertions of Mill, Wetstein, Griesbach and Kennicott were directed to a restoration of the integrity or purity of the sacred text, while the learned and ingenious Shaw, whose "Travels and Observations Relating to Several Parts of Barbary and the Levant" appear to have attracted the notice of the celebrated Harmer, pointed out a new and indispensable source of Biblical illustration, viz., attention to the customs of the Eastern people. About the same period Michaelis was engaged in a similar course on a large scale, and had induced the king of Denmark to send a deputation of learned travelers to pursue the necessary inquiries, under his directions, in Egypt and Syria. The result of their voyage was given in French by the very learned Mons. Niebuhr, whose work produced a great effect by directing attention to the treasures of information which existed in the East.

6. From this new era the sphere of Biblical research and illustration has been gradually enlarging. The metaphysician and the naturalist, the antiquary and the traveler, the philologist and the historian, have contributed their respective shares. The materials now collected are numerous and valuable, and their value is well understood by those competent to employ them in removing obscurities, clearing up difficulties, eliciting new beauties or educing further instruction from that book which is above all price. But much remains to be done to render these aids available for general use.

7. Hitherto, with but one or two exceptions, the method in which the several branches of criticism and interpretation have been treated has restricted the study of these topics to those whose professional engagements have rendered such study imperative, or to those whose learning and leisure have induced them to look upon it as a source of mere intellectual enjoyment.

8. But much of that description of learning which the art of interpretation requires may be brought within the reach, and be adapted to the comprehension, of persons whose minds are not above the ordinary standard, and whose circumstances require that much of their time and attention should be given to other affairs. The advantages of such an extension of Biblical knowledge would soon be apparent in the growing maturity and perfection of the Christian character, and in the increased usefulness and efficiency of the Christian ministry.

9. Biblical learning is usually divided into two principal branches, intimately connected:

(1) BIBLICAL CRITICISM, which treats of the laws by which the genuineness or purity of the text is decided and restored.

(2) BIBLICAL INTERPRETATION, which treats of the rules by which the sense of the text is to

be educed and exhibited, and includes Biblical antiquities.

10. The object in this department of the Encyclopedia being to furnish the unlearned as well as the more erudite with a comprehensive and practically useful digest of the several topics connected with the interpretation of the sacred writings, Biblical criticism, as it pertains to the original text, will be despatched in a much more summary way than the matters incident to interpretation.

11. First, then, we shall direct our attention to the text of the Bible, with a view to ascertain, in a general way, its original character and the securities we possess for its present integrity. This will bring under review the Hebrew and Greek Scriptures, and the various accidents to which literary compositions are liable in passing down the stream of time from a period antecedent to the invention of printing, more particularly those which have occurred to the sacred writings. Thence we shall be led to inquire into the character and value of various readings, or the different wording of the same passage in the several manuscripts and other extant documents comprising the sacred text or portions of it, the sources in which they have originated, and the means we possess for correcting the errors that may have crept into the text. We may then review the progress that has been made toward restoring the text to its original purity, and the methods by which this has been effected. Having thus ascertained the actual state of the books the contents of which it is proposed to investigate, we may proceed step by step through the several rules of interpretation. This will exhibit the means that may be legitimately employed for educing the sense of the language used by the sacred writers. Thus we shall be introduced to almost every variety of subject comprised in the Bible, and clearly ascertain what qualifications are indispensable to its sound interpretation.

### Biblical Criticism.

The immediate object, then, of sound criticism is, not to understand and interpret the Holy Scriptures, but to examine their genuineness and uncorruptness, to assign reasons for deeming any particular passage to have been altered from its original state, and to propose the surest means by which such passage may be restored with the greatest certainty or probability to its pristine condition.

There are four principal sources of criticism. The first is an accurate acquaintance with the peculiarities of the language wherein not merely the sacred Scriptures in general, but each particular book, was composed. The second is a comparison of the various manuscripts or copies which we have of them originating at various periods. The third consists of the various translations which have been made of them into foreign languages. The fourth and last, which must be employed but seldom, springs from the writings and remains of the earlier Fathers, and generally of the earlier ecclesiastical writers who have made

some use of the Bible. The sections of this chapter will be devoted to a general review of these several topics.

### 1. The Hebrew and Greek Scriptures.

1. Speaking in general terms, it may be stated that Hebrew and Greek are the two languages employed by the Author of revelation to convey a knowledge of his will and purpose to mankind.

2. THE BOOKS OF THE OLD TESTAMENT were, with the exception of a few passages, composed in the Hebrew. The exceptions relate to passages written in the Chaldee dialect, the reasons for employing which, where it occurs, are sufficiently obvious. They are passages either consisting of transcripts from original documents, or comprising information specially designed to be communicated to the people by whom this dialect was employed. Thus, Jer. x. 11, which is pure Chaldee introduced into the midst of a Hebrew composition, was to be addressed by the Jews to the Babylonian idolaters. Several passages in Ezra iv. 5, 6, 7, consist of copies of original letters and decrees in the Chaldee, and the book of Daniel, from the second chapter to the seventh, which is in this language, treats exclusively of the affairs of Babylon, and was therefore with the utmost propriety so written.

3. THE BOOKS OF THE NEW TESTAMENT are all in the Greek language, which, being the richest and most prevalent at the time they were penned, was most adapted for works designed for general circulation; for while the Hebrew language is primitive, stiff and comparatively meagre, the Greek is pliant, rich and capable of expressing the most delicate shades of thought.

4. There are but two of these books about which the learned are not agreed as to the language in which they were originally composed, namely, the Gospel of Matthew and the Epistle to the Hebrews, the latter of which is attributed to Paul upon very conclusive evidence. These books, it has been thought by very able critics, were written in the Hebrew, or rather in the Syro-Chaldaic tongue, which was the vernacular language of the Jews in the time of our Saviour, and consequently that our present Greek text is only a translation from the originals. This position is for several reasons untenable, but to enter into a critical investigation of it would not accord with our present purpose.

5. It must not be supposed, however, that the Greek of the New Testament is of the pure classical style. On the contrary, it is of a very peculiar structure, partaking of the Alexandrian and Oriental idioms, with a very large admixture of the peculiarities of the Hebrew phraseology. Hence it has not improperly been called Hebraic Greek. This topic has been very elaborately discussed by critics, but the result of their labors is all that is practically valuable to the interpreter of Scripture. Michaelis has thus characterized the style of the several writers of the New Testament, and with sufficient minuteness for general purposes.

6. The Gospels of Matthew and Mark exhibit strong vestiges of the Hebraic style; the former presents harsher Hebraisms than the latter, and the Gospel of Mark abounds with still more striking Hebraisms. The Epistles of James and Jude are somewhat better; but even these are full of Hebraisms, and betray in other respects a certain Hebrew tone. Luke has, in several passages, written pure and classic Greek, of which the first four verses of his Gospel may be given as an instance. In the sequel, where he describes the

actions of Christ, he has very harsh Hebraisms, yet his style is more agreeable than that of Matthew or Mark. In the Acts he is not free from Hebraisms, which he never seems studiously to have avoided; but his periods are more classically turned, and sometimes possess beauty devoid of art. John has numerous, though not uncouth, Hebraisms, both in his Gospel and in his Epistles; but he has written in a smooth and flowing language, and surpasses all the Jewish writers in the excellence of narrative. Paul, again, is entirely different from them all; his style is indeed neglected and full of Hebraisms, but he has avoided the concise and verse-like construction of the Hebrew language, and has, upon the whole, a considerable share of the roundness of Grecian composition. It is evident that he was as perfectly acquainted with the Greek manner of expression as with the Hebrew, and he has introduced them alternately, as either the one or the other suggested itself the first or was the best approved.

7. Neither our limits nor plan will permit enlargement on this topic. Mr. Horne has given numerous instances of the Hebraisms, Syriasms and Latinisms in the New Testament; also the canons laid down by Ernesti and his commentator, Morus, by which to determine their force and meaning.

8. The style of the sacred writings furnishes, too, one of the most incontestable and satisfactory proofs of their genuineness. The variation in style that prevails in the Old Testament books is found to correspond most exactly with the changes which the Hebrew language underwent, from time to time, by reason of the intercourse of the Jewish people with the adjacent nations, while the peculiarity of composition by which the New Testament books are characterized affords decisive evidence of their Hebrew authorship, as well as their particular era.

9. In a work intended for popular use it will be expected we should give some historical account of the Hebrew and Greek languages only as far as is necessary in a bibliographical account of the sacred text.

On the subject of the Hebrew language, see the article in the body of this work, where the characteristics, the origin, history, extent of usage and changes which took place in that tongue are treated of, at pages 823-827.

In addition to what is there stated, it may be added that while the old Hebrew tongue was largely obliterated among the common people by the Babylonish captivity by the prevalence of the Aramaic, which came to be general in Palestine, our Lord used this language, and the names Kephias, John i. 42, Boanerges, Mark iii. 17, as also the expressions Talitha Cumi, Mark v. 41, Abba, Mark xiv., Eli, Eli, etc., are specimens of it. People of Biblical education spoke this language as written, but the common people, as generally is the case, spoke it in different dialects. The dialect of Jerusalem and Judea was most correct; but that of Samaria, and particularly of Galilee, was much more rude than the former, full of contractions and mutilations; letters were omitted in it, and one guttural exchanged for another, so that, for example, according to the careless and irregular pronunciation of the Galilean dialect, the same word might denote an *ass*, *wine*, *wool*, and a *lamb to be sacrificed*. A Galilean was, therefore, easily recognized by his pronunciation, Matt. xxvi. 73, and he was not admitted as a public reader of Scripture in any synagogue of Judea.

"Jews residing abroad in Greek countries, par-

ticularly in Egypt, had completely adopted the Greek language as their own; and even in Palestine itself, where abhorrence against everything foreign was affected, it seems that partly through intercourse with Jews abroad who spoke Greek, partly through the neighborhood to Syria and Egypt, where Greek was generally spoken, and partly from Greek residents, of whom, especially in Galilee and Perea, vast numbers dwelt among the Jews, the Greek had become generally known and current. This appears from Acts ii. 7-11, where Jews, from Greek countries and provinces, witnessing the enthusiasm which had seized the apostles and their friends, wondered that they expressed their religious thoughts and sentiments in Greek dialects which they had been accustomed to hear abroad, and not merely, as was usual, in ancient Hebrew, likewise from Acts vi. 1-6, where a considerable number of the primitive members of the Christian community at Jerusalem is stated to have been Hellenistic, or Greek-speaking; and also from Acts xxii. 40, compared with Acts xxii. 2, where the Jews expected Paul, who had been accused by Greek Jews, to address them in Greek, but were delighted to hear him speak to them in the language of the country. Whether Jesus himself spoke Greek cannot be determined for certain, although it is highly probable; because in Galilee and Perea he was in frequent intercourse with foreigners; because, even in Jerusalem, an interview with him was sought by Greeks, John xii. 20, and these surely spoke no other language but Greek; because we must suppose that the conferences between Judas and Pilate, mentioned in John xviii. 33-37 and xix. 9-11, were certainly carried on neither in Aramaic nor Latin, but in Greek; and because Mary, in her conversation with Jesus, John xx. 14, etc., seems to have made use of the Greek language until she recognized him as arisen from the dead, when she instantly returns to the familiar Aramaic, to which, in daily intercourse with him, she was accustomed, and addressed him with the word *Rabboni*. The apostles, too, being Galileans, must be supposed to have been more or less acquainted with Greek, even during the three years of their familiar intercourse with Jesus, although it may have been only at a subsequent period that they, in their vocation as messengers of the gospel, rendered themselves more perfect masters of it, so as to be able to express in writing their thoughts in that language."

10. The old pure Hebrew undoubtedly possessed great simplicity and expressiveness. Of all known languages, it is best adapted to indicate the nature and qualities of objects, and this, taken in conjunction with the great conformity subsisting between it and our own language, both in structure and mode of expression, renders its attainment comparatively easy. The construction of Hebrew words in a sentence has the advantage of being extremely simple, and is free from the elliptical and irregular phraseology that often perplexes the student in other languages. The words commonly stand in their natural order, and sentences admit of being translated into English without any change of arrangement. The chief exception is that nominatives very frequently follow their verbs, and adjectives their substantives. The rules are few and the exceptions not numerous.

10. We close this section with some account of the principal of the various schools of Hebrew philology:

1. The *Rabbinical*. This school, which is properly indigenous among the Jews, derives its acquaintance with the Hebrew from the tradition of

the synagogue, from the Chaldee Targums, from the Talmud, from the Arabic, which was the language of the most learned rabbins, and from conjectural interpretation. In this school, at one of its earlier periods, Jerome acquired his knowledge of the language; and on the revival of learning our first Christian Hebraists in the West were also educated in it, having had none but rabbins for their teachers. In consequence of this, the Jewish system of interpretation was introduced into the Christian Church by Reuchlin, Sebastian Munster, Sanctus Pagninus and the elder Buxtorf; and its principles still continue to exert a powerful and extensive influence through the medium of the grammatical and lexicographical works of the last-mentioned author, and the tinge which they gave to many parts of the Biblical translations executed immediately after the Reformation.

2. The *Forsterian* school, founded about the middle of the sixteenth century by John Forster, a scholar of Reuchlin's, and professor in Tubingen and Wittenberg. This author entirely rejected the authority of the rabbins, and not being aware of the use to be made of the versions and cognate dialects, laid it down as an incontrovertible principle of Hebrew philology that a perfect knowledge of the language is to be derived from the sacred text alone, by consulting the connection, comparing the parallel passages and transposing and changing the Hebrew letters, especially such as are similar in figure. His system was either wholly adopted and extended or in part followed by Bohl, Gusset, Driessen, Stock and others, whose lexicons all proceed on this self-interpreting principle; but its insufficiency has been shown by J. D. Michaelis in his "Investigation of the Means to Attain a Knowledge of the Dead Language of the Hebrews," and by Bauer in his "Hermeneutics of the Old Testament."

3. The *Avenarian* school, which proceeds on the principle that the Hebrew, being the primitive language from which all others have been derived, may be explained by the aid of the Greek, Latin, German, English, etc. Its founder, John Avenarius, professor at Wittenberg, has had but few followers, but among these we may reckon the eccentric Hermann van der Hardt, who attempted to derive the Hebrew from the Greek, which he regarded as the most ancient of all tongues.

4. The *Hieroglyphic* or *Cabbalistic* system, long in vogue among the Jews, but first introduced into Christendom by Caspar Newman, professor at Breslau. It consists in attaching certain mystical and hieroglyphical powers to the different letters of the Hebrew alphabet, and determining the signification of the words according to the position occupied by each letter. This ridiculously absurd hypothesis was ably refuted by the learned Michaelis in a dissertation printed at Halle, 1709, in 4to, and has scarcely had any abettors. Recently it has been revived by a French academician, whose work on the subject exhibits a perfect anomaly in modern literature; but the absurdity of the system is so apparent that it merits no notice.

5. The *Hutchinsonian* school, founded by John Hutchinson (originally steward to duke of Somerset, and afterward master of horse to George I.), who maintained that the Hebrew sacred Scriptures contain the true principles of philosophy and natural history, and that, as natural objects are representative of such as are spiritual and invisible, the Hebrew words are to be explained in reference to these sublime objects. His principles pervade the lexicons of Bates and Parkhurst; but

though they have been embraced by several learned men in this country, they are now generally scouted, and have never been adopted, as far as we know, by any continental philologist. The disciples of this school are violent anti-punetists.

6. The *Cocceian* or *polydynamic* hypothesis, according to which the Hebrew words are to be interpreted in every way consistent with their etymological import, or, as it has been expressed, in every sense of which they are capable. Its author, John Cocceius, a learned Dutch divine, regarded everything in the Old Testament as typical of Christ or of his Church and her enemies; and the lengths to which he carried his views on this subject considerably influenced the interpretations given in his Hebrew lexicon, which is, nevertheless, a work of no ordinary merit. This system has been recently followed by Mr. Von Meyer of Frankfurt in his improved version with short notes.

7. The *Schultensian* school, by which to ascertain extent a new epoch was formed in Hebrew philology. Albert Schultens, professor of Oriental languages at Leyden, was enabled by his profound knowledge of Arabic to throw light on many obscure passages of Scripture, especially on Job; but carrying his theory so far as to maintain that the only sure method of fixing the primitive significations of the Hebrew words is to determine the radical ideas attaching to the same words, or words made up of the same letters in Arabic, and then to transfer the meaning from the latter to the former, a wide door was opened for speculative and fanciful interpretation; and the greater number of the derivations proposed by this celebrated philologist and his admirers have been rejected as altogether untenable by the first Hebrew scholars both in our own country and on the Continent. The great faults of the system consisted in the disproportionate use of the Arabic, to the neglect of the other cognate dialects, especially the Syriac (which, being the most closely related, ought to have the primary place), want of due attention to the context, an inordinate fondness for emphasis and far-fetched etymological hypothesis and combinations.

8. The last school is that of Halle, so called from the German university of that name, where many eminent Hebrew scholars have received their education, and by whom its distinguishing principles have been originated and brought to their present advanced state of maturity. Its foundation was laid by J. H. and Ch. B. Michaelis, and the superstructure has been carried up by J. D. Michaelis, Simon, Eichhorn, Dindorf, Schnurrer, Rosenmüller and Gesenius, who is allowed to be one of the first Hebraists of modern times.

(1) Its grand object is to combine all the different methods by which it is possible to arrive at a correct and indubitable knowledge of the Hebrew language as contained in the Scriptures of the Old Testament, allotting to each of the subsidiary means its relative value and authority, and proceeding in the application of the whole according to sober and well-matured principles of interpretation.

(2) The first of these means is the study of the language itself as contained in the books of the Old Testament. Though by some carried to an unwarrantable length, it cannot admit a doubt that this must ever form the grand basis of Scripture interpretation. Difficulties may be encountered at the commencement; but when, as we proceed, we find from the subject matter, from the design of the speaker or writer, and from other adjuncts, that the sense we have been taught to

affix to the words must be the true one, we feel ourselves possessed of a key which, as far as it goes, we may safely and confidently apply to unlock the sacred writings. When, however, the signification of a word cannot be determined by the simple study of the original Hebrew, recourse must then be had to the ancient versions, the authors of most of which, living near the time when the language was spoken in its purity, and being necessarily familiar with Oriental scenes and customs, must be regarded as having furnished us with the most important and valuable of all the subsidiary means by which to ascertain the sense in cases of words or phrases of rare occurrence or connections which throw no light on the meaning. Yet in the use of these versions care must be taken not to employ them exclusively nor merely to consult one or two of them, to the neglect of the rest. It must also be ascertained that their text is critically correct in so far as the passage to be consulted is concerned; and the Biblical student must not be satisfied with simply guessing at their meaning or supposing that they either confirm or desert what he may have been led to regard as the sense of the original, but must be practically acquainted with the established usage obtaining in each version and the particular character of their different renderings.

(3) The *rabbinical lexicons and commentaries* furnish the next source; not, however, as an infallible criterion, but—considering that the rabbins of the tenth, eleventh and twelfth centuries, whose works alone are here taken into account, possessed a knowledge of the Arabic as their vernacular language, or in which, at least, they were well versed, that they were familiar with the traditional interpretation of the synagogue as contained in the Talmud and other ancient Jewish writings or transmitted through the medium of oral communication, and that they were mostly men of great learning, who rose superior to the trammels of tradition, and did not scruple to give their own views respecting the meaning of certain words and phrases, in opposition to the voice of antiquity—no small degree of philological aid may reasonably be expected from their writings.

(4) The last mean consists in a proper use of the *cognate dialects*. These are the Chaldee, Syriac, Arabic, Ethiopic, Samaritan, Phœnician and the Talmudical Hebrew. All these dialects possess to a great extent, in common with the Hebrew, the same radical words, derivatives, mode of derivation, forms, grammatical structure, phrases or modes of expression, and the same, or nearly the same, signification of words. They chiefly differ in regard to accentuation, the use of the vowels, the transmutation of consonants of the same class, the extent of signification in which certain words are used and the peculiar appropriation of certain words, significations and modes of speech which are exhibited in one dialect to the exclusion of the rest.

(5) These languages, when judiciously applied, are useful in many ways. They confirm the precise signification of words, both radicals and derivatives, already ascertained or adopted from other sources. They discover many roots and primitives the derivatives only of which occur in the Hebrew Bible. They are of eminent service in helping to a knowledge of such words as occur but once, or at least but seldom, in the sacred writings, and they throw much light on the meaning of phrases or idiomatical combinations of words, such combinations being natural to them all as branches of the same stock, or to some of

them in common, in consequence of certain more remote affinities.

(6) It is to the superiority the school of Halle has attained, in the combined application of these means, that we are indebted for the flood of light which has been poured upon the sacred pages.

## II. Criticism of the Hebrew Text.

I. One of the first and highest objects of criticism is to ascertain and determine the purity or integrity of the text. Next to the genuineness and authenticity of the Scriptures, the purity of the text is obviously of the utmost importance. It will be plain to every mind that the Biblical books may have been originally written by divinely-inspired persons, but that, during the lapse of ages and by passing through various hands, they may have been so greatly corrupted as to have had their original character destroyed, and to have been rendered wholly unworthy of reception as a revelation of the divine will and purpose. This topic, then, claims our first attention, and we shall therefore proceed to show the evidences we possess for establishing the identity of the text now extant with that delivered to the Church by the inspired prophets, evangelists and apostles.

1. With regard to the books of the Old Testament, it must in candor be admitted that our knowledge of the formation of the present text is very imperfect and unsatisfactory. De Rossi divides Hebrew manuscripts into three classes: 1. More ancient, written before the twelfth century; 2. Ancient, in the thirteenth and fourteenth centuries; 3. More recent, at the end of the fourteenth or the beginning of the fifteenth century; and Dr. Kennicott contends that almost all the existing manuscripts were written between the years 1000 and 1460; whence it has been reasonably inferred that the older manuscripts were destroyed after having been used by the Jewish literati in revising the common text.

2. We know nothing of the method by which the revisers proceeded in the prosecution of their task, nor of the precise amount of those errors in the older copies that induced them to undertake its revision. But let it not be inferred from this admission that the sacred text may therefore have been subjected to unauthorized alterations or willful corruptions. Did we possess no means of detecting such corruptions, if introduced (but which we do possess in abundance, in the ancient versions, quotations, etc.), the profound and almost superstitious veneration which even the most irreligious and immoral Jews are known to cherish for every tittle of their Scriptures, and the labor they have expended in preserving its purity, would alone assure us of the fact that in their critical duties they were influenced by the most scrupulous integrity. Upon this subject it may be interesting as well as satisfactory to show the excess of care the Masorites bestowed in making their copies, with a view to the preservation of the integrity of the text. In transcribing the sacred writings, it has been a constant rule with them that whatever is considered as corrupt shall never be used, but shall be burnt or otherwise destroyed. A book of the law wanting but one letter, with one letter too much, or with an error in one single letter, written with anything but ink, or written on parchment made of the hide of an unclean animal, or on parchment not purposely prepared for that use, or prepared by any but an Israelite, or on skins of parchment tied together by unclean strings, shall be holden to be corrupt;

that no word shall be written without a line first drawn on the parchment; no word written by heart, or without having been first pronounced orally by the writer; that before he writes the name of God he shall wash his pen; that no letter shall be joined to another; and that, if the blank parchment cannot be seen all around each letter, the roll shall be corrupt. There are settled rules for the length and breadth of each sheet, and for the space to be left before and after each letter, each word and each section. These Maimonides mentions as some of the principal rules to be observed in copying the sacred rolls. Even to this day it is an obligation on the persons who copy the sacred writings to observe them; and those who have not seen the rolls used in the synagogues can have no conception of the exquisite beauty, correctness and equality of the writing.

3. But the attention of the Jews was not confined to the penmanship of the Holy Word; they also made incredible exertions to preserve the genuineness and integrity of the text. This produced what is termed the Masora, which has been justly pronounced to be the most stupendous monument in the whole history of literature of minute and persevering labor. The persons who were employed in it, and who afterward received from it the name of Masorites, were some Jewish literati who flourished after the commencement of the Christian era. With a reverential, not to say superstitious, attention, of which history does not furnish an instance to be urged in comparison with it, they counted all the verses, words and letters of all the twenty-four books of the Old Testament, and of each of those twenty-four books, and of every section of each book, and of all the subdivisions of each section. They distinguished the verses where they thought there was something forgotten, the words which they believed to be changed, the letters which they thought superfluous, the repetitions of the same verses, the different reading of the words which are redundant or defective, the number of times that the same word is found in the beginning, middle or end of a verse, the different significations of the same word, the agreement or conjunction of one word with another, the number of words that are printed above, which letters are pronounced and which are turned upside down, and such as hang perpendicular,—all these enumerations they made and took the number of each. Such was their scrupulosity that though it might have been plain that one letter was put for another, or that a word was pushed out of its place, still they would not vary the text, but indicated these changes by a particular mark, supposing that some mystery had occasioned the alteration. They distinguished the degrees of certainty which they attributed to their critical corrections or insinuations by three words: KERI, *read*; CHETIB, *write*; and SHNIR, *conjecture*.

4. Such critics were not likely capriciously or willfully to alter the text, and their numerous and minute rules rendered it almost impossible that they should do so by accident, at least in anything very material.

II. But we are as much at a loss to ascertain the rules adopted by the early editors of the printed editions. The particular manuscripts they used, the way they employed their materials, the degree of authority they yielded to preceding editions, and other similar matters, are all beyond our power to learn, for on these points they have maintained a complete silence. We must, therefore, be contented with a brief sketch of the principal editions, and then notice the pro-

cess by which our present critical apparatus has been formed.

1. The first printed edition of the entire Hebrew Bible was that executed at Soncino, in 1488, under the editorial care of Abraham ben Chayim. Its critical value is very great, but there are only nine copies of it known to be in existence; the Bodleian Library and that of Exeter College, Oxford, possess the only two in England. The variations between this edition and that of Van der Hooght amount (so Kennicott) to some thousands, though none are of any great moment.

2. This was followed, in 1494, by an edition at Brescia, edited by Gerson, son of Rabbi Moses, which deserves special attention from having been used by Luther for his German translation, and also from having formed the basis of several subsequent editions, of which may be noticed that in the Complutensian Polyglot.

3. These two editions, with a third, printed in 1517, without the name of any place, are called the *Soncino* edition, being printed by Jews of a family originally from Germany, established at Soncino, in Lombardy, between Cremona and Brescia. They were the first Hebrew printers.

4. We need only further mention that by Daniel Bomberg, in 1525, at Venice. This, the Brescia edition of 1494 and the Complutensian edition of 1517 form the basis of most subsequent editions.

III. But whatever variations may be found in the text of these and subsequent early editions of the Hebrew Scriptures, it must not be supposed that they resulted from any deviation on the part of the respective editors from the manuscripts they employed. Christians, as well as the Jews, confided most implicitly in the immaculate purity of the text, to have questioned which would have been regarded as an act of the utmost temerity, if not of impiety. Hence it is not to be wondered at that Buxtorf, who published his "Tiberias, or an Exposition and Defence of the Masoretic Doctrines" in 1620, should confirm the affirmation of Elias Levita by saying of the Hebrew manuscripts that "of all the books which are either in Asia, in Africa or in Europe, a consistent harmony, without any discrepancy, is evident." It so happened, however, that in the early part of the seventeenth century the Samaritan copy of the Pentateuch, the existence of which was well known to some of the early Christian writers, but which had been lost sight of for upward of a thousand years, was again brought to light, and its numerous variations from the Masoretic text suggested the idea of a diversity of readings in the Hebrew manuscripts. The examination of copies hence deduced issued in the detection of actual and numerous mistakes, and thus prepared the way for that corrected and purer text we now possess.

1. The first person who boldly and determinately impeached the purity of the Hebrew text was the learned Morinus, a Roman Catholic priest of the Oratory at Paris, who first published his "Exercitationes Ecclesiasticæ et Biblicæ" ("Ecclesiastical and Biblical Dissertations") in 1633. In 1650 he was followed by the erudite Capellus, in the same country, and in 1658 by the celebrated and justly venerated Bishop Walton. The "Critica Sacra" of Capellus should not be passed over without notice. This elaborate production, the work of thirty-six years of the industrious author's life, Capellus could not get printed in the Protestant states; but at length, through the influence of Morinus and other Catholics, it was printed, by royal license, at Paris, under the care of his son. The integrity or purity of the Hebrew text

was here assailed at great length, and with nearly as much success as he had formerly evinced in attacking the divine origin of the points. He contended that verbal mistakes had crept into the Hebrew sacred Scriptures, as into all ancient authors; that the printed editions were not always correct, and did not always agree with each other; and that the ancient versions might be properly employed as one means of correcting the text. In six books he established the existence of various readings. (I.) From the juxtaposition of different parts of the Old Testament. (II.) From a collation of the parallel passages of the Old and New Testaments. (III.) From collations of the Masora, the Samaritan and the most ancient printed editions of the sacred Scriptures. (IV.) From a collation of the Septuagint with the Hebrew text. (V.) From a comparison of the Hebrew text with the Chaldaic paraphrase, the Greek versions of Aquila, Symmachus and Theodotion, the Latin Vulgate and the rabbinical commentators. In Book VI. he treats of the errors of transcribers and of conjectural emendations.

2. The labors of these critics, having destroyed the confidence hitherto reposed in the integrity of the Hebrew text, originated an inquiry respecting the means for ascertaining the extent to which it had suffered and the sources for restoring its purity. It seems not to have occurred to these learned men, however, that a collation of manuscripts would furnish the most satisfactory evidence of the actual state of the text, as well as the materials for its improvement. The only standards by which Morinus had thought of measuring it were the Samaritan Pentateuch and the Septuagint or ancient Greek version; wherever it differed from these, he concluded that its verity was impaired. Nor was the critical apparatus of Capellus much more extensive, as is evident from the account just given of his work, although he avoided many of the errors into which his predecessor had fallen by exercising a sounder judgment as to the criterion of purity. He considered the ancient versions, when applied under proper restrictions, as one source of critical authority in ascertaining the purity of disputed passages; but he did not consider, with Morinus, that a deviation of the Hebrew from the Septuagint or from the Vulgate was a reason for supposing that in such places the Hebrew was incorrect. In short, his principles of criticism were such as the best judges have applied to ancient authors in general. Where Capellus failed, he failed in the application of his principles.

3. Attention having been thus excited to the subject, it was soon determined that the only satisfactory mode of proceeding was by a collation of manuscripts and ancient versions. This was accordingly undertaken by competent persons, who gave the result in the successive editions of Athias, Jablonski, Van der Hooght, Michaelis and Houbigant. It was reserved for the indefatigable Kennicott, however, to institute an extensive collation of manuscripts, and to produce the first critical edition of the Hebrew Bible upon a magnificent scale. During the thirty years in which he and his coadjutors were employed in this work, under the patronage of the learned and wealthy in all parts of Europe, upward of six hundred Hebrew manuscripts and sixteen copies of the Samaritan Pentateuch were either wholly or partially collated. Nor was this the full extent of his labors. Ardently desirous of giving consistency and permanency to the text, this illustrious scholar added to the collation of manuscripts a collation of the most

valuable printed editions and an examination of the quotations from the Hebrew Bible which were found in the works of the Jewish literati. The first volume of Kennicott's Bible was published in 1776, the second in 1780.

4. "That the mass of various readings exhibited in this edition, which greatly exceeded in number the various readings collected by the industry of three centuries for the Greek Testament, contains but few of real importance, is no subject of reproach to the learned editor," says Bishop Marsh, "who could only produce what his authorities afforded. Nor is he to be censured for giving all he had, without regard to their relative value. His was the first attempt to give a copious collection of Hebrew readings, and he could hardly have been justified had he exercised his own discretion in regard to the portion which should be laid before the public. He wisely, therefore, afforded the opportunity to his readers of selecting for themselves; and though his extracts are rarely of much value for critical emendation, they enable us both to estimate the existing Hebrew manuscripts and to draw some important conclusions as to the integrity of the Hebrew text."

5. The major part of this immense collection of readings consists in mere variations of orthography, in the fullness or defectiveness of certain words, in the addition or subtraction of a letter. And if we further deduct the readings which are either manifest errors, or in other respects of no value, the important deviations will be confined within a very narrow compass. In short, Dr. Kennicott's collation has contributed to establish the credit of the Masora. We learn from it this useful lesson—that although a multiplication of written copies will, notwithstanding all human endeavors, produce variations in the text, the manuscripts of the Hebrew Bible have been so far protected by the operation of the Masora that all now extant, both the oldest and the newest, might be compared with those manuscripts of the Greek Testament which Griesbach refers to the same edition.

6. A few years after the publication of Dr. Kennicott's Bible, De Rossi, the Hebrew professor at Parma, and the friend and fellow-laborer of Kennicott, added considerably to the collections previously made by publishing the various readings of seven hundred and thirty-one manuscripts, and three hundred and ten editions, some of which were unknown and others but little known. The whole number of manuscripts collated on this occasion, therefore, amounted to one thousand three hundred and forty-six, and of editions to three hundred and fifty-two, making a total of one thousand six hundred and ninety-eight, containing several hundred thousand various readings. And yet not one doctrine or precept of revelation is affected by them.

7. One circumstance connected with this undertaking is worthy of note—namely, the proof thereby afforded that the marginal words of the Masora, printed opposite to the text in the rabbinical Bibles, and hitherto regarded as materials of interpretation, transmitted by oral tradition from the sacred writers, are in fact nothing more than various readings of the Hebrew text. Out of a thousand of them, as printed by Van der Hooght, there were but fourteen not found in the text of some of the manuscripts examined by Kennicott.

IV. Such is the history of the Hebrew text, from which the progress hitherto made in its criticism may in some measure be gathered. The necessity for this review may not at present be apparent;

but as sacred criticism has for its object an aggregate of literary labors undertaken at different periods and for different purposes, and as its principles are general conclusions deduced from these literary labors, it will ultimately be seen that the reason or foundation of those laws cannot be comprehended without a previous knowledge of the nature and amount of these labors. By such a review we discover not only the means by which it has acquired its present form, but also the propriety of the rules critics have laid down for directing and regulating their operations.

V. This section may close with a brief notice of those celebrated copies of the Hebrew Scriptures which have been adopted by the Jews as exemplars of all subsequent copies.

1. The copy of Hillel, who is thought to have lived about A. D. 1000, was preserved at Toledo, in Spain, where Kimchi, who lived in the twelfth century, states that he saw it. Rabbi Zacuti, who lived near the close of the fifteenth century, states that part of it had been sent into Africa.

2. The copy of Aaron ben Asher, one of the doctors of the celebrated academy at Tiberias, about the middle of the eleventh century, was preserved for many years at Jerusalem as a standard copy; and Maimonides, who made his own copy of the law from it, assures us that it was universally appealed to. From this exemplar all the manuscripts of the Western Jews, as well as all the printed copies of the Hebrew Bible, are almost wholly derived.

3. The copy of Jacob ben Naphtali, who was president of the other famous Jewish academy at Babylon and contemporary with Ben Asher, was adopted by the Oriental Jews.

4. The codices of Jericho and Sinai, and one called Sanbouki, are highly commended for their accuracy.

5. The "Codex Malabaricus," obtained by the late Dr. Buchanan from the black Jews in Malabar, whence its name, though forming a distinct class, should not be passed by without notice. It is evident, as Bishop Marsh suggests, that the copies of the Pentateuch preserved in India must have descended from the autograph of Moses through very different channels to those in the West of Europe, and therefore the close agreement of the one with the other (the Indian copy presenting only four peculiar readings) is proof that they have preserved the original text in great purity. Whether this copy was formed from the Masoretic text is by no means certain; for although perhaps written much later than the period when the Masorites finished their labors, it is probable their influence never reached the mountainous district in the South of India.

## III. Early Versions of the Old Testament.

I. Mention has been made of the Samaritan Pentateuch, in reference to its influence on the criticism of the Hebrew Scriptures; but before we proceed to the Greek Testament some further account of this venerable work, and also of the Septuagint version, is called for.

1. The existence of the Pentateuch, or five books of Moses, written in the peculiar alphabetic character employed by the Samaritans, was known in very ancient times to such of the Christian Fathers as were acquainted with Hebrew. Origen, on Num. xiii. 1 and xxi. 13, distinctly speaks of it, as does Jerome in his prologue to Kings and other places.

2. These, with one or two similar references in

Origen, constitute the evidence we have that the Samaritan Pentateuch was known in very ancient times to such of the Fathers as devoted themselves to the critical study of the Hebrew Scriptures. From the time of Jerome down to the first quarter of the seventeenth century, however, no traces appear in the history of criticism and sacred literature of the existence of the Samaritan copy of the law of Moses. In the year 1616, Petrus à Valle bought of the Samaritans at Damascus a complete copy, which was sent in 1623, by A. H. de Sancy, to the library of the Oratory at Paris. J. Morinus briefly described this copy, not long afterward, in the preface to his edition of the Septuagint, A. D. 1628. Soon after this he published his "Exercitationes Ecclesiasticæ in utrumque Samaritanorum Pentateuchum," in which he extols very highly the text of the Samaritan Pentateuch, preferring it above the common Hebrew text. About the same time, from the copy purchased by à Valle, Morinus printed the Samaritan text of the Paris Polyglot; and from this Walton printed the Samaritan text in the London Polyglot, with very few corrections.

3. In the mean time, between the years 1620 and 1630, Abp. Usher, so distinguished for his zeal in sacred literature, as well as the knowledge of it which he himself acquired, had succeeded, by persevering efforts, in obtaining six additional copies of the Samaritan Pentateuch from the East, some complete, others incomplete. Five of these are still in England, deposited in different libraries. One which the archbishop presented to L. de Dieu appears to have been lost.

4. In 1621 another copy was sent to Italy, which is now in the Ambrosian library at Milan. About the same time Peirese procured three copies, two of which are in the royal library at Paris and one in that of Barberini at Rome.

5. To these copies others have since been added; so that Kennicott was able to extend the comparison of Samaritan manuscripts for his critical collection of various readings to the number of sixteen. Most, however, were more or less defective.

6. The external appearance of these manuscripts agrees in some respects with that of the synagogue rolls of the Jews, but in many others it differs. All the Samaritan copies in Europe are in the form of books, either folio, quarto or still smaller, although the Samaritans in their synagogues make use of rolls, as the Jews do also. The letters in the Samaritan copies are simple, exhibiting no difference in size. They are entirely destitute of vowel points, accents or diacritical signs, such as are found in Hebrew and Chaldee. Each word is separated from the one which follows it by a point placed between them; parts of sentences are distinguished by two points, and periods and paragraphs by short lines or lines and points.

7. The manuscript copy preserved in the British Museum, which was one of the six copies belonging to Archbishop Usher, and by him presented to Sir R. Cotton, is a small folio of two hundred and fifty-four pages, written on vellum, and it is in an excellent state of preservation.

8. The manuscripts differ, however, in some unimportant particulars. Words of doubtful construction are sometimes marked by a small line over one of the letters. The margin is empty, unless, as is sometimes the case, the Samaritan or Arabic version is placed by the side of the original text. The whole Pentateuch, like the Jewish copy, is divided into paragraphs, which they call *Ratzin*. But while the Jews make only fifty-two or fifty-four divisions, one to be read on each

Sabbath in the year, the Samaritans make nine hundred and sixty-six.

9. The age of some of the Samaritan copies is determined by the date which accompanies the name of the copyist; in others it is not found. Kennicott has endeavored to ascertain the date of all the Samaritan manuscripts which he compared. But he resorts to conjecture, supported by no well-grounded rules of judging. The Codex Oratorii used by Morinus he supposes to have been copied in the eleventh century, while all the others except one are conceded to be of more recent origin. One he assigns to the eighth century. The reasoning of Kennicott and De Rossi about the age of Hebrew and Samaritan manuscripts rests, however, on very uncertain grounds.

10. The Samaritan manuscripts are written either on parchment or silk paper. Ordinary paper has been used in recent times only to supply some defects.

11. The Christian world, before Morinus published his famous "Dissertationes," in the year 1631, had been accustomed, as we have seen, to resort only to the Jewish Hebrew Scriptures as exhibiting the well-authenticated and established text of the Mosaic law. But the publication of Morinus soon excited a controversy which even at the present time has not wholly subsided. As the Samaritan copy of the law in a multitude of places agrees with the version of the Seventy, Morinus maintained that the authority of the Samaritan, particularly when supported by the Septuagint, was paramount to that of the Jewish text. He labored, moreover, to show that in a multitude of passages, which in that text as it now stands are obscure and difficult or unharmonious, the Samaritan offers the better reading, that the Jews have corrupted their Scriptures by negligence or ignorance or superstition, and that the safe and only way to purify them is to correct them from the Samaritan in connection with the Septuagint.

12. The signal was now given for the great contest which ensued. Capellus, in his "Critica Sacra," followed in the steps of Morinus, but De Muis, Hottinger, Stephen Morinus, Buxtorf, Fuller, Leusden and A. Pfeiffer, each in separate works published within the seventeenth century, attacked the positions of Morinus and Capellus. Their principal aim was to overthrow these positions rather than to examine the subject before them in a critical and thorough manner.

13. Much less like disputants, and more like impartial critics, did Father Simon, Walton and Le Clerc conduct themselves on this question. In particular Simon has thrown out suggestions which imply for substance the same opinions on many controverted points that the latest and best critics, after all, have adopted.

14. But during the latter part of the last century, when the fierceness of the controversy seemed to have abated, Houbigant, treading in the steps of J. Morinus, revived it in the Prolegomena to his Bible. With him other controvertists united. Kennicott, in various works, A. S. Aquilino, Lobstein and Alexander Geddes have all contended for the equal or superior authority of the Samaritan Codex. Houbigant was answered in a masterly way by S. Ravius in 1761, and recently Michaelis, Eichhorn, Bertholdt, Bauer and Jahn have discussed the subject with a good degree of moderation and acuteness. They have all inclined to attach considerable value to many of the Samaritan readings, although most of them consider the Samaritan Pentateuch, on the whole, of inferior authority to the Hebrew.

15. Thus the matter stood when Gesenius en-

tered upon the discussion of it in the year 1815. The great extent of critical and philological knowledge he had acquired peculiarly fitted him for his difficult task, the settling of a question so long disputed by the master critics. He did not disappoint expectations; and if he has not for ever settled the question about the authority of the Samaritan Pentateuch compared with that of the Hebrew, he has shown the nature of the various readings it exhibits to be such that but little critical reliance can be placed upon them. They are all, or nearly all, as he insists, the effect of design, or want of grammatical, exegetical or critical knowledge, of studious conformity to the Samaritan dialect, or of effort to remove supposed obscurities or restore harmony to passages apparently discrepant.

16. Gesenius divided these various readings into eight different classes: (1) Corrections merely of a grammatical nature. (2) Glosses received into the text. (3) Substitutions of plain modes of expression in the room of those which seemed difficult or obscure in the Hebrew text. (4) Corrections from parallel passages, or where apparent defects are supplied from them. (5) Additions or repetitions respecting things said and done, drawn from the preceding context and again recorded, so as to make the readings in question. (6) Such corrections as were made to remove what was offensive in respect to sentiment—i. e., which conveyed views or narrated facts deemed improbable by the correctors. (7) Where the pure Hebrew idiom is exchanged for the Samaritan. (8) Where alterations have been made, so as to produce conformity to the Samaritan theology, worship or mode of interpretation.

17. Gesenius has produced a multitude of examples, almost to satiety, for the purpose of removing all rational doubt as to the positions he advances. Only four various readings in the whole Samaritan Pentateuch are considered by him as preferable, perhaps, to the Hebrew text. These are the well-known passages in Gen. iv. 6; xxii. 13; xlix. 14; xiv. 14. Many critics, however, who will acquiesce in the general conclusions of Gesenius, will, it is apprehended, differ from him as to the precise number of such passages.

18. The result of Gesenius' labors has been, then, to ruin the credit of the Samaritan Pentateuch as an authentic source of correcting the Hebrew records—a result of no small importance, considering the thousands of places in which it differs from the Hebrew, and the excessive value which has been set upon it by critics of great note in different parts of Europe.

19. As to the age of the Samaritan Codex, Gesenius regards that time as the most probable from which to date its origin when Manasseh, the son-in-law of Sanballat, the Samaritan governor and brother of the high-priest at Jerusalem, went over to the Samaritans, built a temple on Mount Gerizim by the aid of his father-in-law and instituted the Mosaic worship there. Many of the peculiar readings of the Samaritan Codex, he thinks, can be accounted for by such a supposition, and, at all events, we must suppose that Manasseh carried a copy of the Jewish law along with him. But an able writer in the "North American Review" assigns to this Codex, upon what appear to be indisputable grounds, a much earlier date, carrying it up to the time of Jeroboam's reign over the ten tribes. This is, indeed, the only hypothesis which gets rid of the difficulties connected with the supposed origin of the Samaritan Codex.

20. This Pentateuch, although written in the Samaritan character, is in the Hebrew language,

like the Pentateuch in our Hebrew Bibles. There is, however, a translation of the Hebrew Samaritan Pentateuch into the proper Samaritan dialect, a medium between the Hebrew and Aramaean languages, which is thought to have been made as early as the close of the first century. There is also a version by Abusaid, in the eleventh or twelfth century, into the Samaritan Arabic dialect—i. e., the Arabic as spoken by the Samaritans. There are also a few scattered remains of an ancient Greek version, made from the Samaritan Pentateuch, some of which have been collected by Morinus, Hottinger and Montfaucon, but they are too scanty to be of much critical value.

II. The Septuagint version of the Old Testament is the most ancient and valuable of all the translations of the sacred books; but there is scarcely a subject of sacred literature upon which more has been written, or of which less, with any degree of certainty, is known. In addition to what is given in the body of this work on the subject of the Septuagint, the following may be given as the facts which tradition and history have recorded respecting the formation of this celebrated version. The most ancient account of it is written in Greek by Aristæus, who states himself to have been an officer in the guards of Ptolemy Philadelphus, king of Egypt at the time it was made. The following is the substance of his narrative:

1. Ptolemy Philadelphus, wishing to establish an extensive library at Alexandria, committed the charge of it to Demetrius Phalereus, a noble Athenian, who collected from various quarters twenty thousand volumes. In the course of his inquiries after curious and valuable books he was informed of the Law of Moses, in the Hebrew language, and urged to the king the importance of a translation of it into Greek. Ptolemy directed an embassy to Eleazar, the high-priest at Jerusalem, to request a correct copy of the law, and gave and learned men capable of translating it out of Hebrew into Greek. Aristæus, Sosibius and Andreas, three noblemen of Ptolemy's court friendly to the Jews, embraced the opportunity for soliciting the liberation of the Jewish captives taken prisoners by Ptolemy Soter, and still detained in slavery. Their suit was successful, and the king ordered twenty drachmas to be paid to their possessors for each of them, whether man, woman or child. The sum expended in their ransom was 660 talents, liberating 198,000 captives. Aristæus and Andreas were afterward commissioned to carry the official letter from Ptolemy to Eleazar, and their embassy was accompanied with gifts for the temple, and money for the sacrifices there offered and the general service of the sanctuary—viz., one hundred talents; fifty talents in utensils of gold and twenty talents in utensils of silver, besides the precious stones with which they were adorned, of twice their value. Their embassy succeeded, and Eleazar sent to the Egyptian king a copy of the law, written in letters of gold, upon skins of parchment of exquisite fineness and beauty. Six elders out of every tribe, men of acknowledged reputation and learning, were chosen to execute the translation, who returned to Alexandria with the messengers of Ptolemy. On their arrival the seventy-two elders were graciously received by the king, who not only expressed his satisfaction at receiving the law, and his astonishment at its execution, but also feasted the elders for several days, and during the festival fully satisfied himself of their wisdom and ability by proving each of them by seventy-two different

questions. The seven days of feasting being ended, each of the elders received three talents as a mark of the royal favor, and was then conducted by Demetrius to a sumptuous habitation prepared for them in a retired situation in the isle of Pharos, near Alexandria. Here they pursued their important undertaking with the utmost diligence, daily collating their separate versions with each other, and then dictating the approved version to Demetrius, who acted as their scribe. In seventy-two days they completed the whole translation, which was afterward read in the presence of the king, who expressed his approbation in the most decided manner, and rewarded each elder with three rich garments, two talents of gold and a cup of gold weighing one talent. He afterward sent them honorably back to Jerusalem, loaded with the most valuable gifts to Eleazar the high-priest, and commanded the version itself to be lodged with the utmost care in the Alexandrian Library.

2. This account was, in the main, adopted by the Christian Fathers, some of whom contributed additional circumstances; but it is now, however, generally exploded. That Demetrius Phalereus was ever librarian to Ptolemy Philadelphus is extremely doubtful, and it is by no means to be reconciled with the well-known facts in his life. Besides, it is very unlikely that a Peripatetic philosopher, of Demetrius' character, should have paid so much respect to the books of the Jews as to request such an exertion of the royal authority as this account attributes to him.

The prevailing opinion now is that the Septuagint translation was made at Alexandria, at different times and by different interpreters. That it was not all the work of the same translator or translators is manifest from the very great diversity of style and the various modes of translating that prevail in it. The Pentateuch, which is the most accurate part of the entire work, was probably executed in the reign of Ptolemy Philadelphus by some learned Jews for the use of their brethren then resident in Egypt, and who used the Greek language, and the remaining books at different times, as the necessity of the case demanded or the providence of God permitted. It is thought that when the Alexandrian Jews found this public exposure of their sacred oracles, or their translation into a profane language, to be displeasing to their brethren in Palestine, they invented the Aristæan story to give their version the sanction of royal authority.

3. The two most noted manuscripts of the Septuagint are the "Codex Alexandrinus" and the "Codex Vaticanus."

(1) The "Codex Alexandrinus," or Alexandrian copy, is now in the British Museum, and was presented to King Charles I. by Cyrillus Lucaris, patriarch of Constantinople, who obtained it at Alexandria, where it is thought to have been penned. It is in uncial or capital letters, without accents or marks of aspiration. A fac-simile of the New Testament has been published by Dr. Woide, and a fac-simile of the Old Testament has also been completed under Rev. H. H. Baber.

The date of this manuscript has been strongly contested by Biblical critics, some referring it to the middle of the fourth century, others contending it could not have been executed earlier than the tenth.

(2) The "Codex Vaticanus," so called because preserved in the library of the Vatican, at Rome, is a most valuable manuscript, and is greatly preferred by some critics to the "Codex Alexan-

drinus." It is written in the uncial or capital letters, and originally contained the entire Bible, but is now imperfect in both Testaments. It is supposed to have been written some time in the fourth century, before the time of Jerome, though some refer it to the sixth or seventh century.

4. Although the Septuagint version was originally made for the use of the Egyptian Jews, it at length acquired so high a degree of authority among the Jews of Palestine who understood the Greek language that, for a time, it was read in their synagogues instead of the Hebrew, and it is in very many passages quoted by the inspired writers of the New Testament. It was early translated into Latin, and became the text-book of the Western as well as of the Eastern Churches. It was the only copy of the Old Testament Scriptures they generally used or appealed to in all their controversies, particularly with the Jews, employing it most advantageously in confuting those from whom they had received it, proving to them from it, by the most irrefragable arguments, that their expected Messiah must have already come in the person of Jesus Christ. This circumstance at length led the Jews to have it in abhorrence, and a national annual fast was instituted to deplore the same event which they had before commemorated by a solemn festival, so that by the end of the first century it was expelled from every synagogue.

III. The Hebrew, however, had become so completely a dead language, not only to the Hellenists, but to the Jews generally, that they could obtain no knowledge of their Scriptures but through the medium of a translation; and therefore, to supply the place of the Septuagint, a new Greek version was made, about A. D. 129, by Aquila of Pontus, first a convert from paganism to Christianity and then a proselyte to Judaism. His version, which is now lost, is reported to have been very obscure. Of course another was called for, and that of Theodotion made its appearance about A. D. 184. This translator, who had been a disciple of Tatian, then a Marcionite, and lastly a Jew, retained as much of the Septuagint version as suited his purpose, but altered, added to or retrenched to make it conform to such Hebrew manuscripts as the Jews put into his hands. The Jews, as might be expected, were well pleased with this version, and the Christians were not offended, because it so much resembled the Septuagint.

IV. Toward the end of the same century, or early in the next, appeared another Greek translation, less literal and much more elegant than either of the former. It was the work of Symmachus, who, according to Eusebius, was first a Jew, then a Christian, and lastly an Ebionite. In this last communion, and for the use of its members, he composed his work, which he afterward seems to have remodeled in a second edition. The version of Symmachus is often and deservedly praised by Eusebius and Jerome, and the latter is thought to have made it in a great measure the pattern of his Latin translation.

V. Besides these, there are three other Greek versions mentioned by the early Christian writers, called the *fifth*, *sixth* and *seventh*, because their respective authors or editors are unknown. They seem to have comprehended only, or chiefly, the poetical books. Whether made by Jews or Christians it is difficult to say. Dr. Geddes thinks the *sixth*, which bears strong marks of Christian extraction, was only an interpolated edition of the Septuagint.

VI. All these versions were collected by the in-

defatigable Origen, and placed, together with the Septuagint and original Hebrew text, in his famous Polypla; and this, perhaps, is the last entire copy of them ever made, for the Talmudists having gradually excluded all Greek versions from the synagogues, and the Christians universally adhering to the old translations, the rest were either totally neglected, or only such parts copied into the margins of Bibles and commentaries as were deemed most worth attention.

1. Thus the Septuagint version triumphed at length, and remained, for several ages after, the sole Scripture standard in all the Christian Churches.

2. We are not to imagine, however, that it was exactly the same in every Church, or that any Church possessed a perfectly correct copy of it, much less that any such copy now exists. It had contracted many blemishes in the days of Origen, and it was principally with a view to remove them that he designed and executed the most celebrated of his works. No man, says Geddes, could be better qualified for such an undertaking; to a strong constitution, a clear head and a most prodigious memory he had joined an immense and universal erudition by the most assiduous and incessant application that perhaps ever was made. His insatiable thirst for learning made him pry into every corner for rare and curious books, and the liberality of his rich friends put it in his power to purchase them.

3. With all these advantages, he began about A. D. 231 to compile his "Tetrapla," which contained, in so many separate columns and in the following order, the four Greek versions of Aquila, Symmachus, the Septuagint and Theodotion.

4. But the very considerable differences, which Origen could not but observe, between the Septuagint and the three other versions, so recently made from the originals and so nearly agreeing with one another, induced him to suspect it to be much more erroneous than he had formerly thought, and suggested the idea of a work which should, both by its magnitude and importance, totally eclipse the former one. This produced, in succession, the "Hexapla," "Octapla" and "Enneapla," so denominated from the number of columns each contained. In the "Enneapla," of nine columns, the last three contained the three anonymous Greek versions before mentioned; the four immediately preceding them were the same with those of the "Tetrapla;" and in the first two stood the original Hebrew letters, with the pronunciation by its side in Greek characters.

5. Here it would have been well had the Biblical labors of this indefatigable critic terminated, but his judgment was not commensurate with his learning. He now determined upon a revision of the Septuagint to make it more conformable to the Hebrew text. The materials he employed are now utterly unknown, nor is it possible to say in how many respects his revised text differs from the older copies, which have long since been destroyed. But for this evil, to its full extent, Origen himself must not bear the blame. The text itself he left untouched, and only pointed out, by certain marks, the differences between that and the Hebrew text with which he had collated it. His admirers and followers, however, altered the old text, according to his suggestions, in the copies they made, and the loss of the autograph renders it impossible to ascertain how much. From this revised text all our present copies of the Septuagint are derived.

VII. As a source of interpretation for the New

Testament the Septuagint is invaluable. Desirous of possessing in Greek a faithful representation of the Hebrew Scriptures, and being themselves Jews, the translators retained Hebrew forms and modes of expression, while the words they were writing were Greek. The language, therefore, of the Septuagint is a kind of Hebrew-Greek, which a native of Athens might sometimes have found difficult to understand. But as this version became the Bible of all the Jews dispersed throughout the countries where Greek was spoken, it became the standard of their Greek language. Paul himself, who was born in Tarsus, and accustomed from his childhood to hear the Septuagint read in the synagogue of that city, adopted its Hebrew idioms. And when removed to Jerusalem and placed under the guidance of Gamaliel, the Hebrew tincture of his Greek could have suffered no diminution. The other apostles were all natives of Palestine, as was the evangelist Mark, and probably also the evangelist Luke. Their language, therefore, was Syriac, or Aramæan, of which the turns of expression had a close correspondence with those of the ancient Hebrew. Consequently, when they wrote in Greek, their language could not fail to resemble the language used by the Greek translations; and as every Jew who read Greek at all (which they who wrote in it must have done) would read the Greek Bible, the style of the Septuagint again operated in forming the style of the Greek Testament. Both the Hebrew Bible, therefore, and the Greek Testament are so closely connected with the Septuagint, as well in their language as in their matter, that the Septuagint is a source of interpretation alike important to both.

VIII. A highly interesting circumstance relating to the Samaritan Pentateuch and Septuagint, and affecting their critical character and value, remains to be noticed:

1. It is well known that although, considered in a general point of view, the Pentateuch in the Septuagint is a good version of the original, it nevertheless departs in very many cases from the exactness of the Hebrew text. In regard to these departures, it is a very interesting circumstance that in more than a thousand cases of them the Septuagint and the Samaritan Pentateuch are harmonious, both differing from the Hebrew and agreeing in their differences. In most of these cases the discrepancies with the original Hebrew are peculiar to the Samaritan and Septuagint codices, the ancient versions being only now and then accordant with them. The departures from the Hebrew in the Septuagint and Samaritan are thus classified by Gesenius:

(1) Those which are mere glosses, or conjectural emendations of difficult passages, as in Gen. ii. 2, 24; xiv. 19.

(2) Very remote changes, not affecting the sense, and depending on the omission, transposition or permutation of letters, etc. For example, the letter *vau* prefix is added to the text in the Samaritan about two hundred times where it is not found in the Hebrew copy, and removed about one hundred times where it is found in the Hebrew; in nearly all of which cases it is closely followed by the Septuagint. On the other hand,

(3) The Septuagint agrees with the Hebrew in almost a thousand instances where the Samaritan differs from both; for example, Gen. xvii. 17; xxi. 2, 4; xxiv. 55; xli. 32, etc.

(4) Both the Samaritan and the Septuagint sometimes depart from the Hebrew in laboring to remove difficulties, but they pursue different courses in order to accomplish this; for example,

Gen. xxvii. 40; Ex. xxiv. 10, 11, and the genealogies, Gen. v. 11.

(5) The Septuagint agrees with the Hebrew and differs from the Samaritan in all those daring interpolations mentioned under the eighth class of various readings in the former part of this section.

(6) The Septuagint differs from the Hebrew and Samaritan both in a few cases of minor importance from permutation of letters, etc., or introduction of parallel passages; but most of the discrepancies are entirely of an immaterial nature, not at all affecting the sentiment of the sacred text.

2. Such are the facts. To account for them is difficult, and demands a good degree of acquaintance with the business of criticism. Three ways have been proposed to explain such a surprising accordance of the Septuagint and Samaritan in so great a number of cases against the Hebrew.

(1) The Seventy translated from a Samaritan codex. So De Dieu, Selden, Hottinger, Hassencamp, Eichhorn and others. But this is altogether improbable. The mortal hatred which existed between the Jews and Samaritans in Palestine at the time when the version of the Seventy was made extended in the same manner to the Jews and Samaritans in Egypt. Josephus tells us that in the time of the Ptolemies (therefore at or near the time when the Septuagint version was made) the Jews and Samaritans disputed violently before the Egyptian king, and that the Samaritans, who were worsted in the dispute, were condemned to death. But Hassencamp and others labor to show that many of the departures in the Septuagint from the Hebrew text can more easily be accounted for by the supposition that they used a manuscript written in the Samaritan character, inasmuch as the similar letters in this character might easily lead them into the mistakes which they have made in their versions, while the Hebrew square character, which has similar letters, would not mislead them. It is unnecessary now to relate what former critics have replied in answer to these and all such arguments depending on the forms of Hebrew letters. Since Hassencamp and Eichhorn defended the above position, and since Gesenius replied to them, Kopp has published an essay on Themitish palæography that bids fair, it is thought, to end all disputes about the ancient forms of Hebrew letters. Instead of tracing back the square letter to Ezra and to Chaldee, as nearly all the writers before him, not excepting Gesenius himself, had done, he has shown by matter of fact, by appeal to actually existing monuments, that the square character had no existence until many years, probably two or three centuries, after the Christian era commenced, and that it was, like the altered forms in most other alphabets, a gradual work of time, of calligraphy or tachygraphy. He has exhibited the gradual formation of it from the earliest monuments found on the bricks of Babylon down through the Phœnician, the old Hebrew and Samaritan inscriptions stamped on the Maccabæan coins, and the older and more recent Palmyrene or Syriac characters, to the modern Hebrew. The reasoning employed by him and the facts exhibited are so convincing that Gesenius himself in the last edition of his Hebrew grammar has yielded at the point, and concedes that the square character of the Hebrew is descended from the Palmyrene—i. e., such characters as are found in the inscriptions upon some of the ruins of Palmyra. All argument from this source, then, is fairly put out of the question by the masterly performance of Kopp. As the Septuagint is well known and universally acknowledged to be a version made by the

Jews for their own use at Alexandria, there cannot be even a remote probability that this version was made from a copy in the hands of the Samaritans, whom they abhorred as the perverters of the Jewish religion.

(2) The Septuagint has been interpolated from the Samaritan codex, or the Samaritan from the Septuagint. Not the first, for the Jews certainly never loved the Samaritans sufficiently well to alter their Greek Scriptures from the Samaritan codex so as to make them at the same time discrepant from their Hebrew codex. Not the second, for the Samaritans would have been as averse to amending their own codex from a Jewish Greek translation as the Jews would have been to translate from the Samaritan codex. Besides, the greatest part of the discrepancies between the Samaritan and the Hebrew are of such a nature as never could have proceeded from any design, inasmuch as they make no change at all in the sense of the passages where they are found.

(3) That both the Samaritan and Septuagint flowed from a common recension of the Hebrew Scriptures, one older, of course, than either, and differing in many places from the recension of the Masorites now in common use. This is certainly a very ingenious supposition, and one which we cannot well avoid admitting as quite probable. It will account for the differences and for the agreements of the Septuagint and Samaritan. On the supposition that two different recensions had long been in circulation among the Jews, the one of which was substantially what the Samaritan now is, with the exception of a few more recent and designed alterations of the text, and the other substantially what our Masoretic codex now is, then the Seventy, using the former, would of course accord in a multitude of cases with the peculiar readings of it, as they have now done. If we suppose, now, that the ancient copy from which the present Samaritan is descended and that from which the Septuagint was translated were of the same genus, so to speak, or of the same class, and yet were of different species under that genus, and had early been divided off and subjected to alterations in transcribing, then we may have a plausible reason why the Septuagint, agreeing with the Samaritan in so many places, should differ from it in so many others. Add to this that the Samaritan and Septuagint each in the course of being transcribed for several centuries would receive more or less changes that might increase the discrepancies between them. This seems to be the only probable way of critically accounting for the actual state of the Samaritan and Septuagint texts compared with each other and with the Hebrew.

IX. But here we are treading on sacred ground. If these suggestions are well founded, then must it follow that in the time of Ezra and previously to his time there existed recensions of the Jewish Scriptures which differed in some respects very considerably from each other. From this conclusion many will spontaneously revolt. All who have not made sacred criticism a study, or who, at least, have not been fully apprised of the character of various readings and the sources in which they have originated, will be agitated with some unnecessary and ill-grounded fears. But the position is no more dangerous than many others which all enlightened critics admit.

1. It is probable; because, as it has been already shown, the actual state of the Samaritan and Septuagint codices renders it necessary to admit the position. Moreover, the Jews have from the most

227

ancient times uniformly held a tradition that Ezra with his associates, whom they style the Great Synagogue, restored the law and the prophets—i. e., renewed and corrected the copies of them which had become erroneous during the captivity. Certainly there is nothing at all improbable in this tradition. The corrected copies were the originals, probably, of our present Masoretic recension, which has in every age been in the keeping and under the inspection of the most learned Jews. The Samaritan copy and that from which the Septuagint was translated most probably belonged to the recension in common use among the Jews, and which, having been often copied, had come to differ in very many places from the corrected recensions of Ezra.

2. How far back some errors in this common recension may be dated it is difficult to say, but in all probability even to the very first copies of the original autographs. Such we know to have been the case, as is now universally admitted, in respect to the early copies of the New Testament. Is the Old Testament under a more watchful and efficient Providence than the New? Or has it ever been so? Nothing but the belief of a miraculous aid, imparted to every copyist of the Hebrew Scriptures, can, it is presumed, stand in the way of admitting the fact as it is now stated; and with such a belief, after several hundred thousand different readings have been actually selected from the manuscripts of the Old Testament, it would not be worth while to expostulate.

X. In justice, however, to this subject, and to allay the fears of well-meaning persons, inexperienced in criticism, and therefore often exposed to groundless fears, a few words must be added as to the dangers of the position now discussed.

1. A great part of it is evidently imaginary, for out of some eight hundred thousand various readings, about seven hundred and ninety-nine thousand are of just as much importance to the sense of the Hebrew Scriptures as the question in English orthography is whether the word *honor* shall be spelled with *u* or without it. Of the remainder, some change the sense of particular passages or expressions, or omit particular words or phrases, or insert them; but not one doctrine of religion is changed, not one precept is taken away, not one important fact is altered, by the whole of the various readings collectively taken. This is clearly the case in respect to the various readings which are found in the Samaritan and Septuagint, if we except the very few cases of alteration in them which plainly are the result of design, and which belong to more modern times. There is no ground, then, to fear for the safety of the Scriptures on account of any legitimate criticism to which the text may be subjected.

2. Jerome long ago had shrewdness enough to say, that "the Scripture was not the shell, but the nut," by which he meant that the sentiment of the Bible is the word of God, while the costume—i. e., the words in which this sentiment is conveyed—was of minor importance. So the apostles and so the Saviour thought, for they have in a multitude of cases (indeed in almost all the appeals recorded in the New Testament) appealed to the authority of the Old Testament by quoting the Septuagint version of it—a version incomparably more incorrect, and differing from the original Hebrew in incomparably more places, than the very worst version made in any modern times.

3. There is, then, no more danger in supposing

that very early there were different recensions of the Hebrew Scriptures than in supposing that there are different ones of the Scriptures of the New Testament, which all now admit, for it is not a matter of opinion and judgment, but of fact. The Bible, spreading through the whole earth, and becoming the rule of life and salvation to all nations, is at least as important now as it was when only one small nation admitted its claims. It is surely no more objection, then, against the watchful care of Providence over the Church and the records of its holy religion to admit that divers recensions of the Scriptures existed at an early age than to admit that they now exist.

4. The fact that various readings are found, not only in different classes of manuscripts which have come down to us through different channels, but in cases where the same original documents are inserted in different places of the same class of manuscripts, is proved beyond contradiction; the first by the actual comparison of manuscripts, the second by a comparison of different parts of Scripture. Such a comparison may be extended very much further; indeed, to a great portion of the books of the Chronicles, by reading them in connection with the parallel places in the books of Kings and other parts of the Old Testament. Jahn's Hebrew Bible is not only the best, but the only work which will enable any one to do this without trouble, as he has disposed of the whole of the books of the Chronicles in the way of harmony with other parts of Scripture. One thorough perusal and study of this will effectually set the matter at rest with any sober man.

5. Truth needs no concealment, and at the present day admits none. The Bible has nothing to fear from examination; it has ever been illustrated and confirmed by it; and so it will, doubtless, be still more so. But all "pious frauds" all "expurgatory indices," all suppression of facts and truths of any kind, only prove injurious at last to the cause which they are designed to aid. This is a sufficient reason for abjuring them for ever, not to insist on the disingenuousness which is implied in every artifice of this nature.

#### IV. The Greek Testament.

I. We have now to sketch the literary history of the text of the Greek Testament.

1. The same causes that gave rise to various readings in the Hebrew text of the Old Testament operated to produce them in the Greek text of the New. From the periods of the original publication of these books down to the invention of printing—a period of fourteen hundred years—the only method by which they could be multiplied, and thus rendered available for the purposes of general instruction, was that of transcription or writing; and as this process is so much more precarious than our present method of producing copies of literary works, it is evident that without a continued miracle, which we have no reason to expect, many deviations from the autographs of the sacred authors must have occurred. Letters would occasionally be exchanged, omitted or improperly inserted, syllables and words be misspelled or transposed, and sentences be occasionally left out or repeated. Happily for us, however, the great multiplication and extensive circulation of copies furnish the materials for correction, and thus the causes of the errors become the means of their removal.

II. A summary account of the principal critical editions of the Greek Testament will show the pro-

gressive improvement of the text, and prepare the way for a discussion of the causes, the character and the value of various readings.

1. The first edition of the New Testament appeared in 1516, under the editorship of the celebrated Erasmus. The manuscripts upon which he formed his text were only four in number, and the three of which he is found to have made the greatest use contained only parts of the New Testament, and in other respects were not of very high value. In addition to his manuscripts, Erasmus consulted the writings of some of the Greek Fathers, and also the Latin Vulgate; and where, in cases of difficulty, these afforded him no assistance, he corrected from conjecture. It is plain, therefore, from the character of the materials of which Erasmus was possessed, that, however learned and acute he may have been, his edition cannot possess the very highest degree of excellence. True, in his subsequent editions he made numerous alterations; but notwithstanding many are improvements, they do not materially alter the character of his text.

2. The next edition was that printed in the Complutensian Polyglot, which indeed professes to have been printed two years prior to the appearance of Erasmus' first edition, though the publication was delayed till 1522. An examination of the Complutensian text has shown it to have been formed exclusively on comparatively modern manuscripts, and it therefore contributed little or nothing toward restoring the purity of the Greek text.

3. In the year 1546, Robert Stephens, the celebrated printer at Paris, published the first edition of his New Testament, which is proved to be little more than a compilation from the Erasmus and Complutensian texts. In 1550 he published a third edition, once supposed to have had its text formed on the authority of Greek manuscripts, as professed by the editor in his preface, but a careful examination has shown it to be hardly anything more than a reprint of the fifth edition of Erasmus.

4. Beza's edition followed next in (1565), but although he possessed some valuable materials for correcting the errors which had crept into the common text, he only amended that of Stephens in about fifty places, and not always for the better.

5. The first of the Elzevir editions, in which was established the text now in common use, and known as the *Textus Receptus*, or "Received Text," was published in 1624, from Beza's edition, except in about fifty places, where the readings were borrowed partly from the margin of Stephens' edition and partly from other editions. The *Textus Receptus*, therefore, it seems, was copied, with a few exceptions, from the text of Beza, who closely followed Stephens, and Stephens, in his third edition, copied solely from Erasmus, except in the Revelation, where he followed sometimes Erasmus and sometimes the Complutensian editors. The text, therefore, in common use, resolves itself at last into the Complutensian and the Erasmus editions. But neither Erasmus nor the Complutensian editors printed from ancient Greek manuscripts, and the remainder of their critical apparatus included little more than the latest of the Greek Fathers and the Latin Vulgate. It is obvious, therefore, that but little had yet been effected toward giving consistency and permanency to the Greek text. For the attainment of so desirable an object, however, there were not wanting able and laborious critics. Walton, Usher, Carcellhaus and Fell respectively contributed to it by the collation of

manuscripts and the comparison of ancient versions.

6. Between the years 1653-7 the London Polyglot made its appearance, and in 1707 Dr. Mill published his critical edition of the Greek Testament, upon which he had expended the labor of thirteen years. The text adopted by Mill was that of Stephens' third edition; but it was accompanied by no fewer than thirty thousand various readings, collected not only from Greek manuscripts and previously printed editions, as well as the Oriental and other ancient versions, but also from the quotations by the early Fathers in their respective works.

7. The earliest edition of the Greek Testament in which the critical apparatus of Mill was applied to the revision of the text was the one undertaken by Dr. Edward Wells, and published between 1713 and 1718. In 1734 Bengel, a learned professor in Germany, furnished a still more valuable edition for critical purposes, in which he added to the materials collected by Mill extracts from upward of twenty Greek manuscripts, from several of the ancient Latin versions, and also from the Armenian translation. These he did not venture to apply to the revision of the text, except in the Apocalypse, but printed under the text, and classed according to their respective values.

8. We have now arrived at the period when the elaborate and splendid edition of Wetstein made its appearance, superseding all that had gone before. The text adopted by Wetstein was that of Elzevir, or the one in common use, but it was accompanied by nearly a million of quotations in the margin, collected from various sources. But though Wetstein very considerably augmented the stock of critical materials, though he drew from various sources which had hitherto remained unopened, though he collected not by other hands, but by his own, and though few men have possessed a greater share either of learning or of sagacity, yet no alteration was made in the Greek text. He proposed, indeed, alterations, which he inserted in the space between the text and the body of various readings, with reference to the words which he thought should be exchanged for them, and where a reading should, in his opinion, be omitted without the substitution of another, he prefixed to it a mark in the text. But these proposed alterations and omissions are, in general, supported by powerful authority, and commonly commend themselves to an impartial critic. Though, among the various readings, he has occasionally noted the conjectures of others, he has never ventured a conjecture of his own; nor has he made conjecture, in any one instance, the basis of a proposed alteration. Wetstein's edition may therefore be regarded as not only the most elaborate, but also as the most valuable, critical edition extant. It is in two folio volumes, and was published in 1751 and 1752.

9. A later, and a very important, edition which the plan of this work requires us to notice is that of Griesbach, the first impression of which appeared in the years 1775 and 1777, but was afterward materially improved, and republished in 1796-1806. In this laborious work Griesbach employed all the materials that had been collected by his predecessors, as well as many more procured from Greek manuscripts by his own industry. The various readings of Bengel, Mill and Wetstein were subjected to a scrupulous examination, as were those collected by Matthæi, Alter and Birch. The Latin versions published by Blanchini and Sabatier, and the Sahidic, the

Armenian and the Slavonian versions, as well as the fragments of the two very ancient Greek manuscripts preserved at Wolfenbützel, were carefully collated (though some of them not expressly for this work), and then the whole of the materials thus accumulated were applied to the revision of the text. The design of Griesbach was to collect in a small compass the critical apparatus which lay dispersed in various works, and to prepare an edition of the Greek Testament which should contain a text freed from considerable errors, accompanied by such helps as might facilitate interpretation, to exhibit the more important various readings, and the authority on which they are supported, together with the editor's judgment respecting them.

"That Griesbach has fulfilled his duties to the public," says Bishop Marsh, "that his diligence was unremitting, that his caution was extreme, that his erudition was profound and that his judgment was directed by a sole regard to the evidence before him, will in general be allowed by those who have studied his edition and are able to appreciate its merits. That his decisions are always correct, that in all cases the evidence is so nicely weighed as to produce unerring results, that weariness of mind under painful investigation has in no instance occasioned an important oversight, that prejudice or partiality has nowhere influenced his general regard for critical justice, would be affirmations which can hardly apply to any editor, however good or great. But if at any time he has erred, he has at the same time enabled those who are competent judges to decide for themselves, by stating the contending evidence with clearness and precision. Emendations, founded on conjecture, however ingenious, he has introduced not in a single instance. They are all founded on quoted authority. Our attention is even solicited and directed to that authority, the adopted readings being always printed in smaller characters than the rest of the text, and with reference to the rejected readings, which are printed in the inner margin in the same letters with the text, while both of them refer to the respective evidence which is produced below. If readings are added where none existed before, or are withdrawn without substitution, the changes are marked with equal clearness, and are equally supported by critical authority. When the evidence is not sufficiently decisive to warrant an alteration in the text, the readings worthy of notice are placed in the inner margin with different marks expressive of their different claims. Such is the character of this important work, which, with the prolegomena belonging to it, forms a treasure of Biblical learning of incalculable value."

10. There have been several editions of the Greek Testament in which the most important of Griesbach's adopted readings have been inserted; in some of them there are additional corrections. The following are deserving of special notice.

Dr. S. T. Bloomfield published a very valuable edition of the Greek Testament, accompanied with critical, philological and exegetical notes. The text is formed on the last edition of Stephens which Mill had adopted. This work is not cumbersome or overloaded with minute details, and it is extensively known in this country. In 1844, 1852, 1856 and 1857 the Rev. Henry Alford, D. D., dean of Canterbury, issued a critical edition in four volumes with notes which displays a fair amount of scholarship and much soundness of judgment. Like the work of Bloomfield, it also is accessible to American readers, as a part of an edition has

been printed in this country, and the remaining volumes may easily be had. Of all modern issues in this department none are more valuable than the editions which the great publishing house of Mr. Bagster of London has given to the public. His folio volume is printed from the text of Mill, but it shows the readings of Griesbach; and in a smaller work in which the received text is given the readings of Griesbach are given, and thus the fruit of the learned labors of that eminent critic are brought before ordinary Greek scholars in a condensed form, and at a cost so exceedingly low that scholars of a former age would have looked on the work with surprise and admiration. This edition is rendered more valuable by the fact that it is accompanied by a concordance and lexicon of all the Greek words in the text of the New Testament, and scholars on both sides of the Atlantic have been laid under great obligations by the publisher, who has shown such judgment and zeal in the preparation of such a condensed and learned work.

11. Since the sixteenth century Greek manuscripts have been discovered of far greater antiquity than those of Erasmus and Stephens, as well as others in Latin, Syriac, Coptic and Gothic, into which languages the sacred text was translated between the second and fourth centuries, while in the works of the Fathers from the second century downward many quotations from the New Testament have been found and compared. And the result has been that while on the one hand scholars have become aware that the text of Erasmus and Stephens was in use in the Byzantine Church long before the tenth century, on the other hand they have discovered thousands of readings which had escaped the notice of those editors. The question then arose which reading represented what the apostles had written. By no means an easy question, since the variations in the documents are very ancient. Jerome notices them, and many were in existence even as early as the fourth century. Though scholars are divided as to the readings which most exactly convey the word of God, one thing is agreed upon by the majority of those who understand the subject—namely, that the oldest copies approach the original text more nearly than the later ones.

Now, Providence has ordained for the New Testament more sources of the greatest antiquity than are possessed by all the old Greek literature put together. Of these, two manuscripts have long been especially esteemed by Christian scholars, since, in addition to their very great antiquity, they contain very nearly the whole of both the Old and New Testaments. One of these precious treasures is deposited in the Vatican, at Rome, and the other is preserved in the British Museum. A third copy of inestimable value was discovered at Mount Sinai thirty-one years ago; and it was purchased sixteen years since, and is now deposited at St. Petersburg, in Russia. These three manuscripts undoubtedly stand at the head of all the ancient copies of the New Testament, and it is by their standard that both the early editions of the Greek text and the modern versions may be compared and corrected.

Whence the Vatican Codex came is not known, but it appears in the first catalogue of the Vatican collection, in the year 1475. The manuscript embraces both the Old and New Testaments. Of the latter, it contains the four Gospels, the Acts, the seven Catholic Epistles, nine of the Pauline Epistles and the Epistle to the Hebrews as far as Hebrews ix. 14, from which verse to the end of the

New Testament this manuscript is wanting; thus the last chapters of the Hebrews and the Epistles to Timothy, Titus, Philemon and the Revelation of St. John are missing. It is in three columns on each page. The peculiarities of the writing, the arrangement of the manuscript and the character of the text—especially certain very remarkable readings—all combine to place the execution of this codex in the fourth century, possibly about the middle of it. Owing to the regulations of the papal library, it was for a long time very difficult to make use of the manuscript; but in the year 1828 an edition of it was undertaken by Angelo Mai, afterward cardinal, at the instance of Pope Leo XII. The work did not appear until three years after Mai's death, and it is extremely inaccurate. Many hundred errors were corrected by Tischendorf in his edition of 1867, and further corrections were made in a *fac simile* edition of Verecchione and Cozza, in 1868; and these are included in the appendix to the Vatican New Testament of 1869.

The "Alexandrine Codex" was presented to Charles I. of England in 1628 by Cyril Lucar, patriarch of Constantinople, who had himself brought it from Alexandria, of which place he had formerly been patriarch; and hence its name. It is written in pages of two columns, and contains both the Old and New Testaments. Of the New the following passages are wanting: Matt. i. 1 to xxv. 6; John vi. 50 to viii. 52; 2 Cor. iv. 13 to xii. 6. In addition to the Bible, the manuscript contains the Epistle of Clemens Romanus (the only known copy), a letter of Athanasius and a treatise of Eusebius upon the Psalms. On palaeographic and other grounds, it would appear to have been written about the middle of the fifth century. The New Testament was published in quasi *fac simile* in 1786, by C. G. Woide, and it has been recently re-edited, with corrections, in a smaller shape by B. Harris Cowper.

The "Sinaitic Codex" was discovered by the eminent Constantine Tischendorf, in 1844, at the convent of St. Catharine, on Mount Sinai, and in 1859 he purchased it and brought it to St. Petersburg, at the instance of the emperor Alexander II., by whose liberality the second journey was undertaken and the cost of the manuscript was defrayed. It is written in four columns to a page, and contains both Old and New Testaments—the latter perfect without a leaf. In addition, it contains the entire "Epistle of Barnabas" and a portion of the "Shepherd of Hermas," two books which, down to the beginning of the fourth century, were looked upon by many as truly belonging to the canon of Scripture. All the considerations which tend to fix the date of manuscripts lead to the conclusion that the "Sinaitic Codex" belongs to the middle of the fourth century. Indeed, the evidence is clearer in this case than in that of the "Vatican Codex;" and it is not improbable (which cannot be the case with the Vatican manuscript) that it is one of the fifty copies of the Scriptures which the emperor Constantine, in A. D. 331, directed to be made for Byzantium, under the care of Eusebius of Cæsarea. In this case it is a natural inference that it was sent from Byzantium to the monks of St. Catharine by the emperor Justinian, the founder of the convent. The entire codex was published by Dr. Tischendorf, its discoverer, under the orders of the emperor of Russia, in 1862, with the most scrupulous exactness, and in a truly magnificent shape, and the New Testament portion was issued in a portable form in the years 1863 and 1865. These

considerations seem to show that the first place among these manuscripts, both for age and extent, is held by the Sinaitic Codex, the second by the Vatican and the third by the Alexandrine. The text which they exhibit is not merely that which was accepted in the East at the time they were copied; but having been written by Alexandrine copyists who knew but little of Greek, and therefore had no temptations to make alterations, they remain in a high degree faithful to the text which was accepted through a large part of Christendom in the third and second centuries. The proof of this is their agreement with the most ancient translations—namely, the so-called Italic, made in the second century in pro-consular Africa; the Syriac Gospels of the same date, now transferred from the Nitrian desert to the British Museum; and the Coptic Version of the third century. It is confirmed also by their agreement with the oldest Fathers, such as Irenæus, Tertullian, Clement and Origen. These remarks apply to the "Sinaitic Codex," which is remarkably close in its agreement to the "Italic" version, more than they do to the Vatican, and still more than to the Alexandrine, which, however, is of far more value in the Acts, Epistles and Apocalypse than it is in the Gospels.

The value of such ancient treasures must be obvious, because they carry the reader back to an early age, when the mischances could not have occurred in the copying and recopying to which manuscripts are liable in the lapse of ages. When they were prepared, a profound reverence existed for every work which was recognized as being of apostolical authority. Glosses written on the margin were not so likely to have been carried into the body of the manuscript as in the process of seribes of a later age; and the bitterness of religious partisanship had not time to act with such reckless zeal as to induce copyists to add or to omit so as to subvert the cause of contending controversialists. The causes which have tended to produce various readings fall to be considered in the next section; meantime, it may be recorded as a cause for great thankfulness that while the multiplication of ancient manuscripts has enabled scholars to attain with greater certainty to a critical knowledge of the real text of the sacred Scriptures: the older the codex and the nearer to the apostolic age that any manuscript reaches, the more does the evidence become strengthened that the actual word of God has been preserved with a watchfulness and fidelity that has permitted nothing to be lost, and has dared to add nothing to the revelation of God which the sacred Scriptures contain.

#### V. Various Readings.

I. It only remains to give some account of the sources of those various readings about which so much has been said, and to suggest some considerations for determining their real value.

II. In order to form an adequate conception of their nature, it will be necessary to glance at the accidents literary works are liable to in the progress of transcription and in their passage down the stream of time. In this respect the sacred writings stand precisely as do other ancient works. An original document was committed to the keeping of the Church by an inspired prophet or apostle who designed it, in conformity with the divine purpose, for general and constant use. To effect this purpose, copies of the document had to be multiplied by transcription in precisely the same manner as the literati of Greece and Rome mul-

tiplied copies of their classic authors. Now, in such a process the sacred text would be liable to be affected by the usual inconveniences of copying, unless a continued miracle were wrought to insure its integrity. It would be a mere waste of time to argue that no real advantage could have been derived from such an interposition of the divine power; because, as must be obvious to all, it would lie beyond the ability of man to demonstrate the fact of such an interposition on the mere ground of a uniformity of reading in the various manuscripts extant. Such a uniformity might have been the result of other and objectionable causes, and therefore could have furnished no proof of a divine superintendence. But, in fact, we need no such supervision; the materials we possess are adequate to procure a sufficiently authentic text, while we are relieved from the necessity of repelling the charge of a concerted agreement among its several depositaries for the purpose of giving a perfect unity of reading. True, the great multiplication of these writers has induced a proportionate variety of readings, or variations, in existing copies; but this, instead of being the cause of permanent inaccuracy, affords above all things the means of correcting errors where they have really crept in.

1. The first step in the inquiry is, then, to ascertain the probable causes of various readings which existing copies present, because it is obvious that if two manuscripts present a various reading of the same passage the true one can only be ascertained and fixed with certainty by a previous acquaintance with the sources whence errors in the copies of literary works may spring.

2. The chief sources of error are—

1. Imperfections in the original manuscripts.
2. Accidental mistakes of transcribers.
3. Assumption of marginal glosses into the text.
4. Designed alterations of a literary kind.
5. Willful corruptions made for party purposes.

On each of these a word may be offered.

1. It is evident that an original manuscript might contain such imperfections as would induce a diversity of reading in two or more copies, caused either by the ordinary ravages of time or by the particular accidents to which it had been exposed. Thus, if a word or letter had been rendered illegible, and there were no other manuscripts at hand which made up the deficiency, a transcriber would probably supply by conjecture; and since more than one letter or word might suit the connection, two transcribers might vary in their insertions.

2. Accidental departures of transcribers from their exemplars would also occasion a large number of various readings.

These mistakes might be of several kinds.

- (1.) If he wrote after a person reading,
- (a) He might mistake a word for one similar in sound, or the reader might mispronounce;
- (b) He might transpose two or more words;
- (c) He might omit one or more words;
- (d) He might unite two words, or separate one word into two or more.

(2.) If the transcriber had the work before him,

- (a) He might mistake similar letters.
- In the Hebrew manuscripts the greater similarity between some of the characters would proportionately augment the chances of error.

As a specimen, we may notice, 2 Ki. xx. 12, where *b* has been written for *m* in the name of the king of Babylon, as will be seen by comparing Isa. xxxix. 1. In the former place it is Berodach; in the latter, Merodach. In Num. ii.

14 *r* has been written for *d*, Renel or Deuel, as may be seen by collating the passage with Num. i. 14; vii. 42; x. 20. Similar permutations of letters are found in many manuscripts of the New Testament. And the chances of mistake would be multiplied in proportion to the damage a manuscript had sustained.

(b) Or the writer might mistake a contraction, of which there are many in ancient Greek manuscripts.

(c) The transcriber might also wrongly divide words or letters or improperly unite them.

Of various readings thus arising, one or two examples may be here noticed. In Hos. vi. 5 a letter belonging to the beginning of one word has been added to the end of the preceding, "And thy judgments the light goeth forth;" this gives no sense; but all the ancient versions, except the Vulgate, read, "And my judgment shall go forth as the light." Ps. lxxii. 4 presents a very singular reading: "No bands (distresses) into their death." This has resulted from uniting two words in one, "Happen to them; perfect and firm is their strength." In James v. 12 the common text reads, with most manuscripts, "Lest ye fall into hypocrisy;" but the Alexandrian and a few others, with some ancient versions, read "under judgment."

(d) Again, a variation might be occasioned by the exchange of synonymous words.

It is known that in copying a work it is usual with a transcriber to fix a short passage in his memory and then to commit it to writing; he does not usually take up a single word at a time. Now, in writing it is by no means unlikely that a synonymous word would be substituted for one in the text. Those in the habit of copying will immediately perceive the liability.

(e) Other accidental variations would be occasioned by the recurrence of a word after a short interval, a source meriting particular attention.

Suppose the same word stands in different places in a passage, and that the writer, after having transcribed down to the former of the two words, should, in carrying his eye back to his exemplar, alight upon the latter of them, and conceiving it to be the one down to which he had already written, proceed onward in his work. In such case so much of the passage as was between the two words in question would be omitted in the derived copy.

That such omissions have frequently occurred we have all the evidence that the subject admits of. The most remarkable instance occurs in Matt. xxvii. 35, where all the words which, in the received text, stand between *kleron* near the beginning of the verse and the same word at the end of the verse are omitted in ninety-eight known manuscripts, the principal versions and some of the Fathers, upon the authority of which they are rejected as spurious by Wetstein and Griesbach. Michaelis, however, defends their integrity, judiciously arguing that the interpolation of the omitted words so as exactly to suit the context is very difficult to be conceived, whereas their omission, on the principle just mentioned, would be a very natural accident. It cannot, he remarks, be an interpolation from John xix. 24, where the quotation is differently introduced; and, moreover, the author of the quoted Psalm is in the disputed passage styled the prophet, the application of which title to the Psalmist is peculiar to Matthew.

In the Hebrew sacred Scriptures there is such an omission in Jud. xvi. 13, in the latter part of

the verse. A reference to the passage will show that its sense is not complete: "And he (Samson) said unto her (Delilah), If thou weavest the seven locks of my head with the web." This ends the address of Samson, and the following verse begins, "And she fastened it with the pin," etc. Now, it seems very strange that Samson should direct Delilah to weave the locks of his head and nothing more, and that she should omit to do this and adopt an expedient which he had not suggested, namely, fasten his hair with a pin. But such is the representation of the passage. It might be thought highly probable, therefore, that there is an omission in our present text; but we are not left to conjecture, for the Septuagint, no doubt following the old Hebrew text, has the following addition to the words of Samson, as they stand in our copies and are cited above: "And shall fasten them with a pin in the wall, I shall become weak like other men; and so it was that when he slept, Delilah took the seven locks of his head and wove them with the web." Then follows v. 14, as in our version. Now, the part omitted closes with the same words (with the web) as those now closing v. 13; and the copyist, having written onward to the first member of the sentence where they stand, in again looking at his original alighted on them at the end of the sentence, and mistaking them for the words he had just written, naturally passed on to the verse following; consequently, all the words lying between were left out in his copy.

But it will be evident, on a moment's reflection, that this same thing—i. e., the recurrence of a word after a short space—might also give rise to another description of error, namely, a repetition of the words lying between.

In 2 Ki. vii. 13 this appears to have been the case, for we have there a repetition of seven words which seem entirely useless, though our venerable translators, with most others, have not thought themselves at liberty to reject them. An inspection of the original will show how easily this repetition might originate in the manner we have supposed; and if the conjecture here ventured be well founded, the words below enclosed in brackets are spurious: "And one of his servants answered and said, Let some take, I pray thee, five of the horses that remain, which are left in the city, behold they are all as the multitude of Israel that [are left in it; behold, I say, they are even as all the multitude of the Israelites that] are consumed."

The disputed words are wanting in the oldest of Kennicott's manuscripts, and in forty others collated by him and De Rossi; neither are they contained in the Greek or Syriac versions.

(f) Another source of error, nearly allied to the last, is the immediate repetition of letters the latter of which, being mistaken for the former, are left out.

To perceive clearly the probability of such errors, the manner in which the ancient manuscripts were written must be recalled. This was in a continuous text, without any space between the words, in which cases the chances of mistake were much greater and more numerous than they would be according to the present system of writing. To illustrate this we may refer to Luke vii. 21, where several manuscripts omit the article. In some cases of this kind there is no internal evidence for settling a disputed reading, since it is impossible to decide whether the letters in question have been omitted or repeated where either way of writing the passage makes out a good sense.

In such circumstances critics are governed by the

number and character of the testimonies on either side. Again—

(g) A person, having written one or more words from a wrong place, and not choosing to erase it, might return to the right one, and thus produce the improper insertion of a word or clause.

This has probably been the case in Matt. xxvi. 60, among other passages, where the first "but found none" is superfluous and improper, and is wanting in one manuscript. In 2 Cor. xii. 7 the second "lest I should be exalted above measure" is wanting in several manuscripts and two ancient versions; it is also superfluous. So also when a transcriber, having discovered his omission, subjoined what he had omitted, he would obviously produce a transposition in the text.

3. The third cause of various readings noticed was the assumption of marginal glosses in the text. This appears to have been a fruitful source of error, and has been occasioned in various ways. Thus, the possessor of a manuscript might write in the margin—

- (a) An explanation of a difficult passage;
- (b) A word synonymous with one in the text, but more common or easily understood; or,
- (c) The modern name of a place;
- (d) A correction of some real or supposed error;
- (e) A parallel passage in some other place.

In all, or in any, of these cases, where a copyist supposed the marginal notes to have been parts of the text, accidentally omitted in the copy which contained them, and afterward supplied in this manner, he would transfer them at once into his copy, in their supposed places, and thus produce a discrepancy between that and other copies taken from the same manuscript, but in which the marginal glosses were omitted. It is likely, too, that there might be variations in two or more copies taken from a manuscript having marginal notes, where all the transcribers had inserted them in the text, but not in precisely the same place.

4. By designed alterations of a literary description is meant such alterations as consist in a correction of supposed errors in the text; the substitution of a modern for an obsolete name or word; of an elegant for a barbarous phrase; or of a common for a dialectic form of speech.

5. The last source was the corruption of the text for party purposes. But upon this it is obviously unnecessary to enlarge, except to say that although there is good reason to believe it has been attempted, the very nature of the writings upon which the fraud was to be practiced, and the wide extent of their circulation, as well as the watchful jealousy with which the different sects of religionists have at all times viewed each other, rendered it impossible to any material extent.

3. We have been thus particular in giving a general idea of the nature of various readings to enable those persons to whom the subject is new to see that their total value, although their number should amount to two millions, is comparatively very insignificant. All those who suppose that the Scripture depends on a word or letter so essentially that it is not Scripture if either be changed or omitted must, if they will be consistent, abandon the whole Bible, in which many changes of this kind, it is past all question, have actually taken place. The critic wonders not that so many, but that no more, have been experienced, as he well may, if all the circumstances be taken into account.

4. But to return to the real and comparative value of these readings. To what do they amount? To say nothing of those which are mere *errata*—

as the interchange of letters or words, the transposing of words in a sentence, the improper division of letters into words, the mistaking of a contraction and other things of a like kind, about which there would be no difficulty in determining, even if we possessed not a single tolerably correct manuscript—it will be evident to any person who takes the trouble to examine (and those who will not are not entitled to a hearing) that (from the abundance of our materials, in the shape of manuscripts, quotations in ancient authors and early versions, added to the knowledge we possess of the causes of existing errors) nine hundred and ninety-nine of them out of every thousand may be removed, and the original reading restored with ease, after the critical apparatus has been formed. For this purpose there are certain laws of what is technically called *conjectura critica*, or critical judgment; and where the process is conducted according to these, we may place the most unhesitating reliance on the result.

III. To discuss largely the character of these critical laws would be out of place, but the following remarks will probably interest those wholly unacquainted with the subject.

1. The value of a contested reading is not estimated merely by the number and antiquity of the manuscripts in which it is found; not by the number of the manuscripts merely, because if a hundred copies have been taken from one exemplar, their united authority amounts but to that of the parent manuscript; not by their antiquity merely, because a very ancient manuscript may have been derived from the original autograph through a greater number of copies than a more modern one may have been; or it may have been written by a less skillful or conscientious person.

2. As it regards the Hebrew Bible, we have not the advantage of comparing a number of manuscripts derived from the original autographs, through independent sources, as in the case of the Greek Testament; because we know that all the existing copies, excepting the "Codex Bezae Cantabrigiae," about which critics are not fully agreed, have been made from manuscripts revised by the Masoretic critics after the sixth century of the Christian era. But we have, nevertheless, as was seen from the considerations suggested on this topic in a previous section, the fullest assurance of the general accuracy of the Masoretic text.

3. But the case is widely different as respects the text of the Greek Testament for conducting the criticism, of which there are certain canons of a peculiar character; and Bishop Marsh sets this matter in a very clear light, thus:

(1) "In determining the *quantum* of evidence for or against a particular reading the authorities used to be rather numbered than weighed; so that if a reading were contained in thirty manuscripts out of fifty the scale was supposed to turn in its favor. It is true that under similar circumstances more importance was attached to ancient than to modern manuscripts, but the modes of estimating that importance were so various that the same premises not unfrequently led to different conclusions. Nor was due attention paid to that necessary distinction between the antiquity of a manuscript and the antiquity of its text. Wetstein went a great way toward the reduction of sacred criticism to a regular system, but much still remained to be performed, for which we are indebted to Semler, who laid the foundation, and to Griesbach, who raised the superstructure.

(2) "From a comparison and combination of the readings exhibited by Wetstein it was discerned

that certain characteristic readings distinguished certain manuscripts, Fathers and versions, that other characteristic readings pointed out a second class, others again a third class of manuscripts, Fathers and versions. It was further discovered that this threefold classification had an additional foundation in respect to the places where the manuscripts were written, the Fathers lived and the versions were made. Hence the three classes received the names of the Alexandrine Recension, the Constantinopolitan or Byzantine Recension, and the Western Recension. Not that any formal revision of the Greek text is known, either from history or from tradition, to have taken place at Alexandria, at Constantinople or in Western Europe. But whatever causes unknown to us may have operated in producing the effect, there is no doubt of its existence—there is no doubt that those characteristic readings are really contained in the manuscripts, Fathers and versions, and that the classification which is founded on them is founded therefore on truth. Hence arises a new criterion of authenticity. A majority of individual manuscripts can no longer be considered either as decisive or even as very important on this subject. A majority of the recensions, or, as we should say of printed books, a majority of the editions, is alone to be regarded as far as number is concerned. The testimony of the individual manuscript is applied to ascertain what is the reading of this or that edition, but the question of fact being once determined, it ceases to be of consequence what number of manuscripts may be produced, either of the first or of the second or of the third of those editions. For instance, when we have once ascertained that any particular reading belongs to both the Alexandrine and to the Western, but not to the Byzantine, edition, the authority of that reading will not be weakened, even although it should appear on counting the manuscripts that the number of those which range themselves under the Byzantine edition is ten times greater than that of the other two united. We must argue in this case as we argue in the case of printed editions, where we simply inquire what are the readings of this or that edition, and never think of asking for the purpose of criticism how many copies were struck off at the office where it was printed. The relative value of those three editions must likewise be considered; for if any one of them, the Byzantine, for instance, to which most of the modern manuscripts belong, carries with it less weight than either of the other two, a proportional deduction must be made, whether it be thrown into the scale by itself or in conjunction with another. Such are the outlines of that system which Griesbach has applied to the criticism of the Greek Testament. The subject is so new, and at the same time so intricate, that it is hardly possible to give more than a general notion of it. It requires long and laborious investigation, but which every Biblical scholar will readily undertake when he considers that it involves the question, What is the genuine text of the New Testament?"

IV. Against Griesbach's classification of manuscripts some formidable objections were urged by Matthaei, Laurence and Nolan, and critics of eminence have proposed other recensions in its stead. It may be safely affirmed, however, that no one of these affects the readings of Griesbach, generally, but only the process of reasoning by which they have been established.

V. The versions and Fathers which are found to agree with the recensions or editions just enu-

merated are—1. The Alexandrine, or Egyptian edition: with this agree the quotations of Origen and the Coptic version. 2. The Byzantine, or Eastern edition: with this agree the greater number of the many manuscripts written by the monks on Mount Athos. Also the quotations in Chrysostom, Theophylact, bishop of Bulgaria, and the Slavonic or Russian version. The common printed text of the Greek Testament has generally the readings of this recension. 3. The Occidental, or Western edition, which was formerly used where the Latin language was spoken, agrees with the old Itala, the Vulgate and the quotations in the Latin Fathers.

To these three Michaelis has added, 4. The Edessene edition; but of this no manuscripts are now known.

VI. It only remains to suggest a few additional considerations relative to the various readings in the Scriptures, with a view to remove any unfavorable impressions which may have been created in the minds of persons not conversant with this department of Biblical criticism.

1. In innumerable cases we see the proverb verified that "He who knows nothing fears everything;" and it is quite applicable to the subject of various readings in the Scriptures. The first attempts to compare manuscripts and to collect these readings were denounced as being horribly profane and dangerous. Yet the comparison went on. Next, it was admitted to be right in respect to the New Testament, but very wrong in regard to the Old, every word and letter and vowel-point and accent of which Buxtorf roundly asserted to be essentially the same all the world over. More than eight hundred thousand various readings, actually collected, have dissipated this illusion, and taught how groundless the fears of those were who were altogether inexperienced in the criticism of the sacred text. The real theologian is satisfied, from his own examination, that the accumulation of many thousands of various readings, obtained at the expense of immense critical labor, does not affect a single sentiment in the whole Old or New Testament. And thus is criticism, which some despise and others neglect, found to be one of those undecaying columns by which the imperishable structure of Christian truth is supported.

2. But it would be no difficult matter to show that the fact of these variations in the text of the Hebrew and Greek Scriptures, as found in the various manuscripts and other documents classed with them by Biblical critics, do really afford incontestable arguments in favor of the authenticity of the Bible. No book, as Michaelis has remarked, is more exposed to the suspicion of willful corruption than the Scripture, for the very reason that it is the fountain of divine knowledge; and if in all the manuscripts now extant we found a similarity in the readings, we should have reason to suspect that the ruling party of the Christian Church had endeavored to annihilate whatever was inconsistent with its own tenets, and by violence produce a general uniformity in the sacred text; whereas the different readings of the manuscripts in our possession afford sufficient proof that they were written independently of each other by persons separated by distance of time, remoteness of place and diversity of opinions. They are not the works of a single faction, but of Christians of all denominations, whether dignified with the title of orthodox or branded by the ruling Church with the name of heretic; and though no single manuscript can be regarded as a perfect copy of the writings of the apostles, yet the truth

lies scattered in them all, which it is the business of critics to select from the general mass.

3. On the other hand, we may say, with the most perfect confidence, that the sacred writings have not, in anything essential, been obscured or hurt by all the changes which have passed upon the original text. The various readings have left to it all its peculiar characteristics as a work of ancient literature and a record of revealed religion. Mistakes will be most frequently committed, says Dr. Cook, where the attention of the transcriber, or of those who revise his copy, is most apt to slumber. As the inattention will be greatest in points of little consequence, so it may be expected that what is of importance will excite more attention and be more faithfully transmitted. Even the mistakes into which ignorant transcribers, incapable of this discrimination, fall, are limited by the circumstances that are known to give rise to them, and in general might be expected either to indicate themselves or to be discovered by collating different manuscripts, while the more serious injury which might arise to the text from the inadvertent or ill-judged intrusion of explanatory readings from the margin, or from the designed corruption of it to serve a purpose, is naturally either prevented or corrected by the mutual jealousy and vigilance of contending sects. And such, from the most thorough examination of the different channels of evidence that has yet been made, appears to be the state in which the text of the New Testament has been preserved. The various readings have never yet been found to go beyond the limits thus fixed to error. The greatest number is in letters or words which make no alteration upon the sense, and where the sense is affected it is generally in points of no consequence to any religious truth. As the inquiry concerning the writers of the Scriptures leaves no good reason for doubting that the different books were written by the persons to whom they are attributed, so the inquiry concerning the uncorrupted state of the text affords every reasonable security that in all essential points it remains at this day as it was at first given to the world. There is not a manuscript yet discovered so incorrectly written that it does not bear testimony to this its escape from every vitiation by which its value as a treasury of religious truth could be impaired, nor does it appear that all the attention which, since the revival of learning, has been paid to this subject, goes further than to place the evidence of the fact in its proper light, and to contribute toward preserving and illustrating that evidence for the benefit of future ages. For although the printed text cannot be justly considered as having attained, either before or since the labors of modern critics, the highest point of renovated integrity to which it may be brought by the most extensive collations and judicious selection of readings from manuscripts, versions and quotations, and although a beautiful field of Biblical criticism is thus left open for further research, yet upon satisfactory grounds it may be safely asserted that this possible progress in its grammatical accuracy, as it has not hitherto brought, gives no promise of bringing, any accession to the information contained in the Scriptures, and threatens no change upon their statement of any important fact, sentiment or doctrine.

#### VI. The English Bible.

I. Although sacred criticism has immediately to do with the Scriptures in their original languages, it is also, though more remotely, conversant with versions.

1. The character of the English Bible is not a matter of idle curiosity or of curious and unprofitable speculation. Every translation is, properly speaking, an interpretation of the original text; and it is surely of the very first importance to ascertain how far that translation which is in daily and constant use by millions of those to whom the word of promise is addressed, and upon which they are exclusively dependent for ascertaining "the mind of the Spirit," is really a faithful and exact representation of the sense of the sacred writers. This section will be devoted to the topics involved in this inquiry.

2. It is in some degree uncertain at what period the Scriptures were originally translated into the languages spoken in the British Islands. Early in the Saxon times we know that they were read in the vernacular tongue, through the translations of Adhelm, bishop of Sherborne (A. D. 706), Egbert, bishop of Lindisfern (A. D. 720), the Venerable Bede (a few years subsequently), King Alfred (nearly two hundred later), and Elfric, archbishop of Canterbury (A. D. 995). There were, in addition to these translations, various glosses or commentaries upon detached portions of the Scriptures in the vernacular tongue and intended for common use.

3. About 1390, Wycliffe completed his translation of the Bible, which was very widely circulated, notwithstanding that copies had to be made by the tedious and expensive process of writing.

4. The favor in which this version was held excited the jealousy of the Romish clergy, who made various ineffectual attempts to suppress it. In 1408, Arundel, archbishop of York, ordained, in convocation, "that no book or treatise composed by John Wycliffe, or by any other in his time, or hereafter to be composed, should be read by any one, unless approved by the universities, or," etc., "under pain of being punished as a sower of schism and a favorer of heresy." This intolerant decree was followed by another, more severe in its prohibitions: "That no one should, by his own authority, translate any text of holy Scripture into English or any other tongue, by way of book, libel or treatise; and that no one should read any such book, libel or treatise now lately set forth in the time of John Wycliffe or since, or hereafter to be composed, under pain of the greater excommunication, until the said translation should be approved by the diocesan of the place, or, if occasion require, by a provincial council." He who disobeyed this order was to be treated and punished as a favorer of error and heresy.

5. The rigor of this decree was, however, inadequate wholly to repress that desire to read the sacred volume which its circulation had created, and many persons were burnt for contumacy in reading out of Wycliffe's translation. In 1415 a law was passed making it treason to read any of Wycliffe's books. All who were found guilty of so doing were to "forfeit lands, cattle, body, life and goods from their heirs for ever, and so be condemned for heretics to God, enemies to the Crown and most arrant traitors to the land."

6. It may readily be supposed that, if these rigorous and cruel measures did not wholly suppress the reading of Wycliffe's version in private, they at least prevented any additions being made to the translations of the Scriptures already extant.

7. There is no doubt that Wycliffe made his translation from the Latin Vulgate, and not from

the originals; its authority, therefore, is not of the highest kind.

8. The Old Testament of Wycliffe's version has never yet been published. His New Testament has passed through two editions. The first was printed under the superintendence of the Rev. John Lewis, in 1731; the second was edited by the Rev. H. H. Baber, A. M., in 1810.

9. The progress of the Reformation in Germany and England removed some of the impediments, at least for a time, that the Romanists had interposed in the way of Biblical translations; and in 1526 the first edition of Tindal's translation of the New Testament was published at Antwerp. Its publication revived the fears and hatred of the Romish priests, and Bishop Tonsal was so intent upon its suppression that he bought up all the copies that could be found and committed them to the flames at Paul's Cross. Only one copy of this impression is known to be extant. It is very minutely described by Mr. Beloe in his "Anecdotes of Literature."

10. The zeal of the bishop in this case outran his discretion, for the means he employed to suppress the translation of Tindal materially promoted the object its author had in view. The first edition, thus purchased up and destroyed, was very imperfectly executed, but the money expended by Tonsal in purchasing it up enabled Tindal to publish a more correct and better-printed edition, three or four years afterward, in 1530; but like its predecessor, it was to a great extent purchased and destroyed by the Romanists. Nothing daunted, however, Tindal completed a third edition, as also translations of the Pentateuch and Jonah, shortly after which he was seized in Flanders, strangled and had his body reduced to ashes, A. D. 1536.

11. Various means were employed to stay the progress of Scripture reading and translation; but the work which Tindal had so nobly commenced went forward, and in 1535 Miles Coverdale, who had been one of Tindal's coadjutors, completed a translation of the entire Bible. It was published in a folio volume, and dedicated to Henry VIII. in a spirited introduction, in which the author reproaches the self-willed and fiery monarch for having suffered his bishops to "burne God's word, the root of faith, and to persecute the lovers and ministers of it."

12. For this translation, which is said to have been Tindal's as far onward as Second Chronicles inclusive, the royal patronage was obtained during the same year in which Tyndal died, A. D. 1536. The Lord Cromwell and Archbishop Cranmer prevailed upon the king to issue an order that "a book of the whole Bible should be provided and laid in the choir of every church for every man that would to look and read therein."

13. The hand of persecution having been thus paralyzed, those inspired with a love of Scripture knowledge and animated with a zeal for the advancement of the gospel took advantage of the times, and various editions of the Bible followed each other in rapid succession. John Rogers, who subsequently became the first martyr in the reign of the sanguinary Mary, published, under the assumed name of Thomas Matthewes, an edition in 1537. In the following year Johan Hallybushe printed the New Testament in Latin and English; and in 1540 the whole Bible was reprinted by Grafton and Whitchurch, with a preface written by Archbishop Cranmer, whence it was called Cranmer's Bible. After having been ordered by Henry VIII. to be set out and read in every parish church, this capricious prince, within two years

afterward, prohibited its use. In 1550 it received the royal favor of Edward VI., but subsequently shared the fate of the religion it was intended to elucidate. During the reign of this prince several of these early editions of the Scriptures were reprinted, but no new translation was undertaken.

14. The persecution of the Protestants that took place in Mary's reign having compelled Bishop Coverdale, amongst others, to quit England, he took up his residence in Geneva, and there published a revised edition of the Bible, with notes. Of the Geneva Bible the New Testament appeared in 1557, and the entire Scriptures in 1560. Eight years subsequently (1568), an edition of the Bible, revised by a number of learned men, several of whom were bishops, presided over by Archbishop Parker, was published. From the official characters of those under whose superintendence it was prepared, this edition was called "The Bishops' Bible."

15. We have now enumerated the principal editions of the sacred writings that preceded the "Authorized" English version, now in common use. It must not be supposed, however, that these were so many new and independent translations. They were, in fact, only so many revisions of Tindal and Coverdale's version, with occasional insertions of the additions found in the Latin Vulgate or in the Septuagint version. The Geneva Bible purports to be a new translation from the originals; but there can be no doubt that its basis was the previous translation, and that it was only "conferred diligently with the Greek," as the editor, in one place, inadvertently admits.

16. To the general accuracy and excellence of Tindal and Coverdale's translation all competent judges have borne the highest testimony. "The violent opposition it met with," says Geddes, a Roman Catholic and a stern critic, "seems to have arisen more from the injurious reflections contained in the prologues and notes on the then established religion than from any capital defects in the version itself. It was far from being a perfect translation, it is true; but it was the first of the kind, and few first translations will, I think, be found preferable to it. It is astonishing how little obsolete the language is even at this day; and in point of perspicuity, a noble simplicity, propriety of idiom and purity of style no English version has yet surpassed it. The criticisms of those who wrote against it are generally too severe, often captious and sometimes evidently unjust."

17. From the time at which the "Bishops' Bible" appeared, A. D. 1568, no translation or revision of the Scriptures of any importance seems to have been undertaken till 1604. At this period James I. took measures to procure the present Authorized Version. He nominated fifty-four learned men, chiefly professors and divines from the universities of Oxford and Cambridge, whom he charged with the task of "retranslating, revising or correcting preceding versions, so as to produce as perfect a translation as possible." Of the fifty-four, however, only forty-seven actually engaged in the work, the others having died or declined the undertaking; or, as some think, they were appointed to be overseers of the rest.

18. There has been a good deal of controversy on the question whether this edition of the Bible should be considered as a new and independent translation, or as only a revision of those versions which preceded it. If the directions given by the king to those persons charged with the work may be deemed conclusive evidence on the subject, the question will be speedily settled.

2. And it is evident from the "translators' preface to the reader," in which they speak of "building upon their foundation that went before," of "endeavoring to make that better which they left so good," and—more conclusive still—in which they aver "we never thought from the beginning that we should need to make a new translation, nor yet to make of a bad one a good one, . . . but to make a good one better, or, out of many good ones one principal good one, not justly to be excepted against; that hath been our endeavor, that our mark,"—it is evident from these expressions that, although the translators of James did, with great care and diligence, consult and compare with the antecedent English versions the Hebrew and Greek texts of both Testaments, they did not, properly speaking, execute a new translation. It is equally obvious, however, from these passages, as well as from the text itself, that the version they completed was neither a servile copy of any previous version nor "a compilation of second-hand translations." That they were laid under some restrictions cannot be denied, nor that their undertaking has sometimes suffered from them, but the nature and number of these are equally insignificant.

III. The critical value of the authorized English version of the Scriptures is a question of very grave importance, especially to those to whom this edition of the Bible is alone accessible. There has been some controversy as to the competency of James' translators to discharge the trust reposed in them, some writers having gone so far as to assert that there was not among them a single Hebrew scholar, the Hebrew language having been in the reigns of Elizabeth and James I. most shamefully neglected in our universities. Nothing, however, can be farther from the truth than both of these statements.

1. In the time of Elizabeth the Oriental languages were amongst the ordinary philological studies at the two universities; and Fulke in particular speaks of many youths at Cambridge, in 1583, who were intimate with Hebrew and Chaldean. In the public schools emulation in these studies was excited, as is exemplified in a notice of examination at Merchant Tailors' school in 1572, where the bishop of Winchester "tried the scholars in the Hebrew Psalter." Among these scholars was the famous linguist Dr. Lancelot Andrews, who afterward stood at the head of the list of James' translators. Of his associates we need only enumerate Dr. Adrian Saravia, who was a profound scholar and tutor to the celebrated Oriental critic Nicholas Fuller, Dr. R. Clarke, who thoroughly understood the Hebrew, Greek and Latin languages, Dr. Sayfield, to whose Hebrew criticisms the learned and acute Gataker often refers with confidence, and whose skill in the Hebrew tongue Minsheu sought and acknowledged when he published his valuable "Guide into Tongues," the profound Orientalist Mr. W. Bedwell, tutor to the eminent Dr. Pocock, Dr. John Rainolds, whose memory was so extraordinary that "he could readily turn to all material passages in every volume, leaf, page or paragraph of the multitude of books he had read," and who was "most prodigiously seen in all kinds of learning, and most excellent in all tongues," Drs. Holland, Kilby, Miles Smith and Richard Brett, who have each left in their published works undoubted proofs of their critical skill in the Hebrew, Chaldean, Syriac, Arabic, Ethiopic, Greek and Latin tongues, closing with Dr. John Bois, "that eminent light of learning, who at five years of age had

to the books of the New Testament, but also such numerous professed quotations from them, that it is demonstrably certain that these books existed in their present state a few years after the conclusion of our Saviour's ministry. But this is not the place to enlarge upon this topic; it will be fully treated of in a subsequent part.

II. From what has now been said it will be perceived that the existing arrangement of the sacred books has been made with a view to their subject matter rather than with reference to their historical connection, the order of the parts of each division being determined either by the relative importance of the matters to which they relate, the comparative consideration of the persons to whom they are addressed, or some other incidental circumstances of a similar kind. This arrangement, which is adopted in most of the modern versions of the Bible, was originally borrowed, with some trifling exceptions, from the Latin Vulgate, as settled at the Council of Trent. It possesses some advantages for reference and consultation, but it should not govern the student in his Scripture studies, in which the natural order of history and chronology should be generally adhered to. He who has thus studied the Bible will readily subscribe to the remark of the erudite Lightfoot, who says, "Such a method is the most satisfactory, delightful and confirmative of the understanding, mind and memory that may be. This settles histories in your mind; this brings the things as if done before your eyes; this makes you mark what else you would not; and this suffers you not to slip over the least title of a word; and sometimes, in things of doubt and scruple, this strikes all out of question."

III. 1. The sacred writings had originally, and for a long period of time, no punctuation, nor any such divisions as those of chapter and verse. The words were not so much as separated by intervals from one another. Letter was strung on to letter, and so continued that every line was like a single word. Hence the reader was obliged first to separate and recombine the letters in order to form words and discover the sense. So late even as the fifth century the New Testament had none of the ordinary marks of distinction, although Christendom had no lack of grammarians who might have here found an undertaking worthy of their art. The following passage will give the uninformed reader some idea, though a very inadequate one, of the continuous form of the original text, and of the misconceptions to which it was liable:

NOWWHENHEHADENDEDALLHIS SAYING  
SINTHE AUDIENCE OF THE PEOPLE HE ENTE  
RED INTO CAPERNAUM AND A CERTAINCE, ETC.

2. It was no easy task for a person not being instructed, or very much used to it, to read the Bible well and intelligibly in the public assemblies, without adopting for his guide some marks of distinction; for private reading also assistance of a similar description was a desideratum. Hence arose the Masoretic punctuation of the Hebrew text and the Euthalian divisions in the Greek text. The date of the former is a matter of uncertainty; some refer it as far back as the days of Ezra, while others maintain that it was unknown before the second century of the Christian era. The divisions made by Euthalius in the fifth century were very different from those now made by the usual points or grammatical stops, and consisted in setting just so

many words in one line as were to be read uninterruptedly, so as clearly to disclose the sense of the author. Hug has given a specimen of these stichometrical divisions, as they are called, out of a celebrated fragment of Paul's Epistles, which Wetstein has marked II. The passage is Tit. ii. 3. We give it in English, however, instead of Greek, for the sake of the unlearned:

THAT THE AGED MEN BE SOBER  
GRAVE  
TEMPERATE  
SOUND IN FAITH  
IN LOVE  
THE AGED WOMEN LIKEWISE  
IN BEHAVIOR AS BECOMETH HOLINESS  
NOT FALSE ACCUSERS  
NOT GIVEN TO MUCH WINE  
TEACHERS OF GOOD THINGS

It is clear that this mode of writing occupied a very large space to no good purpose, and copyists soon began to improve upon the system by running on the *stichoi* or lines and separating each one by the introduction of a point. The grammarians, however, at length took offence at a mode of punctuation so entirely ungrammatical, and began to introduce distinctions according to fixed rules. This was gradually improved, but did not arrive at anything like perfection until very long after the invention of printing.

3. Previous to the introduction of these verbal divisions into the sacred text there existed other and larger divisions, adopted for the purposes of reference and worship.

4. It appears from the references in the New Testament to the book of Psalms that they were at that time, and most likely had always been, divided into distinct odes or songs, as we now possess them. But with the rest of the Hebrew Scriptures it was different. These were divided, for the convenience of reading, into sections, called *Parashim* and *Haptharoth*, the former comprising the law, the latter the prophets. As these divisions were made for the service of the synagogue, each division included fifty-three *Parashim* or *Haptharoth*, so that by reading one of each on the several Sabbaths the entire Scriptures were publicly read through in the course of the year. But in addition to these larger sections, the *Parashim* were distributed into *Siderim* or orders, and the whole divided into *Pesukim* or verses, by means of two great points (:) called *soph-pasuk*.

5. The custom of reading the New Testament publicly in the Christian assemblies would, of course, soon suggest the propriety of some such divisions being made in this as had already been introduced into the Jewish Scriptures. This, in fact, took place. At a very early period a division was made of the text into church lessons. The books thus divided were called *lectionaries*, and the sections themselves *titles* and *chapters*. In the *lectionaries* there were other distinctions of great use for the purposes of comparison and quotation. The author of these sections in the Gospels is supposed to have been Ammonius of Alexandria, whence they derived the name of *Ammonian sections*; those in the Acts of the Apostles and in the Epistles were introduced by Euthalius, of whom we have already spoken.

6. The inventor of our present chapters was Cardinal Hugo, who flourished about 1240. Having projected an alphabetical index of all the words and phrases in the Latin Vulgate, Hugo found it necessary, in order to facilitate references to the

text, to divide it into distinct sections, which were substantially the same as the chapters now commonly adopted. Instead of subdividing the chapters into verses, however, he effected a secondary division by placing in the margin, at an equal distance from each other, according to the length of the chapters, the first seven letters of the alphabet, or as many of them as the length of the chapters would admit. Toward the middle of the fifteenth century, Rabbi Nathan, a learned Jew, undertook to provide for the Hebrew Scriptures a concordance similar to that which Cardinal Hugo had completed for the Latin Vulgate. But although he followed Hugo in his division of the text into chapters, he improved upon the cardinal's subdivision by numbering in the margin every *pasuk* or verse.

7. The first editor of the Old Testament who enumerated the verses by subjoining to each verse a figure, according to our present method, was Athias, a Jew of Amsterdam, who, in the years 1661 and 1667, published two very correct editions of the Hebrew Bible, having the verses distinguished in this manner. His plan was followed by Vatablus in an edition of the Latin Bible printed for him by Stephens, and has since been adopted in most editions of the Scriptures. The division of the New Testament into verses is attributed to Robert Stephens, who is said to have done it during a journey from Paris to Lyons, about the middle of the sixteenth century.

IV. We have now noticed all the divisions and notes of distinction occurring in the sacred writings. They form, as the reader has seen, no part of the original text, but are mere human contrivances adopted for the purpose of facilitating references to the text and of aiding our conceptions of its sense. That they are of great utility is undoubted; but it cannot be denied that they are sometimes attended with serious inconvenience and evil.

1. The punctuation is often very faulty. In some of the early printed editions the points seem to have been put in almost at random, and even in the present Greek text, as well as in the English version, the sense and beauty of many passages are marred by injudicious and inaccurate punctuation. The misplacing of a comma will not unfrequently alter the sense of a passage, and the improper insertion of a full stop or a note of interrogation must, it is evident, be still more subversive of its real sense or meaning. Hence it is plain that we should not blindly follow and adopt the decisions of those to whom we are indebted for the punctuation of the text; our own judgment and understanding should be employed, and where a passage appears to be obscure or difficult we may with propriety substitute such a mode of punctuation as will render it perspicuous and intelligible. To do this with propriety will, of course, demand attention to the laws of criticism and interpretation.

2. The inconvenience attendant upon our divisions into chapters and verses is that the sense is often interrupted, and sometimes destroyed, by the disjoining of what ought to be connected and the connecting of what ought to be disjoined. The division of the chapters is frequently improper, but that of the verses is often much more so. There is in many places a full periodical distinction where there should not be so much as the smallest pause. Nominatives are separated from their verbs, adjectives from their substantives, and even letters and syllables are cruelly divorced from the words to which they naturally belong.

By these means the chain of reasoning is broken, the sentences mangled, the eye misguided, the attention bewildered and the meaning lost.

3. But independently of these evils, the divisions both of chapter and verse often exert an unfavorable influence on the attention, and induce, almost unconsciously to the reader, an idea of completion, or the contrary, very unfavorable to an accurate perception of the meaning of the sacred writings. Most persons are in the constant habit of reading the Bible in separate chapters, one or more at a time, without any regard to the continuity of the subject or the completion of the sense. It sometimes happens that in reading the Epistles the opening of an argument is read on one day, its proofs and illustrations on the next and its inferences and application on the third or a more distant day still. The consequence of this may be easily conceived. No person thus reading the Scriptures can ever enter thoroughly into the sense and spirit of the sacred penmen or duly appreciate the powers of argument and illustration they frequently exhibit in the prosecution of their high object. For the purposes of study, a Bible with an unbroken text, or divided only into sections according to the real divisions of the subjects, having an enumeration of the verses in the margin, is greatly to be desiderated. If this is not to be had, the student should be constantly upon his guard against the evils to which we have adverted.

#### VIII. Biblical Interpretation.

The object of criticism is the genuineness and purity of the text; the object of interpretation is the sense of the text. The one is conversant with the mere letter of Scripture, the other with its import. It is the province of criticism to ascertain what an author wrote, of interpretation to determine what he meant. This distinction is of great importance, and almost indispensable to a luminous view of the subject in its several details. Like every other science, this has its natural boundaries and divisions, and it is only by a clear perception of, and rigid adherence to, these that order will be introduced into study and the mind be preserved from confusion.

The science explaining the rules of interpretation is called sacred hermeneutics, which, when marked as a part of theology, is called exegetical theology. From this is distinguished what is exegesis, or the art itself of interpreting the sacred volume. Seiler says, "Hermeneutics, which is employed in the discovery and explanation of the sense of a speech or writing, is, objectively considered, a collection of rules through the application of which the sense of the speech or writing is found and accurately expressed. Subjectively considered, it is the knowledge of these rules and the ability to apply them judiciously to the discovery and expression of that sense. This ability, obtained by exercise in explaining according to rules, constitutes an interpreter. The individual who, without the aid of fixed rules, but by the practice of reading and reflection only, has learned to explain the Bible, is an empirical interpreter. Hermeneutics is, then, the theory of interpretation, exegesis is the practice. Both are included under the name exegetical theology."

#### I. Difficulties.

I. It would be unwise as well as unjust to attempt to conceal from the novice the numerous difficulties he will have to encounter in the interpretation of the Scriptures and the large amount

of labor he will be called upon to expend in his efforts to remove them. For a person to remain ignorant of these facts is to be exposed to the constant danger of resting satisfied with the mere assertions of others, instead of applying at once to the source of Scriptural knowledge for the discovery of those truths upon the immediate perception and personal appropriation of which depend his personal safety and happiness. Let us at once premise, therefore, that in the interpretation of the Bible we have to encounter difficulties of no ordinary magnitude, and such, we shall show, as will call forth all the energies of the mind.

1. In discussing the object and principles of Biblical interpretation, we must view the Scripture in its most simple and obvious character—i. e., as a literary document, of properties in common with every other such work, but having some peculiar to itself.

2. In the first place, it must be recollected that the Bible is composed of a number of separate or independent writings or books indited by different persons unknown to each other, living in different places and at different periods of time, and treating on the subjects of which they wrote in a great variety of style, the last-mentioned fact arising out of the mutability of the human language, variety of human character, and other facts to which we shall presently advert. Now, as all human languages are composed of arbitrary signs, between which and the ideas they are intended to represent there is no real analogy or connection, these difficulties may be easily conceived. Issuing in different ways from their common source, they become apparent in the simple radical meaning of terms, or in the changes induced upon that meaning by the metaphorical application of them, by idiomatic expressions, by peculiarities of style, by difference of subject, and by the different species of composition in which the same subject is treated.

3. But in addition to these difficulties, there are others equally embarrassing. We are not only far removed from the authors of the Bible by distance of time, in consequence of which we have to contend with the difficulties inseparable from written language in a greater degree than otherwise we should have to do, but we are separated from them also by distance of place and circumstance. Their laws, manners, customs and modes of thinking were very dissimilar to everything with which we are now conversant, and their references and allusions to then existing circumstances are sometimes so slight, but so intimately connected with an argument or illustration, as to call for a large measure of previous information and knowledge on the part of their readers.

4. It is not, however, intended to affirm that the Scriptures are so obscure, and their meaning so difficult to be ascertained, that multitudes of persons in whose hands they are placed must be deprived of the advantages they tender, and remain destitute of all interest in those blessings it was the great design of their divine Author to communicate. By no means. Those great truths of revelation upon which man's faith and salvation depend are conveyed in language too intelligible to be mistaken by any humble and teachable mind, however destitute of adventitious knowledge. What we wish to impress upon the reader's mind is this—that there is in the sacred writings much beyond what is indispensable to salvation which it is desirable to know and to understand; that there are heights and depths of knowledge the discovery and comprehension of which will greatly conduce to our moral, intellectual

and religious perfection. The more we discover of the beauties of Scripture composition, and of the harmony and symmetry of divine truth, the more the heart will be expanded in love to God, and the more will the energies of the mind be directed to the attainment of his great purposes in the revelation of his will.

5. Our purpose is to place the nature of those studies comprehended within the science of Scripture interpretation in such a light as to fortify the mind of the student against those feelings of despondency to which it could not fail to be subjected upon encountering difficulties of which it had previously no conception. Let these be in some degree foreseen and understood, and a moderate amount of diligence and perseverance be brought to the subject, and we may safely promise the student a rich harvest of reward. If he do not speedily become a profound critic himself, he will become so far acquainted with the principles of interpretation as to be capable of forming a sound judgment upon the criticisms and interpretations of others, and of reading the Scriptures with pleasure and advantage to himself.

II. This seems the proper place for a few observations upon the use of commentaries and expositions of the Bible, because those persons who are contented to remain ignorant of the elementary principles of Biblical interpretation, on the ground of the difficulty with which such knowledge is to be attained, are necessitated to betake themselves, in their Scripture reading, to the constant use of expositors, if they do not, as we fear is often the case, substitute these for the text itself.

1. Let us suppose a person about to commence a course of Scripture reading with a view to his personal edification, and who is, therefore, desirous to comprehend the meaning of the Bible to at least the same extent as he would any human composition. He is, however, supposed to be almost totally ignorant of those historical matters to which the sacred writers so frequently allude, and which, in fact, give a character to the whole of their communications; of those common principles of literary composition by which every judicious and correct writer is governed in the construction of his work; of those general laws of our nature which, under the various circumstances of life, govern the human mind; and of those peculiarities of time and circumstance which of necessity characterize every work of antiquity. But if he is ignorant on these matters, can he be capable of forming a right judgment on the contents of the sacred volume? Assuredly not; and it is because he has a consciousness of this inability to judge for himself that he adopts a commentator as his infallible guide. Can anything be more preposterous, however, than such a mode of proceeding? Can anything tend more effectually to shut out the light of heaven, and perpetuate those lamentable differences which exist among men who profess to take the same word as the ground of their faith, while each word stands at antipodes with the rest? Let us ask, How is it possible that persons thus implicitly adopting the judgment of others should have any judgment of their own? We have as many descriptions of commentaries as we have shades of religious belief; and every exposition of Scripture is written in accordance with some system of religious opinion, which it is designed to support and recommend. Now, if a commentary be adopted as a guide by a person who has not studied the Scriptures for himself, and who is therefore incompetent to decide on the justness of the interpretations proposed, it is clear that he is

age in which they lived, and from their manners, circumstances and design in writing, and consequently never sought to discover in them anything but what could be shown with probability to have been in their minds.

21. But the liberty of interpretation came at last to be shamefully abused by some, and degenerated, through the proneness of mankind to rush into extremes, into the most unrestrained licentiousness. According to the most recent canons of this class of interpreters, we ought to admit nothing in the sacred volume to be true that is not agreeable to the common order of things; and, conformably to these canons, whatever is related in Scripture as different from that order must all be explained by the interpreter in a manner consistent with it, so that what would deservedly be accounted unlawful with regard to the profane writers of antiquity is not only allowed to the most ancient sacred books, but is even reckoned laudable. And there are not wanting persons in our times who twist to a moral purpose whatever may tend to give offence in these books, being no way sollicitous regarding the most natural or plain sense of the words.

22. In fine, during that space of time of which we have just been speaking many books were published which treated of the method of interpreting the whole sacred volume. Some of these, however, confined themselves solely to the critical part, while others, under the name of introductions, embraced all those things which might be reckoned to pertain to the understanding of the contents, the authors, the composition and the ancient version of the whole of the Scriptures and of each of its parts.

### III. Moral Qualities requisite in an Interpreter of the Scriptures.

The moral qualifications of an interpreter of Scripture are of the first importance and demand the most serious regard. Every person well knows that facts and circumstances take a high degree of coloring from the state of mind through which they are viewed, and that the particular impression they make is in a great measure dependent upon the disposition and habits of the recipient. That there can be no correct apprehension of moral truth unless there be an unprejudiced and teachable frame of mind most persons admit. If a man be not convinced of his want of information, and be not animated by an upright intention of submitting without reserve to the discoveries of truth, however opposed to his previous sentiments and pursuits they may be, it is not to be expected that the clearest statement or the most conclusive reasoning will exert any beneficial influence upon his mind. But if this be true in the ordinary affairs of human life, it is much more so in the acquisition of Scriptural knowledge. The stream of revealed truth runs in an opposite direction to the current of our fallen nature. Nor is this the greatest evil; the human mind is as destitute of ability rightly to apprehend the revealed will and purposes of God as the human heart is opposed to their authority and control: "The natural man receiveth not the things of the Spirit of God, for they are foolishness unto him; neither can he know them, because they are spiritually discerned," 1 Cor. ii. 14. Hence arises the necessity of a preparation of heart to seek after God, 1 Sam. vii. 3, etc., by a cultivation of those dispositions which accord as well with the divine communications as with our own relative and responsible character. The state of mind constituting

these moral qualifications may be resolved into the following particulars:

I. Devout gratitude for the fact and character of the divine revelation.

1. If we have anything like just conceptions of the high and holy character of God and of our own debased and abject condition, we shall not fail to approach the volume of inspiration with sentiments of profound gratitude to him for having favored us, in such circumstances, with any communications of his will, but especially so for the character and design of those communications which are presented to us in the Bible. Separated from the Author of our being by a course of sinful disobedience, and totally incapacitated by the depravation of our will and affections for his service and presence, he might have justly abandoned us to the imaginings of our own hearts, destitute of the guidance of any further light from himself. In that case how deplorable must have been our moral condition! Cut off from God; under the dominion of the powers of darkness; following the dictates of depraved affections and subjected to the control of fierce and turbulent passions, we could only have proceeded from one stage of depravity and wretchedness to another until we should have found ourselves placed beyond the reach of even the divine compassion itself. But "the Day-spring from on high has visited us;" the light of his truth has pierced through the gloom with which we were surrounded—"they who sat in darkness, and in the region of the shadow of death, have seen a great light;" and in the midst of our rebellion we are arrested by the voice of God, in accents the most tender and merciful: "Unto you, O men, I call; and my voice is to the sons of men," Prov. viii. 4; "How long, ye simple ones, will ye love simplicity? and the scorners delight in their scorning, and fools hate knowledge? Turn you at my reproof: behold, I will pour out my Spirit upon you, I will make known my words unto you," Prov. i. 22, 23. Now, if the mere fact of a divine revelation, intended to benefit our condition, be sufficient to excite our gratitude and inspire us with reverential feeling, our obligations will appear to be greatly augmented when we consider the merciful character it assumes in the Bible.

2. Let it be observed, then, that it is in the Holy Scriptures only that we have rational and influential discoveries of the character of God. In proof of this position we need only refer to the state of opinion in those parts of the world where the light of revelation has not yet beamed or where it has been quenched by the opposition of sin. Amidst all the speculations of philosophy for which Greece and Rome were renowned, at what certainty did their most celebrated philosophers arrive even on the simple but momentous fact of the existence of an intelligent First Cause? Doubt and indecision marked the conclusions of their profoundest investigations and reduced them to the rank of the merest probabilities. With respect to the character and perfections of God, and the interest which he took in the moral government of the world, they were at a still greater loss and involved in the most bewildering perplexities. In fact, the whole history of man, whether wandering in the wilds of savage independence or enjoying the higher advantages of civilized society, abundantly confirms the humiliating truth that "the world by wisdom knew not God," 1 Cor. i. 21. But turn we to the Scriptures, and what sublime and influential discoveries are there made of the existence and perfections of the Deity! How demonstra-

tive are the evidences of his being, how convincing the proofs of his moral government and how endearing the character he is represented as sustaining toward man! Well might the regal prophet exclaim, "The entrance of thy word giveth life;" "It giveth understanding to the simple," Ps. cxix.

3. We have here, also, an intelligible account of the origin of moral evil. Nor can this be regarded as a matter of trifling moment; it is intimately connected with just views of the righteous system of God's moral government and the final destinies of the human race. But this was never furnished through any other medium than the sacred volume. In confirmation of this assertion, as well as that on the former topic, we might confidently appeal to the speculations of those who have been left destitute of the guidance of revelation or the monstrous notions of those who have rashly and impiously turned from its proffered assistance. But in the Bible this mystery, which had been hidden for ages, is made manifest; the conduct of God stands absolved from every imputation which infidelity has thrown upon it, and every part of his moral government is seen to harmonize with the perfections of his character.

4. Through the same medium exclusively we learn the method by which the salvation of man is effected and the medium of his approach to God. Living, as we do, in the midst of this light, we are not, it is to be feared, sufficiently impressed with a consciousness of its high importance or its infinite value. But looking toward those deprived of it, do not the cruel and degrading superstitions of the pagan world, both in ancient and in modern times, afford convincing proof that the great question which agitates the human mind and presses its terrors upon the consciences of men, apprehensive of the wrath of some unknown but justly offended Deity, is this—"How shall man be justified with God?" Alas! he knows not. The prophet has described, in language no less just than forcible, the fearful anxiety and distressing uncertainty which perturb the mind in such circumstances: "Wherewithal shall I come before the Lord, and bow myself before the high God? Shall I come before him with burnt-offerings, with calves of a year old? Will the Lord be pleased with thousands of rams, or with ten thousands of rivers of oil? Shall I give my first-born for my transgression, the fruit of my body for the sin of my soul?" Mic. vi. 6. On a mind thus agitated by an overwhelming apprehension of the divine displeasure, and without any well-grounded hope of averting its impending doom, what must be the exhilarating effects of the merciful announcements of the gospel? and what must be the thrilling sensibilities of the heart when these discoveries are first made and apprehended? The design of this revelation is to announce the gracious purposes of God to save men from the guilt and punishment of sin; his purposes of pardoning the guilty—of sanctifying the unholy—of giving strength to the helpless and power to them who have no might. It further informs us of the medium through which we may successfully approach the throne of God and acceptably urge our petitions for an interest in these unspeakable benefits: "Seeing, then, that we have a great High-priest, that is passed into the heavens, Jesus, the Son of God, let us hold fast our profession;" "Let us come boldly unto the throne of grace, that we may obtain mercy and find grace to help in time of need;" "Wherefore he is able to save them to the uttermost that come unto God by him, seeing

he ever liveth to make intercession for them," Heb. iv. 14, 16; vii. 25.

5. But it may further be remarked that in the Scriptures only are the truth and certainty of a future state revealed. It is true that some efforts have been made to demonstrate the immortality of the soul upon principles independent of Scripture; but without any desire to depreciate the labors of those who have employed themselves in the investigation, we may be allowed to remark that the mere circumstance of no one ever having arrived at anything like certainty on the subject until brought within the light of inspiration is enough to justify a suspicion that the superiority of modern ratiocination over that of the ancients is in this respect derived, perhaps unconsciously, from the discoveries of the written word. We have been frequently reminded of the sentiments of Socrates, Plato, Cicero and others, who by the mere exercise of reason, it is said, discovered that the present is not the only state of being, that the existence of man does not terminate with this life, but that there remains a state where virtue will be rewarded and vice punished. But granting that such discoveries have been made, we would ask those who boast of philosophy for the purpose of derogating from the value of revelation what it cost those individuals in the pursuit of this knowledge ere they could triumph in its possession. Did the opponents of revelation ever follow those master spirits in their mental excursions? Did they ever make an effort to discipline their own minds to the same severe and laborious course of investigation which these philosophers were obliged to prosecute through toilsome months and years? There is little risk of doing them an injustice in saying that they have not so done. They therefore are incompetent to determine how many could have attained to the same degree of assurance on this truth as the worthies to whom they have referred us. The process by which the truth was thus to be arrived at was too complex to engage the attention of the great proportion of men, and therefore God, in his infinite compassion, made known a shorter way. That way is to be found in the Scriptures; and we are prepared for the sneer and the laugh of the witling when we say that the most illiterate man who can read his Bible and avail himself of the information it contains knows infinitely more about a future state of existence than either Socrates or Plato; and, what is of far more value, his knowledge is more influential. So dubious did these philosophers hold the conclusions of their reasoning to be that they were far from being satisfied of the certainty of those doctrines which they endeavored to impress upon others. In circumstances when the support of his principles was most needed the confidence of the philosopher forsook him, and in the contemplation of death he viewed the existence of a future state as a problem not to be solved. Even Cicero speaks of this doctrine as doubtful, and in his "Treatise on Old Age" he introduces the elder Cato mentioning it as an opinion of which he was fond rather than a doctrine which he could demonstrate; and after enumerating all the arguments of which he could think, he comforts himself with the reflection upon the whole—that if the soul died with the body the petty philosophers who opposed themselves to the opinion of the soul's immortality ceasing to be, as well as himself, would not laugh at his credulity. Plato, in his "Phædon," makes Socrates speak with some doubt concerning his own arguments, and introduces Simmias saying to him, "We ought to lay hold of the strongest argu-

ments for this doctrine that either we ourselves or others can suggest to us. If both ways prove ineffectual, we must put up with the best proofs we can get till some promise or revelation shall clear up the point." The wisdom of Socrates and Plato united did, in fact, only produce such arguments for their favorite opinion as they were themselves dissatisfied with. Cicero, being so attached to the same opinion that, as he says, he would rather err with Plato in holding it than think rightly with those who deny it, poorly echoes the arguments of his master, adds little to them himself, and at the conclusion, virtually giving up the point with all the arguments brought to support it, endeavors to comfort himself and others against the approach of death by proving death to be no evil, even should the soul perish with the body. Such were the conclusions of philosophy. We turn, however, to the Holy Scriptures, and every doubt is removed and every objection silenced. That which antecedently appeared as probable and devoutly to be wished for is here rendered indubitably certain, both by authority and sensible demonstrations. The speculations of philosophy give place to the certainties of revelation, and "life and immortality are rendered manifest by the gospel," 2 Tim. i. 10.

6. In view of such considerations, we cannot but feel our gratitude excited when we approach to God as speaking in that book—gratitude not only expressing itself in proper terms, but possessing the mind with an abiding and overmastering influence, under which it should sit impressed the whole duration of the interview; such an emotion as cannot utter itself in language, though by language it indicates its presence, but preserves us in a devout and adoring frame while the Lord is uttering his voice. Go visit a desolate widow with consolation, and help and fatherhood of her orphaned children—do it again and again—and your presence, the sound of your approaching footstep, the soft utterance of your voice, the very mention of your name, will come to dilate her heart with a fullness which defies her tongue to utter, but speaks by the tokens of a swimming eye and clasped hands and fervent ejaculations to heaven upon your head. No less copious acknowledgment to God, the Author of our well-being and the Father of our better hopes, ought we to feel when his word discloseth to us the excesses of his love. Though a veil be now cast over the majesty which speaks, it is the voice of the Eternal coming to our ear in soft cadences to win our favor, yet omnipotent as in the voice of his thunder and overpowering as the rushing of many waters.

II. With this devout gratitude must be conjoined a humbling conviction of our own inability rightly to estimate the value, or submit to the teachings, of the word of God. This conviction is indispensably requisite, God having thus declared the constitution of his gracious government and the mode of his merciful procedure: "He resisteth the proud, but giveth grace to the humble," James iv. 6; 1 Pet. v. 5. And surely the disposition of mind of which we are now speaking is one most befitting persons who are not only "alienated from the life of God through the ignorance that is in them," Eph. iv. 13, but whose understanding is also blinded by the god of this world, 2 Cor. iv. 4, and whose corrupt nature "is not subject to the law of God, neither indeed can it be," Rom. viii. 7. But how many are they who, if they spurn not the heavenly visitant from their presence, and refuse to listen to the voice of God written in his word, yet come to its perusal with unhumiliated and haughty spirits, with high thoughts of their own importance and

deceitful notions of their own dignity—men who open the Bible and read its humbling and soul-abasing doctrines with the same thoughtlessness with which they peruse the pages of a romance, and never once think of the exceeding broadness of God's command or the exceeding riches of his grace! But would we profit by this employment, there must not only be a conviction of our ignorance of the deeply momentous truths of God's word, but there must also be a sensibility of our want of spiritual perception, when those truths are laid before us, and of the hostility of our nature toward even those we do know. Such is the word of promise: "To that man will I look, to him that is poor and of a contrite spirit and trembleth at my word," Isa. lxvi. 2. When we are brought under the unrestrained influence of these sentiments—gratitude for the revelation and deep self-abasement from a consciousness of our own ignorance—it will induce—

III. Devout prayer to God for divine illumination and a right understanding of Scriptural truth. The original Author of the Holy Scriptures is alone able to open to our understandings their true meaning; and unless his Holy Spirit cast a ray of heavenly illumination upon our minds, no power of grace, no depth of erudition, can help us to a saving knowledge of their contents. Not, indeed, that there is any deficiency in the revelation itself: to suppose so would be as absurd as for a blind man to maintain that the sun did not shine because he was unable to discern its splendor. The defect is in ourselves; we are by nature spiritually blind, "having the understanding darkened, and being alienated from the life of God through the ignorance that is in us because of the blindness of our hearts." "The natural man receiveth not the things of the Spirit of God because they are foolishness unto him; neither can he know them, because they are spiritually discerned." But these declarations do not stand alone; they are accompanied by an assurance that "he which is spiritual discerneth all things;" and our blessed Lord appeals to us: "If ye, being evil, know how to give good gifts to your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him!" While men are entertaining so high a conceit of themselves as to imagine that divine wisdom is attainable by the aid of their own unassisted reason, they are neglecting the chief means which God has appointed for securing it, and remain destitute of any other compass to direct them in the perilous voyage of life than their own changeable fancy. Is it surprising that they should be constantly in danger of making "shipwreck"? They may read and dispute and put their ingenuity to the rack, but they will still remain ignorant of the very rudiments of the gospel. The prayer of faith, however, offered from the humble and contrite heart of one who has learned to sit meekly at the feet of Jesus, will never fail to unlock the sacred treasury of heaven, and to enrich the happy supplicant with that inestimable pearl of great price—that which is "more precious than rubies, and with which all things in the world are not to be compared." It is the peculiar office of the Holy Spirit to "lead men into all truth." Most justly, therefore, did Luther, in commencing his career of triumph over the ignorance and superstition of popery, thus express himself: "The sacred writings are not to be understood but by that Spirit by whom they were written; which Spirit is never more powerful and energetic than when he accompanies the serious period of those writings which he himself has dictated. Setting aside an im-

PLICIT dependence on human writings, let us strenuously adhere to the Scripture alone." In perfect accordance was the practice of the holy psalmist, than whom no man, perhaps, has ever formed a juster conception of the value and blessedness of God's truth: "Open thou mine eyes, that I may behold wondrous things out of thy law;" "Teach me thy statutes;" "Make me to understand the way of thy precepts," Ps. cxix. Such were his convictions of the necessity of divine illumination for the purpose of understanding the written word. Such, also, were the convictions and practice of the prophets and apostles, notwithstanding they were favored with extraordinary revelations from on high. No man who is truly grateful to God for the revelation of his will, and who also feels his own inability rightly to understand that revelation, will fail to profit by these illustrious examples. He will thankfully avail himself of the advice of one who knew how to estimate its value: "If any man lack wisdom, let him ask of God, who giveth to all men liberally, and upbraideth not, and it shall be given him," James i. 5. And we may assure ourselves that no one, reading under the influence of such principles, and the exercise of such devotion, shall fail of his reward. Every annunciation of the Eternal will be sealed upon his heart and be reflected in his temper and comfort. Humbly seeking to God for wisdom, and relying upon the word of his promise for grace to consecrate it to practical purposes, this word will become to such a one the divine seed, giving birth to "the fruits of righteousness," Phil. i. 11.

IV. The Scriptures must be read with a freedom from all undue bias of sentiment, and with an upright intention of submitting to the whole will of God.

1. Where this is not found all efforts will be lost; and it is greatly to be feared that many in whose hearts God has excited a desire for divine knowledge suffer themselves to be deprived of the object of their labor and prayer by not carefully attending to this rule. Preoccupied with some favorite notions which are fondly cherished as the doctrines of the Bible, that book is resorted to rather for arguments to confirm and support these previously-acquired sentiments than to learn with simplicity and without reserve the whole will of God. Is there not reason to think that there are but few comparatively who can adopt in the integrity of their heart the confession of the great but therefore humble Boyle, "I use the Scripture, not as an arsenal to be resorted to only for arms and weapons to defend this party or defeat its enemies, but as a matchless temple, where I delight to be, to contemplate the beauty, the symmetry and the magnificence of the structure, and to increase my awe or excite my devotion to the Deity there preached and adored?" There is, in consequence of the fall of man, a haughty spirit of independence so inseparably allied to our moral constitution that we are more disposed to bring the truth of God to the level of our finite reason, than to receive it with that humility which our Lord inculcated when he said, "Except ye be converted and become as little children, ye cannot enter into the kingdom of heaven"—a temper of mind to which the apostle also alludes when he speaks of our becoming fools in order that we may be made wise. From this bitter root has proceeded much of that hostility with which a simple declaration of the doctrines of Christianity has in every age been met, as well as those various ramifications of false doctrine which frequently harass the seemingly penetrating but really perplexed

and vacillating mind. Much also of the theological warfare which has been maintained among those who have been agreed in the fundamental tenets of vital godliness, and into the lists of which the best of men have sometimes entered, has had its origin in the same cause. How common is it to see even persons possessing piety so fondly attached to particular systems of doctrine as to make no scruple of bending, by a labored explanation, any text which does not seem to favor their preconceived opinions, and thus refusing to embrace the whole counsel of God! Were such persons deeply affected with right conceptions of the inconceivable greatness of that Being by whose inspiration the Scriptures were given, they would not easily fall into such snares. They would be certain that the perfect understanding of many of the subjects revealed in the sacred writings, especially whatever relates to their great Author, is far beyond the province of the human intellect. Every attempt to fathom by our limited reason the deep things of the Most High, or to reconcile with systematic nicety particular points which, though clearly revealed, may not appear to our contracted view perfectly accordant with each other, or with our idea of what is right and befitting the Almighty, must be utterly vain and futile. Humility, contrition of spirit, steady faith, implicit confidence, a disposition to receive in its unsophisticated meaning all that God says because he says it,—these are the dispositions which become man when his Maker condescends to be his instructor, and in the exercise of which alone can we make any profitable attainments in spiritual knowledge. If we are willing to construe the words of a human author in their plain and obvious signification, surely we ought not to refuse to do so with regard to Him that speaketh from heaven. "When I think on the grandeur of God," says Saurin, "when I cast my eyes on that vast ocean, consider that immense ATL, nothing astonishes me, nothing staggers me, nothing seems to me inadmissible, how incomprehensible soever it may be. . . . Either religion must tell us nothing about God, or what it tells must be beyond our capacities; and in surveying even the borders of this immense ocean it must needs exhibit a vast extent in which our feeble sight is lost. But what surprises me, what staggers me, what affrights me, is to see a diminutive creature, a contemptible man, a little ray of light glimmering through a few feeble organs, argue a point with the supreme Being, oppose that Intelligence who sitteth at the helm of the universe, question what he affirms, dispute what he determines, appeal from his decisions, and even after God has given him evidence reject all doctrines that are above his capacity. Enter into thy nothingness, mortal creature! What madness fills thee? How dost thou dare, thou who art but a point, thou whose essence is but an atom, to measure thyself with the supreme Being, with Him who fills heaven and earth, with Him whom the heaven, even the heaven of heavens, cannot contain? Canst thou by searching find out God? Canst thou find out the Almighty to perfection?"

2. But the evil is not confined to those presumptuous persons who would reduce the truths of revelation to the level of their own intellect, and impiously offer their counsel to Him about whose word we are speaking. The picture which has been drawn by an eloquent writer of the too common practice of professing Christians is not less faithful, we fear, than it is humiliating and distress-

ing: "The points of the faith we have been called on to defend, or which are reputable with our party, assume in our esteem an importance disproportionate to their importance in the word which we come to relish chiefly when it goes to sustain them, and the Bible is hunted for arguments and texts of controversy which are treasured up for future service. The solemn stillness which the soul should hold before her Maker, so favorable to reputation and rapt communion with the throne of God, is destroyed at every turn by suggestion of what is orthodox and evangelical, where all is orthodox and evangelical; the spirit of the reader becomes lean, being fed with abstract truths and formal propositions; his temper ungenial, being ever disturbed with controversial suggestions; his prayers undevout recitals of his opinions; his discourse technical announcements of his faith; . . . and the fine, full, harmony of Heaven's melodious voice, which, heard apart, were sufficient to lap the soul into ecstasies unspeakable, is jarred and interfered with, and the heavenly spell is broken with the recurring conceits, sophisms and passions of men."

3. An authoritative message has been sent from the throne of God, accredited by the most ample and convincing evidence. Having, then, been visited with the light of revelation, the formation of our religious creed is no longer left to the dreams of imagination or the speculations of philosophy, but it is to be deduced fairly and honestly from the written record alone. And the same principle is to govern equally the learned and the unlearned. It is the office of a translator to give a faithful representation of the original. And now this faithful representation has been given, it is our part to peruse it with care and to take a fair and faithful impression of it. It is our part to purify our understanding of all its previous conceptions. We must bring a free and unoccupied mind to the exercise. It must not be the pride or the obstinacy of self-formed opinions or the haughty independence of him who thinks he has reached the manhood of his understanding. We must bring with us the docility of a child if we want to gain the kingdom of heaven. It must not be a partial, but an entire and an unaccepted, obedience. The Bible will allow of no compromise. It professes to be the directory of our faith, and claims a total ascendancy over the souls and the understandings of men. It will enter into no composition with us on our natural principles. It challenges the whole mind as its due, and it appeals to the truth of Heaven for the high authority of its sanctions. We must bring every thought into captivity to its obedience, and closely abide by the rule and the doctrine this authentic memorial of God sets before us.

4. Having thus ascertained the revealed will of God, it must be our purpose and determination to fulfill it. It were better for us to be placed beyond the light and influence of the divine revelation than to enjoy its advantages and yet withhold our obedience, Luke xii. 47, 48.

V. Such appears to be the preparation of mind and disposition of heart required in those who would derive from the study of the Scriptures those benefits which it is the intention of their divine Author to impart. The Bible is the ordinary channel through which he conveys his blessings to man, and it is only by placing ourselves in a proper situation and providing ourselves with suitable means that we can rationally expect to become partakers of the waters of life.

NOTE.—This tabular view is interesting and instructive in several particulars. It shows that Noah might have received the account of creation through six equal channels with equal directness, thus: from Adam through Enos only, or from Cainan or Mahalaleel, or Jared or Methuselah, or Lamech, his own father. Lamech was fifty-six years contemporary with Adam, and ninety-three years with Shem; and Shem, again, was contemporary for several years both with Abraham and Isaac. The communication from Adam to Abraham and Isaac is only through Lamech and Shem.

All the generations from Adam to the flood were eleven. Of all these, Adam was contemporary with eight; Seth, with nine; Enos, ten; Cainan, ten; Mahalaleel, ten; Jared, ten; Enoch, nine; Methuselah, eleven; Lamech, eleven; Noah, eight; Shem and brothers, four. Thus, there were never less than nine contemporary generations from Adam to the flood, which would give, in one lineal descent, eighty-one different channels through which the account might be transmitted.

Who ever imagined, without making the comparison, that Shem lived to witness all the glorious things transacted between God and Abraham? Who would have supposed that Abraham and Isaac lived with those who, for one hundred years of their early life, witnessed and assisted in the building of the ark; who were borne triumphantly in it through the swelling flood, saw the opening heavens, felt the heaving earth when its deep foundations were broken up, and heard the groan of a perishing world? Yet such was the fact. Noah was contemporary with every generation after him down to Abraham, and Shem down to Jacob. These narrations bring the account to the time when minute and particular history commences, and when the art of inscribing upon papyrus, and probably upon parchment, was understood. The participators in the awful scenes of the flood lived to see the Pharaohs, the pyramids and obelisks of Egypt, and probably to have those scenes stereotyped on monuments and in hieroglyphics which have come down to us; so that we have the account, in a manner, second-handed from Shem.

## ANALYTICAL TABLE OF THE BOOKS OF THE PROPHETS:

SHOWING THE PROBABLE OCCASION OR TIME OF EACH PROPHECY, WITH DATE AND SCRIPTURE REFERENCE.

PROPHECY.	AFTER WHAT SCRIPTURE.	PROBABLE OCCASION OR PERIOD IN WHICH THE PROPHECY WAS WRITTEN.	BEFORE CHRIST.
<b>ISAIAH</b> i. 1.....	2 Chron. xxvi. 21.....	General preface to the prophecies of Isaiah.....	758
2, to end.....	2 Chron. xxviii. 19.....	On the desolate state of Judea on Pekah's invasion.....	740
ii., iii., iv., v., vi.....	2 Chron. xxv. 21.....	Designation of Isaiah to the prophetic office.....	758
vii., viii., ix., x. 1-5.....	2 Kings xvi. 5.....	On the invasion of Judea by Rezin and Pekah.....	742
5, to end, xi., xii., xiii., xiv. 1-28.....	Isa. xxiii. 18.....	On the first invasion of Palestine by Sennacherib.....	715
28, to end.....	2 Chron. xxviii. 27.....	On the death of Ahaz and the accession of Hezekiah.....	726
xv., xvi.....	2 Chron. xxxi. 21.....	On the approaching invasion of Moab by Shalmaneser.....	726
xvii.....	Isa. x. 4.....	Against Damascus on the invasion of Rezin.....	742
xviii., xix.....	2 Kings xviii. 8.....	On the approaching captivity of the ten tribes, and against Egypt.....	721
xx.....	2 Kings xviii. 16.....	On the capture of Ashdod.....	713
xxi.....	Isa. xxii. 14.....	On the appearance of the Medes and Persians in Sennacherib's army.....	713
xxii. 1-15.....	Isa. xxvii. 13.....	On the expected appearance of Sennacherib's army.....	713
15, to end.....	2 Kings xxi. 16.....	On the luxury and pride of Shebna.....	698
xxiii.....	Nah. iii. 19.....	On the exultation of the Tyrians after the retreat of Shalmaneser.....	715
xxiv., xxv., xxvi., xxvii.....	Isa. xiv. 27.....	On the desolation of Sennacherib's army.....	715
xxviii.....	2 Kings xvi. 9.....	To the ten tribes, after the destruction of Damascus.....	740
xxix., xxx., xxxi.....	Isa. xx. 6.....	On Hezekiah's alliance with Egypt.....	713
xxxii., xxxiii., xxxiv., xxxv.....	2 Kings xx. 11.....	On Hezekiah's recovery.....	713
xxxvi., xxxvii.....	2 Chron. xxix. 2.....	History of Sennacherib's invasion.....	713
xxxviii. 1-9.....	Isa. xxxviii. 38.....	History of Hezekiah's sickness.....	713
9-21.....	Isa. xxxv. 10.....	Hezekiah's thanksgiving on his recovery.....	713
21, 22.....	Isa. xxxviii. 8.....	Recovery of Hezekiah.....	713
xxxix.....	Isa. xxxviii. 22.....	Visit of Merodach Baladan.....	713
xl., xli., to end of the Book of Isaiah's Prophecies.....	2 Kings xix. 37.....	Written in the latter years of the reign of Hezekiah, while the kingdom enjoyed peace after the destruction of Sennacherib's army.....	710 699
<b>JEREMIAH</b> i. ii., iii. 1-6.....	2 Chron. xxxiv. 7.....	On the designation of Jeremiah to the prophetic office.....	629
6, to end; iv., v., vi.....	2 Chron. xxxv. 19.....	On the backsliding after the reformation by Josiah.....	612
vii., viii., ix., x.....	Hab. iii. 19.....	On the near approach of the captivity.....	612
xi., xii.....	Jer. x. 25.....	To remind the people of Josiah's covenant.....	610
xiii., xiv., xv., xvi., xvii., xviii., xix.....	2 Kings xxiii. 37.....	Appeals to the people before the captivity.....	609
xx.....	Jer. xix. 15.....	On Jeremiah's imprisonment by Pashur.....	609
xxi.....	Jer. xxxvii. 21.....	Jeremiah repeats his predictions to Zedekiah.....	588
xxii. 1-24.....	Jer. xx. 18.....	On the approaching fate of Shallum and Jehoikim.....	609
24, to end.....	2 Kings xxiv. 9.....	On the approaching captivity of Jehoikim.....	599
xxiii.....	Jer. xxii. 30.....	On the overthrow of the temporal kingdom of the Jews.....	599
xxiv.....	Jer. lii. 3.....	On Jehoiahin being carried to Babylon.....	599
xxv.....	Jer. xxxv. 19.....	On the immediate approach of Nebuchadnezzar's army.....	606
xxvi.....	Jer. xxii. 23.....	Apprehension of Jeremiah.....	608
xxvii., xxviii.....	Jer. xxxi. 40.....	On the approaching ruin of Zedekiah and of the surrounding nations.....	595
xxix.....	Jer. xxiv. 10.....	Letter from Jeremiah to the captives at Babylon.....	597
xxx., xxxi.....	Jer. xxix. 32.....	Prediction of the restoration of the Jews.....	597
xxxii., xxxiii.....	Jer. xxxiv. 10.....	Imprisonment of Jeremiah, and purchase of the field of Hananeel.....	589
xxxiv. 1-11.....	Jer. xxxvii. 4.....	On the commencement of the siege of Jerusalem.....	590
11, to end.....	Jer. xxxvii. 10.....	On the recall of the Hebrew slaves to their former servitude.....	589
xxxv.....	Jer. xvi. 12.....	On the Rechabites taking refuge in Jerusalem.....	606
xxxvi. 1-9.....	Jer. xxv. 38.....	First reading of the roll by Baruch.....	606
9, to end.....	2 Kings xxiv. 4.....	Second reading of the roll by Baruch.....	605
xxxvii. 1-5.....	Jer. xxxix. 1.....	Zedekiah sends for Jeremiah.....	590
5.....	Jer. xxxiii. 26.....	Part of the narrative of the siege of Jerusalem.....	589
xxxvii. 6-11.....	Jer. xlvii. 7.....	Prediction of the return of Pharaoh's army.....	589
11, to end.....	Jer. xxxiv. 22.....	Jeremiah attempts to escape from Jerusalem.....	588
xxxviii.....	Jer. xxi. 14.....	Jeremiah is committed to the dungeon of Malchiah.....	588
xxxix. 1.....	2 Kings xxv. 2.....	Commencement of the siege of Jerusalem.....	590
2.....	Jer. lii. 4.....	Capture of Jerusalem.....	588
3.....	Jer. lii. 6.....	Part of the history of the capture of Jerusalem.....	588
4-10.....	Jer. xxxix. 2.....	Flight of Zedekiah.....	588
10.....	Jer. lii. 16.....	Account of those who were left in Judea by Nebuzar-adan.....	588
xxxix. 11-15.....	Jer. lii. 11.....	Jeremiah committed to the care of Nebuzar-adan.....	588
15, to end.....	Jer. xxxviii. 28.....	The promise to Ebed-melech.....	588
xl. 1-13.....	2 Kings xxv. 22.....	Conduct of Jeremiah after his capture by Nebuzar-adan.....	588
13, to end; xli. 1-11.....	Jer. xl. 12.....	Conspiracy of Ishmael against Gedaliah.....	588
11, to end.....	Jer. xli. 10.....	Johanan rescues the captives from Ishmael.....	581
xlii., xliii. 1-8.....	Jer. xli. 18.....	Jeremiah reproves Johanan.....	587
8, to end.....	Jer. xliii. 7.....	On the arrival of Jeremiah in Egypt.....	587
xliv.....	Jer. xlv. 28.....	Predictions of Jeremiah at Tahpanhes.....	587
xlv.....	Jer. xxxviii. 8.....	Address to Baruch on reading the roll.....	606
xlv. 1-13.....	Jer. xxvi. 24.....	On the defeat of Pharaoh Necho at Carchemish.....	606
13, to end.....	Jer. xliii. 13.....	On the arrival of Jeremiah in Egypt.....	587
xlvii.....	Jer. xxxvii. 5.....	Before the conquest of Gaza by Pharaoh.....	589
xlviii., xlix.....	Jer. xxviii. 17.....	On the ruin of the surrounding nations by Nebuchadnezzar.....	595
l., li.....	Jer. xlix. 30.....	On Seraiah's going to Babylon.....	595
li. 1-4.....	2 Chron. xxvi. 10.....	Part of the life of Zedekiah.....	599
4.....	2 Kings xxiv. 20.....	Nebuchadnezzar commences the siege of Jerusalem.....	588
5, 6.....	Jer. xxxix. 18.....	Part of the history of the siege of Jerusalem.....	588
7-12.....	Jer. xxxix. 3.....	Part of the history of the siege of Jerusalem.....	588
12-15.....	Jer. lii. 27.....	Burning of the temple of Jerusalem.....	588
15, 16.....	Jer. lii. 27.....	Account of those who were left in Judea by Nebuchadnezzar.....	588
17-24.....	Jer. lii. 14.....	Account of the Jewish spoils.....	588
24-28.....	Jer. xxxix. 14.....	Murder of the chief-priests after the capture of Jerusalem.....	588
28-31.....	Jer. xlv. 30.....	Recapitulation of the captivities.....	587
31, to end.....	Dan. iv. 37.....	Release of Jehoiahin.....	561
<b>LAMENTATIONS</b> .....	2 Kings xxv. 21.....	Jeremiah laments the desolation of Judea.....	588

## ANALYTICAL TABLE OF THE BOOKS OF THE PROPHETS.

(CONCLUDED FROM PRECEDING PAGE.)

PROPHECY.	AFTER WHAT SCRIPTURE.	PROBABLE OCCASION OR PERIOD IN WHICH THE PROPHECY WAS WRITTEN.	BEFORE CHRIST.
<b>EZEKIEL</b> i. ii., iii. 1-22.....	Dan. i. 20.....	Commission of Ezekiel.....	595
22, to end, iv., v., vi., vii.....	Ezek. iii. 21.....	Prediction of the destruction of Jerusalem.....	595
viii., ix., x., xi. 1-22.....	Ezek. vii. 27.....	On the idolatries which occasioned the Babylonish captivity.....	594
22, to end, xii., xiii., xiv., xv., xvi., xvii., xviii., xix.....	Ezek. xi. 21.....	On the approaching ruin of Zedekiah and the surrounding nations.....	594
xx., xxi., xxii., xxiii.....	Ezek. xix. 14.....	On Ezekiel's being consulted by the Jewish elders.....	593

17, to end, iv.....	Neh. xiii. 31.....	After the completion of the reformation by Nehemiah.....	400

NOTE.—The above Table states after what Scripture the different portions of the prophetic books are to be read in the order of time, but it does not necessarily imply that there is any connection of subject between the Scripture and the prophecy; as, for instance, Mal. i., ii., iii. 1-16, following Psalm cxix. Often, however, there is an important connection: for instance, 2 Kings xvi. 5, with Isa. vii.-x. 1-5, presents us with an astonishing view of the long-suffering of God to one of the most wicked of men: the prophet Isaiah, for the consolation of Ahaz, was sent not only to assure him of immediate safety, but to announce to him one of the most splendid prophecies in the Old Testament respecting the promised Messiah (Isa. vii. 14; ix. 6, etc.).

In studying prophecies, as in parables, we are chiefly to consider their scope and design, without attempting to find too minute or exact an explanation of the poetical symbols or images in which the Sacred Books abound; many of these are simply used as adornments of style—the sky and trees in the background to fill in and beautify the picture.

Many of the Old Testament prophecies have a twofold application: first, directly to the temporal punishments and blessings of the Jews; and secondly, less directly, yet clearly and unequivocally, to the Messiah and His kingdom. In fact, almost all the prophecies in the Old Testament, whatever their direct significance and object, are to be referred to the Gospel, where alone we can find their full completion. We must not, however, look for a mystical or typical meaning in every prophecy; as a rule, when the direct meaning is plain and complete in sense and application, or when history shows an entire fulfilment, it is scarcely needful or expedient to depart from it or to be over-curious to look beyond.

In the reckoning of time, in prophetic language, a day denotes a year, and often things yet future are, to indicate their certainty, spoken of as though past. When the prophets speak of the *last days* or the *latter days*, they always refer to the Messianic era, and so also, generally, when they use the expression *that day*.

## PROPHECIES ALREADY LITERALLY FULFILLED.

TEXT.	THE FULFILMENT.	TEXT.	THE FULFILMENT.
Gen. ix. 25, 27.	The descendants of Shem and Japheth are "ruling" and "enlarged," but the descendants of Ham are still "the servants of servants."	Nab. i., iii.	Nineveh is completely destroyed, and for ages its locality was unknown.
Gen. xvi. 10, 12.	The posterity of Ishmael have "multiplied exceedingly," living like "wild men," "their hand against every man," free in "the presence of all their brethren" and of all their enemies.	Isa. xiii., xiv.	Babylon has been swept with "the besom of destruction," is made "a desolation for ever," "a possession for the bittern and pools of water," "a dwelling-place for dragons, an astonishment and hissing, without an inhabitant."
Gen. xlix. 10.	"The sceptre has departed from Judah."	Ezek. xxvi. 4, 5.	Tyre has become "like the top of a rock, a place for fishers to spread their nets upon."
Lev. xxvi. 38, 39.	The Jews have been "led away into all nations," "Jerusalem has been trodden down by the Gentiles," the people have been "plucked from off their own land," "removed into all the kingdoms of the earth," "scattered among the heathen," "among all people," "sifted among all nations," have "become a proverb," have found "among these nations no ease, and the sole of their foot had no rest," have "been many days without a king and without a sacrifice."	Ezek. xxix. 14, 15.	Egypt became "a base kingdom," tributary to strangers, and never able to "exalt itself above the nations."
Deut. xxviii. 62, 67.		Dan. xi. 37, 39.	The fourth and last of the four great kingdoms was divided into ten kingdoms, and among them has arisen a power with a triple crown, "diverse from the first," "with a mouth speaking very great things," "wearing out the saints of the Most High," "changing times and laws," ruling "over many and dividing the land for gain."
Ezek. v. 10, 15.			
Hos. iii. 4.			
Num. xxiii. 9.	The Jews "dwell alone," and are not "reckoned among the nations."	Luke xxi. 24.	The Jews have been led into all nations, and Jerusalem has been trodden down by the Gentiles.
Num. xxiv. 20.	"The remembrance of Amalek" is "utterly put out from under heaven."	1 Tim. iv. 1-3.	The apostasy here predicted has taken place. The Roman Church has forbidden the priesthood "to marry," and "commanded to abstain from meats."
Ps. ii. 8.	The Lord has given to the Messiah "the heathen for his inheritance," and the progress of the Gospel is hastening the time when "from the rising of the sun, even to the going down of the same, his name shall be great among the Gentiles."	Rev. ii., iii.	The decay of the seven Asiatic churches and their fate have been literally foretold.
Mal. i. 11.	The family of Esau has become extinct, "cut off for ever," so that there is "none remaining of the house of Esau." The "palaces of Bozrah" have been "devoured by fire." Fire was "kindled in Rabbah and in the palaces thereof," and Ammon was destroyed as in "the day of the whirlwind."	Rev. xiii.-xvii.	The rise, power and fury of the mystical Babylon are here set forth, and Rome built on seven hills is pointed out as the seat of this tyranny.
Jer. xlix. 17, etc.			
Ezek. xxv. 12, etc.			
Joel iii. 19.			
Amos i. 11, etc.			
Obad. x. 18, etc.			

## INSTANCES OF PROPHECY COMPARED WITH HISTORY.

THE CHIEF POINTS BEING SELECTED AND NUMBERED.

PROPHECY OF FOUR KINGDOMS REPRESENTED BY FOUR BEASTS.		CORRESPONDING EVENTS IN THEIR HISTORICAL ORDER.	
NO.	THE FIRST BEAST.—DAN. vii. 4.	NO.	ASSYRIAN EMPIRE.
1.	A lion,	1.	The Babylonian empire;
2.	having eagle's wings;	2.	Nineveh, etc., added to it—but
3.	the wings were plucked;	3.	Nineveh was almost destroyed at the fall of Sardanapalus.
4.	it was raised from the ground,	4.	Yet this empire was again elevated to power,
5.	and made to stand on the feet, as a man,	5.	and seemed to acquire stability under Nebuchadnezzar,
6.	and a man's heart [intellect] was given to it.	6.	who laid the foundation of its subsequent policy and authority.
THE SECOND BEAST.—DAN. viii. 3, 4.		PERSIAN EMPIRE.	
1.	A ram	1.	Darius, or the Persian power.
2.	which had two horns,	2.	Composed of Media and Persia—
3.	both high,	3.	both considerable provinces,
4.	but one higher than the other:	4.	Media the most powerful; yet this most powerful
5.	the highest came up last;	5.	Median empire, under Dejoces, rose after the other,
6.	the ram pushed west, north and south,	6.	and extended its conquests, under Cyrus, over Lydia, etc., west;
7.	did as he pleased, and became great.	7.	over Asia, north; over Babylon, etc., south; and, ruling over such an extent of country, was a great empire.
THE THIRD BEAST.—DAN. viii. 5-12.		GRECIAN EMPIRE.	
1.	A he-goat	1.	Alexander, or the Greek power,
2.	came from the west,	2.	came from Europe (west of Asia)
3.	gliding swiftly over the earth;	3.	with unexampled rapidity of success;
4.	ran unto the ram in the fury of his power,	4.	attacked Darius furiously, and
5.	smote him,	5.	beat him—at the Granicus, Issus, etc.;
6.	broke his two horns,	6.	conquered Persia, Media, etc.;
7.	cast him on the ground,	7.	ruined the power of Darius,
8.	stamped on him, and	8.	insomuch that Darius was murdered, etc.
9.	waxed very great;	9.	Alexander overran Bactriana to India,
10.	when he was struck his great horn was broken, and	10.	but died at Babylon in the zenith of his fame and power;
11.	instead of it came up four notable ones	11.	his dominions were parceled among Seleucus, Antigonus, Ptolemy, Cassander (who had been his officers);
12.	toward the four winds of heaven;	12.	In Babylon, Asia Minor, Egypt, Greece.
13.	out of one of them a little horn waxed great	13.	Antiochus the Great, succeeded by Antiochus Epiphanes,
14.	toward the south and east,	14.	conquered Egypt, etc.,
15.	which took away the daily sacrifice, cast down the sanctuary, etc.	15.	and endeavored utterly to subvert the Jewish polity, polluting their temple-worship and sacrifices to the utmost of his power.

## DATE AND ORIGIN OF THE PSALMS, ARRANGED ACCORDING TO THE OCCASION AND ORDER.

PSALMS.	AFTER WHAT SCRIPTURE.	PROBABLE OCCASION ON WHICH EACH PSALM WAS COMPOSED.	BEFORE CHRIST.	PSALMS.	AFTER WHAT SCRIPTURE.	PROBABLE OCCASION ON WHICH EACH PSALM WAS COMPOSED.	BEFORE CHRIST.
1.....	Neh. 13. 3.....	Written by David or Ezra, and placed as a preface to the Psalms.	444	75, 76.....	2 Kings 19. 35.	On the destruction of Sennacherib.....	710

73.....	Jer. 39. 10.....	On the destruction of the city and temple.....	588				
74.....							

NOTE.—The Book of Psalms is quoted in the New Testament, or clearly referred to, upwards of seventy times.

AUTHORS.—The question of the authorship of many of the Psalms has caused much discussion, and is still an open one. Though an interesting question, it is not vitally important. The Psalms are usually ascribed to the several authors, as follows: David, 85; Solomon, 7; Moses, 9; Asaph, 12; Heman, 1; Ezra, 3; the sons of Korah, 11; Hezekiah, 1; Daniel, 1; Haggai, 1; Unknown, 19.

1 Applied to our Lord by Peter, Acts 2. 25-31; and by Paul, Acts 13. 35, 36.

2 Explained and applied to our Lord, Heb. 1. 8, 9; 1 Pet. 3. 22; Eph. 1. 22; Phil. 2. 9-11.

3 Cited by our Lord to prove his Divinity, Matt. 22. 44; by Peter, Acts 2. 32-36; Paul, 1 Cor. 15. 25-28; Heb. 7. 1-28; 8. 1.

4 Cited by our Lord, Matt. 21. 42; explained by Peter, Acts 4. 11; 1 Pet. 2. 4, 5; Paul, Rom. 9. 32, 33; Eph. 2. 20, 21.

5 Calmet and most commentators refer this Psalm to the captivity.

## TABLE OF THE PSALMS ADAPTED TO THE PURPOSES OF PRIVATE DEVOTION.

NO.	PRAYERS ADAPTED TO VARIOUS SUBJECTS.	NO.	PSALMS OF PRAISE AND ADORATION, DISPLAYING THE ATTRIBUTES OF GOD.
1.	Prayers for pardon of sin, Ps. vi., xxv., xxxviii., li., cxxx. Psalms styled penitential, vi., xxxii., xxxviii., li., ciii., cxxx., cxliii.	1.	General acknowledgments of GOD'S goodness and mercy, and particularly his care and protection of good men, Ps. xxiii., xxxiv., xxxvi., xci., ciii., cxvii., cxviii., cxli., cxlii.
2.	Prayers composed when the Psalmist was deprived of the public exercise of religion, Ps. xlii., xliii., lxiii., lxxxiv.	2.	Psalms displaying the power, majesty, glory and other attributes of JEHOVAH, Ps. viii., xix., xxiv., xxix., xxxiii., xlvi., l., lxxv., lxxvi., lxxvii., xciii., xciv., xcvi., xcvi., xcix., cxi., cxiii., cxv., cxxxiv., cxxxix., cxlvii., cxlviii., cl.
3.	Prayers in which the Psalmist appears extremely dejected, though not totally deprived of consolation, under his afflictions, Ps. xlii., xliii., lxix., lxxvii., lxxxviii., cxliii.	INSTRUCTIVE PSALMS.	
4.	Prayers in which the Psalmist asks help of GOD, in consideration of his own integrity and the uprightness of his cause, Ps. vii., xvii., xxvi., xxxv.	1.	The different characters of good and bad men—the happiness of the one and the misery of the other, Ps. i., v., vii., ix., xi., xli., xlv., xv., xvii., xxiv., xxv., xxxii., xxxiv., xxxvi., xxxvii., l., lii., liii., lviii., lxxii., lxxv., lxxxiv., xci., xcii., xciv., cxii., cxix., cxxi., cxv., cxvii., cxviii., cxxxiii.
5.	Prayers expressing the firmest trust and confidence in GOD under afflictions, Ps. iii., xvi., xxvii., xxxi., liv., lvi., lvii., lxi., lxxi., lxxxvi.	2.	The excellence of GOD'S law, Ps. xix., cxix.
6.	Prayers composed when the people of GOD were under affliction or persecution, Ps. xlii., lx., lxxiv., lxxix., lxxx., lxxxiii., lxxxix., xciv., cii., cxiii., cxxxvii.	3.	The vanity of human life, Ps. xxxix., xli., xc.
7.	The following are also prayers in time of trouble and affliction: Ps. iv., v., xi., xxviii., xli., lv., lix., lxiv., lxx., cix., cxx., cxi., cxli., cxlii.	4.	Advice to magistrates, Ps. lxxii., ci.
8.	Prayers of intercession, Ps. xx., lxvii., cxii., cxxxii., cxliv.	5.	The virtue of humility, Ps. cxxxi.
PSALMS OF THANKSGIVING.		PROPHETICAL PSALMS.	
1.	Thanksgivings for mercies bestowed on particular persons, Ps. ix., xviii., xxi., xxx., xxxiv., xl., lxxv., ciii., cxvi., cxviii., cxxxviii., cxliv.	Ps. ii., xvi., xxii., xl., xlv., lxviii., lxxii., lxxxvii., cx., cxviii.	
2.	Thanksgivings for mercies bestowed upon the Israelites in general, Ps. xlv., xlviii., lxxv., lxxvi., lxxxi., lxxxv., xcvi., cv., cxxiv., cxxvi., cxxxix., cxxxv., cxxxvi., cxlix.	HISTORICAL PSALMS.	
		Ps. lxxviii., cv., cvi.

## CHRONOLOGICAL ORDER OF THE PROPHETICAL BOOKS.

NAMES.	BEFORE CHRIST.	KINGS OF JUDAH.	KINGS OF ISRAEL.	NAMES.	BEFORE CHRIST.	KINGS OF JUDAH.	KINGS OF ISRAEL.
JONAH.	Between 856 and 784.	JOASH, AMAZIAH, or AZARIAH.	JEHU and JEHOAHAZ, or JOASH and JEROBOAM II.	JEREMIAH.	Between 628 and 586.	JOSIAH.	
AMOS.	Between 810 and 795.	UZZIAH, ch. i. 1.	JEROBOAM II., ch. i. 1.	HABAKKUK.	Between 612 and 598.	JEHOIAKIM.	
HOSEA.	Between 810 and 725.	UZZIAH, JOTHAM, AHAZ, HEZEKIAH.	JEROBOAM II., ch. i. 1.	DANIEL.	Between 606 and 534.	During all the captivity.	
ISAIAH.	Between 810 and 698.	UZZIAH, JOTHAM, AHAZ and HEZEKIAH.	ZECHARIAH, SHALLUM, MENAHEM, PEKAHIAH, PEKAH and HOSEA.	OBADIAH.	Between 588 and 583.	Soon after the siege of Jerusalem by NEBUCHADNEZZAR.	
JOEL.	Between 810 and 660.	UZZIAH or MANASSEH.	ZECHARIAH, SHALLUM, MENAHEM, PEKAHIAH, PEKAH and HOSEA.	EZEKIEL.	Between 583 and 562.	Captivity.	
MICAH.	Between 758 and 699.	JOTHAM, AHAZ and HEZEKIAH, ch. i. 1.	PEKAH and HOSEA.	HAGGAI.	About 520 or 518.	After the return from Babylon.	
NAHUM.	Between 720 and 698.	About the close of HEZEKIAH'S reign.		ZECHARIAH.	Between 520 and 518.		
ZEPHANIAH.	Between 640 and 609.	JOSIAH, ch. i. 1.		MALACHI.	Between 436 and 420.		

## FEASTS AND FESTIVALS OF THE JEWS; WITH THE SEASONS AND PRODUCTS OF THE YEAR.

MONTH OF SACRED YEAR.	CIVIL YEAR.	NAME.	ANSWERING TO THE MONTHS OF	FESTIVALS AND LESSONS.	SEASONS AND WEATHER.	PRODUCTIONS.
1st.	7th.	Abib, or Nisan (30 days), Exod. xii. 2; Ezra vii. 9; Neh. ii. 1; Esth. iii. 7.	Parts of Mar. and April.	3. Lev. vi.; Jer. vii. 21. 14. Paschal lamb slain. The Passover. 16. The first-fruits of the barley-harvest presented. 21. End of the Passover and unleavened bread.	HARVEST BEGINS. The latter rain begins to fall, Deut. xi. 14; Zech. x. 1. The weather during the rains chilly, Ezra x. 9; John xviii. 10. This rain prepares the corn for harvest. Great heat, especially in the plains. The rivers swell from the rains, Josh. iii. 15; 1 Chron. xii. 15; Jer. xii. 5.	Barley ripe at Jericho; wheat partly in ear; fig-tree blossoms; winter-fig still on the tree, Matt. xxi. 19; Mark xi. 23.
2d.	8th.	Tyar, or Zif (29 days), 1 Kings vi. 1.	Parts of April and May.	11. Lev. xvi. 1; Ez. xxii. 14. The second Passover (Num. ix. 10, 11), for such as could not celebrate the first.	The latter rains still frequent. These rains often preceded by whirlwinds, 1 Kings xviii. 45; Matt. viii. 24.	Barley generally three weeks earlier than wheat. Barley generally cut this month, Ruth i. 22. Wheat begins to ripen.
3d.	9th.	Sisan, or Sivan (30 days), Esth. viii. 9.	Parts of May and June.	6. Pentecost, or feast of weeks. First-fruits of wheat-harvest (Lev. xxiii. 17, 20), and first-fruits of all the ground, Deut. xxvi. 2, 10, 16; 1 Kings xii. 25-33. 10. Num. i.; Hos. i.	Excessive drought. From April to Sept. no rain or thunder, 1 Sam. xii. 17; Prov. xxvi. 1. The morning cloud seen early, but soon disappears, Hos. vi. 4; xiii. 3. Copious dews at night, Job xxix. 9; Ps. cxxxiii. 3. North and east winds increase drought, Gen. xli. 6; Jer. iv. 8.	Wheat ripening on the hills in June; in the valleys, early in May.
4th.	10th.	Thammuz (29 days).	Parts of June and July.	3. Num. xiii. 1; Josh. ii. 26. Num. xxii. 2; Mic. v. 7.	Heat increases.	Early vintage, Lev. xxvi. 5. Rice and early figs ripen.
5th.	11th.	Ab (30 days), Ezra vii. 9.	Parts of July and Aug.	3. Num. xxx. 2; Jer. i. 20. Deut. i.; Isa. i.	HOT SEASON. Heat intense; country apparently burned up. Lebanon nearly free from snow.	Ripe figs at Jerusalem; olives at Jericho; grapes ripening.
6th.	12th.	Elul (29 days), Neh. vi. 15.	Parts of Aug. and Sept.	3. Deut. vii. 12; Isa. xlix. 14. 20. Deut. xvi. 18; Isa. li. 12.	Heat still intense, 2 Kings iv. 19, 20; Ps. cxxi. 6; Isa. xlix. 9, 10; Rev. vii. 16.	Grape harvest general.
7th.	1st.	Tisri, or Ethanim (30 days), 1 Kings viii. 2.	Parts of Sept. and Oct.	1. Feast of trumpets, Lev. xxiii. 24; Num. xxix. 1. 10. Day of atonement, Lev. xxiii. 27, 28. 15. Feast of tabernacles, or of the in-gatherings, Ex. xxiii. 16; Lev. xxiii. 34. First-fruits of wine and oil, Lev. xxiii. 39. 21. Gen. i.; Isa. xlii. 5.	SEED-TIME BEGINS. Heat in the day; nights frosty, Gen. xxxi. 40. Showers frequent; the former, or early rain. Ploughing and sowing begin.	
8th.	2d.	Marchesvan, or Bul (29 days), 1 Kings vi. 38.	Parts of Oct. and Nov.	8. Gen. xxiii. 1; 1 Sam. i. 1.	Sometimes the early rain begins now. Wheat and barley sown.	The latter grapes gathered.
9th.	3d.	Chisleu (30 days), Zech. vii. 1; Neh. i. 1.	Parts of Nov. and Dec.	10. Gen. xxxvii. 1; Amos ii. 6. 25. Feast of the dedication, 1 Mac. iv. 52-59; John x. 22, 23.	WINTER BEGINS. Trees lose their foliage. Snow begins to fall on the mountains, Josh. xxxvi. 22.	
10th.	4th.	Thebeth (29 days), Esther ii. 16.	Parts of Dec. and Jan.	25. Ex. x. 1; Jer. xli. 13.	On the mountains the cold is severe. Hail; snow, Josh. x. 11; Ps. xlvii. 16, 17. Weather warm at intervals, Ezek. xxxiii. 30, 31.	Grass and herbs spring up after the rains.
11th.	5th.	Shevet, or Shebet (30 days), Zech. i. 7.	Parts of Jan. and Feb.	17. Ex. xxi. 1; Jer. xxxiv. 8.	COLD SEASON. Corn still sown. At the beginning of the cold season the weather cold, but gradually becomes warm.	The winter-fig found on the trees, though they are stripped of their leaves.
12th.	6th.	Adar (29 days), Ezra vi. 15. Ye Adar, or 2d Adar.	Parts of Feb. and Mar.	1. Ex. xxxviii. 21; 1 Sam. xvii. 13. 14, 15. Feast of Purim. 25. Lev. i. 1; Isa. xliii. 21.	Thunder and hail frequent. Barley sometimes sown.	The almond tree blossoms.

NOTE.—The first month of the sacred year was the one whose full moon followed next after the vernal equinox, and therefore sometimes answered to March and sometimes to April, and sometimes to parts of both.

## JEWISH SEASONS, SACRIFICES AND OBLATIONS.

WITH THEIR TYPICAL REFERENCE TO CHRIST, HIS WORK AND HIS INSTITUTIONS.

## SACRIFICES AND OBLATIONS.

The distinction between sacrifices and oblations consisted in this, that in the former the thing offered was wholly or partially destroyed, as being Jehovah's only; in the latter, it was acknowledged to be His gift, and then enjoyed by the offerer.

The sacrifices were divided into *burnt-offerings*, with the accompanying *meat-offerings* (meat-food in general, especially corn and flour), *peace-offerings*, *sin-offerings*, for sins committed ignorantly, and *trespass-offerings*, for wilful sins and for ceremonial uncleanness.

I. **THE BURNT-OFFERING**, or *perfect sacrifice*, was so called because it was wholly consumed by fire upon the altar of burnt-offering, and so, as it were, sent up to God on the wings of fire. It signified that the offerer belonged wholly to God, and that he dedicated himself soul and body to Him. Burnt-offerings were made on behalf of the whole people or by one or more individuals who must bring them of their own free will (Lev. i, vi, 8-13). Three kinds of animals, free from blemish, might be offered: (1) a young bullock of not more than three years; (2) a lamb or kid, a male of the first year; (3) turtle doves or young pigeons. Burnt-offerings were made on the following occasions, viz.:

1. **The Daily Sacrifice** of a yearling lamb or kid was offered at the times of the morning and evening prayer before the priest went into the tabernacle to burn incense.

2. **The Sabbath Burnt-Offering** was the daily sacrifice doubled (Num. xxviii. 9, 10).

3. **The Burnt-Offerings** at the festivals of the New Moon, the three great feasts, the Day of Atonement and the Feast of Trumpets, were generally two bullocks, a ram and seven lambs (Num. xxviii. 11; xxix. 39).

4. **Private Burnt-Offerings** prescribed by the law, at the consecration of priests, the purification of women, the removal of leprosy or other ceremonial uncleanness, the performance or the accidental breach of the vow of a Nazirite.

II. **THE MEAT-OFFERING** and the **DRINK-OFFERING** always accompanied the burnt-offering, for which, indeed, the meat-offering might be substituted by the poor. As the burnt-offering signified the consecration of *life* to God, so in the meat-offering the produce of the land was presented before Him as being His gift, with the devout acknowledgment in both cases, "Of thine own have we given thee" (1 Chron. xxix. 14).

III. **THE PEACE-OFFERING** was not an atoning sacrifice to make peace with God, but a joyful celebration of *peace* made through atoning provisions of the covenant. Jehovah, as it were, was in His *House* inviting the worshiper who had been reconciled and accepted to *feast with Him*. Only a part of the offering was burnt on the altar and was thus offered to Jehovah; the breast and the shoulder belonged to the priests, and the rest might be eaten by the worshiper.

IV. **THE SIN-OFFERING** was an expiatory sacrifice for sins of ignorance committed by a priest, or by any of the people. Special victims were enjoined in different cases with special ceremonies (Lev. vi. 24-30).

V. **TRESPASS-OFFERINGS** were for sins committed knowingly, as well as for acts of ceremonial uncleanness.

And thus in all these sacrifices and offerings, which were continued from year to year, the Jews had before their minds the great facts of their guilt and exposedness to condemnation because of their violation of God's righteous law. They were taught their inability to satisfy the demands of the law which they had broken, and, above all, that when they deserved judgment, deliverance was graciously prepared for them by way of substitution and atonement. They were taught that it was not possible "that the blood of bulls and of goats should take away sins," yet these shadows intimated the substance of good things to come away sins, when the Great Deliverer, by one perfect offering, which needed no repetition, should finish the work of redemption, and for ever sit down at the right hand of God. As in the type, the blood of an innocent victim was shed, so in the case of the great Antitype, the holy and righteous One who knew no sin, who was of pure and undefiled, gave His life as a ransom for the guilty, His vicarious death and sufferings atone for guilt, and thus peace with God is the portion of the believer in the Saviour. The believing Jew was permitted to eat of the peace-offering as an intimation of the fact that reconciliation and acceptance had been secured; so now the Christian is assured that, being justified by faith (Rom. v. 1), he has peace with God through our Lord Jesus Christ.

VI. **OBLATIONS** are not clearly distinguished from those sacrifices which were of the nature of *gifts*; they included *incense*, things *vowed*, *first-fruits* of corn, of wine, oil and wool, the *first-born* of man and beast, and *tithes* of the produce of the land.

## THE SACRED SEASONS.

These fell under three heads.

I. Those connected with the Sabbath, namely:

1. The weekly Sabbath itself.
2. The Feast of the New Moon.
3. The Sabbatical Month, and the Feast of Trumpets.
4. The Sabbatical year.
5. The Year of Jubilee.

II. The three great historical festivals, namely:

1. The Passover.
2. The Feast of Pentecost.
3. The Feast of Tabernacles.

III. The Day of Atonement.

## I. THE SABBATICAL SEASONS.

1. **THE SABBATH** is so named from a Hebrew word which signifies *rest*. That this was one of the primeval institutions adopted by Moses from the ancient patriarchal usage is implied in the very words of the law, "Remember the Sabbath day to keep it holy." The institution was not intended to promote idleness, but to prohibit *work for worldly gain*.

2. **THE FEAST OF THE NEW MOON** marked the completion of the lunar month. The first sight of her new crescent was announced by the sound of two silver trumpets (Num. x. 10).

3. **THE SABBATICAL MONTH** and the **FEAST OF TRUMPETS**. The month of Tisri, the first of the civil but the seventh of the sacred year, had a kind of Sabbatical character (Lev. xxiii. 24). The calendar was arranged so that the first day of this month fell on a Sabbath. This, the civil *New Year's* day, was ushered in by the blowing of trumpets, and hence was called the *Feast of Trumpets*. On the tenth of this month the great Day of Atonement was kept, and from the fifteenth to the twenty-second of the month the Feast of Tabernacles, the greatest of the whole year, was celebrated. All the great festivals were observed within a Sabbatical cycle of seven months.

4. **THE SABBATICAL YEAR**. Each seventh *day*, and each seventh *month* and each seventh *year* were holy. The land belonged to Jehovah, and it also had to keep its Sabbaths to Him. It was to be a season of rest and especially of great kindness to the poor. The land was not to be sown, nor the vineyards and the olive-yards dressed; no fruit or produce of any kind was to be gathered from the soil, but all was to be left to the poor, the slave and the stranger (Ex. xxiii. 10, 11). This was a "year of release," because in it creditors were bound to release poor debtors. Slaves also were to be set free (Deut. xv. 12-18). From the first the people neglected these injunctions, and it was one of the national sins which were punished by the Babylonian captivity.

5. **THE YEAR OF JUBILEE** occurred every fiftieth year. It completed every

half century. It began on the tenth of the seventh month, the great Day of Atonement. Sacrifice being offered, the trumpet of jubilee proclaimed "liberty to the captive and the opening of the prison doors to those that were bound." The land was left uncultivated as in the Sabbatical year, and all alienated possessions returned to the families to whom they had been allotted in the first division of the holy land. The institution was based on the principle that the land was God's, who granted to each family its portion, and thus the principle was asserted that the land, the people, all belonged to God, were His servants and incapable of belonging to any one but Him; and thus the jubilee completed the great Sabbatical cycle of years at the close of which, in a limited sense, "all things were made new."

## II. THE THREE GREAT HISTORICAL FESTIVALS.

Thrice in the year at these feasts all the males were required to appear before Jehovah at the tabernacle, and afterward at the temple. No age was prescribed: Jesus went up to the Passover at the age of twelve (Luke ii. 42), Samuel still younger (1 Sam. i. 24).

1. **THE PASSOVER**, which was the most solemn of the three festivals, as the memorial of the nation's birth and the type of Christ's death, was kept for seven days, from the evening which closed the fourteenth to the end of the twenty-first day of the first month of the sacred year, Abib or Nisan (April). Certain differences existed between the ordinance as observed in Egypt and the "Perpetual Passover." The latter was thus observed: On the fourteenth day of Nisan all heaven was put away out of their houses, and on the same day all males who were not infirm had to appear with an offering of money at the national sanctuary, according to his means (Deut. xvi. 16, 17). As the sun was setting the lambs were slain, and the fat and the blood given to the priests. The lamb was then roasted whole, and eaten with bitter herbs and unleavened bread, no portion of it being left until the morning. The same night the fat was burned by the priests after the fifteenth day had commenced, and the blood was sprinkled on the altar. On the fifteenth no work, except preparing food, was done, as it was a holy day. On the sixteenth of the month, the morrow after the Sabbath, the first sheaf of the harvest was presented and waved by the priest before the Lord, and a male lamb was offered as a burnt-sacrifice, with a meat and drink-offering. Special offerings were made during all the period, and the seventh day, the twenty-first of Nisan, appears to have been one of peculiar solemnity. Cheerfulness was to prevail during all the week, and in later years the *Hallel*, Psalm cxiii.-cxviii., was sung (Matt. xxvi. 30). The Passover has the profoundest and yet the clearest significance of any typical rite. Its teaching is summed up in the words, "CHRIST OUR PASSOVER IS SACRIFICED FOR US" (1 Cor. v. 7), who was in fact put to death at the very season of the Passover, as "a lamb without blemish and without spot" (1 Pet. i. 19; Isa. liii. 7; John i. 29; Acts viii. 32).

## MIRACLES OF THE OLD TESTAMENT.

THE MIRACLE.	THE OBJECT OR OCCASION.	THE PLACE.	THE TEXT.
The Multiplication of Languages.....	To Defeat Wrong Ambition.....	Babel.....	Gen. xi. 7-9.
Certain Sodomites Smitten with Blindness.....	To Punish them for Murderous Intent.....	Sodom.....	xix. 11.
Destruction of Sodom and Gomorrah.....	As Punishment for their Great Wickedness.....	Sodom and Gomorrah.....	xix. 24, 25.

## THE ANCIENT EGYPTIANS.

THE intercourse of the ancient people of God with the Egyptians began at a remote period. When Abraham left the home of his fathers and arrived in the land which God told him he and his descendants were to have as a possession, he found that a famine prevailed in the land, and he forthwith went down into Egypt. Want of food obliged the family of his grandson Jacob to have recourse to the same country, under similar but still more interesting circumstances; for it was an Israelite who then held place and power in Egypt, and by whose wisdom judicious measures had been adopted to save even Egypt itself from impending ruin. In subsequent times, when the Israelites rose to be a power among the nations, their intercourse with Egypt, as might have been expected, produced important changes among the upper classes of the people at home, especially in the circles of the court, in the matter of religion, the fashions of society and the alliances which from time to time were formed for political purposes. It is therefore important that an exhibition of the life of a people who so greatly affected the course of affairs in Judah and Israel should be given; and accordingly, the object of the following pages is to set forth such interesting facts as will give a portraiture of the manners and customs of that venerable nation which stood at the head of civilization in the dim ages of the remote past, when all Europe, the North of Asia and the body of the African continent lay either unoccupied or were roamed over by nomads who knew nothing of a settled national life. Such a portraiture is the more valuable because in the body of this work a moderate space only could be given to any of the terms which occurred in connection with Egyptian matters, unless repetition and undue enlargement had been indulged in to the exclusion of other topics. Here such information is condensed so as to present the subject in a separate form.

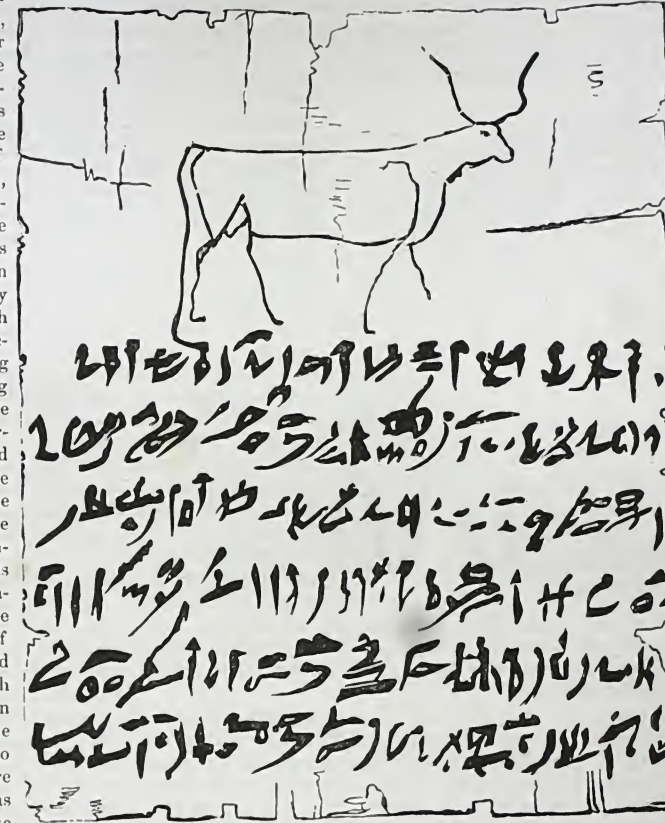

the Hebrew records, of which many satisfactory illustrations occur in the sculptures of Pharaonic times. Their great antiquity also enables us to understand the condition of the world long before the era of written history; all existing monuments left by other people are comparatively modern, and the paintings in Egypt are the earliest descriptive illustrations of the manners and customs of any nation.

It is from these that we are enabled to form an opinion of the character of the Egyptians. They have been pronounced a serious, gloomy people,

resemblance they bear to their ancient predecessors. It is a common error to suppose that the conquest of a country gives an entirely new character to the inhabitants. The immigration of a whole nation, taking possession of a thinly-peopled country, will have this effect when the original inhabitants are nearly all driven out by the newcomers; but immigration has not always, and conquest never has, for its object the destruction or expulsion of the native population; they are found useful to the victors, and as necessary for them as the cattle or the productions of the soil.

Invaders are always numerically inferior to the conquered nation, even to the male population; and when the women are added to the number, the majority is greatly in favor of the original race, and they must exercise immense influence on the character of the rising generation. The customs, too, of the old inhabitants are very readily adopted by the newcomers, especially when they are found to suit the climate and the peculiarities of the country they have been formed in; and the habits of a small mass of settlers living in contact with them fade away more and more with each successive generation. So it has been in Egypt, and, as usual, the conquered people bear the stamp of the ancient inhabitants rather than that of the Arab conquerors.

Of the various institutions of the ancient Egyptians, none are more interesting than those which relate to their social life; and when we consider the condition of other countries in the early ages when they flourished, from the tenth to the twentieth century before our era, we may look with respect on the advancement they had then made in civilization and acknowledge the benefits they conferred upon mankind during their career. For like other people, they have had their part in the great scheme of the world's development and their share of usefulness in the destined progress of the human race; for countries, like individuals, have certain qualities given them which, differing from those of their predecessors and contemporaries, are intended in due season to perform their requisite duties. The interest felt in the Egyptians is from their having led the way, or having been the first people we know of who made any great progress, in the arts and manners of civilization, which, for the period when they lived, was very creditable, and far beyond that of other kingdoms of the world. Nor can we fail to remark the difference between them and their Asiatic rivals, the Assyrians, who, even at a much later period, had the great defects of Asiatic cruelty, flaying alive, impaling and torturing their prisoners, as the Persians, Turks and other Orientals have done to the present century, the reproach of which cannot be extended to the ancient Egyptians. Being the dom-

A FRAGMENT OF AN ANCIENT EGYPTIAN PAPYRUS ROLL.

## I. Character of the Egyptians.—Original Populations.—Social Life.

THE monumental records and various works of art, and, above all, the writings, of the Greeks and Romans, have made us acquainted with their customs and their very thoughts; and though the literature of the Egyptians is unknown, their monuments, especially the paintings in the tombs, have afforded us an insight into their mode of life scarcely to be obtained from those of any other people. The influence that Egypt had in early times on Greece gives to every inquiry respecting it an additional interest, and the frequent mention of the Egyptians in the Bible connects them with

saddened by the habit of abstruse speculation; but how far this conclusion agrees with fact will be seen in the sequel. They were, no doubt, less lively than the Greeks; but if a comparatively late writer, Ammianus Marcellinus, may have remarked a "rather sad" expression, after they had been for ages under successive yokes, this can scarcely be admitted as a testimony of their character in the early times of their prosperity; and though a sadness of expression might be observed in the present oppressed population, they cannot be considered a grave or melancholy people. Much, indeed, may be learned from the character of the modern Egyptians; and notwithstanding the infusion of foreign blood, particularly of the Arab invaders, every one must perceive the strong

inant race of that age, they necessarily had an influence on others with whom they came in contact; and it is by these means that civilization is advanced through its various stages, each people striving to improve on the lessons derived from a neighbor whose institutions they appreciate or consider beneficial to themselves. It was thus that the active mind of the talented Greeks sought and improved on the lessons derived from other countries, especially from Egypt; and though the latter, at the late period of the seventh century B. C., had lost its greatness and the prestige of superiority among the nations of the world, it was still the seat of learning and the resort of studious philosophers, and the abuses consequent on the fall of an empire had not yet brought about the demoralization of after times.

The early part of Egyptian monumental history is coeval with the arrivals of Abraham and of Joseph and the Exodus of the Israelites, and we know from the Bible what was the state of the world at that time. But then, and apparently long before, the habits of social life in Egypt were already what we find them to have been during

EGYPTIANS POUNDING IN MORTARS.

the most glorious period of their career; and as the people had already laid aside their arms, and military men only carried them when on service, some notion may be had of the very remote date of Egyptian civilization. In the treatment of women they seem to have been very far advanced beyond other wealthy communities of the same era, having usages very similar to those of modern Europe; and such was the respect shown to women that precedence was given to them over men, and the wives and daughters of kings succeeded to the throne like the male branches of the royal family. Nor was this privilege rescinded, even though it had more than once entailed upon them the troubles of a contested succession, foreign kings often having claimed a right to the throne through marriage with an Egyptian princess. It was not a mere influence that they possessed, which women often acquire in the most arbitrary Eastern communities, nor a political importance accorded to a particular individual, like that of the Sultana Valideh, the queen mother, at Constantinople; it was a right acknowledged by law, both in private and public life. They knew that unless women were treated with respect and made to exercise an influence over society, the standard of public opinion would soon be lowered and the manners and morals of men would suffer; and in

acknowledging this, they pointed out to women the very responsible duties they had to perform to the community.

It has been said that the Egyptian priests were only allowed to have one wife, while the rest of the community had as many as they chose; but besides the improbability of such a license, the testimony of the monuments accords with Herodotus in disproving the statement, and each individual is represented in his tomb with a single consort. Their mutual affection is also indicated by the fond manner in which they are seated together, and by the expressions of endearment they use to each other as well as to their children. And if further proof were wanting to show their respect for social ties, we may mention the conduct of Pharaoh in the case of the supposed sister of Abraham, standing in remarkable contrast to the habits of most princes of those and many subsequent ages.

From their private life great insight is obtained into their character and customs; and their household arrangements, the style of their dwellings, their amusements and their occupations explain their habits, as their institutions, mode of government, arts and military knowledge illustrate their history and their relative position among the nations of antiquity. In their form and arrangement the houses were made to suit the climate, modified according to their advancement in civilization; and we are often enabled to trace in their abodes some of the primitive habits of a people long after they have been settled in towns and have adopted the manners of wealthy

communities, as the tent may still be traced in the houses of the Turks, and the small original wooden chamber in the mansions and temples of ancient Greece.

As in all warm climates, the poorer classes of Egyptians lived much in the open air, and the houses of the rich were constructed to be cool throughout the summer, currents of refreshing air being made to circulate freely through them by the judicious arrangement of the passages and courts. Corridors, supported on columns, gave access to the different apartments through a succession of shady avenues and areas, with one side open to the air, as in our cloisters; and even small detached houses had an open court in the centre, planted as a garden with palms and other trees. *Mulkufs*, or wooden wind-sails, were also fixed over the terraces of the upper story, facing the prevalent and cool north-west wind, which was conducted down their sloping boards into the interior of the house. They were exactly similar to those in the modern houses of Cairo, and some few were double, facing in opposite directions.

The houses were built of crude brick, stuccoed and painted with all the combinations of bright color in which the Egyptians delighted; and a highly decorated mansion had numerous courts and architectural details derived from the temples.

Over the door was sometimes a sentence, as "the good house," or the name of a king under whom the owner probably held some office. Many other symbols of good omen were also put up, as at the entrances of modern Egyptian houses; and a visit to some temple gave as good a claim to a record as the pilgrimage to Mekkeh at the present day. Poor people were satisfied with very simple tenements, their wants being easily supplied, both as to lodging and food; and their house consisted of four walls, with a flat roof of palm branches laid across a split date tree as a beam, and covered with mats plastered over with a thick coating of mud. It had one door and a few small windows closed by wooden shutters. As it scarcely ever rained, the mud roof was not washed into the sitting-room; and this cottage rather answered as a shelter from the sun and a closet for their goods than for the ordinary purpose of a house in other countries. Indeed, at night the owners slept on the roof during the greater part of the year; and as most of their work was done out of doors, they might easily be persuaded that a house was far less necessary for them than a tomb. To convince the rich of this ultra-philosophical sentiment was not so easy—at least the practice differed from the theory; and though it was promulgated among all the Egyptians, it did not prevent the priests and other grandees from living in very luxurious abodes or enjoying the good things of this world; and a display of wealth was found to be useful in maintaining their power and in securing the obedience of a credulous people. The worldly possessions of the priests were therefore very extensive; and if they imposed on themselves occasional habits of abstemiousness, avoided certain kinds of unwholesome food and performed many mysterious observances, they were amply repaid by the improvement of their health and by the influence they thereby acquired. Superior intelligence enabled them to put their own construction on regulations emanating from their sacred body with the convenient persuasion that what suited them did not suit others; and the profane vulgar were expected to do, not as the priests did, but as they taught them to do.

In their plans the houses of towns, like the villas in the country, varied according to the caprice of the builders. The ground-plan, in some of the former, consisted of a number of chambers on three sides of a court, which was often planted with trees. Others consisted of two rows of rooms on either side of a long passage, with an entrance-court from the street; and others were laid out in chambers round a central area, similar to the Roman *impluvium*, and paved with stone, or containing a few trees, a tank or a fountain in its centre. Sometimes, though rarely, a flight of steps led to the front door from the street.

Houses of small size were often connected together, and formed the continuous sides of streets, and a courtyard was common to several dwellings. Others of a humbler kind consisted merely of rooms opening on a narrow passage or directly on the street. These had only a basement story or ground-floor; and few houses exceeded two stories above it. They mostly consisted of one upper floor; and though Diodorus speaks of the lofty houses in Thebes, four and five stories high, the paintings show that few had three, and the largest seldom four, including, as he does, the basement story. Even the greater portion of the house was confined to a first floor, with an additional story in one part, on which was a terrace covered by an awning, or a light roof supported on columns.

This served for the ladies of the family to sit at work in during the day, and here the master of the house often slept at night during the summer or took his *siesta* in the afternoon. Some had a tower which rose even above the terrace.

The first floor was what the Italians call the "*piano nobile*," the ground rooms being chiefly used for stores or as offices, of which one was set apart for the porter, and another for visitors coming on business. Sometimes besides the parlor were receiving apartments on the basement story, but guests were generally entertained on the first floor; and on this were the sleeping-rooms also, except where the house was of two or three stories. The houses of wealthy citizens often covered a considerable space, and either stood directly upon the street or a short way back, within an open court; and some large mansions were detached, and had several entrances on two or three sides. Before the door was a porch supported on two columns, decked with banners or ribands, and larger porticoes had a double row of columns, with statues between them.

Other mansions had a flight of steps leading to a raised platform, with a doorway between two towers, not unlike those before the temples. A line of trees ran parallel to the front of the house; and to prevent injuries from cattle, or any accident, the stems were surrounded by a low wall, pierced with square holes to admit the air. This custom of planting trees about town houses was common also at Rome.

The height of the portico was about twelve or fifteen feet, just exceeding that of the cornice of the door, which was only raised by its threshold above the level of the ground. On either side of the main entrance was a smaller door, which stood at an equal distance between it and the side wall, and was probably intended for the servants or those who came on business. On entering by the porch you passed into an open court containing a *mândara*, or receiving-room for visitors. This building, supported by columns, decorated with banners, was closed only at the lower part by inter-columnar panels, over which a stream of cool air was admitted, and protection from the rays of the sun was secured by an awning that covered it. On the opposite side of the court was another door, the approach to the *mândara* from the interior; and the master of the house, on the announcement of a stranger, came in that way to receive him. Three doors led from this court to another of larger dimensions, which was ornamented with avenues of trees, and communicated on the right and left with the interior of the house; and this, like most of the large courts, had a back entrance through a central and lateral gateway. The arrangement of the interior was much the same on either side of the court, six or more chambers, whose doors faced those of the opposite set, opening on a corridor supported by columns on the right and left of an area, which was shaded by a double row of trees.

At the upper end of one of these areas was a sitting-room, which faced the door leading to the great court, and over this and the other chambers were the apartments of the upper story. Here were also two small gateways toward the street.

Another plan consisted of a court with the usual avenue of trees, on one side of which were several sets of chambers opening on corridors or passages, but without any colonnade before the doors. The receiving-room looked upon the court, and from it a row of columns led to the private sitting apartment, which stood isolated in one of the

passages, near to a door communicating with the side chambers; and in its position, with a corridor or porch in front, it bears a striking resemblance to the "summer parlor" of Egion, king of Moab, "which he had for himself alone," and where he received Ehud the Israelite stranger. And the flight of Ehud "through the porch," after he had shut and locked the door of the parlor, shows its situation to have been very similar to some of these isolated apartments in the houses or villas of the ancient Egyptians. The side chambers were frequently arranged on either side of a corridor, others faced toward the court, and others were only separated from the outer wall by a long passage.

In the distribution of the apartments numerous and different modes were adopted, according to circumstances; in general, however, the large mansions seem to have consisted of a court and several corridors, with rooms leading from them, not unlike many of those now built in Oriental and tropical countries. The houses in most of the Egyptian towns are quite destroyed, leaving few traces of their plans or even of their sites; but sufficient remains of some at Thebes, at Tel el

Other small houses in towns consisted of two or three stories above the ground-floor. They had no court and stood close together, covering a small space, and high in proportion to their base, like many of those at Karnak. The lower part had merely the door of entrance and some store-rooms, over which were a first and second floor, each with three windows on the front and side, and above these an attic without windows and a staircase leading to a terrace on the flat roof. The floors were laid on rafters, the end of which projected slightly from the walls like dentils, and the courses of brick were in waving or concave lines, as in the walls of an enclosure at Dayr el Medeenah in Thebes. The windows of the first floor had a sort of mullion dividing them into two lights each, with a transom above, and the upper windows were filled with trellis-work or cross-bars of wood, as in many Turkish harems. A model of a house of this kind is also in the British Museum. But the generality of Egyptian houses were far less regular in their plan and elevation, and the usual disregard for symmetry is generally observable in the houses even of towns.

The doors, both of the entrances and of the inner

ANCIENT EGYPTIANS TAKING A CENSUS.

Amarna and other places to enable us, with the help of the sculptures, to ascertain their form and appearance.

Granaries were also laid out in a very regular manner, and varied of course in plan as much as the houses, to which there is reason to believe they were frequently attached, even in the towns; and they were sometimes only separated from the house by an avenue of trees.

Some small houses consisted merely of a court and three or four store-rooms on the ground-floor, with a single chamber above, to which a flight of steps led from the court; but they were probably only met with in the country, and resembled some still found in the fellah villages of modern Egypt. Very similar to these was the model of a house now in the British Museum, which solely consisted of a courtyard and three small store-rooms on the ground-floor, with a staircase leading to a room belonging to the storekeeper, which was furnished with a narrow window or aperture opposite the door, rather intended for the purposes of ventilation than to admit the light. In the court a woman was represented making bread, as is sometimes done at the present day in Egypt, in the open air, and the store-rooms were full of grain.

apartments, were frequently stained to imitate foreign and rare woods. They were either of one or two valves, turning on pins of metal, and were secured within by a bar or bolts. Some of these bronze pins have been discovered in the tombs of Thebes. They were fastened to the wood with nails of the same metal, whose round heads served also as an ornament, and the upper one had a projection at the back in order to prevent the door striking against the wall. We also find in the stone lintels and floor, behind the thresholds of the tombs and temples, the holes in which they turned, as well as those of the bolts and bars, and the recess for receiving the opened valves. The folding-doors had bolts in the centre, sometimes above as well as below; a bar was placed across from one wall to the other, and in many instances wooden locks secured them by passing over the centre at the junction of the two folds. For greater security they were occasionally sealed with a mass of clay, as is proved by some tombs found closed at Thebes by the sculptures, and in the account given by Herodotus of Rhampsinitus' treasury.

Keys were made of bronze or iron, and consisted of a long straight shank, about five inches

in length, with three or more projecting teeth; others had a nearer resemblance to the wards of modern keys, with a short shank about an inch long, and some resembled a common ring with the wards at its back. These are probably of Roman date. The earliest mention of a key is in Jud. iii. 23-25, when, Ehud having gone "through the porch, and shut the doors of the parlor upon him and looked them," Eglon's "servants took a key and opened them."

The doorways, like those in the temples, were often surmounted by the Egyptian cornice; others were variously decorated, and some represented in the tombs were surrounded with a variety of ornaments, as usual richly painted. These last, though sometimes found at Thebes, were more general about Memphis and the Delta; and two good instances of them are preserved in the British Museum, brought from a tomb near the pyramids.

Even at the early period when the pyramids were built, the doors were of one or two valves; and both those of the rooms and the entrance-doors opened inward, contrary to the custom of the Greeks, who were consequently obliged to strike on the inside of the street door before they opened it, in order to warn persons passing by; and the Romans were forbidden to make it open outward

EGYPTIAN CULINARY VESSELS.

without a special permission. The floors were of stone, or a composition made of lime or other materials, but in humbler abodes they were formed of split date tree beams, arranged close together or at intervals, with planks or transverse layers of palm branches over them, covered with mats and a coating of mud. Many roofs were vaulted, and built, like the rest of the house, of crude brick; and not only have arches been found of that material dating in the sixteenth century before our era, but vaulted granaries appear to be represented of much earlier date. Bricks, indeed, led to the invention of the arch, the want of timber in Egypt having pointed out the necessity of some substitute for it.

Wood was imported in great quantities; deal and cedar were brought from Syria, and rare woods were part of the tribute imposed on foreign nations conquered by the Pharaohs. And so highly were these appreciated for ornamental purposes that painted imitations were made for poorer persons who could not afford them; and the panels, windows, doors, boxes and various kinds of woodwork were frequently of cheap deal or sycamore, stained to resemble the rarest foreign woods. And the remnants of them found at Thebes show that these imitations were clever substitutes for the reality. Even coffins were sometimes made of foreign wood, and many are found of cedar of

Lebanon. The value of foreign woods also suggested to the Egyptians the process of veneering, and this was one of the arts of their skillful cabinet-makers.

The ceilings were of stucco, richly painted with various devices, tasteful both in their form and the arrangement of the colors, among the oldest of which is the Guilloche, often misnamed the Tuscan or Greek, border.

Both in the interior and exterior of their houses the walls were sometimes portioned out into large panels of one uniform color, flush with the surface or recessed, not very unlike those at Pompeii, and they were red, yellow or stained to resemble stone or wood. It seems to have been the introduction of this mode of ornament into Roman houses that excited the indignation of Vitruvius, who says that in old times they used red paint sparingly, like phrygians, though now whole walls are covered over with it.

Figures were also introduced on the blank walls in the sitting-rooms, or scenes from domestic life, surrounded by ornamental borders, and surmounted by deep cornices of flowers and various devices richly painted, and no people appear to have been more fond of using flowers on every occasion. In their domestic architecture they formed the chief ornament of the mouldings, and every visitor received a bouquet of real flowers as a token of welcome on entering a house. It was the pipe and coffee of the modern Egyptians; and a guest at a party was not only presented with a lotus, or some other flower, but had a chaplet placed round his head and another round his neck, which led the Roman poet to remark the "many chaplets on the foreheads" of the Egyptians at their banquets. Everywhere flowers abounded; they were formed into wreaths and festoons; they decked the stands that supported the vases in the convivial chamber, and crowned the wine-bowl as well as the servants who bore the cup from it to the assembled guests.

Besides the painted panels, there were other points of resemblance to Pompeian taste in the Egyptian houses, particularly the elongated columns sometimes attached to the building, sometimes painted on the walls, which were derived by the Greeks either from Egypt or from Asia. Their long slender shafts were made to reach the whole way from the ground to the very roof of the house, in utter defiance of proportion or the semblance of utility, performing no more office than many of the pillars and half columns which, having nothing to support, may be said to hang up against the fronts of our modern houses, with two tiers of windows, like pictures, in the vacant space between them.

And though in their temples the horizontal line predominated, as in Greece, the Egyptians were not averse to the contrast of the vertical with it, which they managed by means of the long line of their lofty pyramidal towers and of their obelisks, and indeed in the lengthy columns that extended up the whole front of their houses they may claim the first introduction of the vertical principle. This was afterward adopted by the Romans also, and is very obvious in their arches of triumph, where the column, rising from the ground on a pedestal, extends the whole way up the front, forces the entablature to advance and break its uniform straight course in order to accord with the capital, and is surmounted by a statue or a projecting attic, extending to the summit of the edifice.

The same slender columns, or "reeds for col-

umns," considered so inconsistent by Vitruvius, found their way into the houses of Rome, and we see them painted in those of Pompeii, as well as the "buildings standing on candelabra" he equally condemns. Incongruous they certainly were, having been merely called in from another and proper office in order to assist in developing a new element of architecture, which long afterward introduced numerous vertical lines, in the form of towers, minarets and other lofty edifices, that now rise above our roofs and give so much variety to the external aspect of modern European and Saracenic towns. This contrast was wanting in the low and very uniform outline of Greek buildings, scarcely relieved by the triangular pediment of a temple; for however beautiful each monument itself, a Greek city was singularly deficient in the combination of the vertical with the horizontal line. But the endeavor to obtain this effect at Rome by isolated columns bearing a statue which towered above the roofs was not such as taste could justify; for we may well condemn the inappropriateness of extracting from a temple one of its legitimate members and of magnifying it to an extravagant height; and the same Roman poverty of invention and inapplicableness were shown in this as in the named "truncated column," called upon to support a bust in lieu of its own head. Nor can any justification be found for the erection of monstrous colossi, such as Egypt, Greece and Rome produced; and we are now happily freed from the dilemma of exaggerating what ought to be limited to its proper dimensions by the resources of modern architecture whenever we seek the harmonious contrast of vertical and horizontal lines.

The windows of Egyptian dwellings had merely wooden shutters of one or two valves turning on pins, and these, like the whole building, were painted. The openings were small, because where little light is admitted little heat penetrates. Coolness was the great requisite, and in the cloudless sky of Egypt there was no want of light. And though, as in most of our modern houses, the windows were little more than square holes, unrelieved by ornamental mouldings, the Egyptians did not spoil the external appearance of the house by making them of unreasonable size in order to admit the light, and then inconsistently do all they possibly could to exclude it by numerous dust-catching hangings, such as are inflicted on innocent Englishmen by tasteless and interested upholsterers.

The palace of a king was generally of more durable materials than a private house, and, like the temple to which it was often attached, was of stone, as at Medinet Haboo, in Thebes. It was then placed at the outer end of the avenue that led to the sacred building, and the principal apartments stood in two stories immediately over the gateway through which all the grand processions passed toward the temple. The rest of the building extended a considerable distance on the right and left before this gateway, forming an outer approach from two lodges at the very entrance, occupied by the guards and porters. Some of the chambers looked down upon this passage; others faced in opposite directions, and the whole building was crowned with battlements like the walls of fortified towns. The apartments were not large, being only fourteen feet long by twelve feet eight inches in breadth, and thirteen feet six inches in height; the walls, being five to six feet thick, were a protection against the heat, and currents of air circulated freely through them from opposite win-

dows. The walls were ornamented with subjects, in low relief, or in intaglio, representing the king and his household, with various ornamental devices, particularly the lotus and other flowers.

Pavilions were also built in a similar style, though on a smaller scale, in various parts of the country, and in the foreign districts through which the Egyptian armies passed for the use of the king; and some private houses occasionally imitated these small castles by substituting for the usual parapet wall and cornice the battlements that crowned them, and which were intended to represent Egyptian shields. The roofs of all their houses, whether in the town or country, were flat, like those of the modern houses of Cairo, and there, as at the present day, the women often held long conversations with their neighbors on the scandal and gossip of the day. Many a curious subject was doubtless discussed at these animated meetings, and report affirms that some modern Cairene stories have been founded on those recorded of Pharaonic times, one of which is thus related.

A man digging in his vineyard, having found a jar full of gold, ran home with joy to announce his good fortune to his wife; but as he reflected on the way that women could not always be trusted with secrets, and that he might lose a treasure which of right belonged to the king, he thought it better first to test her discretion. As soon, therefore, as he had entered the house, he called her to him, and saying he had something of great importance to tell her, asked if she was sure she could keep a secret. "Oh yes," was the ready answer; "when did you ever know me to betray one? What is it?" "Well, then— But you are sure you won't mention?" "Have I not told you so? Why be so tiresome? What is it?" "Now, as you promise me, I will tell you. A most singular thing happens to me; every morning I lay an egg," at the same time producing one from beneath his cloak. "What! an egg? Extraordinary!" "Yes, it is indeed; but mind you don't mention it." "Oh no, I shall say nothing about it, I promise you." "No, I feel sure you won't," and so saying, he left the house. No sooner gone than his wife ran up to the terrace; and finding a neighbor on the adjoining roof, she beckoned to her, and with great caution said, "Oh, my sister, such a curious thing happens to my husband! But you are sure you won't tell anybody?" "No, no; what is it? Do tell me." "Every morning he lays ten eggs." "What! ten eggs?" "Yes, and he has shown them to me; is it not strange? But mind you say nothing about it," and away she went again down stairs. It was not long before another woman came upon the next terrace, and the story was told in the same way by the wife's friend, with a similar promise of secrecy, only with the variation of twenty instead of ten eggs, till one neighbor after another to whom the secret was entrusted had increased them to a hundred. It was not long before the husband heard it also, and the supposed egg-layer, learning how his story had spread, was persuaded not to risk his treasure by trusting his wife with the real secret.

The villas of the Egyptians were of great extent, and contained spacious gardens watered by canals communicating with the Nile. They had large tanks of water in different parts of the garden, which served for ornament as well as for irrigation when the Nile was low, and on these the master of the house occasionally amused himself and his friends by an excursion in a pleasure-boat towed by his servants. They also enjoyed the diversion of angling and spearing fish in the

ponds within their grounds, and on these occasions they were generally accompanied by a friend or one or more members of their family. Particular care was always bestowed upon the garden, and their great fondness for flowers is shown by the number they always cultivated, as well as by the women of the family or the attendants presenting bouquets to the master of the house and friends when they walked there.

The house itself was sometimes ornamented with propylæa and obelisks, like the temples themselves. It is even possible that part of the building may have been consecrated to religious purposes, as the chapels of other countries, since we find a priest engaged in presenting offerings at the door of the inner chambers; and indeed, were it not for the presence of the women, the form of the garden and the style of the porch, we should feel disposed to consider it a temple rather than a place of abode. The entrances of large villas were generally through folding-gates, standing between lofty towers, as at the courts of temples,

ANCIENT POTTERY OF EGYPT.

with a small door at each side, and others had merely folding-gates, with the jambs surmounted by a cornice. One general wall of circuit extended round the premises, but the courts of the house, the garden, the offices and all other parts of the villa had each their separate enclosure. The walls were usually built of crude brick, and in damp places, or when within reach of the inundation, the lower part was strengthened by a basement of stone. They were sometimes ornamented with panels and grooved lines, generally stuccoed, and the summit was crowned either with Egyptian battlements, the usual cornice, a row of spikes in imitation of spear heads, or with some fancy ornament.

The plans of the villas varied according to circumstances, but their general arrangement is sufficiently explained by the paintings. They were surrounded by a high wall, about the middle of which was the main or front entrance, with one central and two side gates, leading to an open walk shaded by rows of trees. Here were spacious tanks of water, facing the doors of the right and left wings of the house, between which an avenue led from the main entrance to what may be called the centre of the mansion. After passing the outer

door of the right wing you entered an open court with trees, extending quite round a nucleus of inner apartments, and having a back entrance communicating with the garden. On the right and left of this court were six or more store-rooms, a small receiving- or waiting-room at two of the corners, and at the other end the staircases which led to the upper story. Both of the inner façades were furnished with a corridor, supported on columns, with similar towers and gateways. The interior of this wing consisted of twelve rooms, two outer and one centre court, communicating by folding-gates, and on either side of this last was the main entrance to the rooms on the ground floor and to the staircases leading to the upper story. At the back were three long rooms and a gateway opening on the garden, which, besides flowers, contained a variety of trees, a summer-house and a large tank of water.

The arrangement of the left wing was different. The front gate led to an open court extending the whole breadth of the façade of the building and

backed by the wall of the inner part. Central and lateral doors thence communicated with another court, surrounded on three sides by a set of rooms, and behind it was a corridor, upon which several other chambers opened.

This wing had no back entrance, and standing isolated, the outer court extended entirely round it; and a succession of doorways communicated from the court with different sections of the centre of the house, where the rooms, disposed, like those already described, around passages and corridors, served partly as sitting apartments and partly as store-rooms.

The stables for the horses and the coach-houses for the traveling chariots and carts were in the centre or inner part of the building, but the farm-yard, where the cattle were kept, stood at some distance from the house, and corresponded to the department known by the Romans under the name of *rustica*. Though enclosed separately, it was within the general wall of circuit which surrounded the land attached to the villa; and a canal, bringing water from the river, skirted it and extended along the back of the grounds. It consisted of two parts, the sheds for housing the cattle, which stood at the upper end, and the yard, where rows of rings were fixed, in

order to tie them while feeding in the daytime; and men always attended and frequently fed them with the hand.

The granaries were also apart from the house and were enclosed within a separate wall, and some of the rooms in which they housed the grain appear to have had vaulted roofs. These were filled through an aperture near the top, to which the men ascended by steps, and the grain when wanted was taken out from a door at the base.

The superintendence of the house and grounds was entrusted to stewards, who regulated the tillage of the land, received whatever was derived from the sale of the produce, overlooked the returns of the quantity of cattle or stock upon the estate, settled all the accounts and condemned the delinquent peasants to the bastinado, or any punishment they might deserve. To one were entrusted the affairs of the house, answering to "the ruler," "overseer" or "steward of Joseph's house," Gen. xxxix. 5; xliii. 16, 19; xlv. 1;

ANCIENT WATER-VESSELS OF EGYPT.

others "superintended the granaries," the vineyard, comp. Matt. xx. 8, or the culture of the fields; and the extent of their duties, or the number of those employed, depended on the quantity of land or the will of its owner.

The mode of laying out their gardens was as varied as that of the houses, but in all cases they appear to have taken particular care to command a plentiful supply of water by means of reservoirs and canals. Indeed, in no country is artificial irrigation more required than in the valley of the Nile; and from the circumstance of the water of the inundation not being admitted into the gardens, they depend throughout the year on the supply obtained from wells and tanks or a neighboring canal.

The mode of irrigation adopted by the ancient Egyptians was exceedingly simple, being merely the *shadûf*, or pole and bucket of the present day; and in many instances men were employed to carry the water in pails, suspended by a wooden yoke they bore upon their shoulders. The same yoke was employed for carrying other things, as boxes, baskets containing game and poultry, or whatever was taken to market; and every trade seems to have used it for this purpose, from the potter and the brickmaker to the carpenter and the shipwright.

The wooden bar or yoke was about three feet seven inches in length, and the straps, which were double and fastened together at the lower as well as at the upper extremity, were of leather and between fifteen and sixteen inches long. The small thong at the bottom not only served to connect the ends, but was probably intended to fasten a hook, or an additional strap if required, to attach the burden; and though most of these yokes had two, some were furnished with four or eight straps;

and the form, number and arrangement of them varied according to the purposes for which they were intended.

The buckets were filled from the reservoirs or ponds in the garden, and the water was carried in them to the trees or the different beds, which were small hollow squares on the level ground, surrounded by a low ledge of earth, like our salt-pans.

They do not appear to have used the water-wheel very generally, though it was not unknown to them; but this and the hydraulic screw were probably of late introduction. They may also have had the foot-machine mentioned by Philo; and it is either to this or to their stopping the small channels which conducted the water from one bed to another that the sentence in Dent. xi. 40 refers: "Egypt, . . . where thou sowedst thy seed, and waterdest it with thy foot as a garden of herbs;" but the common mode of raising water from the Nile was by the pole and bucket, the *shadûf*, so common still in Egypt.

Skins were much used by the Egyptians for carrying water, as well as for sprinkling the ground before the rooms or seats of the *grandees*, and they were frequently kept ready filled at the tank for that purpose.

Part of the garden was laid out in walks shaded with trees, usually planted in rows, and surrounded at the base of the stem with a circular ridge of earth, which, being lower at the centre than at the circumference, retained the water and directed it more immediately toward the roots. It is difficult to say if trees were trimmed into any particular shape, or if their formal appearance in the sculpture is merely owing to a conventional mode of representing them; but since

the pomegranate and some other fruit trees are drawn with spreading and irregular branches, it is possible that sycamores and others which presented large masses of foliage were really trained in that formal manner, though, from the hieroglyphic signifying "tree" having the same shape, we may conclude it was only a general character for all trees.

Some, as the pomegranates, date trees and *dôm*-palms, are easily recognized in the sculptures, but the rest are doubtful, as are the flowering plants, with the exception of the lotus and a few others.

To the garden department belonged the care of the bees, which were kept in hives very like our own. In Egypt they required great attention; and so few are its plants at the present day that the owners of hives often take the bees in boats to various spots upon the Nile in quest of flowers. They are a smaller kind than our own; and though found wild in the country, they are far less numerous than wasps, hornets and ichneumons. The wild bees live mostly under stones or in clefts of the rock, as in many other countries, and the expression of Moses, as of the Psalmist, "honey out of the rock," shows that in Palestine their habits were the same. Honey was thought of great importance in Egypt, both for household purposes and for an offering to the gods; that of Benha (thence surnamed *El assal*), or Athribis, in the Delta, retained its reputation to a late time, and a jar of honey from that place was one of the four presents sent by John Mekaukes, the governor of Egypt, to Mohammed.

Large gardens were usually divided into different parts, the principal sections being appropriated to the date and sycamore trees and to the vineyard. The former may be called the orchard. The flower and kitchen gardens also occupied a considerable

space, laid out in beds, and dwarf trees, herbs and flowers were grown in red earthen pots, exactly like our own, arranged in long rows by the walks and borders.

Besides the orchard and gardens, some of the large villas had a park or paradise, with its fish-ponds and preserves for game, as well as poultry-yards for keeping hens and geese, stalls for fattening cattle, wild goats, gazelles and other animals originally from the desert, whose meat was reckoned among the dainties of the table. It was in these extensive preserves that the rich amused themselves with the chase; and they also enclosed a considerable space in the desert itself with net-fences, into which the animals were driven and shot with arrows or hunted with dogs.

Gardens are frequently represented in the tombs of Thebes and other parts of Egypt, many of which are remarkable for their extent. The one here introduced is shown to have been surrounded by an embattled wall, with a canal of water passing in front of it, connected with the river. Between the canal and the wall and parallel to them both was a shady avenue of various trees, and about the centre was the entrance, through a lofty door, whose lintel and jambs were decorated with hieroglyphic inscriptions containing the name of the owner of the grounds, who in this instance was the king himself. In the gateway were rooms for the porter and other persons employed about the garden, and probably the receiving-room for visitors, whose abrupt admission might be unwelcome; and at the back a gate opened into the vineyard. The vines were trained on a trellis-work supported by transverse rafters resting on pillars; and a wall extending around it separated this part from the rest of the garden. At the upper end were suites of rooms on three different stories, looking upon green trees and affording a pleasant retreat in the heat of summer. On the outside of the vineyard wall were planted rows of palms, which occurred again with the *dôm* and other trees, along the whole length of the exterior walls; four tanks of water, bordered by a grass-plot, where geese were kept and the delicate flower of the lotus was encouraged to grow, served for the irrigation of the grounds; and small kiosks, or summer-houses, shaded with trees, stood near the water and overlooked beds of flowers. The spaces containing the tanks and the adjoining portions of the garden were each enclosed by their respective walls, and a small subdivision on either side, between the large and small tanks, seems to have been reserved for the growth of particular trees, which either required peculiar care or bore a fruit of superior quality.

In all cases, whether the orchard stood apart from or was united with the rest of the garden, it was supplied, like the other portions of it, with abundance of water, preserved in spacious reservoirs, on either side of which stood a row of palms or an avenue of shady sycamores. Sometimes the orchard and vineyard were not separated by any wall, and figs and other trees were planted within the same limits as the vines. But if not connected with it, the vineyard was close to the orchard, and their mode of training the vines on wooden rafters supported by rows of columns, which divided the vineyard into numerous avenues, was both tasteful and convenient.

The columns were frequently colored, but many were simple wooden pillars, supporting with their forked summits the poles that lay over them. Some vines were allowed to grow as standing bushes, and being kept low, did not require any

other support; others were formed into a series of bowers; and from the form of the hieroglyphic, signifying vineyard, we may conclude that the most usual method of training them was in bowers or in avenues formed by rafters and columns. But they do not appear to have attached them to other trees, as the Romans often did to the elm and poplar, and as the modern Italians do to the white mulberry; nor have the Egyptians of the present day adopted this European custom.

When the vineyard was enclosed within its own wall of circuit, it frequently had a reservoir of water attached to it, as well as the building which contained the wine-press; but the various modes of arranging the vineyard, as well as the other parts of the garden, depended, of course, on the taste of each individual or the nature of the ground. Great care was taken to preserve the clusters from the intrusion of birds, and boys were constantly employed, about the season of the vintage, to frighten them with a sling and the sound of the voice.

When the grapes were gathered, the bunches were carefully put into deep wicker baskets, which men carried, either on their head or shoulders or slung upon a yoke, to the wine-press; but when intended for eating, they were put, like other fruits, into flat open baskets, and generally covered with leaves of the palm, vine or other trees. These flat baskets were of wicker-work, and similar to those of the present day used at Cairo for the same purpose, which are made of osiers or common twigs. Monkeys appear to have been trained to assist in gathering the fruit, and the Egyptians represent them in the sculptures handing down figs from the sycamore trees to the gardeners below; but as might be expected, these animals amply repaid themselves for the trouble imposed upon them, and the artist has not failed to show that they consulted their own wishes as well as those of their employers.

Many animals were tamed in Egypt for various purposes, as the lion, leopard, gazelle, baboon, crocodile and others; and in the Jimma country, which lies to the south of Abyssinia, monkeys are still taught several useful accomplishments. Among them is that of officiating as torch-bearers at a supper-party; and seated in a row, on a raised bench, they hold the lights until the departure of the guests, and patiently await their own repast as a reward for their services. Sometimes the party is alarmed by an unruly monkey throwing his lighted torch into the midst of the unsuspecting guests; but fortunately the ladies there do not wear muslin dresses, and the stick and "no supper" remind the offender of his present and future duties.

After the vintage was over, they allowed the kids to browse upon the vines which grew as standing bushes; and the season of the year when the grapes ripened in Egypt was the month Epiphi, toward the end of June or the commencement of July. Some have pretended to doubt that the vine was commonly cultivated, or even grown, in Egypt, but the frequent notice of it and of Egyptian wine in the sculptures, and the authority of ancient writers, sufficiently answer those objections, and the regrets of the Israelites on leaving the vines of Egypt prove them to have been very abundant, since even people in the condition of slaves could procure the fruit, Num. xx. 5, compare Gen. xl. 11.

The wine-press was of different kinds. The most simple consisted merely of a bag, in which the grapes were put and squeezed by means of two poles turning in contrary directions, a vase

being placed below to receive the falling juice. Another press, nearly on the same principle, consisted of a bag supported in a frame, having two upright sides, connected by beams at their summit. In this the bag was retained in a horizontal position, one end fixed, the other passing through a hole in the opposite side, and was twisted by means of a rod turned with the hand, the juice, as in the former, being received into a vase beneath; and within the frame stood the superintendent, who regulated the quantity of pressure and gave the signal to stop.

Sometimes a liquid was heated on the fire, and having been well stirred, was poured into the sack containing the grapes during the process of pressure; but whether this was solely with a view of obtaining a greater quantity of juice, by moistening the husks, or was applied for any other purpose, it is difficult to determine; the fact, however, of its being stirred while on the fire suffices to show it was not simple water; and the trituration of the fruit, while it was poured upon it, may suggest its use in extracting the coloring matter for red wine.

The two Egyptian hand-presses were used in all parts of the country, but principally in Lower Egypt, the grapes in the Thebaid being generally pressed by the feet. The foot-press was also used in the lower country, and we even find the two methods of pressing the grapes represented in the same sculptures; it is not therefore impossible that, after having been subjected to the foot, they may have undergone a second pressure in the twisted bag. This does not appear to have been the case in the Thebaid, where the foot-press is always represented alone, and the juice was allowed to run off by a pipe directly to an open tank, compare Isa. lxiii. 3; Neh. xiii. 15; Jud. ix. 27.

Some of the large presses were highly ornamented, and consisted of at least two distinct parts, the lower portion or vat, and the trough where the men with naked feet trod the fruit, supporting themselves by ropes suspended from the roof; though from their great height some may have had an intermediate reservoir, which received the juice in its passage to the pipe, answering to the strainer, or *colum*, of the Romans.

After the fermentation was over, the juice was taken out in small vases with a long spout, and poured into earthenware jars, which corresponded to the *cadi* or amphoræ of the Romans. They appear to also have added something to it after or previous to the fermentation, and an instance occurs in the sculptures of a man pouring a liquid from a small cup into the lower reservoir. When the must was considered in a proper state, the amphoræ were closed with a lid, resembling an inverted saucer, covered with liquid clay, pitch, gypsum, mortar, or other composition,

which was stamped with a seal; they were then removed from the winehouse and placed upright in the cellar.

Previous to pouring in the wine they generally put a certain quantity of resin into the amphoræ, which coated the inside of the porous jars, preserved the wine, and was even supposed to improve its flavor—a notion, or rather an acquired taste, owing, probably, to their having at first used skins instead of jars; and the flavor imparted by the resin, which was necessary to preserve the skins, having become, from long habit, a favorite peculiarity of the wine, it was afterward added from choice, after they had adopted the use of earthenware. And this custom, formerly so general in Egypt, Italy and Greece, is still preserved throughout the islands of the Archipelago. In Egypt a resinous substance is always found at the bottom of amphoræ which have served for holding wine; it is perfectly preserved, brittle, and when burnt, smells like a very fine quality of pitch. The Romans, according to Pliny, employed the Brutian pitch, or resin of the picea pine, in preference to all

ANCIENT ALABASTER BOXES.

others, for this purpose; and if, "in Spain, they used that of the pinaster, it was little esteemed on account of its bitterness and oppressive smell." In the East the terebinthus was considered to afford the best resin, superior even to the mastic of the lentiscus, and the resins of Judea and Syria only yielded in quality to that of Cyprus.

The mode of arranging amphoræ in an Egyptian cellar was similar to that adopted by the Greeks and Romans. They stood upright in successive rows, the innermost set resting against the wall, with their pointed ends firmly fixed in the ground; and each jar was secured by means of a stone ring fitting round its pointed base, or was raised on a wooden stand. Others appear occasionally to have been placed in upper rooms, as the amphoræ in a Roman apotheca.

The Egyptians had several different kinds of wine, some of which have been commended by ancient authors for their excellent qualities. That of Mareotis was the most esteemed, and in the greatest quantity. Its superiority over other Egyptian wines may readily be accounted for, when we consider the nature of the soil in that district, being principally composed of gravel,

which, lying beyond the reach of the alluvial deposit, was free from the rich and tenacious mud usually met with in the valley of the Nile, so little suited for grapes of delicate quality; and from the extensive remains of vineyards still found on the western borders of the Arsinoite nome, or Fyoom, we may conclude that the ancient Egyptians were fully aware of the advantages of land situated beyond the limits of the inundation for planting the vine. According to Athenæus, "the Mareotic grape was remarkable for its sweetness," and the wine is thus described by him: "Its color is white, its quality excellent, and it is sweet and light, with a fragrant bouquet; it is by no means astringent, nor does it affect the head." But it was not for its flavor alone that this wine was esteemed, and Strabo ascribes to it the additional merit of keeping to a great age. "Still, however," says Athenæus, "it is inferior to the Teniotic, a wine which receives its name from a place called Tenia, where it is produced. Its color is pale and white, and there is such a degree of richness in it that, when mixed with water, it seems gradually to be diluted, much in the same way as Attic honey when a liquid is

ANCIENT MUSICAL INSTRUMENTS OF EGYPT.

poured into it; and besides the agreeable flavor of the wine, its fragrance is so delightful as to render it perfectly aromatic, and it has the property of being slightly astringent. There are many other vineyards in the valley of the Nile whose wines are in great repute, and these differ both in color and taste; but that which is produced about Anthylla is preferred to all the rest." Some of the wine made in the Thebaid was particularly light, especially about Coptos, and "so wholesome," says the same author, "that invalids might take it without inconvenience, even during a fever." The Sebennytic was likewise one of the choice Egyptian wines, and, as Pliny says, was made of three different grapes, one of which was a sort of Thasian. The Thasian grape he afterward describes as excelling all others in Egypt for its sweetness, and remarkable for its medicinal properties.

The Mendesian is also mentioned by Clemens, with rather a sweet flavor, and another singular wine, called by Pliny *ecbolada*, was also the produce of Egypt; but, from its peculiar powers, we may suppose that men alone drank it, or at least that it was forbidden to newly-married brides. And considering how prevalent the custom was amongst the ancients of altering the

qualities of wines by drugs and divers processes, we may readily conceive the possibility of the effects ascribed to them, and thus it happened that opposite properties were frequently attributed to the same kind.

Wines were much used by them for medicinal purposes, and many were held in such repute as to be considered specifics in certain complaints, but the medical men of the day were prudent in their mode of prescribing them; and as the imagination has on many occasions effected the cure and given celebrity to a medicine, those least known were wisely preferred, and each extolled the virtues of some foreign wine. In the earliest times Egypt was renowned for drugs, and foreigners had recourse to that country for wines as well as herbs; yet Apollodorus, the physician, in a treatise on wines addressed to Ptolemy, king of Egypt, recommended those of Pontus as more beneficial than of his own country, and particularly praised the Peparethian, produced in an island of the Ægean Sea, but he was disposed to consider it less valuable as a medicine, when its good qualities could not be discovered in six years.

The wines of Alexandria and Coptos are also cited among the best of Egyptian growth, and the latter was so light as not to affect even those in delicate health.

In offerings to the Egyptian deities wine frequently occurs, and several different kinds are noticed in the sacred sculptures; but it is probable that many of the Egyptian wines are not introduced in these subjects, and that, as with the Romans and other people, all were not admitted at their sacrifices. According to Herodotus, their sacrifices commenced with a libation of wine, and some was sprinkled on the ground where the victim lay; yet at Heliopolis, if Plutarch may be credited, it was forbidden to take it into the temple, and the priests

of the god worshiped in that city were required to abstain from its use. "Those of other deities," adds the same author, "were less scrupulous," but still they used wine very sparingly, and the quantity allowed them for their daily consumption was regulated by law. Nor could they indulge in it at all times, and the use of it was strictly prohibited during their more solemn purifications and in times of abstinence. The number of wines mentioned in the lists of offerings presented to the deities in the tombs or temples varies in different places. Each appears with its peculiar name attached to it, but they seldom exceed three or four kinds, and among them I have observed at Thebes that of the "northern country," which was perhaps from Marcolis Anthylla, or the nome of Sebennytus.

Private individuals were under no particular restrictions with regard to its use, and it was not forbidden to women. In this they differed widely from the Romans, for in early times no female at Rome enjoyed the privilege, and it was unlawful for women, or indeed for young men below the age of thirty, to drink wine except at sacrifices. Even at a later time the Romans considered it disgraceful for a woman to drink wine; and they sometimes saluted a female relation whom they

suspected in order to discover if she had secretly indulged in its use. It was afterward allowed them on the plea of health, and no better method could have been devised for removing the restriction.

That Egyptian women were not forbidden the use of wine nor the enjoyment of other luxuries is evident from the frescoes which represent their feasts, and the painters in illustrating this fact have sometimes sacrificed their gallantry to a love of caricature. Some call the servants to support them as they sit, others with difficulty prevent themselves from falling on those behind them; a basin is brought too late by a reluctant servant, and the faded flower which is ready to drop from their heated hands is intended to be characteristic of their own sensations.

That the consumption of wine in Egypt was very great is evident from the sculptures and from the accounts of ancient authors, some of whom have censured the Egyptians for their excesses; and so much did the quantity used exceed that made in the country that in the time of Herodotus twice every year a large importation was received from Phœnicia and Greece.

Notwithstanding all the injunctions or exhortations of the priests in favor of temperance, the Egyptians of both sexes appear from the sculptures to have committed occasional excesses, and men were sometimes unable to walk from a feast, and were carried home by servants. These scenes, however, do not appear to refer to members of the higher, but of the lower, classes, some of whom indulged in extravagant buffoonery, dancing in a ludicrous manner or standing on their heads, and frequently in amusements which terminated in a fight.

At the tables of the rich stimulants were sometimes introduced to excite the palate before drinking, and Athenæus mentions cabbages as one of the vegetables used by the Egyptians for this purpose.

Throughout the upper and lower country wine was the favorite beverage of the wealthy. They had also very excellent beer, called *zythus*, which Diodorus, though wholly unaccustomed to it, and a native of a wine country, affirms was scarcely inferior to the juice of the grape. Strabo and other ancient authors have likewise mentioned it under the name of *zythus*; and though Herodotus pretends that it was merely used as a substitute for wine in the lowlands, where corn was principally cultivated, it is more reasonable to conclude it was drunk by the peasants in all parts of Egypt, though less in those districts where vines were abundant. Native wines of a choice kind, whether made in the vicinity or brought from another province, were confined to the rich; and we learn from Strabo that this was the case even at Alexandria, where wine could be obtained in greater quantity than in any other part of Egypt, owing to the proximity of the Mareotic district; and the common people were there content with beer and the poor wine of the coast of Libya.

Egyptian beer was made from barley; but as hops were unknown, they were obliged to have recourse to other plants in order to give it a grateful flavor, and the lupin, the skirret and the root of an Assyrian plant were used by them for that purpose.

The vicinity of Pelusium was the most noted for its beer, and the Pelusiac *zythus* is mentioned by more than one author. The account given by Athenæus of Egyptian beer is that it was very strong, and had so exhilarating an effect that they

danced and sang and committed the same excesses as those who were intoxicated with the strongest wines, an observation confirmed by the authority of Aristotle, whose opinion on the subject has at least the merit of being amusing. For we must smile at the philosopher's method of distinguishing persons suffering under the influence of wine and beer, however disposed he would have been to accuse us of ignorance in not having yet discovered how invariably the former in that state "lie upon their face, and the latter on their backs."

Besides beer, the Egyptians had what Pliny calls *faetitious* or artificial wine, extracted from various fruits, as figs, nixas, pomegranates, as well as herbs, some of which were selected for their medicinal properties. The Greeks and Latins comprehended every kind of beverage made by the process of fermentation under the same general name, and beer was designated as *barley-wine*; but by the use of the name *zythos* they show that the Egyptians distinguished it by its own peculiar appellation. Palm-wine was also made in Egypt, and used in the process of embalming.

The palm-wine now made in Egypt and the oases is simply from an incision in the heart of the tree, immediately below the base of the upper branches, and a jar is attached to the part to catch the juice which exudes from it. But a palm thus tapped is rendered perfectly useless as a fruit-bearing tree, and generally dies in consequence; and it is reasonable to suppose that so great a sacrifice is seldom made except when date trees are to be felled or when they grow in great abundance. The modern name of this beverage in Egypt is *loubgeh*; in flavor it resembles a very new light wine, and may be drunk in great quantity when taken from the tree; but as soon as the fermentation has commenced its intoxicating qualities have a powerful and speedy effect.

Among the various fruit trees cultivated by the ancient Egyptians palms, of course, held the first rank, as well from their abundance as from their great utility. The fruit constituted a principal part of their food both in the month of August, when it was gathered fresh from the trees, and at other seasons of the year, when it was used in a preserved state. They had two different modes of keeping the dates; one was by the simple process of drying them, the other was by making them into a conserve, like the *aguek* of the present day; and of this, which was eaten either cooked or as a simple sweetmeat, I have found some cakes, as well as the dried dates, in the sepulchres of Thebes.

Pliny makes a just remark respecting the localities where the palm prospers, and the constant irrigation it requires; and though every one in the East knows the tree will not grow except where water is abundant, we still read of "palm trees of the desert," as if it delighted in an arid district. Wherever it is found it is a sure indication of water; and if it may be said to flourish in a sandy soil, this is only in situations where its roots can obtain a certain quantity of moisture. The numerous purposes for which its branches and other parts might be applied rendered the cultivation of this valuable and productive tree a matter of primary importance, for no portion of it is without its peculiar use. The trunk serves for beams, either entire or split in half; of the *gerélt*, or branches, are made wicker-baskets, bedsteads, coops and ceilings of rooms, answering every purpose for which laths or any thin wood-work are required; the leaves are converted into

mats, brooms and baskets; of the fibrous tegument at the base of the branches strong ropes and mats are made, and even the thick ends of the *gerélt* are beaten flat and formed into brooms. Besides the *loubgeh* of the tree, brandy, wine and vinegar are made from the fruit; and the quantity of saccharine matter in the dates might be used in default of sugar or honey.

In Upper Egypt another tree, called the *dôm*, or Theban palm, was also much cultivated, and its wood, more solid and compact than the date tree, is found to answer as well for rafts and other purposes connected with water as for beams and rafters. The fruit is a large rounded nut, with a fibrous exterior envelope, which has a flavor very similar to our gingerbread; and from its extreme hardness this nut was used for the hollow socket of their drills or centre-bits, as well as for beads and other purposes. Of the leaves of the *dôm* were made baskets, sacks, mats, fans, fly-flaps, brushes and light sandals; and they served as a general substitute for those of the date tree and for the rushes, *halfeh* or *poa* grass, the cyperus, osiers and other materials employed for the same purposes in Egypt.

Next to the palms, the principal trees of the garden were the fig, sycamore, pomegranate, olive, peach, almond, persea, *nebk* or *sidr*, *mokhayt* or *myza*, *kharôb* or locust tree; and of those that bore no fruit the most remarkable were the two tamarisks, the cassia fistula, senna, palma christi or castor-berry tree, myrtle, various kinds of "acanthus" or acacia, and some others still found in the deserts between the Nile and the Red Sea. So fond were the Egyptians of trees and flowers, and of rearing numerous and rare plants, that they even made them part of the tribute exacted from foreign countries; and such, according to Athenæus, "was the care they bestowed on their culture that those flowers which elsewhere were only sparingly produced, even in their proper season, grew profusely at all times in Egypt; so that neither roses nor violets, nor any others, were wanting there even in the middle of winter." The tables in their sitting-rooms were always decked with bouquets, and they had even artificial flowers which received the name of "Egyptian." The lotus was the favorite for wreaths and chaplets; they also employed the leaves or blossoms of other plants, as the chrysanthemum, *aceton*, acacia, *strychnus*, *persoluta*, anemone, convolvulus, olive, myrtle, *amaricus*, xeranthemum, bay tree and others; and when Agesilaus visited Egypt, he was so delighted with the chaplets of papyrus sent him by the Egyptian king that he took some home with him on his return to Sparta. But it is singular that while the lotus is so often represented, no instance occurs on the monuments of the Indian lotus, or *Nelumbium*, though the Roman-Egyptian sculptures point it out as a peculiar plant of Egypt, placing it about the figure of the god Nile, and it is stated by Latin writers to have been common in the country.

In the furniture of their houses the Egyptians displayed considerable taste; and there, as elsewhere, they studiously avoided too much regularity, justly considering that its monotonous effect fatigued the eye. They preferred variety both in the arrangement of the rooms and in the character of their furniture, and neither the windows, doors nor wings of the house exactly corresponded with each other. An Egyptian would therefore have been more pleased with the form of our

Elizabethan than of the box-shaped rooms of later times.

In their mode of sitting on chairs they resembled the modern Europeans rather than Asiatics, neither using, like the latter, soft divans, nor sitting cross-legged on carpets. Nor did they recline at meals, as the Romans, on a *triclinium*, though couches and ottomans formed part of the furniture of an Egyptian as of an English drawing-room. When Joseph entertained his brethren, he ordered them to sit according to their ages. And if they sometimes sat cross-legged on the ground on mats and carpets, or knelt on one or both knees, these were rather the customs for certain occasions and of the poorer classes. To sit on their heels was also customary as a token of

EGYPTIAN HUNTERS WITH LIVE GAME.

respect in the presence of a superior, as in modern Egypt; and when a priest bore a shrine before the deity, he assumed this position of humility, a still greater respect being shown by prostration or by kneeling and kissing the ground. But the house of a wealthy person was always furnished with chairs and couches. Stools and low seats were also used, the seat being only from eight to fourteen inches high, and of wood or interlaced with thongs; these, however, may be considered equivalent to our rush-bottomed chairs, and probably belonged to persons of humble means. They varied in their quality, and some were inlaid with ivory and various woods.

Those most common in the houses of the rich were the single and double chair (answering to the Greek *thronos* and *diphros*), the latter sometimes kept as a family seat, and occupied by the master and mistress of the house or a married couple. It was not, however, always reserved exclusively for them, nor did they invariably occupy the same seat; they sometimes sat, like their guests, on separate chairs, and a *diphros* was occasionally offered to visitors, both men and women.

Many of the fauteuils were of the most elegant form. They were made of ebony and other rare woods, inlaid with ivory, and very similar to some now used in Europe. The legs were mostly in imitation of those of an animal; and lions' heads, or the entire body, formed the arms of large fauteuils, as in the throne of Solomon, 1 Ki. x. 19. Some again had folding legs, like our camp-stools; the seat was often slightly concave, and those in the royal palace were ornamented with the figures of captives, or emblems of his dominion over Egypt and other countries. The back was light and strong, and consisted of a single set of upright and cross bars, or of a frame receding gradually and terminating at its summit in a graceful curve, supported from without by perpendicular bars; and over this was thrown a handsome pillow of colored cotton, painted leather or gold and silver tissue, like the beds at the feast of Ahasuerus, mentioned in Esther; or like the

feathered cushions covered with stuffs and embroidered with silk and threads of gold in the palace of Scarus.

Seats on the principle of our camp-stool seem to have been much in vogue. They were furnished with a cushion, or were covered with the skin of a leopard or some other animal, which was removed when the seat was folded up; and it was not unusual to make even head-stools, or wooden pillows, on the same principle. They were also adorned in various ways, bound with metal plates and inlaid with ivory or foreign woods, and the wood of common chairs was often painted to resemble that of a rarer and more valuable kind.

The seats of chairs were frequently of leather,

A TEMPLE AT DANDOUR.

painted with flowers and fancy devices, or of interlaced work made of string or thongs, carefully and neatly arranged, which, like our Indian cane chairs, were particularly adapted for a hot climate, but over this they occasionally placed a leather cushion, painted in the manner already mentioned.

The forms of the chairs varied very much; the larger ones generally had light backs, and some few had arms. They were mostly about the height of those now used in Europe, the seat nearly in a line with the bend of the knee; but some were very low, and others offered that variety of position which we seek in the kangaroo chairs of our own drawing-room. The ordinary fashion of the legs was in imitation of those of some wild animal, as the lion or the goat, but more usually the former, the foot raised and supported on a short pin; and, what is remarkable, the skill of their cabinet-makers, even before the time of Joseph, had already done away with the necessity of uniting the legs with bars. Stools, however, and more rarely chairs, were occasionally made with these strengthening members, as is still the case in our own

country, but the drawing-room fauteuil and couch were not disfigured by so unseemly and so unskillful a support.

The stools used in the saloon were of the same style and elegance as the chairs, frequently differing from them only in the absence of a back; and those of more delicate workmanship were made of ebony, and inlaid, as already stated, with ivory or rare woods. Some of an ordinary kind had solid sides, and were generally very low; and others, with three legs, not unlike those used by the peasants of England, belonged to persons of inferior rank.

The ottomans were simple square sofas, without backs, raised from the ground nearly to the same level as the chairs. The upper part was of leather or a cotton stuff, richly colored, like the cushions of the fauteuils; the base was of wood, painted with various devices; and those in the royal palace were ornamented with the figures of captives, the conquest of whose country was designated by their having this humiliating position. The same idea gave them a place on the soles of sandals, on the foot-stools of a royal throne, and on the walls of the palace at Medinet Haboo, in Thebes, where their heads support some of the ornamental details of the building.

Footstools also constituted part of the furniture of the sitting-room; they were made with solid or open sides, covered at the top with leather or interlaced work, and varied in height according to circumstances, some being of the usual size now adopted by us, others of considerable thickness, and rather resembling a small rug. Carpets, indeed, were a very early invention, and they are often represented sitting upon them, as well as on mats, which were commonly used in their sitting-rooms, as at the present day, and remnants of them have been found in the Theban tombs.

Their couches evinced no less taste than the fauteuils. They were of wood, with one end raised, and receding in a graceful curve; and the feet, as in many of the chairs already described, were fashioned to resemble those of some wild animal.

Egyptian tables were round, square or oblong; the former were generally used during their repasts, and consisted of a circular flat summit, supported, like the *monopodium* of the Romans, on a single shaft, or leg, in the centre, or by the figure of a man, intended to represent a captive. Large tables had usually three or four legs, but some were made with solid sides; and though generally of wood, many were of metal or stone; and they varied in size according to the purposes for which they were intended.

Of the furniture of their bedrooms we know little or nothing, but that they universally employed the wooden pillow above alluded to is evident, though Porphyry would lead us to suppose its use was confined to the priests when, in noticing their mode of life, he mentions a half cylinder of well-polished wood "sufficing to support their head," as an instance of their simplicity and self-denial. For the rich they were made of Oriental alabaster, with an elegant grooved or fluted shaft, ornamented with hieroglyphics, carved in intaglio, of sycamore, tamarisk and other woods of the country, the poorer classes being contented with a

cheaper sort, of pottery or stone. Porphyry mentions a kind of wicker bedstead of palm branches, hence called *bais*, evidently the species of framework called *haffass* still employed by the modern Egyptians as a support to the diwans of sitting-rooms and to their beds. Wooden, and perhaps also bronze, bedsteads (like the iron one of Og, king of Bashan) were used by the wealthier classes of the ancient Egyptians; and it is at least probable that the couches they slept upon were as elegant as those on which their bodies reposed after death, and the more so as these last, in their general style, are very similar to the furniture of the sitting-room.

## II. Entertainments.—Reception of Guests.—Music.

In their entertainments they appear to have omitted nothing which could promote festivity and the amusement of the guests. Music, songs, dancing, buffoonery, feats of agility or games of chance were generally introduced, and they welcomed them with all the luxuries which the cellar and the table could afford.

The party, when invited to dinner, met about midday, and they arrived successively in their chariots, in palanquins borne by their servants or on foot. Sometimes their attendants screened them from the sun by holding up a shield (as is still done in Southern Africa), or by some other contrivance; but the chariot of a king or of a princess was often furnished with a large parasol; and the flabella borne behind the king, which belonged exclusively to royalty, answered the same purpose. They were composed of feathers, and were not very unlike those carried on state occasions behind the pope in modern Rome. Parasols or umbrellas were also used in Assyria, Persia and other Eastern countries.

When a visitor came in his car, he was attended by a number of servants, some of whom carried a stool to enable him to alight, and others his writing-tablet, or whatever he might want during his stay at the house. The guests assembled in a sitting-room within, and were entertained with music during the interval preceding the announcement of dinner; for, like the Greeks, they considered it a want of good breeding to sit down to table immediately on arriving, and as Bdelycleon, in Aristophanes, recommended his father Philocleon to do, they praised the beauty of the rooms and the furniture, taking care to show particular interest in those objects which were intended for admiration. As usual in all countries, some of the party arrived earlier than others; and the consequence, or affectation of fashion, in the person who now drives up in his curicle, is shown by his coming some time after the rest of the company; one of his footmen runs forward to knock at the door; others, close behind the chariot, are ready to take the reins and to perform their accustomed duties; and the one holding his sandals in his hand, that he may run with greater ease, illustrates a custom still common in Egypt among the Arabs and peasants of the country, who find the power of the foot greater when freed from the encumbrance of a shoe.

To those who arrived from a journey, or who desired it, water was brought for their feet previous to entering the festive chamber. They also washed their hands before dinner, the water being brought in the same manner as at the present day; and ewers, not unlike those used by the modern Egyptians, are represented, with the basins belonging to them, in the paintings of a Theban tomb.

In the houses of the rich they were of gold or other costly materials. Herodotus mentions the golden foot-pan in which Amasis and his guests used to wash their feet. The Greeks had the same custom of bringing water to the guests, numerous instances of which we find in Homer, as when Telemachus and the son of Nestor were received at the house of Menelaus, and when Asphalion poured it upon the hands of his master and the same guests on another occasion. Virgil also describes the servants bringing water for this purpose when Aeneas was entertained by Dido. Nor was the ceremony thought superfluous or declined, even though they had previously bathed and been anointed with oil.

At the time of entering the saloon a lotus flower was presented to each guest, who held it in his hand during the entertainment. Servants then brought necklaces of flowers composed chiefly of the lotus, a garland was also put round the head, and a single lotus bud or a full-blown flower was so attached as to hang over the forehead. Many of them, made up into wreaths and other devices, were suspended upon stands in the room ready for immediate use; and servants were constantly employed to bring other fresh flowers from the garden in order to supply the guests as their bouquets faded.

The Greeks and Romans had the same custom of presenting guests with flowers or garlands, which were brought in at the beginning of their entertainments or before the second course. They not only adorned their heads, necks and breasts, like the Egyptians, but often bestrewed the couches on which they lay and all parts of the room with flowers, though the head was chiefly regarded, as appears from Horace, Anacreon, Ovid and other ancient authors. The wine-bowl, too, was crowned with flowers, as at an Egyptian banquet. They also perfumed the apartment with myrrh, frankincense and other choice odors.

The Greeks and other ancient people usually put on a particular garment at festive meetings, generally of a white color; but it does not appear to have been customary with the Egyptians to make any great alteration in their attire, though they evidently abstained from dresses of a gloomy hue.

The guests being seated, and having received these tokens of welcome, wine was offered them by the servants. To the ladies it was generally brought in a small vase, which, when emptied into the drinking-cup, was handed to an under-servant or slave who followed; but to the men it was frequently presented in a one-handed goblet, without being poured into any cup, and sometimes in a large or small vase of gold, silver or other materials.

Herodotus and Hellanicus both say that they drank wine out of brass or bronze goblets, and, indeed, the former affirms that this was the only kind of drinking-cup known to the Egyptians; but Joseph had one of silver, and the sculptures represent them of glass and porcelain, as well as of gold, silver and bronze. Those who could not afford the more costly kind were satisfied with a cheaper quality, and many were contented with cups of common earthenware; but the wealthy Egyptians used vases of glass, porcelain and the precious metals for numerous purposes, both in their houses and in the temples of the gods.

The practice of introducing wine at the commencement of an entertainment or before dinner had been served up was not peculiar to this people; and the Chinese to the present day offer it at

their parties to all the guests as they arrive in the same manner as the ancient Egyptians. They also drank wine during the repast, perhaps to the health of one another or of an absent friend, like the Romans; and no doubt the master of the house or "the ruler of the feast" recommended a choice wine and pledged them to the cup.

While dinner was preparing the party was enlivened by the sound of music; and a band, consisting of the harp, lyre, guitar, tambourine, double and single pipe, flute and other instruments, played the favorite airs and songs of the country. Nor was it deemed unbecoming the gravity and dignity of a priest to admit musicians into his house or to take pleasure in witnessing the dance; and, seated with their wives and family in the midst of their friends, the highest functionaries of the sacerdotal order enjoyed the lively scene. In the same manner, at a Greek entertainment, diversions of all kinds were introduced; and Xenophon and Plato inform us that Socrates, the wisest of men, amused his friends with music, jugglers, mimics, buffoons and whatever could be desired for exciting cheerfulness and mirth.

PILLAR AND BEAMS OF TEMPLE AT KARNAK.

Though impossible for us now to form any notion of the character or style of Egyptian music, we may be allowed to conjecture that it was studied on scientific principles; and whatever defects existed in the skill of ordinary performers who gained their livelihood by playing in public or for the entertainment of a public party, music was looked upon as an important science and diligently studied by the priests themselves. According to Diodorus, it was not customary to make music part of their education, being deemed useless, and even injurious, as tending to render the minds of men effeminate; but this remark can only apply to the custom of studying it as an amusement. Plato, who was well acquainted with the usages of the Egyptians, says that they considered music of the greatest consequence, from its beneficial effects upon the minds of youth; and according to Strabo, the children of the Egyptians were taught letters, the songs appointed by law and a certain kind of music established by government.

That the Egyptians were particularly fond of music is abundantly proved by the paintings in their tombs of the earlier times; and we even find they introduced figures performing on the favorite instruments of the country among the devices

with which they adorned fancy boxes or trinkets. The skill of the Egyptians in the use of musical instruments is also noticed by Athenæus, who says that both the Greeks and barbarians were taught by refugees from Egypt, and that the Alexandrians were the most scientific and skillful players on pipes and other instruments.

In the infancy of music, as Dr. Barney observes, "no other instruments were known than those of percussion, and it was therefore little more than metrical." Pipes of various kinds and the flute were afterward invented, at first very rude, and made of reeds which grew in the rivers and lakes; and some of these have been found in the Egyptian tombs. To discover, we can scarcely say to invent, such simple instruments required a very slight effort. But it was long before music and musical instruments attained to any degree of excellence; and the simple instruments of early times, being in time succeeded by others of a more complicated kind—the many-stringed harp, lyre and other instruments—added to the power and variety of musical sounds.

To contrive a method of obtaining perfect mel-

ody from a small number of strings by shortening them on a neck during the performance, like our modern violin, was, unquestionably, a more difficult task than could be accomplished in the infancy of music, and great advances must have been already made in the science before this could be attained or before the idea would suggest itself to the mind. With this principle, however, the Egyptians were well acquainted; and the sculptures unquestionably prove it, in the frequent use of the three-stringed guitar.

A harp or lyre having a number of strings, imitating various sounds, and disposed in the order of notes, might be invented even in an early stage of the art; but a people who had not attentively studied the nature of musical sounds would necessarily remain ignorant of the method of procuring the same tones from a limited number of strings; nor are our means simplified till they become perfectly understood. It is, then, evident, not only from the great fondness for music evinced by the early Egyptians, but from the nature of the very instruments they used, that the art was studied with great attention, and that they extended the same minute and serious investigation to this as to other sciences.

The fabulous account of its origin, mentioned by Diodorus, shows music to have been sanctioned, and even cultivated, by the priests themselves, who invariably pretended to have derived from the gods the knowledge of the sciences they encouraged. Hermes or Mercury was, therefore, reputed to be the first discoverer of the harmony and principle of voices or sounds, and the inventor of the lyre.

From his limiting the number of its chords to three, the historian evidently confounds the lyre with the Egyptian guitar; yet this traditional story serves to attest the remote antiquity of stringed instruments and proves the great respect paid to music by the Egyptian priests, who thought

COURT OF A PRIVATE HOUSE.

it not unworthy of a deity to be its patron and inventor.

It is sufficiently evident from the sculptures of the ancient Egyptians that their hired musicians were acquainted with the triple symphony—the harmony of instruments, of voices and of voices and instruments. Their band was variously composed, consisting either of two harps, with the single pipe and flute; of the harp and double pipe, frequently with the addition of the guitar; of a fourteen-stringed harp, a guitar, lyre, double pipe and tambourine; of two harps, sometimes of different sizes, one of seven, the other of four, strings; of two harps of eight chords and a seven-stringed lyre; of the guitar and the square or oblong tambourine; of the lyre, harp, guitar, double pipe and a sort of harp with four strings, which was held upon the shoulder; of the harp, guitar, double pipe, lyre and square tambourine; of the harp, two guitars and the double pipe; of the harp, two

flutes and a guitar; of two harps and a flute; of a seventeen-stringed lyre, the double pipe and a harp of fourteen chords; of the harp and two guitars; or of seven-stringed harps and an instrument held in the hand, not unlike an Eastern fan, to which were probably attached small bells or pieces of metal that emitted a jingling sound when shaken, like the crescent-crowned bells of our modern bands. There were many other combinations of these various instruments; and in the Bacchic festival of Ptolemy Philadelphus, described by Athanasius, more than six hundred musicians were employed in the choros, among whom were three hundred performers on the cithara.

Sometimes the harp was played alone or as an accompaniment to the voice, and a band of seven or more choristers frequently sung to it a favorite air, beating time with their hands between each stanza. They also sung to other instruments, as the lyre, guitar or double pipe, or to several of them played together, as the flute and one or more harps, or to these last, with a lyre or a guitar. It was not unusual for one man or one woman to perform a solo; and a chorus of many persons occasionally sang at a private assembly without any instrument, two or three beating time at intervals with the hand. Sometimes the band of choristers consisted of more than twenty persons, only two of whom responded by clapping their hands; and in one instance I have seen a female represented holding what was perhaps another kind of jingling instrument.

The custom of beating time by clapping the hands between the stanzas is still usual in Egypt.

On some occasions women beat the tambourine and *darabooka* drum without the addition of any other instrument, dancing or singing to the sound; and bearing palm branches or green twigs in their hands, they proceeded to the tomb of a deceased friend, accompanied by this species of music. The same custom may still be traced in the Friday visit to the cemetery and in some other funeral ceremonies among the Moslem peasants of modern Egypt.

If it was not customary for the higher classes of Egyptians to learn music for the purpose of playing in society, and if few amateur performers could be found among persons of rank, still some general knowledge of the art must have been acquired by

a people so alive to its charms, and the attention paid to it by the priests regulated the taste and prevented the introduction of a vitiated style. Those who played at the houses of the rich, as well as the ambulant musicians of the streets, were of the lower classes, and made this employment the means of obtaining their livelihood; and in many instances both the minstrels and the choristers were blind.

The Israelites also delighted in music and the dance, and persons of rank deemed them a necessary part of their education. Like the Egyptians with whom they had so long resided, the Jews carefully distinguished sacred from profane music. They introduced it at public and private rejoicings, at funerals and in religious services; but the character of the airs, like the words of their songs, varied according to the occasion, and they had canticles of mirth, of praise, of thanksgiving and of lamentation. Some were *epithalamia*, or songs

composed to celebrate marriages; others to commemorate a victory or the accession of a prince; to return thanks to the deity or to celebrate his praises; to lament a general calamity or a private affliction; and others, again, were peculiar to their festive meetings. On these occasions they introduced the harp, lute, tabret and various instruments, together with songs and dancing, and the guests were entertained nearly in the same manner as at an Egyptian feast. In the temple and in the religious ceremonies the Jews had female as well as male performers, who were generally daughters of the Levites, as the Pallaces of Thebes were either of the royal family or the daughters of priests; and these musicians were attached exclusively to the service of religion. David was not only remarkable for his taste and skill in music, but took a delight in introducing it on every occasion: "And seeing that the Levites were numerous, and no longer employed as formerly in carrying the boards, veils and vessels of the tabernacle, its abode being fixed at Jerusalem, he appointed a great part of them to sing and play on instruments at the religious festivals." Solomon, again, at the dedication of the temple, employed "one hundred and twenty priests to sound with trumpets;" and Josephus pretends that no less than two hundred thousand musicians were present at that ceremony, besides the same number of singers, who were Levites.

The method adopted by the Egyptian priests for preserving their melodies has not been ascertained; but if their system of notation resembled that of the Greeks, which was by disposing the letters of the alphabet in different ways, it must have been cumbersome and imperfect.

When hired to attend at a private entertainment, the musicians either stood in the centre or at one side of the festive chamber, and some sat cross-legged on the ground, like the Turks and other Eastern people of the present day. They were usually accompanied on these occasions by dancers, either men or women, sometimes both, whose art consisted in assuming all the graceful or ludicrous gestures which could obtain the applause or tend to the amusement of the assembled guests; for music and dancing were considered as essential at their entertainments as among the Greeks. But it is by no means certain that these diversions counteracted the effect of wine, as Plutarch imagines. A sprightly air is more likely to have invited another glass, and sobriety at a feast was not one of the objects of the lively Egyptians.

At the religious ceremonies and processions certain musicians attached to the priestly order, and organized for this special purpose, were employed, who were considered to belong exclusively to the service of the temple, as each military band of their army to its respective corps.

When an individual died, it was usual for the women to issue forth from the house, and throwing dust and mud upon their heads, to utter cries of lamentation as they wandered through the streets of the town or amidst the cottages of the village. They sang a doleful dirge in token of their grief; they, by turns, expressed their regret for the loss of their relative or friend and their praises of his virtues; and this was frequently done to the time and measure of a plaintive, though not inharmonious, air. Sometimes the tambourine was introduced, and the "mournful song" was accompanied by its monotonous sound. On these occasions the services of hired performers were uncalled for, though during the period of seventy days, while the body was in the hand of the embalmers,

mourners were employed, who sang the same plaintive dirge to the memory of the deceased—a custom prevalent also among the Jews when preparing for a funeral.

The *darabooka* drum is rarely met with in the paintings of Thebes, being only used on certain occasions, and chiefly, as at the present day, by the peasant women and the boatmen of the Nile. It was evidently the same as the modern one, which is made of parchment, strained and glued over a funnel-shaped ease of pottery, which is a hollow cylinder with a truncated cone attached to it. It is beaten with the hand; and when relaxed, the parchment is braced by exposing it a few moments to the sun or the warmth of a fire. It is generally supported by a band around the neck of the performer, who with the fingers of the right hand plays the air, and with the left grasps the lower edge of the head, in order to beat the bass, as in the tambourine, which we find from the sculptures was played in the same manner by the ancient Egyptians.

They had also cymbals and cylindrical maces (*crotales*, or clappers), two of which were struck together, and probably emitted a sharp metallic sound. The cymbals were of mixed metal, apparently brass, or a compound of brass and silver, and of a form exactly resembling those of modern times, though smaller, being only seven or five inches and a half in diameter. The handle was also of brass, bound with leather, string or any similar substance, and being inserted in a small hole at the summit, was secured by bending back the two ends. The same kind of instrument is used by the modern inhabitants of the country, and from them have been borrowed the very small cymbals played with the finger and thumb which supply the place of castanets in the *almei* dance. These were the origin of the Spanish castanet, having been introduced into that country by the Moors, and afterward altered in form, and made of chestnut (castaña) and other wood instead of metal.

The cymbals of modern Egypt are chiefly used by the attendants of sheikhs' tombs, who travel through the country at certain periods of the year to exact charitable donations from the credulous or the devout among the Moslems by the promise of some blessing from the indulgent saint. Drums and some other noisy instruments, which are used at marriages and on other occasions, accompany the cymbals, but these last are more peculiarly appropriated to the service of the sheikhs and the external ceremonies of religion, as among the ancient Egyptians; and a female, whose coffin contained a pair of cymbals, was described in the hieroglyphics of the exterior as the minstrel of a deity.

Though the Egyptians were fond of buffoonery and gesticulation, they do not seem to have had any public show which can be said to resemble a theatre. The stage is allowed to have been a purely Greek invention, and to dramatic entertainments, which were originally of two kinds, comedy and tragedy, were added the ancient Italian pantomime. The Egyptian common people had certain jocose songs, accompanied with mimic and extravagant gestures, containing appropriate and laughable remarks on the bystanders—extempore sallies of wit, like the Fescennine verses of ancient Italy, which were also peculiar to the country people. Their object was to provoke a retort from him they addressed or to supply one if unanswered—a custom still continued by the modern Egyptians, who have adopted the high

## THE ANCIENT EGYPTIANS.

foolscaps of palm leaves, frequently with tassels or foxes' tails attached to them, and the alternate verse or couplets of two performers, who dance and sing in recitative to the monotonous sound of a hand-drum. They also went, like strolling players, from village to village, and danced in the streets to amuse passers by, and often took up a position by the steps of some grand mansion, where, if they could only spy some children or nursery-maids at a window, they performed their parts with redoubled energy, and holding up their hands toward them made complimentary remarks in their songs, with the same keen longing for *bakshish* as their descendants.

Some of these buffoons were foreigners, generally blacks from Africa, whose scanty dress, made of a piece of bull's hide, added not a little to their grotesque appearance, purposely increased by a small addition resembling a tail. They also had tags, like beads, suspended from their elbows, which were often put on by Egyptian performers on festive occasions, as they are still by the people of Ethiopia and Kordofan in their dances, and they are shown by the vases to have been adopted by the Greeks in bacchanalian and other ceremonies. The tail was also given to Greek fauns.

In their military bands some of the instruments differed from those of ordinary musicians, but the sculptures have not recorded all the various kinds used in the Egyptian army. The principal ones appear to have been the trumpet and drum, the former used to marshal the troops, summon them to the charge and direct them in their evolutions, the latter to regulate and enliven their march.

The trumpet, like that of the Israelites, was about one foot and a half long, of very simple form, apparently of brass; and when sounded, it was held with both hands, and either used singly, or as part of the military band, with the drum and other instruments.

The trumpet was particularly, though not exclusively, appropriated to martial purposes. It was straight, like the Roman tuba or our common trumpet, and was used in Egypt at the earliest times. In Greece it was also known before the Trojan war; it was reputed to have been the invention of Minerva or of Tyrrhenus, a son of Hercules; and in later times it was generally adopted, both as a martial instrument and by the ambulant musicians of the streets. In some parts of Egypt a prejudice existed against the trumpet; and the people of Busiris and Lycopolis would never use it, because the sound resembled the braying of an ass, which, being the emblem of Typhon, gave them very unpleasant sensations by reminding them of the evil being. The same kind of notion prevents the Moslems using bells, which, if they do not actually bring bad spirits into the house, keep away good ones; and many seem to think that dogs are also in league with the powers of darkness.

The Israelites had trumpets for warlike, as well as sacred, purposes, for festivals and rejoicings; and the office of sounding them was not only honorable, but was committed solely to the priests. Some were of silver, which were suited to all occasions; others were animals' horns (like the original cornu of the Romans), and these are stated to have been employed at the siege of Jericho. The Greeks had six kinds of trumpets, the

Romans four—the tuba, cornu, buccina and lituus, and in ancient times the concha, so called from having been originally a shell—which were the only instruments employed by them for military purposes, and in this they differed from the Greeks and Egyptians.

The only drum represented in the sculptures is a long drum, very similar to one of the tomtoms of India. It was about two feet or two feet and a half in length, and was beaten with the hand, like the Roman tympanum. The ease was of wood or copper, covered at either end with parchment or leather, braced by cords extending diagonally over the exterior of the cylinder; and when played, it was slung by a band round the neck of the drummer, who during the march carried it in a vertical position at his back. Like the

FRONT OF A PRIVATE HOUSE.

trumpet, it was chiefly employed in the army, and the evidence of the sculptures is confirmed by Clement of Alexandria, who says the drum was used by the Egyptians in going to war. It was also common at the earliest period of which we have any account from the sculptures of Thebes, or about the sixteenth century before our era.

Besides the long drum, the Egyptians had another, not very unlike our own both in form and size, which was much broader in proportion to its length than the tomtom just mentioned, being two feet and a half high and two feet broad. It was beaten with two wooden sticks; but as there is no representation of the mode of using it, we are unable to decide whether it was suspended horizontally and struck at both ends, as the drum of the same kind still used at Cairo, or at one end only, like our own, though from the curve of the sticks

I am inclined to think it was slung and beaten as the tambour of modern Egypt. Sometimes the sticks were straight, and consisted of two parts, the handle and a thin round rod, at whose end a small knob projected for the purpose of fastening the leather pad with which the drum was struck; they were about a foot in length, and judging from the form of the handle of one in the Berlin Museum, we may conclude they belonged, like those above mentioned, to a drum beaten at both ends. Each extremity of the drum was covered with red leather, braced with catgut strings passing through small holes in its broad margin, and extending in direct lines over the copper body, which, from its convexity, was similar in shape to a cask.

Besides the ordinary forms of Egyptian instruments, several were constructed according to a particular taste or accidental caprice. Some were of the most simple kind, others of very costly materials, and many were richly ornamented with brilliant colors and fancy figures, particularly the harps and lyres. The harps varied greatly in form, size and the number of their strings. They are represented in the ancient paintings with four, six, seven, eight, nine, ten, eleven, twelve, four-

ATTITUDE OF GREETING A SUPERIOR.

teen, seventeen, twenty, twenty-one and twenty-two chords; that in the Paris collection appears also to have had twenty-one, and the head of another found at Thebes was made for seventeen strings. They were frequently very large, even exceeding the height of a man, tastefully painted with the lotus and other flowers, or with fancy devices; and those of the royal minstrels were fitted up in the most splendid manner, adorned with the head or bust of the monarch himself, like those in Bruce's tomb at Thebes.

The oldest harps found in the sculptures are in a tomb near the pyramids of Gezeh, upward of four thousand years old. They are more rude in shape than those usually represented; and though it is impossible to ascertain the precise number of their chords, they do not appear to have exceeded seven or eight, and are fastened in a different manner from ordinary Egyptian harps. These date long before the shepherd invasion, and the fact of the Egyptians being already sufficiently advanced to combine the harmony of various instruments with the voice shows they were not indebted for music to that Asiatic race. The combination of harps and lyres of great compass with the flute, single and double pipes, guitars and tambourines, proves the proficiency to which they had arrived; and

even in the reign of Amosis, the first king of the eighteenth dynasty, about 1570 B. C., nine hundred years before Terpander's time, the ordinary musicians of Egypt used harps of fourteen and lyres of seventeen strings.

The Greeks were indebted to Asia for their stringed instruments, and even for the cithara, which was originally styled "Asiatic," and was introduced from Lesbos. It had only seven chords, till Timotheus of Miletus added four others, about 400 B. C.; and Terpander, who lived two hundred years after Homer, was the first to lay down any laws for this instrument, some time before they were devised for the flute or pipe. The harp, indeed, seems always to have been unknown to the Greeks.

The strings of Egyptian harps were of catgut, as of the lyres still used in Nubia. Some harps stood on the ground while played, having an even broad base; others were placed on a stool or raised upon a stand or limb attached to the lower part. Men and women often used harps of the same compass, and even the smallest of four strings were played by men, but the largest were mostly appropriated to the latter, who stood during the performance. These large harps had a flat base, so as to stand without support, like those in Bruce's tomb, and a lighter kind was also squared for the same purpose, but when played was frequently inclined toward the performer, who supported the instrument in the most convenient position. Many harps were of wood, covered with bull's hide or with leather, sometimes of a green or red color and painted with various devices, vestiges of which may be traced in that of the Paris collection, and small ones were sometimes made, like many Greek lyres, of tortoise shell.

The Egyptians had no means of shortening the harp-strings during the performance by any contrivance resembling our modern pedals, so as to introduce occasional sharps and flats; they could therefore only play in one key until they tuned the instrument afresh by turning the pegs. Indeed, it was not more necessary in their harp than in the lyre, since the former was always combined with other instruments, except when used as a mere accompaniment to the voice. But they seem occasionally to have supplied this deficiency by a double set of pegs, and their great skill in music during so many centuries would necessarily suggest some means of obtaining half notes.

The Egyptian harps have another imperfection, for which it is not easy to account—the absence of a pole, and consequently of a support to the bar or upper limb, in which the pegs were fixed; and it is difficult to conceive how, without it, the chords could have been properly tightened or the bar sufficiently strong to resist the effect of their tension, particularly in those of triangular form. The pole is not wanting only in those of the paintings, but in all that have been found in the tombs, and even in that of the Paris collection, which, having twenty-one strings, was one of the highest power they had, since they are seldom represented on the monuments with more than two octaves. This last, however, may hold an intermediate place between a harp and the many triangular stringed instruments of the Egyptians.

The harp was thought to be especially suited for the service of religion, and it was used on many occasions to celebrate the praises of the gods. It was even represented in the hands of the deities themselves, as well as the tambourine and the sacred sistrum.

The Egyptian lyre was not less varied in form

and the number of its chords than the harp, and they ornamented it in many ways, as their taste suggested, some with the head of the animal carved in wood, as the horse, ibex or gazelle, while others were of more simple shape.

Many Egyptian lyres were of considerable power, having five, seven, ten and eighteen strings. They were usually supported between the elbow and the side, and the mode of playing them was with the hand, or sometimes with the plectrum, which was made of bone, ivory or wood, and was often attached to one limb of the lyre by a string.

Numerous other instruments resembling harps or lyres in principle were common in Egypt, which varied so much in form, compass and sound that they were considered quite distinct from them, and had each its own name. They have been found in the tombs, or are represented in the paintings of Thebes and other places.

The strings were of catgut, as in the harps; and those were so well preserved which were found at Thebes in 1823 that they sounded on being touched, though buried two or three thousand years. It was an instrument of great compass, having twenty strings wound round a rod at the lower end, which was probably turned in order to tighten them; and the frame was of wood, covered with leather, on which could be traced a few hieroglyphics.

Another, which may be called a standing-lyre, was of great height. It consisted of a round body, probably of wood and metal, in the form of a vase, from which two upright limbs rose, supporting the transverse bar to which the upper ends of its eight strings were fastened; and the minstrel sang to it as he touched the chords with his two hands.

A still more jingling instrument was used as an accompaniment to the lyre. It consisted of several bars, probably of wire, attached to a frame or some sounding body, which were struck with a rod held in both hands by the performer.

More common was a light instrument of four strings, which was carried on the shoulder while played, and was mostly used by women, who chanted to it as the Jews did "to the sound of the (nabl) viol," Amos vi. 5. Some of these have been found in the tombs of Thebes, and the most perfect one is that in the British Museum, which is forty-one inches long, the neck twenty-two and the breadth of the body four inches. Its exact form, the pegs, the rod to which the chords were fastened, and even the parchment covering its wooden body and serving as a sounding-board, still remain, and all it wants are the four strings. The mode of fastening the strings to the rod is not quite evident, and they seem to have passed through the parchment to the rod lying beneath it, which has notches at intervals to receive them. It is of hard wood, apparently acacia, and sufficient remains of one of the strings to show they were of catgut.

Similar in principle to this was a small instrument of five chords, having a hollow wooden body, over which was stretched a covering of parchment or of thin wood, and the strings extended in the same manner from a rod in the centre to the pegs at the end of the neck.

Three have been found in the tombs, one of which is in the Berlin and two in the British Museum, the former with the five pegs entire, and the body composed of three pieces of sycamore wood. Their whole length is two feet, the neck about one foot three inches, in the under side of which are the five pegs, placed in a direct line one after

the other. At the opposite end of the body are two holes for fastening the rod that secured the strings.

Besides harps and lyres, the Egyptians had a sort of guitar with three chords, which have been strangely supposed to correspond to the three seasons of the Egyptian year; and here again Thoth or Mercury has received the credit of the invention, for the instrument, having only three strings and yet equaling the power of those of great compass, was considered by the Egyptians worthy of the god whose intervention on this and similar occasions is, in fact, only an allegorical mode of expressing the intellectual gifts communicated from the divinity to man.

The guitar consisted of two parts, a long flat neck or handle and a hollow oval body, either wholly of wood or covered with parchment, having the upper surface perforated with holes to allow the sound to escape. Over this body, and the whole length of the handle, were stretched three strings of catgut, secured at the upper extremity either by the same number of pegs or by passing through an aperture in the handle; they were then bound round it and tied in a knot. It does not appear to have had any bridge, but the chords were fastened at the lower end to a triangular piece of wood or ivory, which raised them to a sufficient height; and they were sometimes elevated at the upper extremity of the handle by means of a small crossbar immediately below each of the apertures where the strings were passed through and tightened.

It is from an ancient instrument of this kind, sometimes called cithara, that the modern guitar (*chitarra*) has been derived, though the cithara of the Greeks and Romans, in early times at least, was a lyre. The Egyptian guitar may be called a lute, but it does not appear to correspond to the three-stringed lyre of Greece.

An instrument of an oval form, with a circular or cylindrical handle, was found at Thebes, not altogether unlike the guitar; but owing to the imperfect state of its preservation, nothing could be ascertained respecting the pegs or the mode of tightening the chords. The wooden body was faced with leather, the handle extending down it to the lower end, and part of the string remained which attached the plectrum. Three small holes indicated the place where the chords were secured, and two others, a short distance above, appear to have been intended for fastening some kind of bridge.

Wire strings were not used by the Egyptians in any of their instruments, catgut being alone employed, and the twang of this in the warlike bow doubtless led to its adoption in the peaceful lyre, owing to the accidental discovery of its musical sound; for men hunted animals and killed each other with the bow and arrow long before they recited verses or indulged in music. It is, therefore, not surprising that the Arabs, a nation of hunters, were the inventors of the monochordium, an instrument of the most imperfect kind (except when the skill of a Paganini is employed to command its tones); for, with all the accumulated practice of ages, the modern Cairenes have not succeeded in making their one-stringed rahab a tolerable accompaniment to the voice. No doubt the instrument was very ancient; for being used by the reciters of poems, it evidently belonged to the early bards, the first musicians of every country; and the wild Montenegri still sing their primitive war- and love-songs to the sound of the one-stringed gusla, handed down to them from the "wizards" of the ancient Slavonians.

If we are surprised at the number of stringed instruments of the Egyptians (and many more are of course unknown to us), and if we wonder what sort of tones and what variety of sounds could be obtained from them, what shall we think of those mentioned by the Greeks, who seem to have adopted every one they could obtain from other countries? Some, as the phorminx, barbiton and other lyres, are known, the first of which, according to Clemens, was not very different from the cithara, but the bare recital of the names of the rest is bewildering.

The flute was of great antiquity, for in a tomb near the great pyramid, built more than four thousand years ago, is a concert of vocal and instrumental music, where two harps, a pipe, a flute and several voices are introduced.

The Egyptian flute was of great length; for reaching the ground when the performer was seated, it could not be less than two feet three inches; and some were so long that, when playing, he was obliged to extend his arms below his waist to touch the holes. Those who played it generally sat on the ground, and in every instance I have met with they are men.

It was made of reed, of wood, of bone or of ivory; and from the word *sabi*, written over the instrument in the hieroglyphics, which is the same as its Coptic name, we may suppose it was originally the leg-bone of some animal. The Latin *tibia* has the same meaning, and flutes are said to have been made in Boeotia of those hollow bones. The Egyptians probably had several kinds of flutes, some suited to mournful, others to festive, occasions, like the Greeks; and it is evident they used them both at banquets and religious ceremonies. But no Egyptian deity is represented playing the flute; and the gods and goddesses may have felt the same aversion to it as Minerva when she perceived "the deformed appearance of her mouth"—an allegory signifying, according to Aristotle, that it "interfered with mental reflection," and had most immoral effects, which in these ignorant days we are unable to perceive.

The double pipe was quite as common in Egypt as in Greece. It consisted of two tubes, one played by the right, the other by the left, hand, the latter giving a deep sound for the bass, the right a sharp tone for the tenor. The double *zummara* of the modern Egyptians is a rude imitation of it, but its piping harshness and monotonous drone exclude it even from their imperfect bands; and it is only used by the boatmen of the Nile and by the peasants, who seem to think it a suitable accompaniment to the tedious camel's pace. Fortunately, this national instrument delights its admirers out of doors, like the bagpipes of Abbruzzi and other countries, which at a little distance it so much resembles.

The double, like the single, pipe was at first of reed and afterward of wood and other materials; and it was introduced both on solemn and festive occasions among the Egyptians as among the Greeks. Men, but more frequently women, performed upon it, occasionally dancing as they played; and from its repeated occurrence in the sculptures of Thebes it was evidently preferred to the single pipe.

The tambourine was a favorite instrument in religious ceremonies and at private banquets. It was played by men and women, but more usually by the latter, who often danced and sang to its sound; and it was used as an accompaniment to other instruments. It was of three kinds—one circular, like our own; another square or oblong; and

the third consisted of two squares, separated by a bar; all of which were beaten by the hand; but there is no appearance of balls or movable pieces of metal attached to the frame, as in the Greek and modern tambourine. The *taph*, "timbrel" or "tabret" of the Jews was the same instrument, and was of very early use among them, as well as the harp, even before they "went down into Egypt;" and the Jewish, like the Egyptian, women danced to its sound.

Nearly all their instruments were admitted by the Egyptians into their sacred music, as the harp, lyre, flute, double pipe, tambourine, cymbals and guitar; and neither the trumpet, drum nor clappers were excluded from the religious processions in which the military were engaged. The harp, lyre and tambourine performed a part in the services of the temple; and two goddesses in the frieze at Dendera are represented playing the harp and tambourine in honor of Athor, the Egyptian Venus. The priests, bearing sacred emblems, often walked in procession to the sound of the flute; and excepting those of Osiris at Abydos, the sacred rites of an Egyptian deity did not forbid the intro-

ATTITUDES OF DEVOTION.

duction of the harp and flute or the voice of singers. The harp, indeed, was considered particularly suited to religious purposes; the title "minstrels of Amun" applied to some harpers, and the two performers before the god in the tomb of Remeses III., show the honor in which it was held; and it was played either alone or in combination with other instruments. The minstrel often chanted as he touched its strings, and the harp, guitar and two flutes joined in a sacred air while the high priest offered incense to the deity. The *erotola*, or clappers, were also used with the flute during pilgrimages and processions to the shrine of a god, accompanied by choristers who chanted hymns in his honor.

The Jews, in like manner, regarded music as indispensable for religious rites; their favorite instruments were the harp, lute or psaltery and ten-stringed *ashur*, the tabret, trumpet, cornet, cymbals and others; and many "singing men and singing women" attended in the processions to the Jewish sanctuary.

The sistrum was the sacred instrument *par excellence*, and belonged as peculiarly to the service of

the temple as the small tinkling bell to that of a Roman Catholic chapel. Some pretend it was used to frighten away Typhon, and the rattling noise of its movable bars was sometimes increased by the addition of several loose rings. It had generally three, rarely four, bars; and the whole instrument was from eight to sixteen or eighteen inches in length, entirely of brass or bronze. It was sometimes inlaid with silver or gilt, or otherwise ornamented, and, being held upright, was shaken, the rings moving to and fro upon the bars. These last were frequently made to imitate the sacred asp, or were simply bent at each end to secure them. Plutarch mentions a cat with a human face on the top of the instrument, and at the upper part of the handle, beneath the bars, the face of Isis on one side and of Nephtys on the other.

The British Museum possesses an excellent specimen of the sistrum, well preserved and of the best period of Egyptian art. It is one foot four inches high and had three movable bars, which have been unfortunately lost. On the upper part are

AN EGYPTIAN FEMALE.

represented the goddess Pasht or Bubastis, the sacred vulture and other emblems; and on the side below is the figure of a female holding in each hand one of the instruments.

The handle is cylindrical and surmounted by the double face of Athor, wearing an "asp-formed crown," on whose summit appears to have been the cat, now scarcely traced in the remains of its feet. It is entirely of bronze; the handle, which is hollow and closed by a movable cover of the same metal, is supposed to have held something appertaining to the sistrum; and the lead, still remaining within the head, is a portion of that used in soldering it.

Two others, in the same collection, are highly preserved, but of a late time, and another is of still more recent date; they have four bars, and are of very small size.

One of the Berlin sistra is eight, the other nine, inches in height; the former has four bars, and on the upper or circular part lies a cat, crowned with the disk or sun. The other has three bars; the handle is composed of a figure, supposed to be of Typhon, surmounted by the heads of Athor; and on the summit are the horns, globe and feathers of the same goddess. They are both destitute of rings; but the rude Egyptian model of another in

the same collection has three rings upon its single bar, agreeing in this respect, if not in the number of the bars, with those represented in the sculptures. They are not of early date.

It was so great a privilege to hold the sacred sistrum in the temple that it was given to queens and to those noble ladies who had the distinguished title of "women of Amun," and were devoted to the service of the deity; and the Jews seem, in like manner, to have entrusted the principal sacred offices held by women to the daughters of priests and of persons of rank.

The dance consisted mostly of a succession of figures, in which the performers endeavored to exhibit a great variety of gesture; men and women danced at the same time, or in separate parties, but the latter were generally preferred, from their superior grace and elegance. Some danced to slow airs, adapted to the style of the movement. The attitudes they assumed frequently partook of a grace not unworthy of the Greeks, and others preferred a lively step, regulated by an appropriate tune. Men sometimes danced with great spirit, bounding from the ground more in the manner of European than of Eastern people; on which occasions the music was not always composed of many instruments, but consisted only of *crotales* or maces, a man clapping his hands and a woman snapping her finger to the time.

Graceful attitudes and gesticulations were the general style of their dance, but, as in other countries, the taste of the performance varied according to the rank of the person by whom they were employed or their own skill; and the dance at the house of a priest differed from that among the uncouth peasantry or the lower classes of townsmen.

It was not customary for the upper orders of Egyptians to indulge in this amusement, either in public or private assemblies, and none appear to have practiced it but the lower ranks of society and those who gained their livelihood by attending festive meetings. The Greeks, however, though they employed women who professed music and dancing to entertain the guests, looked upon the dance as a recreation in which all classes might indulge, and an accomplishment becoming a gentleman; and it was also a Jewish custom for young ladies to dance at private entertainments, as it still is at Damascus and other Eastern towns.

The Romans, on the contrary, were far from considering it worthy of a man of rank or of a sensible person, and Cicero says, "No man who is sober dances unless he is out of his mind, either when alone or in any decent society; for dancing is the companion of wantoning, conviviality, dissoluteness and luxury." Nor did the Greeks indulge in it to excess, and effeminate dances or extraordinary gesticulation were deemed indecent in men of character and wisdom. Indeed, Herodotus tells a story of Hippocleides the Athenian, who had been preferred before all the nobles of Greece, as a husband for the daughter of Cleisthenes, king of Argos, having been rejected on account of his extravagant gestures in the dance.

Slaves were taught dancing as well as music, and in the houses of the rich, besides their other occupations, that of dancing to entertain the family or a party of friends was required of them; and free Egyptians also gained a livelihood by their performances.

The dances of the lower orders generally had a tendency toward a species of pantomime; and the rude peasantry were more delighted with ludicrous and extravagant dexterity than with gestures which displayed elegance and grace.

Besides the pirouette and the steps above mentioned, a favorite figure dance was universally adopted throughout the country, in which the two partners, who were usually men, advanced toward each other or stood face to face upon one leg, and having performed a series of movements, retired again in opposite directions, continuing to hold by one hand and concluding by turning each other round.

In another they struck the ground with the heel, standing on one foot, changing perhaps alternately from the right to the left, which is not very unlike a step of the present day.

The Egyptians also danced at the temples in honor of the gods, and in some processions, as they approached the precincts of the sacred courts; and though this custom may at first sight appear inconsistent with the gravity of religion, we may recollect with what feelings David himself danced before the ark, and that the Jews considered it part of their religious duties to approach the Deity with the dance, with tabret and with harp. Their mode of worshiping the golden calf also consisted of songs and dancing; and this was immediately derived from the ceremonies of the Egyptians.

### III. Preparation for Dinner.—Mode of Eating.—Spoons.—Games within and out of doors.

While the party was amused with music and dancing, and the late arrivals were successively announced, refreshments continued to be handed round, and every attention was shown to the assembled guests. Wine was offered to each newcomer, and chaplets of flowers were brought by men servants to the gentlemen, and by women or white slaves to the ladies, as they took their seats. An upper servant or slave had the office of handing the wine, and a black woman sometimes followed, in an inferior capacity, to receive an empty cup when the wine had been poured into the goblet. The same black slave also carried the fruits and other refreshments; and the peculiar mode of holding a plate with the hand reversed, so generally adopted by women from Africa, is characteristically shown in the Theban paintings. To each person after drinking a napkin was presented for wiping the mouth, answering to the mahrama of the modern Egyptians; and the bearer of it uttered a complimentary sentiment, when she offered it and received back the goblet, as, "May it benefit you!" and no Oriental at the present day drinks water without receiving a similar wish. But it was not considered rude to refuse wine when offered, even though it had been poured out, and a teetotaler might continue smelling a lotus without any affront. Men and women either sat together or separately, in a different part of the room; but no rigid mistrust prevented strangers, as well as members of the family, being received into the same society, which shows how greatly the Egyptians were advanced in the habits of social life. In this they, like the Romans, differed widely from the Greeks, and might say with Cornelius Nepos, "Which of us is ashamed to bring his wife to an entertainment? and what mistress of a family can be shown who does not inhabit the chief and most frequented part of the house? Whereas in Greece she never appears at any entertainments, except those to which relations alone are invited, and constantly lives in the women's apartments at the upper part of the house, into which no man has admission unless he be a near relation."

The master and mistress of the house accordingly sat side by side on a large fauteuil, and each guest as he arrived walked up to receive their welcome. The musicians and dancers hired for the occasion also did obeisance to them before they began their part. To the leg of the fauteuil was tied a favorite monkey, a dog, a gazelle, or some other pet; and a young child was permitted to sit on the ground at the side of its mother or on its father's knee.

It was considered a pretty compliment to offer each other a flower from their own bouquet, and all the vivacity of the Egyptians was called forth as they sat together. The hosts omitted nothing that could make their party pass off pleasantly and keep up agreeable conversation, which was with them the great charm of accomplished society, as with the Greeks, who thought it "more requisite and becoming to gratify the company by cheerful conversation than with variety of dishes. The guests, too, neglected no opportunity of showing how much they enjoyed themselves, and as they drew each other's attention to the many knick-knacks that adorned the rooms paid a well-turned compliment to the taste of the owner of the house. They admired the vases, the carved boxes of wood or ivory, and the light tables on which many a curious trinket was displayed, and commended the elegance and comfort of the luxurious fauteuils, the rich cushions and coverings of the couches and ottomans, the carpets and the other furniture. Some who were invited to see the sleeping-apartments found in the ornaments on the toilet-tables and in the general arrangements fresh subjects for admiration, and their return to the guest-chamber gave an opportunity of declaring that good taste prevailed throughout the whole house.

The vases were very numerous, and varied in shape, size and materials, being of hard stone, alabaster, glass, ivory, bone, porcelain, bronze, brass, silver or gold; and those of the poorer classes were of glazed pottery or common earthenware. Many of their ornamental vases, as well as those in ordinary use, were of the most elegant shape, which would do honor to the Greeks, the Egyptians frequently displaying in these objects of private luxé the taste of a highly refined people; and so strong a resemblance did they bear to the productions of the best epochs of ancient Greece, both in their shape and in the fancy devices upon them, that some might even suppose them borrowed from Greek patterns. But they were purely Egyptian, and had been universally adopted in the valley of the Nile long before the graceful forms we admire were known in Greece—a fact invariably acknowledged by those who are acquainted with the remote age of Egyptian monuments and of the paintings that represent them.

For some of the most elegant date in the early age of the third Thothmes, who lived between fourteen and fifteen hundred years before our era; and we not only admire their form, but the richness of the materials of which they were made, their color, as well as the hieroglyphics, showing them to have been of gold and silver, or of this last, inlaid with the more precious metal.

Those of bronze, alabaster, glass, porcelain, and even of ordinary pottery, were also deserving of admiration, from the beauty of their shapes, the designs which ornamented them and the superior quality of the material; and gold and silver cups were often beautifully engraved and studded with precious stones. Among these we readily distinguish the green emerald, the purple amethyst and other gems; and when an animal's head adorned their handles the eyes were frequently composed

of them, except when enamel or some colored composition was employed as a substitute.

That the Egyptians made great use of precious stones for their vases, and for women's necklaces, rings, bracelets and other ornamental purposes, is evident from the paintings at Thebes and from the numerous articles of jewelry discovered in the tombs; and they appear sometimes to have been sent to Egypt in bags, similar to those containing the gold dust brought by the conquered nations tributary to the Egyptians, which were tied up and secured with a seal.

Many bronze vases found at Thebes and in other parts of Egypt are of very excellent quality, and prove the skill possessed by the Egyptians in the art of working and compounding metals. We are surprised at the rich sonorous tones they emit on being struck, the fine polish of which some are still susceptible, and the high finish given them by the workmen; nor are the knives and daggers made of the same materials less deserving of notice, the elastic spring they possessed, and even retain to the present day, being such as could only be looked for in a blade of steel. The exact proportions of the copper and alloys, in all the different specimens preserved in the museums of Europe, have not yet been ascertained; but it would be curious to know their composition, particularly the interesting dagger of the Berlin collection, which is as remarkable for the elasticity of its blade as for the neatness and perfection of its finish. Many contain ten or twenty parts tin, to ninety and eighty copper.

Some vases had one, others two, handles; some were ornamented with the heads of wild animals, as the ibex, oryx or gazelle; others had a head on either side, a fox, a cat, or something similar; and many were ornamented with horses' heads, a whole quadruped, a goose's head, figures of captives or fancy devices. They were occasionally grotesque and monstrous, especially when introduced among the offerings brought by the conquered people of the North, which may be Asiatic rather than Egyptian; and one of them appears to have for its cover the head of the Assyrian god represented in the Nimrod sculptures, supposed to be a vulture, a bird whose name, *nisr*, recalls that of "Nisroch, the god" of Nebuchadnezzar. They were either made of porcelain or an enamel on gold, and were remarkable for the brilliancy of their colors. The head of a Typhonian monster also served for the cover of some of these vases, as it often did for the support of a mirror (contrasted daily with the beauty of an Egyptian lady), but both this and the head of the bird are of early time, being found on vases brought as part of the tribute from Asia to the kings of the eighteenth and nineteenth dynasties. The Typhonian head bears some analogy to that of Medusa. It is thought to be of the Syrian god Baal, whose name was sometimes associated with that of Seth or Typhon, the evil being.

There was also a rhyton, or drinking-cup, in the form of a cock's head, represented among the tribute of the people of Kufa brought to Thothmes III.

These very highly ornamented vases, with a confused mixture of flower and scroll patterns, appear to have been mostly brought from Asia, and it is remarkable that the Nineveh ornaments have much the same kind of character. They are occasionally as devoid of taste as the wine bottles and flower-pots of an English cellar and conservatory, but many of those brought by the people of

Rotun have all the beauty of form found in those of Greece.

Some had a single handle fixed to one side, and were in shape not unlike our cream jugs, ornamented with the heads of oxen or fancy devices; others were of bronze, bound with gold, having handles of the same metal. Several vases had simple handles or rings on either side; others were destitute of these and of every exterior ornament; some again were furnished with a single ring attached to a neat bar, or with a single knob projecting from the side; and many of those used in the service of the temple, highly ornamented with figures of deities in relief, had a movable curved handle, on the principle of, though more elegant in form than that of, their common culinary utensils. They were of bronze, ornamented with figures in relief or engraved upon them; and one of those found by Mr. Salt showed, by the elastic spring of its cover and the nicety with which this fitted the mouth of the vase, the great skill of the Egyptian workmen.

Vases, surmounted with a human head forming the cover, appear to have been frequently used for keeping gold and other precious objects, as in cer-

AN EGYPTIAN SCULPTURE.

tain small side chambers of Medeenet Haboo, which were the treasury of King Remeses III. And if this Remeses was really the same as the wealthy Rhampsinitus of Herodotus, these chambers may have been the very treasury he mentions, where the thieves displayed so much dexterity.

Bottles, small vases and pots used for holding ointment, or other purposes connected with the toilet, were of alabaster, glass, porcelain and hard stone, as granite, basalt, porphyry, serpentine or breccia.

It may be stated generally that in the houses of the Egyptians fancy, taste and wealth produced an immense variety of objects of an attractive character, not only for use, but for ornament. Boxes of varied shape, of costly woods and rich with carving, were scattered about. Objects of most fantastic form, made out of ivory, acaia and other rich and odorous materials, abounded, as in the present day the artists of the nineteenth century have adorned the drawing-rooms of our modern homes. Nor even in the matter of number, or in that of taste, would it appear that the moderns have excelled the ancients.

While the guests were entertained with music

and the dance, dinner was prepared; but as it consisted of a considerable number of dishes, and the meat was killed for the occasion, as at the present day in Eastern and tropical climates, some time elapsed before it was put upon table. An ox, kid, wild goat, gazelle or an oryx, and a quantity of geese, ducks, teal, quails and other birds, were generally selected, but mutton was excluded from a Theban table. Plutarch even states that "no Egyptians would eat the flesh of sheep, except the Lycopolites," who did so out of compliment to the wolves they venerated, and Strabo confines the sacrifice of them to the nome of Nitriotis. But though sheep were not killed for the altar or the table, they abounded in Egypt, and even at Thebes; and large flocks were kept for their wool, particularly in the neighborhood of Memphis. Sometimes a flock consisted of more than two thousand; and in a tomb below the pyramids, dating upward of four thousand years ago, nine hundred and seventy-four rams are brought to be registered by his scribes as part of the stock of the deceased, implying an equal number of ewes, independent of lambs.

Beef and goose constituted the principal part of the animal food throughout Egypt; and by a prudent foresight, in a country possessing neither extensive pasture lands nor great abundance of cattle, the cow was held sacred, and consequently

SLAUGHTERING CATTLE.

forbidden to be eaten. Thus the risk of exhausting the stock was prevented, and a constant supply of oxen was kept up for the table and for agricultural purposes. A similar fear of diminishing the number of sheep, so valuable for their wool, led to a preference for such meats as beef and goose, though they were much less light and wholesome than mutton. In Abyssinia it is a sin to eat geese or ducks; and modern experience teaches that in Egypt, and similar climates, beef and goose are not eligible food, except in the winter months.

A considerable quantity of meat was served up at these repasts, to which strangers were invited, as among people of the East at the present day. An endless succession of vegetables was also required on all occasions; and when dining in private, dishes composed chiefly of them were in greater request than joints, even at the tables of the rich; and consequently the Israelites, who, by their long residence there, had acquired similar habits, regretted them equally with the meat and fish of Egypt.

Their mode of dining was very similar to that now adopted in Cairo and throughout the East, each person sitting around a table and dipping his bread into a dish placed in the centre, removed on a sign made by the host, and succeeded by others, whose rotation depends on established rule, and whose number is predetermined according to the size of the party or the quality of the guests.

Among the lower orders vegetables constituted a very great part of their ordinary food, and they

gladly availed themselves of the variety and abundance of esculent roots growing spontaneously in the lands irrigated by the rising Nile, as soon as its waters had subsided, some of which were eaten in a crude state and others roasted in the ashes, boiled or stewed, their chief aliment and that of their children consisting of milk and cheese, roots, leguminous, eucurbitaceous and other plants, and the ordinary fruits of the country. Herodotus describes the food of the workmen who built the pyramids to have been the "*raphanus*, onions and garlic;" the first of which, now called *figh*, is like a turnip-radish in flavor; but he has omitted one more vegetable, lentils, which were always, as at the present day, the chief article of their diet, and which Strabo very properly adds to the number.

Much attention was bestowed on the culture of this useful pulse, and certain varieties became remarkable for their excellence, the lentils of Pelusium being esteemed both in Egypt and in foreign countries.

In few countries were vegetables more numerous than in Egypt, as is proved by ancient writers, the sculptures and the number of persons who sold them; and at the time of the Arab invasion, when Alexandria was taken by Amer, the lieutenant of the caliph Omer, no less than four thousand persons were engaged in selling vegetables in that city.

The lotus, the papyrus and other similar productions of the land, during and after the inundation, were, for the poor, one of the greatest blessings nature ever provided for any people, and, like the acorn in northern climates, constituted perhaps the sole aliment of the peasantry at the early period when Egypt was first colonized. The fertility of the soil, however, soon afforded a more valuable produce to the inhabitants; and long before they had made any great advances in civilization corn and leguminous plants were grown to a great extent throughout the country. The palm was another important gift bestowed upon them; it flourished spontaneously in the valley of the Nile; and if it was unable to grow in the sands of the arid desert, yet wherever water sufficed for its nourishment, this useful tree produced an abundance of dates, a wholesome and nutritious fruit which might be regarded as an universal benefit, being within the reach of all classes of people, and neither requiring expense in the cultivation nor interfering with the time demanded for other agricultural occupations.

Among the vegetables above mentioned is one which requires some observations. Juvenal says that they were forbidden to eat the onion, and it is reported to have been excluded from an Egyptian table. But even if, as Plutarch supposes, onions were prohibited to the priests, who "abstained from most kinds of pulse," they were not excluded from the altars of the gods, either in the tombs or temples; and a priest is frequently seen holding them in his hand or covering an altar with a bundle of their leaves and roots. They were introduced at private as well as public festivals, and brought to table with gourds, cucumbers and other vegetables; and the Israelites, when they left the country, regretted "the onions" as well as the cucumbers, the watermelons, the leeks, the garlic and the meat they "did eat" in Egypt.

The onions of Egypt were mild and of an excellent flavor. They were eaten crude as well as cooked by persons both of the higher and the lower classes; but it is difficult to say if they introduced them to the table like the cabbage, as a

*hors d'œuvre* to stimulate the appetite, which Socrates recommends in the "Banquet of Xenophon." On this occasion some curious reasons for their use are brought forward by different members of the party. Niecerates observes that onions relish well with wine, and cites Homer in support of his remark; Callias affirms that they inspire courage in the hour of battle; and Charinidas suggests their utility "in deceiving a jealous wife, who, finding her husband return with his breath smelling of onions, would be induced to believe he had not saluted any one while from home."

In slaughtering for the table, it was customary to take the ox, or whatever animal had been chosen for the occasion, into a court-yard near the house, to tie its four legs together and then to throw it upon the ground, in which position it was held by one or more persons while the butcher, sharpening his broad knife upon a steel attached to his apron, proceeded to cut the throat as near as possible from one ear to the other, sometimes continuing the opening downward. The blood was frequently received into a vase or basin for the purposes of cookery, which was repeatedly forbidden to the Israelites by the Mosaic law; and the reason of the explicit manner of the prohibition is readily explained, from the necessity of preventing their adopting a custom they had so recently witnessed in Egypt. Nor is it less strictly denounced by the Mohammedan religion; and all Moslems look upon this ancient Egyptian and modern European custom with unqualified horror and disgust. But black-puddings were popular in Egypt.

The head was then taken off, and they proceeded to skin the animal, beginning with the leg and neck. The first joint removed was the right fore-leg or shoulder, the other parts following in succession, according to custom or convenience; and the same rotation was observed in cutting up the victims offered in sacrifice to the gods. Servants carried the joints to the kitchen on wooden trays, and the cook, having selected the parts suited for boiling, roasting and other modes of dressing, prepared them for the fire by washing and any other preliminary process he thought necessary. In large kitchens the *chef*, or head cook, had several persons under him, who were required to make ready and boil the water of the caldron, to put the joints on spits or skewers, to cut up or mince the meat, to prepare the vegetables and to fulfill various other duties assigned to them.

The very peculiar mode of cutting up the meat frequently prevents our ascertaining the exact part they intend to represent in the sculptures; the chief joints, however, appear to be the head, shoulder and leg, with the ribs, tail or rump, the heart and kidneys; and they occur in the same manner on the altars of the temple and the tables of a private house. One is remarkable, not only from being totally unlike any of our joints, but from its exact resemblance to that commonly seen at table in modern Egypt; it is part of the leg, consisting of the flesh covering the bone, whose two extremities project slightly beyond it.

The head was left with the skin and horns, and was sometimes given away to a poor person, as a reward for holding the walking-sticks of those who came on foot; but it was frequently taken to the kitchen with the other joints; and notwithstanding the positive assertion of Herodotus, we find that even in the temples themselves it was admitted at a sacrifice and placed with other offerings on the altars of the gods.

The historian would lead us to suppose that a

strict religious scruple prevented the Egyptians of all classes from eating this part, as he affirms "that no Egyptian will taste the head of any species of animal," in consequence of certain imprecations having been uttered upon it at the time it was sacrificed; but as he is speaking of heifers slaughtered for the service of the gods, we may conclude that the prohibition did not extend to those killed for table, nor even to all those offered for sacrifice in the temple; and as with the scapegoat of the Jews, that important ceremony was perhaps confined to certain occasions and to chosen animals, without extending to every victim which was slain.

The formula of the imprecation was probably very similar with the Jews and Egyptians. Herodotus says the latter pray the gods "that if any misfortune was about to happen to those who offered, or to the other inhabitants of Egypt, it might fall upon that head;" and with the former it was customary for the priest to take two goats and cast lots upon them, "one lot for the Lord and the other lot for the scapegoat," which was presented alive "to make atonement" for the people. The priest was then required to "lay both his hands upon the head of the live goat, and confess over him all the iniquities of the children of Israel, and all their transgressions in all their sins, putting them upon the head of the goat, and send him away by the hand of a fit man into the wilderness." The remark of Herodotus should then be confined to the head on which their imprecation was pronounced; and being looked upon by every Egyptian as an abomination, it may have been taken to the market and sold to the foreigners; or if no foreigners happened to be there, it may have been given to the crocodiles.

The same mode of slaughtering and of preparing the joints extended to all the large animals; but geese and other wild and tame fowl were served up entire, or at least only deprived of their feet and pinion joints. Fish were also brought to table whole, whether boiled or fried, the tails and fins being removed. For the service of religion they were generally prepared in the same manner as for private feasts; sometimes, however, an ox was brought entire to the altar, and birds were often placed among the offerings without even having the feathers taken off.

In Lower Egypt, or, as Herodotus styles it, "the corn country," they were in the habit of drying and salting birds of various kinds, as quails, ducks and others; and fish were prepared by them in the same manner both in Upper and Lower Egypt.

Some joints were boiled, others roasted, two modes of dressing their food to which Herodotus appears to confine the Egyptians, at least in the lower country; but the various modes of artificial cookery which Menes introduced, and which offended the simple habits of King Tnephachthus, had long since taught them to make "savory meats," such as prevented Isaac's distinguishing the flesh of kids from venison.

For though the early Greeks were contented with roast meats, and, as Athenæus observes, the heroes of Homer seldom "boil their meat or dress it with sauces," the Egyptians were far more advanced in the habits of civilization in those remote times.

The Egyptians never committed the same excesses as the Romans under the empire; but they gave way to habits of intemperance and luxury after the Persian conquest and the accession of the Ptolemies, so that writers who mention them at that period describe the Egyptians as a profligate

and luxurious people, addicted to an immoderate love of the table and to every excess in drinking.

As is the custom in Egypt and other hot climates at the present day, they cooked the meat as soon as killed, with the same view of having it tender which makes northern people keep it until decomposition is beginning; and this explains the order of Joseph to "slay and make ready" for his brethren to dine with him the same day at noon. As soon, therefore, as this had been done, and the joints were all ready, the kitchen presented an animated scene and the cooks were busy in their different departments. One regulated the heat of the fire, raising it with a poker or blowing it with bellows worked by the feet; another superintended the cooking of the meat, skimming the water with a spoon or stirring it with a large fork; while a third pounded salt, pepper or other ingredients in a large mortar, which were added from time to time during this process. Liquids of various kinds also stood ready for use, which were sometimes drawn off by means of syphons; and those things they wished to raise beyond the reach of rats or other intruders were placed upon trays and pulled up by ropes running through rings in the ceiling, answering the purposes of a safe.

Other servants took charge of the pastry which the bakers or confectioners had made for the dinner-table; and this department, which may be considered as attached to the kitchen, appears even more varied than that of the cook. Some sifted and mixed the flour, others kneaded the paste with their hands and formed it into rolls, which were then prepared for baking, and being placed on a long tray or board, were carried on a man's head to the oven. Certain seeds were previously sprinkled upon the upper surface of each roll; and judging from those still used in Egypt for the same purpose, they were chiefly the *nigella sativa*, or *kambon aswed*, the *simsim* and the caraway. Pliny also mentions this custom, and says that seeds of cummin were put upon cakes of bread in Egypt, and that condiments were mixed with them.

Sometimes they kneaded the paste with their feet, having placed it in a large wooden bowl upon the ground; it was then in a more liquid state than when mixed by the hand, and was carried in vases to the pastry-cook, who formed it into a sort of macaroni upon a shallow metal pan over the fire. Two persons were engaged in this process, one stirring it with a wooden spatula and the other taking it off when cooked with two pointed sticks, who arranged it in a proper place where the rest of the pastry was kept. This last was of various kinds, apparently made up with fruit or other ingredients, with which the dough, spread out with the hand, was sometimes mixed; and it assumed the shape of a three-cornered cake, a recumbent ox, a leaf, a crocodile's head, a heart, or other forms, according to the fancy of the confectioner. That his department was connected with the kitchen is again shown by the presence of a man in the corner of the picture engaged in cooking lentils for a soup or porridge; his companion brings a bundle of fagots for the fire, and the lentils themselves are seen standing near him in wicker baskets.

In heating water or boiling meat fagots of wood were principally employed; but for the roast meat charcoal, as in the modern kitchens of Cairo; and the sculptures represent servants bringing this last in mats of the same form as in those of the present day. They sometimes used round balls for

cooking, probably a composition of charcoal and other ingredients, which a servant is represented taking out of a basket and putting on the stove, while another blows the fire with a fan.

That dinner was served up at midday may be inferred from the invitation given by Joseph to his brethren; but it is probable that, like the Romans, they also ate supper in the evening, as is still the custom in the East. The table was much the same as that of the present day in Egypt—a small stool, supporting a round tray, on which the dishes are placed; but it differed from this, in having its circular summit fixed on a pillar or leg, which was often in the form of a man, generally a captive, who supported the slab upon his head, the whole being of stone, or some hard wood. On this the dishes were placed, together with loaves of bread, some of which were not unlike those of the present day in Egypt, flat and round as our crumpets. Others had the form of rolls or cakes, sprinkled with seeds.

It was not generally covered with any linen, but, like the Greek table, was washed with a sponge or napkin after the dishes were removed, and polished by the servants when the company had retired, though an instance sometimes occurs of a napkin spread on it, at least on those which bore offerings in honor of the dead. One or two guests

EGYPTIAN COFFEE-SERVICE.

generally sat at a table, though, from the mention of persons seated in rows according to rank, it has been supposed the tables were occasionally of a long shape, as may have been the case when the brethren of Joseph "sat before him, the first-born according to his birth-right and the youngest according to his youth," Joseph eating alone at another table where "they set on for him by himself." But even if round, they might still sit according to rank, one place being always the post of honor, even at the present day, at the round table of Egypt.

In the houses of the rich bread was made of wheat, the poorer classes being contented with cakes of barley or of *doora* (holeus sorghum), which last is still so commonly used by them; for Herodotus is as wrong in saying that they thought it "the greatest disgrace to live on wheat and barley" as that "no one drank out of any but bronze (or brazen) cups." The drinking-cups of the Egyptians not only varied in their materials, but also in their forms. Some were plain and unornamented; others, though of small dimensions, were made after the models of larger vases; many were like our own cups without handles, and others may come under the denomination of beakers and saucers. Of these the former were frequently made of alabaster, with a round base, so that they could not stand when filled, and were held in the hand, or when empty were turned downward upon their rim; and the saucers, which were of glazed

pottery, had sometimes lotus blossoms or fish represented on their concave surface.

The tables, as at a Roman repast, were occasionally brought in and removed with the dishes on them; sometimes each joint was served up separately, and the fruit, deposited in a plate or trencher, succeeded the meat at the close of dinner; but in less fashionable circles, particularly of the older times, fruit was brought in baskets, which stood beside the table. The dishes consisted of fish; meat boiled, roasted and dressed in various ways; game, poultry and a profusion of vegetables and fruit, particularly figs and grapes, during the season; and a soup or "pottage of lentils," as with the modern Egyptians, was not an unusual dish. Of figs and grapes they were particularly fond, which is shown by their constant introduction even among the choice offerings presented to the gods; and figs of the sycamore must have been highly esteemed, since they were selected as the heavenly fruit given by the goddess Netpe to those who were judged worthy of admission to the regions of eternal happiness. Fresh dates during the season, and in a dried state at other periods of the year, were also brought to table, as well as a preserve of the fruit, made into

A SADDLED ASS.

a cake of the same form as the tamarinds now brought from the interior of Africa and sold in the Cairo market.

The guests sat on the ground or on stools and chairs; and having neither knives nor forks, nor any substitute for them answering to the chopsticks of the Chinese, they ate with their fingers, like the modern Asiatics, and invariably with the right hand; nor did the Jews and Etruscans, though they had forks for other purposes, use any at table.

Spoons were introduced when required for soup or other liquids; and perhaps even a knife was employed on some occasions to facilitate the carving of a large joint, which is sometimes done in the East at the present day.

The Egyptian spoons were of various forms and sizes. They were principally of ivory, bone, woods or bronze, and other metals; and in some the handle terminated in a hook, by which, if required, they were suspended to a nail. Many were ornamented with the lotus flower; the handles of others were made to represent an animal or a human figure; some were of very arbitrary shape; and a smaller kind of round form, probably intended for taking ointment out of a vase and transferring it to a shell or cup for immediate use, are occasionally discovered in the tombs of Thebes. One in the museum of Alnwick Castle is a perfect specimen of these spoons, and is rendered more

interesting from having been found with the shell, its companion at the toilet-table.

Simpula, or ladles, were also common, and many have been found at Thebes. They were of bronze, frequently gilt, and the curved summit of the handle terminating in a goose's head, a favorite Egyptian ornament, served to suspend them at the side of a vessel, after having been used for taking a liquid from it; and judging from a painting on a vase in the Naples Museum, where a priest is represented pouring a libation from a vase with the simpulum, we may conclude this to have been the principal purpose to which they were applied.

Some simpula were made with a joint or hinge in the centre of the handle, so that the upper half either folded over the other or slid down behind it, the extremity of each being furnished with a bar which held them together, at the same time that it allowed the upper one to pass freely up and down. Two of these are preserved in the Berlin Museum. There is also a ladle of hard wood, found with a case of bottles. It is very small, the lower part, which may properly be called the handle, being barely more than five inches long, of very delicate workmanship; and the sliding-rod, which fits into a groove in the centre of the handle, is about the thickness of a needle.

Small strainers or cullenders of bronze have also been found at Thebes, about five inches in diameter, and several other utensils.

The Egyptians washed after as well as before dinner, an invariable custom throughout the East, as among the Greeks, Romans, Hebrews and others; and Herodotus speaks of a golden basin, belonging to Amasis, which was used by the king, and "the guests who were in the habit of eating at his table."

An absorbent seems also to have been adopted for scouring the hands, and a powder of ground lupins, the *dogâq* of modern Egypt, is no doubt an old invention, handed down to the present inhabitants.

Soap was not unknown to the ancients, and a small quantity has been found at Pompeii. Pliny, who mentions it as an invention of the Gauls, says it was made of fat and ashes; and Arctæus, the physician of Cappadocia, tells us that the Greeks borrowed their knowledge of its medicinal properties from the Romans. But there is no evidence of soap having been used by the Egyptians; and if by accident they discovered something of the kind while engaged with mixtures of natron or potash and other ingredients, it is probable that it was only an absorbent, without oil or grease, and on a par with steatite or the argillaceous earths, with which, no doubt, they were long acquainted.

The Egyptians, a scrupulously religious people, were never remiss in expressing their gratitude for the blessings they enjoyed, and in returning thanks to the gods for that peculiar protection they were thought to extend to them and to their country above all the nations of the earth. They therefore never sat down to meals without saying grace; and Josephus says that when the seventy-two elders were invited by Ptolemy Philadelphus to sup at the palace, Nicanor requested Eleazar to say grace for his countrymen instead of those Egyptians to whom that duty was committed on other occasions.

It was also a custom of the Egyptians, during or after their repasts, to introduce a wooden image of Osiris, from one foot and a half to three feet in height, in the form of a human mummy, standing erect or lying on a bier, and to show it to each of the guests, warning him of his mortality and the transitory nature of human pleasure. He was

reminded that some day he would be like that figure; that men ought "to love one another and avoid those evils which tend to make them consider life too long, when in reality it is too short;" and while enjoying the blessings of this world to bear in mind that their existence was precarious, and that death, which all ought to be prepared to meet, must eventually close their earthly career. Thus, while the guests were permitted, and even encouraged, to indulge in conviviality, the pleasures of the table and the mirth so congenial to their lively disposition, they were exhorted to put a certain degree of restraint upon their conduct; and though this sentiment was perverted by other people and used as an incentive to present excesses, it was perfectly consistent with the ideas of the Egyptians to be reminded that this life was only a lodging or "inn" on their way, and that their existence here was the preparation for a future state.

The idea of death had nothing revolting to them; and so little did the Egyptians object to have it brought before them that they even introduced the mummy of a deceased relative at their parties, and placed it at table as one of the guests—a fact which is recorded by Lucian, in his "Essay on Grief," and of which he declares himself to have been an eye-witness.

After dinner music and singing were resumed; hired men and women displayed feats of agility; swinging each other round by the hand; throwing up and catching the ball; or flinging themselves round backward head over heels, in imitation of a wheel, which was usually a performance of women. They also stood on each other's back and made a somersault from that position, and a necklace or other reward was given to the most successful tumbler.

The most usual games within-doors were odd and even, *mora* and draughts, for the first of which (called by the Romans "ludere par et impar") they used bones, nuts, beans, almonds or shells; and any indefinite number was held between the two hands.

The game of *mora* was common in ancient as well as modern Italy, and was played by two persons, who each simultaneously threw out the fingers of one hand, while one party guessed the sum of both. They were said in Latin, "micare digitis," and this game, still so common among the lower order of Italians, existed in Egypt about four thousand years ago, in the reigns of the Osirtasens.

The same, or even a greater, antiquity may be claimed for the game of draughts, or, as it has been erroneously called, chess. As in the two former, the players sat on the ground or on chairs, and the pieces or men, being ranged in line at either end of the tables, moved on a chequered board, as in our own chess and draughts.

The pieces were all of the same size and form, though they varied on different boards, some being small, others large with round summits; some were surmounted by human heads; and many were of a lighter and neater shape, like small nine-pins, probably the most fashionable kind, since they were used in the palace of King Remeses. These last seem to have been about one inch and a half high, standing on a circular base of half an inch in diameter, but some are only one inch and a quarter in height, and little more than half an inch broad at the lower end. Others have been found of ivory one inch and six-eighths high and one and an eighth in diam-

eter, with a small knob at the top, exactly like those represented at Beni Hassan and the tombs near the pyramids.

They were about equal in size upon the same board, one set black, the other white or red; or one with round, the other with flat heads, standing on opposite sides; and each player, raising it with the finger and thumb, advanced his piece toward those of his opponent; but though we are unable to say if this was done in a direct or diagonal line, there is reason to believe they could not take backward, as in the Polish game of draughts, the men being mixed together on the board.

It was an amusement common in the houses of the lower classes, as in the mansions of the rich; and King Remeses is himself portrayed on the walls of his palace at Thebes engaged in the game of draughts with the ladies of his household.

The modern Egyptians have a game of draughts very similar in the appearance of the men to that of their ancestors, which they call *dameh*, and play much in the same manner as our own.

Analogous to the game of odd and even was one in which two of the players held a number of shells or dice in their closed hands over a third person who knelt between them, with his face toward the ground, and who was obliged to guess the combined number ere he could be released from this position.

Another game consisted in endeavoring to snatch from each other a small hoop by means of hooked rods, probably of metal; and the success of a player seems to have depended on extricating his own from an adversary's rod, and then snatching up the hoop before he had time to stop it.

Other games are represented in the paintings, but not in a manner to render them intelligible; and many which were doubtless common in Egypt are omitted both in the tombs and in the writings of ancient authors.

The dice discovered at Thebes and other places may not be of a Pharaonic period, but from the simplicity of their form we may suppose them similar to those of the earliest age in which too the conventional number of six sides had probably always been adopted. They were marked with small circles, representing units, generally with a dot in the centre, and were of bone or ivory, varying slightly in size.

Plutarch shows that dice were a very early invention in Egypt, and acknowledged to be so by the Egyptians themselves, since they were introduced into one of their oldest mythological fables, Mercury being represented as playing at dice with the Moon previous to the birth of Osiris, and winning from her the five days of the epact which were added to complete the three hundred and sixty-five days of the year.

It is probable that several games of chance were known to the Egyptians besides dice and *mora*, and as with the Romans, that many a doubtful mind sought relief in the promise of success by having recourse to fortuitous combinations of various kinds; and the custom of drawing or casting lots was common at least as early as the period of the Hebrew exodus.

The games and amusements of children were such as tended to promote health by the exercise of the body, and to divert the mind by laughable entertainments. Throwing and catching the ball, running, leaping and similar feats, were encouraged as soon as their age enabled them to indulge in them; and a young child was amused with painted dolls whose hands and legs, moving on

pins, were made to assume various positions by means of strings. Some of these were of rude form, without legs, or with an imperfect representation of a single arm on one side. Some had numerous beads, in imitation of hair, hanging from the doubtful place of the head; others exhibited a nearer approach to the form of a man; and some, made with considerable attention to proportion, were small models of the human figure. They were colored according to fancy, and the most shapeless had usually the most gaudy appearance, being intended to catch the eye of an infant. Sometimes a man was figured washing or kneading dough, who was made to work by pulling a string; and a typhonian monster or a crocodile amused a child by its grimaces or the motion of its opening mouth. In the toy of the crocodile we have sufficient evidence that the notion of this animal, "not moving its lower jaw, and being the only creature which brings the upper one down to the lower," is erroneous. Like other animals, it moves the lower jaw only; but when seizing its prey, it throws up its head, which gives an appearance of motion in the upper jaw and has led to the mistake.

The game of ball was of course generally played out of doors. It was not confined to children nor to one sex, though the mere amusement of throwing and catching it appears to have been considered more particularly adapted to women. They had different modes of playing. Sometimes a person unsuccessful in catching the ball was obliged to suffer another to ride on her back, who continued to enjoy this post until she also missed it, the ball being thrown by an opposite player, mounted in the same manner and placed at a certain distance, according to the space previously agreed upon; and from the beast-of-burden office of the person who had failed, the same name was probably applied to her as to those in the Greek game, "who were called asses, and were obliged to submit to the commands of the victor."

Sometimes they caught three or more balls in succession, the hands occasionally crossed over the breast; they also threw it up to a height and caught it, like the Greek *orpavia*, our "sky ball;" and the game described by Homer to have been played by Halius and Laodamus in the presence of Alcinous was known to them; in which one party threw the ball as high as he could, and the other, leaping up, caught it on its fall, before his feet again touched the ground.

When mounted on the backs of the losing party, the Egyptian women sat sidewise. Their dress consisted merely of a short petticoat, without a body, the loose upper robe being laid aside on these occasions; it was bound at the waist with a girdle, supported by a strap over the shoulder, and was nearly the same as the undress garb of mourners, worn during the funeral lamentation on the death of a friend.

The balls were made of leather or skin, sewed with string, crosswise, in the same manner as our own, and stuffed with bran or husks of corn; and those which have been found at Thebes are about three inches in diameter. Others were made of string or of the stalks of rushes, platted together, so as to form a circular mass, and covered, like the former, with leather. They appear also to have had a smaller kind of ball, probably of the same materials, and covered, like many of our own,

with slips of leather of a rhomboidal shape, sewed together longitudinally and meeting in a common point at both ends, each alternate slip being of a different color; but these have only been met with in pottery.

In one of their performances of strength and dexterity two men stood together side by side, and placing one arm forward and the other behind them, held the hands of two women, who reclined backward in opposite directions, with their whole weight pressed against each other's feet, and in this position were whirled around, the hands of the men who held them being occasionally crossed in order more effectually to guarantee the steadiness of the centre on which they turned.

Sometimes two men, seated back to back on the

EGYPTIAN HOOKAH AND TOBACCO PIPES.

ground, at a given signal tried who should rise first from that position without touching the ground with the hand. And in this, too, there was probably the trial who should first make good his seat upon the ground from a standing position.

Another game consisted in throwing a knife or pointed weapon into a block of wood, in which each player was required to strike his adversary's, or more probably to fix his own in the centre or at the circumference of a ring painted on the wood; and his success depended on being able to ring his weapon most frequently or approach most closely to the line.

Conjuring appears also to have been known to them, at least thimble-rig, or the game of cups, under which a ball was put, while the opposite party guessed under which of four it was concealed.

The Egyptian grandees frequently admitted dwarfs and deformed persons into their household,

originally, perhaps, from a humane motive, or from some superstitious regard for men who bore the external character of one of their principal gods, Pthah-Sokari-Osiris, the misshapen deity of Memphis; but whatever may have given rise to the custom, it is a singular fact that already as early as the age of Osirtasen, or about four thousand years ago, the same fancy of attaching these persons to their suite existed among the Egyptians as at Rome, and even in modern Europe, till a late period.

The games of the lower orders, and of those who sought to invigorate the body by active exercises, consisted of feats of agility and strength. Wrestling was a favorite amusement, and the paintings at Beni Hassan present all the varied attitudes and modes of attack and defence of which it is susceptible. And in order to enable the spectator more readily to perceive the position of the limbs of each combatant, the artist has availed himself of a dark and light color, and even ventured to introduce alternately a black and red figure. The subject covers a whole wall, but the selection of a few groups will suffice to convey an idea of the principal positions of the combatants.

It is probable that, like the Greeks, they anointed the body with oil when preparing for these exercises, and they were entirely naked, with the exception of a girdle, apparently of leathern thongs.

The two combatants generally approached each other holding their arms in an inclined position before the body, and each endeavored to seize his adversary in the manner best suited to his mode of attack. It was allowable to take hold of any part of the body, the head, neck or legs, and the struggle was frequently continued on the ground after one or both had fallen—a mode of wrestling common also to the Greeks.

They also fought with the single stick, the hand being apparently protected by a basket or guard projecting over the knuckles; and on the left arm they wore a straight piece of wood bound on with straps, serving as a shield to ward off their adversary's blow. They do not, however, appear to have used the *cestus*, nor to have known the art of boxing, though in one group, at Beni Hassan, the combatants appear to strike each other. Nor is there an instance in any of these contests of the Greek sign of acknowledging defeat, which was by holding up a finger in token of submission; and it was probably done by the Egyptians with a word. It is also doubtful if throwing the discus, or quoit, was an Egyptian game; but there appears to be one instance of it in a king's tomb of the nineteenth dynasty.

One of their feats of strength or dexterity was lifting weights; and bags full of sand were raised with one hand from the ground and carried with a straight arm over the head, and held in that position.

Mock fights were also an amusement, particularly among those of the military class, who were trained to the fatigues of war by these manly recreations. One party attacked a temporary fort and brought up the battering-ram under cover of the testudo; another defended the walls and endeavored to repel the enemy; others, in two parties of equal numbers, engaged in single-stick, or the more usual *nebót*, a pole wielded with both hands; and the pugnacious spirit of the people is frequently alluded to in the scenes portrayed by their artists.

The use of the *nebót* seems to have been as

common among the ancient as among the modern Egyptians; and the quarrels of villages were often decided or increased, as at present, by this efficient weapon. Crews of boats are also represented attacking each other with the earnestness of real strife. Some are desperately wounded, and being felled by their more skillful opponents, are thrown headlong into the water; and the truth of Herodotus' assertion that the heads of the Egyptians were harder than those of other people seems fully justified by the scenes described by their own draughtsmen. It is fortunate that their suc-

EGYPTIAN ENDLESS CHAIN.—See IRRIGATION.

cessors have inherited this peculiarity, in order to bear the violence of the Turks and their own combats.

Many singular encounters with sticks are mentioned by ancient authors, among which may be noticed one at Papremis, the city of Mars, described by Herodotus. When the votaries of the deity presented themselves at the gates of the temple, their entrance was obstructed by an opposing party; and all being armed with sticks, they commenced a rude combat, which ended not merely in the infliction of a few severe wounds, but even, as the historian affirms, in the death of many persons on either side.

Bull-fights were also among their sports, which

were sometimes exhibited in the dromos or avenue leading to the temples, as at Memphis before the temple of Vulcan, and prizes were awarded to the owner of the victorious combatant. Great care was taken in training them for this purpose, Strabo says as much as is usually bestowed on horses, and herdsmen were not loth to allow or encourage an occasional fight for the love of the exciting and popular amusement.

They did not, however, condemn culprits or captives taken in war to fight with wild beasts for the amusement of an unfeeling assembly. Nor did they compel gladiators to kill each other and gratify a depraved taste by exhibitions revolting to humanity. Their great delight was in amusements of a lively character, as music, dancing, buffoonery and feats of agility, and those who excelled in gymnastic exercises were rewarded with prizes of various kinds.

#### IV. Animals. — Birds. — Fishing. — The Hippopotamus. — Crocodile. — Animals of Egypt. — Birds. — Plants. — Emblems. — Offerings. — Ceremonies.

Among the various pastimes of the Egyptians, none was more popular than the chase, and the wealthy aristocracy omitted nothing that could promote their favorite amusement. They hunted the numerous wild animals in the desert; they had them caught with nets, to be turned out on some future day, and some very keen sportsmen took long journeys to spots noted for abundance of game.

The taste, as far as it could be indulged, was general with all classes, and the peasants hunted down the wild beasts that lived on the borders of the desert and invaded the flocks and fields at night with the same alacrity as the priestly and military grandes or other wealthy land-owners chased the game in their preserves. Some shot them with arrows, others laid traps for them, and various methods were devised for securing the enemies of the farm-yard. Watchers and dogs were always on the alert against wolves and jackals, the poachers of their flocks and poultry; and when the peasants heard the melancholy howls and yelping bark of the large packs of jackals collecting every evening in anticipation of a foray among the geese, they waited for their well-known passage through a ravine on the desert's edge, or longed that some, in spite of Anubis, might fall into their traps.

The hyena, an enemy of flocks and herds, a gourmand in the flesh of the peasant's very useful donkey, and when none of these could be had a very destructive devourer of the crops, was especially hateful; and the agricultural heart rejoiced when a hyena, caught in a trap, was brought home muzzled, as a harmless spectacle to the children of the village and a triumph among the neighbors.

When a grand chase took place in the domain of some grandee or in the extensive tracts of the desert, a retinue of huntsmen, beaters and others in his service attended, to manage the hounds, to carry the game baskets and hunting poles, to set the nets and to make other preparations for a good day's sport. Some took a fresh supply of arrows, a spare bow and various requisites for remedying accidents; some were merely beaters, others were to assist in securing the large animals caught by the lasso, others had to mark or turn the game, and some carried a stock of provisions for the chasseur and his friends. These last were borne upon the usual wooden yoke across the shoulders, and consisted of a skin of water and jars of good

wine placed in wicker baskets, with bread, meats and other eatables. The skin used for holding water was precisely the same as that of the present day, being of a goat or a gazelle, stripped from the body by a longitudinal opening at the throat, the legs serving as handles, to which ropes for slinging them were attached, and a soft pendent tube of leather sewed to the throat in the place of the head formed the mouth of the water-skin, which was secured by a thong fastened round it.

Sometimes a portion of the desert of considerable extent was enclosed by nets, into which the animals were driven by beaters, and the place chosen for fixing them was, if possible, across narrow valleys or torrent beds lying between some rocky hills. Here a sportsman on horseback or in a chariot could waylay them or get within reach with a bow; for many animals, particularly gazelles, when closely pressed by dogs, fear to take a steep ascent, and are easily overtaken or shot as they double back.

The spots thus enclosed were usually in the vicinity of the water-brooks, to which they were in the habit of repairing in the morning and evening; and having awaited the time when they went to drink, and ascertained it by their recent tracks on the accustomed path, the hunters disposed the nets, occupied proper positions for observing them unseen and gradually closed in upon them. Such are the scenes partially portrayed in the Egyptian paintings, where long nets are represented surrounding the space they hunted in, and the hyenas, jackals and various wild beasts unconnected with the sport are intended to show that they have been accidentally enclosed within the same line of nets with the antelopes and other animals.

The long net was furnished with several ropes, and was supported on forked poles, varying in length to correspond with the inequalities of the ground, and was so contrived as to enclose any space by crossing hills, valleys or streams and encircling woods or whatever might present itself.

Besides the portions of the open desert and the valleys which were enclosed for hunting, the parks and covers on their own domains in the valley of the Nile, though of comparatively limited dimensions, offered ample space and opportunity for indulging in the chase; and a quantity of game was kept there, principally the wild goat, oryx and gazelle.

They had also fishponds, and spacious poultry-yards set apart for keeping geese and other wild fowl, which they fattened for the table.

It was the duty of the huntsmen or the game-keepers to superintend the preserves; and at proper periods of the year wild fawns were obtained to increase the herds of gazelles and other animals, which always formed part of the stock of a wealthy Egyptian.

Being fed within pastures enclosed with fences, they were not marked in any particular way like the cattle, which, being let loose in open meadows, and frequently allowed to mix with the herds of the neighbors, required some distinguishing sign by which they might be recognized. These last were, therefore, branded on the shoulder with a hot iron engraved with the owner's name; and the paintings of Thebes represent the cattle lying on the ground with their feet tied, while one person heats an iron on the fire and another applies it to the shoulder of the prostrate animal.

The Egyptians frequently coursed with dogs in the open plains, the chasseur following in his chariot and the huntsmen on foot. Sometimes he

only drove to cover in his car, and having alighted, shared in the toil of searching for the game, his attendants keeping the dogs in slips, ready to start them as soon as it appeared. The more usual custom, when the dogs threw off in a level plain of great extent, was for him to remain in his chariot, and urging his horses to their full speed, endeavor to turn or intercept them as they doubled, discharging a well-directed arrow whenever they came within its range.

The noose, or lasso, was also employed to catch the wild ox, the antelope and other animals; but this could only be thrown by lying in ambush for the purpose, and was principally adopted when they wished to secure them alive.

Besides the bow, the hounds and the noose, they hunted with lions, which were trained expressly for the chase, like the cheeta or hunting leopard of India, being brought up from cubs in a tame state, and many Egyptian monarchs were accompanied in battle by a favorite lion. But there is no instance of hawking.

The bow used for the chase was very similar to that employed in war; the arrows were generally the same, with metal heads, though some were only tipped with stone. The mode of draw-

FORM OF AN EGYPTIAN DOOR.

ing the bow was also the same; and if the chasseurs sometimes pulled the string only to the breast, the more usual method was to raise it, and bring the arrow to the ear; and occasionally one or more spare arrows were held in the hand, to give greater facility in discharging them with rapidity on the antelopes and wild oxen.

The animals they chiefly hunted were the gazelle, wild goat or ibex, the oryx, wild ox, stag, kesh or wild sheep, hare and porcupine, of all of which the meat was highly esteemed among the delicacies of the table, the fox, jackal, wolf, hyena and leopard and others being chased as an amusement, for the sake of their skins or as enemies of the farm-yard. For though the fact of the hyena being sometimes bought with the ibex and gazelle might seem to justify the belief that it was also eaten, there is no instance of its being slaughtered for the table. The ostrich held out a great temptation to the hunter from the value of its plumes. These were in great request among the Egyptians for ornamental purposes; they were also the sacred symbol of truth, and the members of the court on grand occasions decked themselves with the feathers of the ostrich. The labor endured during the chase of this swift-footed bird was amply repaid; even its eggs were required for some ornamental or for some religious use (as with the modern Copts), and with the plumes formed part of the tribute imposed

by the Egyptians on the conquered countries where it abounded. Lion-hunting was a favorite amusement of the kings, and the deserts of Ethiopia always afforded good sport, abounding as they did with lions; their success on those occasions was a triumph they often recorded; and Amunoph III. boasted having brought down in one battue no less than one hundred and two head, either with the bow or spear. For the chase of elephants they went still farther south, and in after times the Ptolemies had hunting-palaces in Abyssinia.

Many other animals are introduced in the sculptures besides those already noticed, some of which are well worthy of heraldry, as winged quadrupeds with the heads of hawks or of a snake, and a crocodile with a hawk's head, with others equally fanciful, and were it not for their great antiquity (as early as the twelfth dynasty) might be supposed to derive their origin from Asia.

The Egyptian sphinx was usually an emblematic figure, representative of the king, and may be considered, when with the head of a man and the body of a lion, as the union of intellect and physical force; it is therefore scarcely necessary to observe that it is not female, as that of the Greeks. Besides the ordinary sphinx, compounded of a lion and a man, was one with the head of a ram, another with the hawk's head and lion's body, and the asp-headed and the hawk-headed sphinx with wings.

The wild animals now most noted in Egypt, either in the valley of the Nile or in the desert, are the gazelle, ibex, kesh, hare, fox, jackal, wolf, hyena, jerboa, hedgehog and iehneumon.

The oryx is a native of Ethiopia, as is the spotted hycna or marafeen, which last is once represented in the Egyptian sculptures. The oryx has long annulated horns, tapering to a sharp point, and nearly straight, with a slight curve or inclination backward. It frequently occurs in the sculptures, being among the animals tamed by the Egyptians and kept in great numbers in their preserves.

The beisa is very like the oryx, except in the black marks upon its face and a few other points; and the *addax*, another antelope, inhabiting Upper Ethiopia, differs principally from the oryx in its horns, which have a waving or spiral form. It appears to be represented in the sculptures of Beni Hassan.

The wild ox, which is also of the genus antelope, the *défassa* of modern zoologists, though not a native of Egypt, is found in the African desert, and I believe in Eastern Ethiopia; it is of a reddish sandy and gray color, with a black tuft terminating its tail, and stands about four feet high at the shoulder. At Beni Hassan it is made too much to resemble a common ox, but it is more correctly represented in the Theban sculptures.

The stag with branching horns, figured at Beni Hassan, is also unknown in the valley of the Nile; but it is still seen in the vicinity of the natron lakes, as about Tinnis, though not in the desert between the river and the Red Sea.

The ibex, which is common in the Eastern desert, is very similar to the bouquetin of the Alps, and is called in Arabic *Beddan* or *Tūyal*. The former appellation is exclusively applied to the male, which is readily distinguished by a beard and large knotted horns, curving backward over its body, the female having short erect horns, scarcely larger than those of the gazelle, and being of a much smaller and lighter structure.

The kebsh, or wild sheep, is found in the eastern desert, principally in the ranges of primitive mountains, which, commencing about latitude 28° 40', at the back of the limestone hills of the valley of the Nile, extend thence into Ethiopia and Abyssinia. The female kebsh is between two and three feet high at the shoulder, and its total length from the tail to the end of the nose is a little more than four feet; but the male is larger and is provided with stronger horns, which are about five inches in diameter at the roots, and are curved backward on each side of the neck. The whole body is covered with hair, like many of the Ethiopian sheep, and the throat and thighs of the fore legs are furnished with a long pendent mane—a peculiarity not omitted in the sculptures, and which suffices to prove the identity of the kebsh, wherever its figure is represented.

The porcupine is no longer a native of Egypt, nor is the leopard met with on this side of Upper Ethiopia. Bears are altogether unknown; and if they occur twice in the paintings of the Theban tombs, they are only brought by foreigners, together with the productions of their country which were deemed rare and curious to the Egyptians.

The wolf is common, and, as Herodotus says, "scarcely larger than a fox," and the tombs in the mountain above Lycopolis, the modern O'Sioot,

AN EGYPTIAN COFFEE-SERVICE.

contain the mummies of wolves, which were the sacred animals of the place.

The Egyptian hare is a native of the valley of the Nile, as well as of the two deserts, and is remarkable for the length of its ears, which the Egyptians have not failed to indicate in their sculptures. It is a smaller species than those of Europe, which accords with Denon's remark on the comparative size of animals common to Egypt and Europe—that the former are always smaller than our own.

The wabber or hyrax, though a native of the eastern desert of Egypt, is not represented in the sculptures, but this is probably owing to its habits and to their hunting principally in the valleys of the secondary mountains, the wabber only venturing a short distance from its burrow in the evening, and living in the primitive ranges where the *scäleh* or *acaia* grows. It was probably the saphan of the Bible, as Bruce has remarked, and that enterprising traveler is perfectly correct in placing it among ruminating animals. The hedgehog was always common, as at present, in the valley of the Nile.

The lion is now unknown to the north of Upper Ethiopia; there, however, it is common, as well as the leopard and other carnivorous beasts; and the abundance of sheep in those districts amply supplies them with food and has the happy tendency of rendering them less dangerous to man. In ancient times, however, the lion inhabited the deserts of Egypt, and Athenæus mentions one killed

by the emperor Adrian while hunting near Alexandria. They are even said, in former times, to have been found in Syria and in Greece.

Among the animals confined to the valley of the Nile and its vicinity may be mentioned the ichneumon, which lives principally in Lower Egypt and the Fyoom, and which, from its enmity to serpents, was looked upon by the Egyptians with great respect. Its dexterity in attacking the snake is truly surprising. It seizes the enemy at the back of the neck as soon as it perceives it rising to the attack, one firm bite sufficing to destroy it; and when wounded by the venomous fangs of its opponent, it is said by the Arabs to have recourse to some herb which checks the effect of the deadly poison.

The ichneumon is easily tamed and is sometimes seen in the houses of Cairo, where, in its hostility to rats, it performs all the duties of a cat; but from its indiscriminate fondness for eggs, poultry and many other requisites for the kitchen, it is generally reckoned troublesome, and I have often found reason to complain of those I kept.

Eggs are its favorite food, and it is said to have been greatly venerated by those who held the crocodile in abhorrence, in consequence of its destroying the eggs of that hateful animal; but it is now rarely met with in places where the crocodile abounds; and at all periods its principal recommendation was its hostility to serpents. It is frequently seen in the paintings, where its habits are distinctly alluded to by the Egyptian artists, who represent it in search of eggs among the bushes and the usual resorts of the feathered tribe.

The wild cat, the *Felis chaus* of Linnaeus, is common in the vicinity of the pyramids and Heliopolis, but it does not occur among the pictured animals of ancient Egypt. Nor is the jerboa, so frequently met with both in the upper and lower country, represented in the sculptures.

The giraffe was not a native of Egypt, but of Ethiopia, and is only introduced in subjects which relate to that country, where it is brought, with apes, rare woods and other native productions, as part of the tribute annually paid to the Pharaohs.

The Egyptians had several breeds of dogs, some solely used for the chase, others admitted into the parlor, or as companions of their walks, and some, as at the present day, were chosen for their peculiar ugliness. The most common kinds were a sort of fox-dog and a hound; they had also a short-legged dog, not unlike our turnspit, which was a great favorite, especially in the reigns of the Osirtasens, and, as in later days, the choice of a king or some noted personage brought a particular breed into fashion.

Mummies of the fox-dog are common in Upper Egypt; and this was doubtless the parent stock of the modern red wild dog of Egypt, so common in Cairo and other parts of the lower country.

Pigs, though an abomination to the Egyptians, formed part of a farmer's stock; but attentive to the habits of animals, they allowed them to range and feed out of doors, under the care of a herdsman, knowing that cleanliness is as beneficial for, as the confinement in a sty is contrary to, the nature of a pig.

Their cattle were of different kinds, the most common being the short- and long-horned varieties and the Indian or humped ox; and the last two, though no longer natives of Egypt, are common in Abyssinia and Upper Ethiopia. The buffalo, which abounds in Abyssinia and in modern Egypt, is never represented on the monuments.

Horses and asses were abundant, and the latter

were employed as beasts of burden, for treading out corn (particularly in Lower Egypt) and for many other purposes. Like those of the present day, they were small, active and capable of bearing great fatigue; and as these hardy animals were maintained at a very trifling expense, their numbers in the agricultural districts were very great, and one individual had as many as seven hundred and sixty employed on different parts of his estate.

Egyptian horses were greatly esteemed; they were even exported to the neighboring countries, and Solomon bought them at a hundred and fifty shekels of silver from the merchants who traded with Egypt by the Syrian desert.

It is remarkable that the camel, though known in Egypt as early at least as the time of Abraham (being among the presents given by Pharaoh to the patriarch), has never been met with, even in the latest paintings or hieroglyphics. Yet this does not prove it was even rare in the country, since the same would apply to fowls and pigeons, of which no instance occurs on the monuments among the stock of the farm-yard. Coeks and hens, however, as well as horses, appear to have come originally from Asia.

The birds of Egypt were very numerous, especially wild fowl, which abounded on the lakes and marsh-land of the Delta; they also frequented the large pieces of water on the estates of the rich landed proprietors in all parts of the country.

Large flights of quails afforded excellent sport at certain seasons, and the bustard and other birds, found on the edge of the desert, were highly prized for the table.

Many are represented by the Egyptian sculptures, some sacred, others that served for food; and in the tombs of Thebes and Beni Hassan the Egyptians have not omitted to notice bats, and even some of the insects that abound in the valley of the Nile; and the well-known locust, the butterfly and the beetle are introduced in the fowling and fishing scenes and in sacred subjects.

Fowling was one of the great amusements of all classes. Those who followed this sport for their livelihood used nets and traps; but the amateur sportsman pursued his game in the thickets and felled them with the throw-stick, priding himself on his dexterity in its use. The bow was not employed for this purpose, nor was the sling adopted, except by gardeners and peasants, to frighten the birds from the vineyards and fruit. The throw-stick was made of heavy wood, and flat, so as to offer little resistance to the air in its flight; and the distance to which an expert arm could throw it was considerable, though they always endeavored to approach the birds as near as possible under cover of the bushes and reeds. It was from one foot and a quarter to two feet in length, and about one and a half inch in breadth, slightly curved at the upper end, but in no instance had it the round shape and flight of the Australian boomerang.

On their fowling excursions they usually proceeded with a party of friends and attendants, sometimes accompanied by the members of their family, and even by their young children, to the jungles and thickets of the marsh-lands or to the lakes of their own grounds, which, especially during the inundation, abounded with wild fowl; and seated in punts made of the papyrus, they glided, without disturbing the birds, amidst the lofty reeds that grew in the water and masked their approach. This sort of boat was either towed, pushed by a pole or propelled by paddles, and the Egyptians fancied that persons who used it were secure from the attacks of crocodiles.

Fishing was also a favorite pastime of the Egyptian gentleman, both in the Nile and in the spacious "sluices or ponds for fish" constructed within his grounds, where they were fed for the table, and where he amused himself by angling and the dexterous use of the bident. These favorite occupations were not confined to young persons nor thought unworthy of men of serious habits; and an Egyptian of rank, and of certain age, is frequently represented in the sculptures catching fish in a canal or lake with the line, or spearing them as they glided past the bank. Sometimes the angler posted himself in a shady spot by the water's edge, and having ordered his servants to spread a mat upon the ground, sat upon it as he threw his line; and some, with notions of elegance and comfort, used a chair, as effeminate gentlemen sometimes do in our modern civilization.

The rod was short, and apparently of one piece; the line usually single, though instances occur of a double line, each with its own hook, which was of bronze. In all cases they adopted a ground bait, as is still the custom in Egypt, without any float; and though several winged insects are represented in the paintings hovering over the water, it does not appear that they ever put them to the hook, and still less that they had devised any method similar to our artificial-fly fishing, which is still as unknown to the unsophisticated modern Egyptians as to their fish.

To spear them with the bident was thought the most sportsmanlike way of killing fish. In throwing it they sometimes stood on the bank, but generally used the papyrus punt, gliding smoothly over the water of a lake on their grounds without disturbing the fish as they lay beneath the broad leaves of the lotus. Those who were very keen sportsmen even made parties to the lowlands of the Delta, as they did at other times for shooting to the highlands of the desert.

The bident was a spear with two barbed points, which was either thrust at the fish with one or both hands as they passed by, or was darted to a short distance, a long line fastened to it preventing its being lost, and serving to recover it with the fish when struck. It was occasionally furnished with feathers like an arrow, and sometimes a common spear was used for the purpose, but in most cases it was provided with a line, the end of which was held by the left hand or wound upon a reel. This mode of fishing is still adopted in many countries; and the fish-spears of the South Sea Islanders have two, three and four points, and are thrown nearly in the same manner as the bident of the ancient Egyptians. Their attendants or their children assisted in securing the fish, which, when taken off the barbed point of the spear, were tied together by the stalk of a rush passed through the gills.

The chase of the hippopotamus was a favorite amusement of the sportsman, for it then frequented Lower Egypt, though now confined to Upper Ethiopia. Like the crocodile, it was looked upon as an enemy, from the ravages it committed at night in the fields, and was also killed for its hide, of which they made shields, whips, javelins and helmets.

The whips, known by the name of corbag (corbag), are still very generally used in Egypt and Ethiopia, in riding the dromedary or for chastising a delinquent peasant, for which purposes it was applied by the ancient Egyptians; and an attendant sometimes followed the steward of an estate with this implement of punishment in hand.

The mode of attacking and securing the hippopotamus appears, from the sculptures of Thebes, to have been very similar to that now adopted about Sennar, where, like the ancient Egyptians, they prefer chasing it in the river to an open attack on shore; and the modern Ethiopians are contented to frighten it from the corn-fields by the sound of drums and other noisy instruments.

It was entangled by a running noose, at the extremity of a long rope wound upon a reel, at the same time that it was struck by a spear. This weapon consisted of a broad flat blade, furnished with a deep tooth, or barb, at the side, having a strong line of considerable length attached to its upper end and running over the notched summit of a wooden shaft, which was inserted into the head or blade like a common javelin. It was thrown in the same manner, but, on striking, the shaft fell and the iron head alone remained in the body of the animal, which, on receiving a wound, plunged into deep water, the line having been immediately let out. When fatigued by exertion, the hippopotamus was dragged to the boat, from which it again plunged, and the same was repeated till it became perfectly exhausted, frequently receiving additional wounds and being entangled by other nooses, which the attendants held in readiness, as it was brought within their reach.

The line attached to the blade was also wound upon a reel, generally carried by some of the attendants, which was of very simple construction, consisting of a half ring of metal as a handle, and the bar turning on it, on which the line was wound.

Neither the hippopotamus nor the crocodile was used as food by the ancient Egyptians, but the people of Apollinopolis ate the crocodile upon a certain occasion, in order to show their abhorrence of Typho, the evil genius, of whom it was an emblem. "They had also a solemn hunt of this animal upon a particular day, set apart for the purpose, at which time they killed as many of them as they could, and afterward threw their dead bodies before the temple of their god, assigning this reason for their practice, that it was in the shape of a crocodile Typho eluded the pursuit of Orus."

In some parts of Egypt it was sacred, "while in other places they made war upon it, and those who lived about Thebes and the Lake Mæris (in the Arsinoite nome) held it in great veneration."

It was there treated with the most marked respect and kept at a considerable expense; it was fed and attended with the most scrupulous care; geese, fish and various meats were dressed purposely for it; they ornamented its head with earrings, its feet with bracelets, and its neck with necklaces of gold and artificial stones; it was rendered perfectly tame by kind treatment; and after death its body was embalmed in a most sumptuous manner. This was particularly the case in the Theban, Ombite and Arsinoite nomes; and at a place now called Maabdeh, opposite the modern town of Manfaloot, are extensive grottoes, cut far into the limestone mountain, where numerous crocodile mummies have been found, perfectly preserved and evidently embalmed with great care.

The people of Apollinopolis, Tentyris, Heracleopolis and other places, on the contrary, held the crocodile in abhorrence, and lost no opportunity of destroying it; and the Tentyrites were so expert, from long habit, in catching and even in overcoming this powerful animal in the water

that they were known to follow it into the Nile and bring it by force to the shore. Pliny and others mention the wonderful feats performed by them, not only in their own country, but in the presence of the Roman people; and Strabo says that on the occasion of some crocodiles being exhibited at Rome the Tentyrites who were present fully confirmed the truth of the report of their power over those animals; for having put them into a spacious tank of water, with a shelving bank artificially constructed at one side, the men boldly entered the water, and entangling them in a net, dragged them to the bank and back again into the water, which was witnessed by numerous spectators.

The crocodile is, in fact, a timid animal, flying on the approach of man, and little danger need be apprehended from it, except by any one incautiously standing on a sloping bank of sand near the river, when it can approach unseen. Egypt produces two varieties, distinguished by the number and position of the scales on the neck, and by one being black, the other of a greener color. They do not exceed eighteen or twenty feet, though travelers have mentioned some of awful size. The story of the "trochilus" entering its mouth as it sleeps on the sandbanks, and relieving it of the leeches in its throat, would be "remarkable, if true" that any leeches existed in the Nile, but

BEARING BURDENS.

the friendly offices of this winged toothpick may have originated in the habits of the small "running bird," a species of *claradrius* or *dotrel*, so common there, which, by its shrill cry on the approach of man, warns the crocodile (quite unintentionally) of its danger. And its proximity to the crocodile is readily explained by its seeking the flies and other insects that are attracted to the sleeping beast.

The eggs of the crocodile are remarkably small—only three inches long by two in breadth, or diameter—being less than those of a goose. They are equally thick at each end. They are laid in the sand till hatched by the warmth of the sun; and the small crocodile, curled up with its tail to its nose, awaits the time for breaking the shell. But the ichneumon is far more dangerous to the eggs than the trochilus is useful to their parents, and its destruction of the unhatched young obtained for it great veneration in those places where the crocodile was not held sacred.

There were various modes of catching it. One was "to fasten a piece of pork to a hook and throw it into the middle of the stream as a bait; then standing near the water's edge, they beat a young pig, and the crocodile, being enticed to the spot by its cries, found the bait on its way, and swallowing it, was caught by the hook. It was then pulled ashore; and its eyes being quickly covered up with mud, it was easily overcome."

It is singular that the wild boar is never represented among the animals of Egypt, though a

native of the country and still frequenting the Fyoom and the Delta. It is even eaten at the present day, in spite of the religious prejudices of the Moslems, by some of the people about Damietta. Even if it never inhabited Upper Egypt, it ought to be figured in some of the fowling and hunting scenes which relate to the marsh-lands of the Delta; and the fabled chase of it by Typho shows it was known in Egypt at the earliest times. Nor is the wild ass met with in the paintings either of Upper or Lower Egypt, though it is common in the deserts of the Thebaid; and other animals have already been shown to be wanting in the sculptures. We are, therefore, more reconciled by these omissions to the absence of several from the monuments which appear in all probability to have existed in the country.

And here it may not be out of place to give a list of the different animals, birds, reptiles, fish and plants, noticing at the same time those that were sacred, and adding an account of the emblems connected with the religion. Among the Egyptians different animals, birds, reptiles, fishes and plants were sacred, and among the long list the following may be enumerated. Thus of animals the following were sacred, viz.: The ape, green monkey, shrew-mouse, dog, wolf, the jackal, ichneumon, cat, lion, goat, sheep and ram, and the cow. Among the sacred birds were classed the vulture

ANCIENT EGYPTIAN FLINT KNIVES.

Nubicus, or Nisser, the sacred hawk, fowls, cocks, the goose. Of reptiles, the tortoise was dedicated to a tortoise-headed god, and the crocodile was sacred to Savak. The little egret was sacred to Osiris; the asp was dedicated to Neph and Ranno; and the frog was the emblem of Pthah. At Syenite the eel was sacred, and the scorpion was sacred generally to the goddess Selk. Very celebrated was the scarabæus and different genera and species of beetles; they were used as emblems of the world, and were dedicated to the sun and to Pthah. Among vegetables, the pomegranate, vine, fig, acanthus, tamarisk, lotus, garlic, onion, leek, palm branch and the papyrus were all placed in the category of sacred offices, and were under the tutelage of special gods, to whom they were considered appropriate offerings.

Among the ancient Egyptians almost everything in nature had some emblematic or symbolic use. The remains of their monuments are covered with illustrations of their remarkable fertility of thought in this department. They had emblems of their deities, of life, of goodness, of power, of majesty and dominion, of authority, of royalty, of stability, while long lists of other attributes were symbolized, as may be seen in the chambers of Osiris at Philæ and in the coronation ceremony at Medinet Haboo.

The sign of Life is held by the gods in one hand and the sceptre of Power (or Purity) generally in the other. The lotus was always a favorite symbol; the palm branch was the sign of "the

year;" and a frog with the young palm leaf, as it springs from the date stone, rising from its back, was the type of man in embryo. The eye of Osiris was sometimes a representation of "Egypt," and was placed at the head of their boats; and numerous other emblems occur in the sacred subjects represented on the monuments. Among flowers two frequently occur, the papyrus head and another water plant, which were the emblems of Lower and Upper Egypt.

Flowers were presented in different ways, either loosely, tied together by the stalks, or in carefully formed bouquets, without any other gifts. Sometimes those of a particular kind were offered alone, the most esteemed being the lotus, papyrus, convolvulus and other favorite productions of the garden; and a bouquet of peculiar form was occasionally presented, or two smaller ones, carried in each of the donor's hands.

Chaplets and wreaths of flowers were also laid upon the altars and offered to the deities, whose statues were frequently crowned with them. In the selection of them, as of herbs and roots, those most grateful or useful to man were chosen as most acceptable to the gods; and it was probably the utility rather than the flavor that induced them to show a marked preference for the onion, the *raphanus*, and cucurbitaceous plants which so generally found a place amongst the offerings.

Of fruits, the sycamore, fig and grapes were the most esteemed for the service of the altar. They were presented on baskets or trays, frequently covered with leaves to keep them fresh; and sometimes the former were represented placed in such a manner on an open basket as to resemble the hieroglyphic signifying "wife."

Ointment often formed part of a large donation, and always entered into the list of those things which constituted a complete set of offerings. It was placed before the deity in vases of alabaster or other materials, the name of the god to whom it was vowed being frequently engraved upon the vase that contained it. Sometimes the king or priest took out a certain portion to anoint the statue of the deity, which was done with the little finger of the right hand.

Ointment was presented in different ways, according to the ceremony performed in honor of the gods, and the various kinds of sweet-scented ointments used by the Egyptians were liberally offered at every shrine. According to Clemens, the *psugda* of Egypt were among the most noted; and Pliny and Athenæus both bear testimony to the variety of Egyptian ointments, as well as the importance attached to them, which is confirmed by the sculptures, and even by the vases discovered in the tombs.

Rich vestments, necklaces, bracelets, jewelry of various kinds and other ornaments, vases of gold, silver and porcelain, bags of gold and numerous gifts of the most costly description, were also presented to the gods. They constituted the riches of the treasury of the temple; and the spoils taken from conquered nations were deposited there by a victorious monarch as a votive gift for the success of his arms or as a token of gratitude for favors already received. Tables of the precious metals and rare woods were among the offerings, and an accurate catalogue of his votive presents was engraved on the walls of the temple to commemorate the piety of the donor and the wealth of the sanctuary. They do not, however, properly come under the denomination of offerings to the gods, but are rather dedications to

their temples; and it was in presenting them that some of the grand processions took place.

But it was not only customary to deposit the necklaces and other "precious gifts" collectively in the temple; the kings frequently offered each singly to the gods, decorating their statues with them and placing them on their altars.

They also presented numerous emblems connected with the vows they had made, the favors they desired or the thanksgivings they returned to the gods, among which the most usual were a small figure of truth; the symbol of the assemblies; the cow of Athor; the hawk-headed necklace of Sokari; a cynocephalus; parts of dress; ointment; gold and silver in bags or in rings; three feathers or heads of reeds, the emblem of a field; a scribe's tablet and inkstand; a garland or wreath; and an emblem of pyramidal form, perhaps a particular kind of "white" cake.

Thanksgivings for the birth of a child, escape from danger or other marks of divine favor were offered by individuals through the medium of the priests. The same was also done in private; and secret as well as public vows were made in the hope of future favors, the quality of these oblations depending on the god to whom presented or the occupation of the donor, a shepherd bringing from his flocks, a husbandman from his fields, and others according to their means, provided the offering was not forbidden by the rites of the deity.

Though the Egyptians considered certain oblations suited to particular gods, others inadmissible to their temples, and some more peculiarly adapted to prescribed periods of the year, the greater part of the deities were invoked with the same offerings, the most usual of which were fruit, flowers, vegetables, ointment, incense, grain, wine, milk, beer, oil, cakes and the sacrifice of animals and birds. These last were either offered whole, with the feathers, or plucked and trussed; and when presented alone, they were sometimes placed upon a portable stand furnished with spikes, over which the bird was laid.

The bronze instruments with long curved spikes found in the Etruscan tombs were probably intended for a similar purpose, though they were once thought to be for torturing Christian martyrs.

Even oxen and other animals were sometimes offered entire, though generally after the head had been taken off, and it does not appear that this depended on any particular ceremony.

In slaying a victim the Egyptians suffered the blood to flow upon the ground, or over the altar if placed upon it; and the mode of cutting it up appears to have been the same as when killed for the table. The head was first taken off, and after the skin had been removed they generally cut off the right leg and shoulder, and the other legs and parts in succession, which, if required for the table, were placed on trays and carried to the kitchen, or if intended for sacrifice were deposited on the altar, with fruit, cakes and other offerings.

The joints and parts most readily distinguished in the sculptures are the head, the fore leg, with the shoulder, which was styled *sapt*, "the chosen part," the upper joint of the hind leg, the kidneys, the ribs, the heart and the rump; and those most commonly seen on the altars are the head, the leg and the ribs. When the Egyptians offered a holocaust, they commenced with a libation of wine—a preliminary ceremony common, according to Herodotus, to all their sacrifices—and after it had been poured upon the altar, the victim was slain. They first removed the head and skin (a

statement, as has already been shown, fully confirmed by the sculptures. They then took out the stomach, leaving only the entrails and the fat, after which the thighs, the upper part of the haunches, the shoulders and the neck were cut off in succession. Then, filling the body with cakes of pure flour, honey, dried raisins, figs, incense, myrrh and other odoriferous substances, they burnt it on the fire, pouring over it a considerable quantity of oil. The portions which were not consumed were afterward given to the votaries who were present on the occasion, no part of the offering being left; and it was during the ceremony of burning the sacrifice at the fête of Isis that they beat themselves in honor of Osiris.

The ordinary subjects in the interior of the temples represent the king presenting offerings to the deities worshiped there, the most remarkable of which are the sacrifices already mentioned, incense, libation, and several emblematic figures or devices connected with religion. He sometimes made an appropriate offering to the presiding deity of the sanctuary and to each of the contemplar gods, as Diodorus says Osymandyas was represented to have done, the memorial of which act of piety was preserved in the sculptures of his tomb.

Incense was presented to all the gods and introduced on every grand occasion, when a complete oblation was made; for they sometimes merely offered a libation of wine, oil and other liquids, or a single gift, a necklace, a bouquet of flowers or whatever they had vowed. Incense was also presented alone, though more usually accompanied by a libation of wine. It consisted of various ingredients, according to circumstances; and in offerings to the sun, Plutarch says that resin, myrrh and a mixture of sixteen ingredients called kuphi were adapted to different times of the day.

In offering incense the king held in one hand the censer, and with the other threw balls or pastiles of incense into the flame. Then, addressing the god before whose statue he stood, with a suitable prayer to invoke his aid and favor, he begged him to accept the incense he presented, in return for which the deity granted him "a long, pure and happy life," with other favors accorded by the gods to men.

A libation of wine was frequently offered, together with incense, or two censers of incense, with several oxen, birds and other consecrated gifts. And that it was customary to present several of the same kind is shown by the ordinary formula of presentation, which says, "I give you a thousand cakes, a thousand vases of wine, a thousand head of oxen, a thousand geese, a thousand vestments, a thousand censers of incense, a thousand libations, a thousand boxes of ointment." The cakes were of various kinds. Many were round, oval or triangular, and others had the edges folded over like the fateerh of the present day. They also assumed the shape of leaves or the form of an animal, a crocodile's head or some capricious figure, and it was frequently customary to sprinkle them (particularly the round and oval cakes) with seeds.

Wine was presented in two cups. It was not then a libation, but merely an offering of wine; and since the pouring out of wine upon the altar was a preliminary ceremony, as Herodotus observes common to all their sacrifices, we find that the king is often represented making a libation upon an altar covered with offerings of cakes, flowers and the joints of a victim killed for the occasion.

Two kinds of vases were principally used for libations, but that used on great occasions, and

carried in procession by the prophet or by the king, was of long shape, with the usual spout.

The various kinds of wine were indicated by the names affixed to them. White and red wines, those of the upper and lower country, grape juice or wine of the vineyard (one of the most delicious beverages of a hot climate, and one which is commonly used in Spain and other countries at the present day), were the most noted.

Beer and milk, as well as oils of various kinds for which Egypt was famous, were also common among the offerings.

No people had greater delight in ceremonies and religious pomp than the Egyptians; and grand processions constantly took place to commemorate some legendary tale connected with superstition. Nor was this tendency of the Egyptian mind neglected by the priesthood, whose influence was greatly increased by the importance of the post they held on those occasions; there was no ceremony in which they did not participate,

The number of shrines in the processions, and the splendor of the ceremony performed on the occasion, depended on the particular festival they intended to commemorate. In many instances the shrine of the deity of the temple was carried alone, sometimes that of other deities accompanied it and sometimes that of the king was added—a privilege granted as a peculiar mark of esteem for some great benefit conferred by him upon his country, or for his piety in having beautified the temples of the gods. Such is the motive mentioned in the description of the Rosetta Stone, which, after enumerating the benefits conferred upon the country by Ptolemy, decrees, as a return for them, "that a statue of the king shall be erected in every temple, in the most conspicuous place; that it shall be called the statue of Ptolemy, the defender of Egypt, and that near it shall be placed the presiding deity, presenting to him the shield of victory. Moreover, that the priests shall minister three times every day to the

PILLARS AND BEAMS OF THE GREAT TEMPLE OF KARNAK.

and even military regulations were subject to their influence.

One of the most important ceremonies was "the procession of shrines," which is mentioned in the Rosetta Stone, and is frequently represented on the walls of the temples. The shrines were of two kinds, the one a sort of canopy, the other an ark or sacred boat, which may be termed the great shrine. This was carried with grand pomp by the priests, a certain number being selected for that duty, who, supporting it on their shoulders by means of long staves passing through metal rings at the side of the sledge on which it stood, brought it into the temple, where it was placed upon a stand or table, in order that the prescribed ceremonies might be performed before it.

The stand was also carried in the procession by another set of priests, following the shrine, by means of similar staves, a method usually adopted for transporting large statues and sacred emblems too heavy or too important to be borne by one person. The same is stated to have been the custom of the Jews in some of their religious processions, as in carrying the ark "to its place, into the oracle of the house, to the most holy place," when the temple was built by Solomon.

statues and prepare for them the sacred dress, and perform the accustomed ceremonies, as in honor of other gods at feasts and festivals; that there shall be erected an image and golden shrine of King Ptolemy in the most honorable of the temples, to be set up in the sanctuary among the other shrines; and that on the great festivals, when the procession of shrines takes place, that of the god Epiphanes shall accompany them, ten royal golden crowns being deposited upon the shrine, with an asp attached to each, and the (double) crown Pschent, which he wore at his coronation, placed in the midst."

It was also usual to carry this statue of the principal deity in whose honor the procession took place, together with that of the king and the figures of his ancestors, borne in the same manner on men's shoulders, like the gods of Babylon mentioned by Jeremiah.

Diodorus speaks of an Ethiopian festival of Jupiter, when his statue was carried in procession, probably to commemorate the supposed refuge of the gods in that country, which may have been a memorial of the flight of the Egyptians with their gods at the time of the shepherd invasion, mentioned by Josephus on the authority of Manetho.

Diodorus also says, "Homer derived from Egypt his story of the embraces of Jupiter and Juno and their traveling into Ethiopia, because the Egyptians every year carry Jupiter's shrine over the river into Africa, and a few days after bring it back again, as if the gods had returned out of Ethiopia. The fiction of their nuptials was taken from the solemnization of these festivals, at which time both their shrines, adorned with all sorts of flowers, are carried by the priests to the top of a mountain."

The usual number of priests who performed the duty of bearers was generally twelve or sixteen to each shrine. They were accompanied by another of a superior grade, distinguished by a lock of hair pendant on one side of his head and clad in a leopard skin, the peculiar badge of his rank, who, walking near them, gave directions respecting the procession, its position in the temple and whatever else was required during the ceremony, which agrees well with the remark of Herodotus, that "each deity had many priests and one high-priest." Sometimes two priests of the same peculiar grade attended, both during the procession and after the shrine had been deposited in the temple. These were the pontiffs, or highest order of priests; they had the title of "Sem," and enjoyed the privilege of offering sacrifice on all grand occasions.

When the shrine reached the temple, it was received with every demonstration of respect by the officiating priest, who was appointed to do duty upon the day of the festival; and if the king happened to be there, it was his privilege to perform the appointed ceremonies. These consisted of sacrifices and prayers, and the shrine was decked with fresh-gathered flowers and rich garlands. An endless profusion of offerings was placed before it on several separate altars, and the king, frequently accompanied by his queen, who held a sistrum in one hand and in the other a bouquet of flowers made up into the particular form required for these religious ceremonies, presented incense and libation. This part of the ceremony being finished, the king proceeded to the presence of the god (represented by his statue), from whom he was supposed to receive a blessing, typified by the sacred *tau*, the sign of life. Sometimes the principal contemporary deity was also present, usually the second member of the triad of the place, and it is probable that the position of the statue was near to the shrine alluded to in the inscription of the Rosetta Stone.

Some of the sacred boats or arks contained the emblems of life and stability, which, when the veil was drawn aside, were partially seen; others, the figure of the divine spirit Nef or Nou, and some presented the sacred beetle of the sun overshadowed by the wings of two figures of the goddess Thmet or Truth, which call to mind the cherubim of the Jews.

The dedication of the whole or part of a temple was, as may be reasonably supposed, one of the most remarkable solemnities at which the king presided. And if the actual celebration of the rites practiced on the occasion, the laying of the foundation stone or other ceremonies connected with it, are not represented on the monuments, the importance attached to it is shown by the conspicuous manner in which it is recorded in the sculptures, the ostentation with which it is announced in the dedicatory inscriptions of the monuments themselves, and the answer returned by the god in whose honor it was erected.

Another striking ceremony was the transport of

the dedicatory offerings made by the king to the gods, which were carried in great pomp to their respective temples. The king and all the priests attended the procession, clad in their robes of ceremony, and the flag-staffs attached to the great towers of the façade were decked, as on other grand festivals, with banners.

The coronation of the king was a peculiarly imposing ceremony. It was one of the principal subjects represented in the court of the temples, and some idea may be formed of the pomp displayed on the occasion even from the limited scale on which the monuments are capable of describing it. It is thus represented at Medeenet Haboo.

First comes the king, borne in his shrine or canopy, and seated on a throne ornamented with the figures of a lion and a sphinx, which is preceded by a hawk. Behind him stand two figures of Truth and Justice with outspread wings. Twelve Egyptian princes, his sons, bear the shrine; officers wave flabella around the monarch, and others of the sacerdotal order attend on either side, carrying his arms and insignia. Four others follow; then six of the king's sons, behind whom are two scribes and eight attendants of the military class, bearing stools and the steps of the throne.

In another line are members of the sacerdotal order, four others of the king's sons, fan-bearers and military scribes, a guard of soldiers bringing up the rear of the procession. Before the shrine, in one line, march six officers bearing sceptres and other insignia; in another a scribe reads aloud the contents of a scroll he holds unfolded in his hand, preceded by two of the king's sons and two distinguished persons of the military and priestly orders. The rear of both these lines is closed by a pontiff, who, turning round toward the shrine, burns incense before the monarch, and a band of music, composed of the trumpet, drum, double pipe and other instruments, with choristers, forms the van of the procession.

The king, alighted from his throne, officiates as priest before the statue of Amun-Khem, or Amun-Re, *generator*; and still wearing his helmet, he presents libations and incense before the altar, which is loaded with flowers and other suitable offerings. The statue of the god, attended by officers bearing flabella, is carried on a palanquin covered with rich drapery by twenty-two priests; behind it follow others, bringing the table and the altar of the deity. Before the statue is the sacred bull, followed by the king on foot, wearing the cap of the "Lower country." Apart from the procession itself stands the queen, as a spectator of the ceremony, and before her a scribe reads a scroll he has unfolded. A priest turns round to offer incense to the white bull; and another, clapping his hands, brings up the rear of a long procession of *hieraphori*, carrying standards, images and other sacred emblems; and the foremost bear the statue of the king's ancestors.

In the next compartment, the president of the assembly reads a long invocation, the contents of which are contained in the hieroglyphic inscription above; and the six ears of corn which the king, once more wearing his helmet, has cut with a golden sickle are held out by a priest toward the deity. The white bull and images of the king's ancestors are deposited in his temple, in the presence of Amun-Khem, the queen still witnessing the ceremony, which is concluded by an offering of incense and libation made by Remeses to the statue of the god.

With the Egyptians, as with the Jews, the investiture into any sacred office, as that of king or

priest, was confirmed by this external sign; and as the Jewish lawgiver mentions the ceremony of pouring oil upon the head of the high-priest after he had put on his entire dress, with the mitre and crown, the Egyptians represent the anointing of their priests and kings after they were attired in their full robes, with the cap and crown upon their head. Some of the sculptures introduce a priest pouring oil over the monarch in the presence of Thoth, Hor-Hat, Seth and Nilus, which may be considered a representation of the ceremony before the statues of those gods. The functionary who officiated was the high-priest or prophet, clad in a leopard skin, the same who attended on all occasions which required him to assist or assume the duties of the monarch in the temple.

The custom of anointing was not confined to the appointment of kings and priests to the sacred offices they held; it was the ordinary token of welcome to guests in every party at the house of a friend; and in Egypt, no less than in Judaea, the metaphorical expression, "anointed with the oil of gladness," was fully understood, and applied to the ordinary occurrences of life. It was not confined to the living; the dead were made to participate in it, as if sensible of the token of esteem thus bestowed upon them; and a grateful survivor, in giving an affectionate token of gratitude to a regretted friend, neglected not this last unction of his mortal remains. Even the head of the bandaged mummy, and the case which contained it, were anointed with oils and the most precious ointments.

Another ceremony represented in the temples was the blessing bestowed by the gods on the king at the moment of his assuming the reins of government. They laid their hands upon him; and presenting him with the symbol of life, they promised that his reign should be long and glorious, and that he should enjoy tranquillity, with certain victory over his enemies. If about to undertake an expedition against foreign nations, they gave him the falchion of victory to secure the defeat of the people whose country he was about to invade, saying, "Take this weapon and smite with it the heads of the impure Gentiles."

To show the special favor he enjoyed from heaven, the gods were even represented admitting him into their company and communing with him; and sometimes Thoth, with other deities, taking him by the hand, led him into the presence of the great triad, or of the presiding divinity of the temple. He was welcomed with suitable expressions of approbation; and on this, as on other occasions, the sacred *tau*, or sign of life, was presented to him—a symbol which, with the sceptre of purity, was usually placed in the hands of the gods. These two were deemed the greatest gifts bestowed by the deity on man.

The origin of the *tau* cannot be precisely determined, but this remarkable fact is connected with it in later times—that the early Christians of Egypt adopted it in lieu of the cross, which was afterward substituted for it, prefixing it to inscriptions in the same manner as the cross in later times; and numerous inscriptions headed by the *tau* are preserved to the present day in early Christian sepulchres at the Great Oasis.

The triumph of the king was a grand solemnity. Flattering to the national pride of the Egyptians, it awakened those feelings of enthusiasm which the celebration of victory naturally inspires, and led them to commemorate it with the greatest pomp. When the victorious monarch, returning

to Egypt after a glorious campaign, approached the cities which lay on his way, from the confluents of the country to the capital, the inhabitants flocked to meet him, and with welcome acclamations greeted his arrival and the success of his arms. The priests and chief people of each place advanced with garlands and bouquets of flowers; the procession entered the temple, where sacrifice was offered to the deity; the deeds of the monarch were recited; and the ceremony of laying the captives before the feet of the god was an imposing spectacle. The whole land was excited on the joyous occasion.

Of the fixed festivals, one of the most remarkable was the celebration of the grand assemblies or panegyrics, held in the great halls of the principal temples, at which the king presided in person. That they were of the greatest importance is abundantly proved by the frequent mention of them in the sculptures; and that the post of president of the assemblies was the highest possible honor may be inferred, as well from its being enjoyed by the sovereign alone of all men as from its being assigned to the deity himself in these legends: "Phrah (Pharaoh), lord of the panegyrics, like Re," or "like his father Phrah," which so frequently occur on the monuments of Thebes and Memphis.

Their celebration was fixed to certain periods of the year, as were the festivals of the new moons and those recorded in the great calendar, sculptured on the exterior of the south-west wall of Medeenet Haboo, which took place during several successive days of each month, and were even repeated in honor of different deities every day during some months, and attended by the king in person.

Another important religious ceremony is often alluded to in the sculptures which appears to be connected with the assemblies just mentioned. In this the king is represented running, with a vase or some emblem in one hand and the flagellum of Osiris, a type of majesty, in the other, as if hastening to enter the hall where the panegyrics were held; and two figures of him are frequently introduced, one crowned with the cap of the Upper, the other with that of the Lower country, as they stand beneath a canopy indicative of the hall of assembly. The same deities who usually preside on the anointing of the king present him with the sign of life and bear before him the palm branch on which the years of the assemblies are noted. Before him stands the goddess Milt, bearing on her head the water-plants, her emblem, and around are numerous emblems appropriated to this subject. The monarch sometimes runs into the presence of the god bearing two vases, which appears to be the commencement of, or connected with, this ceremony; and the whole may be the anniversary of the foundation of the temple or of the sovereign's reign. An ox (or cow) is in some instances represented running with the king, on the same occasion.

The birthdays of the kings were celebrated with great pomp. They were looked upon as holy; no business was done upon them, and all classes indulged in the festivities suitable to the occasion. Every Egyptian attached much importance to the day, and even to the hour, of his birth; and it is probable that, as in Persia, each individual kept his birthday with great rejoicings, welcoming his friends with all the amusements of society, and a more than usual profusion of the delicacies of the table.

They had many other public holidays, when the

court of the king and all public offices were closed. This was sometimes owing to a superstitious belief of their being unlucky; and such was the prejudice against the "third day of the epoch, the birthday of Typho, that the sovereign neither transacted any business upon it, nor even suffered himself to take any refreshment till the evening." Other fasts were also observed by the king and the priesthood, out of respect to certain solemn purifications they deemed it their duty to undergo for the service of religion.

Among the ordinary rites the most noted, because the most frequent, were the daily sacrifices offered in the temple by the sovereign pontiff. It was customary for him to attend there early every morning, after he had examined and settled his epistolary correspondence relative to the affairs of state, and the service began by the high-priest reading a prayer for the welfare of the monarch in the presence of the people.

Of the anniversary festivals one of the most remarkable was the Niloo, or invocation of the blessings of the inundation, offered to the tutelar deity of the Nile. According to Heliodorus, it was one of the principal festivals of the Egyptians. It took place about the summer solstice, when the river began to rise; and the anxiety with which they looked forward to a plentiful inundation induced them to celebrate it with more than usual honor. Libanius asserts that these rites were deemed of so much importance by the Egyptians that unless they were performed at the proper season, and in a becoming manner by the persons appointed to this duty, they felt persuaded that the Nile would refuse to rise and inundate the land. Their full belief in the efficacy of the ceremony secured its annual performance on a grand scale. Men and women assembled from all parts of the country in the towns of their respective nomes, grand festivities were proclaimed, and all the enjoyments of the table were united with the solemnity of a holy festival. Music, the dance and appropriate hymns marked the respect they felt for the deity; and a wooden statue of the river god was carried by the priests through the villages in solemn procession that all might appear to be honored by his presence while invoking the blessings he was about to confer.

Another festival particularly welcomed by the Egyptian peasants, and looked upon as a day of great rejoicing, was (if it may be so called) the harvest home, or the close of the labors of the year and the preparation of the land for its future crops by the inundation, when, as Diodorus tells us, the husbandmen indulged in recreations of every kind, and showed their gratitude for the benefits the deity had conferred upon them by the blessings of the inundation.

Games were also celebrated in honor of certain gods, in which wrestling and other gymnastic exercises were practiced.

The investiture of a chief was a ceremony of considerable importance, when the post conferred was connected with any high dignity about the person of the monarch, in the army or the priesthood. It took place in the presence of the sovereign seated on his throne; and two priests, having arrayed the candidate in a long loose vesture, placed necklaces round his neck. One of these ceremonies frequently occurs in the monuments, which was sometimes performed immediately after a victory, in which case we may conclude that the honor was granted in return for distinguished services in the field; and as the individual, on all occasions, holds the flabella, crook and other in-

signia of the office of fan-bearer, it appears to have been either the appointment to that post or to some high command in the army.

A similar mode of investiture appears to have been adopted in all appointments to the high offices of state, both of a civil and military kind. In this, as in many customs detailed in the sculptures, we find an interesting illustration of a ceremony mentioned in the Bible, which describes Pharaoh taking a ring from his hand and putting it on Joseph's hand, arraying him in vestures of fine linen and putting a gold chain about his neck.

In a tomb opened at Thebes by Mr. Hoskins another instance occurs of this investiture to the post of fan-bearer, in which the two attendants, or inferior priests, are engaged in clothing him with the robes of his new office. One puts on the necklace, the other arranges his dress, a fillet being already bound round his head, and he appears to wear gloves upon his uplifted hands. In the next part of the same picture (for, as is often the case, it presents two actions and two periods of time) the individual holding the insignia of fan-bearer, and followed by the two priests, presents himself before the king, who holds forth his hand to him to touch, or perhaps to kiss.

At Medeenet Haboo is a remarkable instance of the ceremony of carrying the sacred boat of Pthah-Sokari-Osiris, which may represent the funeral of Osiris. It is frequently introduced in the sculptures; and in one of the tombs of Thebes this solemnity occurs, which, though on a smaller scale than on the walls of Medeenet Haboo, offers some interesting peculiarities. First comes the boat, carried as usual by several priests, superintended by the pontiff, clad in a leopard skin; after which two hieraphori, each bearing a long staff surmounted by a hawk; then a man beating the tambourine, behind whom is a flower with the stalk bound round with ivy (or the periploca, which so much resembles it). These are followed by two hieraphori (or bearers of holy emblems), carrying each a staff with a jackal on the top, and another carrying a flower, behind whom is a priest turning round to offer incense to the emblem of Nofre-Atmoo. The latter is placed horizontally upon six columns, between each of which stands a human figure with uplifted arms, either in the act of adoration or aiding to support the sacred emblem; and behind it is an image of the king kneeling, the whole borne on the usual staves by several priests, attended by a pontiff in his leopard-skin dress. In this ceremony, as in some of the tales related of Osiris, we may trace those analogies which led the Greeks to suggest the resemblance between that deity and their Bacchus, as the tambourine, the ivy-bound flower or thyrsus and the leopard skin, which last recalls the leopards that drew his car. The spotted skin of the nebris, or fawn, may also be traced in that suspended near Osiris in the region of Amenti.

At Medeenet Haboo the procession is on a more splendid scale; the ark of Sokari is borne by sixteen priests accompanied by two pontiffs, one clad in the usual leopard skin, and Remeses himself officiates on the occasion. The king also performs the singular ceremony of holding a rope at its centre, the two ends being supported by four priests, eight of his sons and four other chiefs, before whom two priests turned round to offer incense, while a sacred scribe reads the contents of a papyrus he holds in his hands. These are preceded by one of the hieraphori bearing the hawk on a staff decked with banners (the standard of

the king or of Horus), and by the emblem of Nofre-Atmoo borne by eighteen priests, the figures standing between the columns over which it is laid being of kings, and the columns themselves being surmounted by the heads of hawks.

Many of the religious festivals were indicative of some peculiar attribute or supposed property of the deity in whose honor they were celebrated. One mentioned by Herodotus was emblematic of the generative principle, and the same that appears to be alluded to by Plutarch under the name of Pamyliia, which he says bore a resemblance to one of the Greek ceremonies. The assertion, however, of these writers, that such figures belonged to Osiris, is contradicted by the sculptures, which show them to have been emblematic of the god Khem or Pan; and this is confirmed by another observation of the latter writer, that the leaf of the fig tree represented the deity of that festival as well as the land of Egypt. The tree does indeed represent Egypt, and always occurs on the altar of Khem, but it is not in any way connected with Osiris, and the statues mentioned by Plutarch evidently refer to the Egyptian Pan.

According to Herodotus, the only two festivals in which it was lawful to sacrifice pigs were those of the Moon and Bacchus (or Osiris), the reason of which restriction he attributes to a sacred reason which he does not think it right to mention. "In sacrificing a pig to the moon they killed it; and when they had put together the end of the tail, the spleen and the caul, and covered them with all the fat from the inside of the animal, they burnt them, the rest of the victim being eaten on the day of the full moon, which was the same on which the sacrifice was offered, for on no other day were they allowed to eat the flesh of the pig. Poor people who had barely the means of subsistence made a paste figure of a pig, which, being baked, they offered as a sacrifice." The same kind of substitute was doubtless made for other victims by those who could not afford to purchase them, and some of the small glass and clay figures of animals found in the tombs have probably served for this purpose. "On the fête of Bacchus every one immolated a pig before the door of his house at the hour of dinner; he then gave it back to the person of whom it had been bought." "The Egyptians," adds the historian, "celebrate the rest of this fête nearly in the same manner as the Greeks, with the exception of the sacrifice of pigs."

The procession on this occasion was headed as usual by music, a flute player, according to Herodotus, leading the van; and the first sacred emblem they carried was a hydria or water-pitcher. A festival was also held on the seventeenth of Athyr and three succeeding days in honor of Osiris, during which they exposed to view a gilded ox, the emblem of that deity, and commemorated what they called the "loss of Osiris." Another followed in honor of the same deity after an interval of six months or one hundred and seventy-nine days, "upon the 19th of Pachon, when they marched in procession toward the seaside, whither, likewise, the priest and other proper officers carried the sacred chest, enclosing a small boat or vessel of gold, into which they first poured some fresh water, and then all present cried out with a loud voice, 'Osiris is found.' This ceremony being ended, they threw a little fresh mould, together with rich odors and spices, into the water, mixing the whole mass together, and working it up into a little image in the shape of a crescent. The image was afterward dressed and adorned with a proper

habit, and the whole was intended to intimate that they looked upon these gods as the essence and power of earth and water."

Among the ceremonies connected with Osiris the fête of Apis holds a conspicuous place.

For Osiris was also worshiped under the form of Apis, the sacred bull of Memphis, or as a human figure with a bull's head, accompanied by the name "Apis-Osiris." According to Plutarch, Apis was a fair and beautiful image of the soul of Osiris, and the same author tells us that Mnevis, the sacred ox of Heliopolis, was also dedicated to Osiris, and honored by the Egyptians with a reverence next to that paid to Apis, whose sire some pretend him to be. This agrees with the statement of Diodorus, who says Apis and Mnevis were both sacred to Osiris, and worshiped as gods throughout the whole of Egypt; and Plutarch suggests that from these well-known representations of Osiris the people of Elis and Argos derived the idea of Bacchus with an ox's head, Bacchus being reputed to be the same as Osiris. Herodotus, in describing him, says, "Apis, also called Epaphus, is a young bull whose mother can have no other offspring, and who is reported by the Egyptians to conceive from lightning sent from heaven, and thus to produce the god Apis. He is known by certain marks; his hair is black. On his forehead is a white triangular spot, on his back an eagle, and a beetle under his tongue, and the hair of his tail is double." Ovid represents him of various colors. Strabo says his forehead and some parts of his body are of a white color, the rest being black, "by which signs they fix upon a new one to succeed the other when he dies;" and Plutarch thinks that "on account of the great resemblance they imagine between Osiris and the moon, his more bright and shining parts being shadowed and obscured by those that are of a darker hue, they call the Apis the living image of Osiris, and suppose him begotten by a ray of generative light flowing from the moon and fixing upon his mother at a time when she was strongly disposed for it."

It is difficult to decide if Herodotus is correct respecting the peculiar marks of Apis. There is, however, evidence from the bronzes found in Egypt that the vulture (not eagle) on his back was one of his characteristics, supplied, no doubt, like many others, by the priests themselves, who probably put him to much inconvenience, and pain too, to make the marks and hairs conform to his description.

To Apis belonged all the clean oxen chosen for sacrifice; the necessary requisite for which, according to Herodotus, was that they should be entirely free from black spots, or even a single black hair, though, as I shall have occasion to remark in treating of the sacrifices, this statement of the historian is far from accurate. It may also be doubted if the name Epaphus, by which he says Apis was called by the Greeks in their language, was of Greek origin.

He is called in the hieroglyphic legends Hapi; and the bull, the demonstrative and figurative sign following his name, is accompanied by the crux ansata, or emblem of life. It has seldom any ornament on its head; but the figure of Apis- (or Hapi-) Osiris generally wears the globe of the sun, and the asp, the symbol of divine majesty, which are also given to the bronze figures of this bull.

Memphis was the place where Apis was kept and where his worship was particularly observed. He was not merely looked upon as an emblem, but, as Pliny and Cicero say, was deemed "a god

by the Egyptians;" and Strabo calls "Apis the same as Osiris." Psammaticus there erected a grand court (ornamented with figures in lieu of columns twelve cubits in height, forming an inner peristyle), in which he was kept when exhibited in public. Attached to it were the two stables ("delubra," or "thalami") mentioned by Pliny; and Strabo says, "Before the enclosure where Apis is kept is a vestibule, in which also the mother of the sacred bull is fed, and into this vestibule Apis is introduced in order to be shown to strangers. After being brought out for a little while, he is again taken back; at other times he is only seen through a window." "The temple of Apis is close to that of Vulcan, which last is remarkable for its architectural beauty, its extent and the richness of its decoration."

The festival in honor of Apis lasted seven days, on which occasion a large concourse of people assembled at Memphis. The priests then led the sacred bull in solemn procession, all people coming forward from their houses to welcome him as he passed; and Pliny and Solinus affirm that children who smelt his breath were thought to be thereby gifted with the power of predicting future events.

Diodorus derives the worship of Apis from the belief of "the soul of Osiris having migrated into this animal, who was thus supposed to manifest himself to man through successive ages, though some report that the members of Osiris, when killed by Typho, having been deposited in a wooden box, enveloped in byssine cloths, gave the name to the city of Busiris and established its worship there."

When the Apis died, certain priests chosen for this duty went in quest of another, who was known from the signs mentioned in the sacred books. As soon as he was found they took him to the city of the Nile, preparatory to his removal to Memphis, where he was kept forty days, during which period women alone were permitted to see him. These forty days being completed, he was placed in a boat, with a golden cabin prepared to receive him, and he was conducted in state upon the Nile to Memphis.

When the Apis died a natural death, his obsequies were celebrated on the most magnificent scale; and to such extravagance was this carried that those who had the office of taking charge of him were often ruined by the heavy expenses entailed upon them. On one occasion, during the reign of the first Ptolemy, upward of fifty talents were borrowed to defray the necessary cost of his funeral; "and in our time," says Diodorus, "the curators of other sacred animals have expended one hundred talents in their burial."

As soon as he was buried permission was given to the priests to enter the temple of Sarapis, though previously forbidden during the whole festival.

The burial-place of the Apis bulls has lately been discovered by M. Mariette, near Memphis. It consists of an arched gallery hewn in the rock, about twenty feet in height and breadth, and two thousand feet in length (besides a lateral gallery). On each side is a series of chambers or recesses, which might be called sepulchral stalls, every one containing a large sarcophagus of granite, fifteen feet by eight, in which the body of a sacred bull was deposited; and when visited by Mr. Harris (in March, 1852), thirty sarcophagi had been already found. One only had an inscription, with the blank oval of a king; but on the walls were several tablets, and fragments of others lay on the

ground, containing dedications to Apis in behalf of some person deceased, one with the name of Amasis and another of Ptolemaic time. Mention was also made of the birth, death and burial of the bulls. They mostly lived seventeen to twenty years (twenty-five being the prescribed limit of their life), so that the thirty would only go back to about the beginning of the twenty-sixth dynasty. Many more have, therefore, to be discovered.

Before this is a paved road, with lions ranged on each side, about eight feet high, which forms the approach; and before this again is a temple, supposed to be the Sarapeum, with a sort of vestibule; and at the doorway, between these two, are, on either side, a crouched lion and a tablet, on one of which King Nectanebo, followed by a priest of Apis-Osiris (Sarapis?), is represented making an offering; and in the upper line are eight deities, with an altar before them—Amunra, Mant, Khons, Horus, Athor, Mandoo (Month), Khem and Osiris. In the vestibule are statues of eleven divinities, of Greek form (one of whom is Jupiter), seated in a half circle. These are of Greek or Roman time; but near the spot have been found the names of Amyrteus and of some late unknown Egyptian kings, and that of the second Remeses on the surface of the ground above.

From whatever cause the death of Apis took place, the people performed a public lamentation, as if Osiris himself had died; and this mourning lasted until the other Apis, his successor, had been found. They then commenced the rejoicings, which were celebrated with an enthusiasm equal to the grief exhibited during the previous mourning.

The Egyptians not only paid divine honors to the bull Apis, but, considering him the living image and representative of Osiris, they consulted him as an oracle, and drew from his actions good or bad omens. They were in the habit of offering him any kind of food with the hand; if he took it, the answer was considered favorable; if he refused, it was thought to be a sinister omen. Pliny and Ammianus observe that he refused what the unfortunate Germanicus presented to him; and the death of that prince, which happened shortly after, was thought to confirm most unequivocally the truth of these presages. The Egyptians also drew omens respecting the welfare of their country according to the stable in which he happened to be. To these two stables he had free access, and when he spontaneously entered one it foreboded benefits to Egypt, as the other the reverse; and many other tokens were derived from accidental circumstances connected with this sacred animal.

Pausanias says that those who wished to consult Apis first burnt incense on an altar, filling the lamps with oil which were lighted there, and depositing a piece of money on the altar to the right of the statue of the god. Then placing their mouth near his ear, in order to consult him, they asked whatever question they wished. This done, they withdrew, covering their two ears until they were outside the sacred precincts of the temple, and there, listening to the first expression any one uttered, they drew from it the desired omen.

Children, also, according to Pliny and Solinus, who attended in great numbers during the processions in honor of the divine bull, received the gift of foretelling future events; and the same authors mention a superstitious belief at Memphis of the influence of Apis upon the crocodile during the seven days when his birth was celebrated. On

this occasion a gold and silver patera was annually thrown into the Nile at a spot called from its form the "Bottle;" and while this festival was held no one was in danger of being attacked by crocodiles, though bathing carelessly in the river. But it could no longer be done with impunity after the sixth hour of the eighth day. The hostility of that animal to man was then observed invariably to return, as if permitted by the deity to resume its habits.

Apis was usually kept in one or other of the two stables—seldom going out, except into the court attached to them, where strangers came to visit him. But on certain occasions he was conducted through the town with great pomp. He was then escorted by numerous guards, who made a way amidst the crowd, and prevented the approach of the profane, and a chorus of children singing hymns in his honor headed the procession.

The greatest attention was paid to the health of Apis; they took care to obtain for him the most wholesome food, and they rejoiced if they could preserve his life to the full extent prescribed by law. Plutarch also notices his being forbidden to drink the water of the Nile in consequence of its having a peculiarly fattening property. "For," he adds, "they endeavor to prevent fitness, as well in Apis as in themselves; always studious that their bodies may sit as light about their souls as possible, in order that their mortal part may not oppress and weigh down the more divine and immortal."

Many fêtes were held at different seasons of the year; for as Herodotus observes, far from being contented with one festival, the Egyptians celebrate annually a very great number, of which that of Diana (Pasht), kept at the city of Bubastis, holds the first rank and is performed with the greatest pomp. Next to it is that of Isis, at Busiris, a city situated in the middle of the Delta, with a very large temple consecrated to that goddess, the Ceres of the Greeks. The third in importance is the fête of Minerva (Neith), held at Sais; the fourth, of the Sun, at Heliopolis; the fifth, of Latona, in the city of Buto; and the sixth is that performed at Papremis in honor of Mars.

In going to celebrate the festival of Diana at Bubastis it was customary to repair thither by water, and parties of men and women were crowded together on that occasion in numerous boats, without distinction of age or sex. During the whole of the journey several women played on *crotala* (clappers) and some men on the flute, others accompanying them with the voice and the clapping of hands, as was usual at musical parties in Egypt. Whenever they approached a town, the boats were brought near to it, and while the singing continued, some of the women, in the most abusive manner, scoffed at those on the shore as they passed by.

Arrived at Bubastis, they performed the rites of the festival by the sacrifice of a great number of victims, and the quantity of wine consumed on the occasion was said to be more than during all the rest of the year. The number of persons present was reckoned by the inhabitants of the place to be seven hundred thousand, without including children; and it is probable that the appearance presented by this concourse of people, the scenes which occurred and the picturesque groups they presented were not altogether unlike those witnessed at the modern fêtes of Tanta and Dessook, in the Delta, in honor of the Sayd el Beddawe and Sheikh Ibrahim el Dessooke.

The number stated by the historian is beyond all probability, notwithstanding the population of ancient Egypt, and cannot fail to call to mind the seventy thousand pilgrims reported by the Moslems to be annually present at Mecca, whose explanation of the mode adopted for keeping up that exact number is very ingenious, every deficiency being supplied by a mysterious complement of angels obligingly presenting themselves for the purpose; and some contrivance of the kind may have suggested itself to the ancient Egyptians at the festival of Bubastis.

The fête of Isis was performed with great magnificence. This festival was celebrated at Busiris, to commemorate the death of Osiris, who was reported to have been buried there, as well as in other places, and whose tomb gave the name to the city. It was probably on this occasion that the branch of absinthium, mentioned by Pliny, was carried by the priests of Isis, and dogs were made to head the procession, to commemorate the recovery of his body.

Another festival of Isis was held at harvest-time, when the Egyptians throughout the country offered the first-fruits of the earth, and with doleful lamentations presented them at her altar. On this occasion she seems to answer to the Ceres of the Greeks (as has been observed by Herodotus); and the multiplicity of names she bore may account for the different capacities in which she was worshiped, and remove the difficulty any change appears to present in the wife and sister of Osiris. One similarity is observable between this last and the fête celebrated at Busiris—that the votaries presented their offerings in the guise of mourners; and the first-fruits had probably a direct reference to Osiris, in connection with one of those allegories which represented him as the beneficent property of the Nile.

The festival of Minerva at Sais was performed on a particular night, when every one who intended to be present at the sacrifice was required to light a number of lamps in the open air around his house. They were small vases filled with salt and oil, on which a wick floated, and being lighted, continued to burn all night. They called it the Festival of Burning Lamps. It was not observed at Sais alone; every Egyptian who could not attend in person was required to observe the ceremony of lighting lamps, in whatever part of the country he happened to be; and it was considered of the greatest consequence to do honor to the deity by the proper performance of this rite.

On the sacred Lake of Sais they represented, probably on the same occasion, the allegorical history of Osiris, which the Egyptians deemed the most solemn mystery of their religion, and which Herodotus always mentions with great caution.

The Lake of Sais still exists near the modern town of Sa-el-Hagar, and the walls and ruins of the town stand high above the level of the plain.

Those who went to Heliopolis and to Buto merely offered sacrifices. At Papremis the rites were much the same as in other places; but when the sun went down, a body of priests made certain gestures about the statue of Mars, while others, in greater numbers, armed with sticks, then presented themselves with a view of performing their vows; but no sooner did the priests proceed to draw for-

ward the statue, which had been placed in a small wooden gilded shrine, upon a four-wheeled car, than they were opposed by those in the vestibule, who endeavored to prevent their entrance into the temple. Each party attacked its opponent with sticks, when an affray ensued, which, as Herodotus observes, must, in spite of all the assertions of the Egyptians to the contrary, have been frequently attended with serious consequences, and even with loss of life. There were several festivals in honor of Re, or the Sun. Plutarch states that a sacrifice was performed to him on the fourth day of every month, as related in the books of the genealogy of Horus, by whom that custom was said to have been instituted; and so great was the veneration paid to the sun that they burnt incense to him three times a day—resin at his “first rising, myrrh when in the meridian, and a mixture called kuphi” at the time of setting. The principal worship of Re was at Heliopolis, of which he was the presiding deity; and every city had certain holy days peculiarly consecrated to its patron, besides those common to the whole country.

Another festival in honor of the sun was held on the 30th day of Epiphi, called the birthday of Horus’ eyes, when the sun and moon were in the same right line with the earth; and “on the 22d day of Phaophi, after the autumnal equinox, was a similar one, to which, according to Plutarch, they gave the name of ‘the nativity of the staves of the sun,’ intimating that the sun was then removing from the earth, and as its light became weaker and weaker that it stood in need of a staff to support it. In reference to which notion,” he adds, “about the winter solstice they lead the cow seven times in procession around her temple, calling this the searching after Osiris, that season of the year standing most in need of the sun’s warmth.”

Clemens mentions the custom of carrying four golden figures in the festivals of the gods. They were two dogs, a hawk and an ibis, which, like the number four, had a mysterious meaning. The dogs represented the hemispheres, the hawk the sun and the ibis the moon, but he does not state if this was usual at all festivals or confined to those in honor of particular deities.

In their religious solemnities music was permitted, and even required, as acceptable to the gods, except, if we may believe Strabo, in the temple of Osiris at Abydos. It probably differed much from that used on ordinary festive occasions, and was, according to Apuleius, of a lugubrious character. But this I have already mentioned in treating of the music of the Egyptians.

**V. Origin of the Egyptians.—Population of Egypt.—History.—The King.—Priests.—Their System.—Religion.—Triads.—Dresses and Mode of Life of the Priests.—Soldiers.—Arms.—Chariots.—Ships and Navy.**

Having mentioned those customs particularly connected with the private life of the Egyptians, I proceed to notice their early history, government and institutions, as well as the occupations of the different classes of the community.

The origin of the Egyptians is enveloped in the same obscurity as that of most people, but they were undoubtedly from Asia, as is proved by the form of the skull, which is that of a Caucasian race, by their features, hair and other evidences; and the whole valley of the Nile throughout Ethiopia, all Abyssinia and the coast to the south were peopled by Asiatic immigrations. Nor are the

Kafirs a negro race. Pliny is therefore right in saying that the people on the banks of the Nile, south of Syene, were Arabs (or a Semitic race) “who also founded Heliopolis.”

At the period of the colonization of Egypt the aboriginal population was doubtless small, and the change in the peculiarities of the new-comers was proportionately slight, little variation being observable in the form of the skull from the Caucasian original. Still, there was a change; and a modification in character as well as conformation must occur, in a greater or less degree, whenever a mixture of races has taken place.

I may even venture to suggest that, while the present races in Europe are all traceable to an Asiatic origin, there must there have found at the period of their immigration an indigenous population, which, though small, had its influence upon them. And this conclusion is confirmed by the fact that, while in North America the people who have become its new inhabitants are (as they always will continue to be) essentially European, the Europeans are decidedly not Asiatics, and differ entirely from them in character, habits and appearance. The difference between all Europeans and the Asiatics is as palpable as the identity of the new American race and their European ancestors; and this is readily explained by the Asiatic tribes who peopled Europe having

EGYPTIAN IDOLS.

mixed with the indigenous races of our continent, while the Europeans who colonized America have kept themselves distinct from the aborigines. It is not necessary that the primitive Europeans should, as some have thought, be traceable in the Basques or any other people, and the absorption of all of them is rather to be expected after so many ages.

The Egyptians probably came to the valley of the Nile as conquerors. Their advance was through Lower Egypt southward; and the extraordinary notion that they descended and derived their civilization from Ethiopia has long since been exploded. Equally obsolete is the idea that the Delta occupies a tract once covered by the sea, even after Egypt was inhabited; and the argument derived from Homer’s “Isle of Pharos” having been a day’s sail “from Egyptus” has failed before the fact of his “Egyptus” being the name he applies to the Nile, not to the coast of Egypt, which, being rock in that part, is exactly the same distance from the Pharos now as at any previous period, though the intermediate channel has been filled up by a causeway that unites it to the shore. The oldest towns, too, on the coast of the Delta occupy the same site, close to the sea, as of old; and whatever may be the accumulation of soil, it is counterbalanced by a sinking of the land, from subterranean agency, along the whole of the northern coast of Egypt.

Though a country which played a distinguished part in the early history of the world, its extent

was very limited, Egypt itself consisting merely of the narrow strip of land between the Mediterranean and the first cataract, about seven degrees and a half of latitude. For, with the exception of the northern part about the Delta, the average width of the valley of the Nile, between the eastern and western hills, is only about seven miles, and that of the cultivable land scarcely more than five and a half, being in the widest part ten and three-quarters, and in the narrowest two miles, including the river. And that portion between Edfoo and Asouan, at the first cataract, is still narrower, barely leaving room for any soil, so that those sixty miles do not enter into the general average.

The extent in square miles of the northernmost district, between the pyramids and the sea, is considerable; and that of the Delta alone, which forms a portion of it, may be estimated at nineteen hundred and seventy-six square miles; for though it is very narrow about the apex at the junction of the modern Rosetta and Damietta branches, it gradually widens on approaching the coast, where the base of this somewhat irregular triangle is eighty-one miles. And as much irrigated land stretches on either side east and west of the two branches, the northern district, with the intermediate Delta included, will be found to contain about four thousand five hundred square miles, or double the whole arable land of Egypt, which may be computed at two thousand five hundred and fifty-five square miles, exclusive of the Fyoom, a small province consisting of about three hundred and forty.

The number of towns and villages reported to have stood on this tract, and in the upper parts of the valley of the Nile, appears incredible; and Herodotus affirms that twenty thousand populous cities existed in Egypt during the reign of Amasis. Diodorus calculates eighteen thousand large villages and towns, and states that under Ptolemy Lagus they amounted to upward of thirty thousand, a number which remained even at the period when he wrote, or about forty-four years before our era. But the population was already greatly reduced, and of the seven millions who once inhabited Egypt about three only remained in the time of the historian, so that Josephus must overstate it when, in the reign of Vespasian, he still reckons seven millions and a half in the valley of the Nile, besides the population of Alexandria, which amounted to more than three hundred thousand souls. To such an extent has the population of Egypt diminished that it now scarcely amounts to two millions; but this decrease is not peculiar to Egypt; and other countries, once more remarkable for their populousness, have undergone a similar change, while others, then scantily peopled, now teem with inhabitants.

Besides the inhabitants of the country between the first cataract and the sea, Egypt included those of the neighboring districts under her sway, who greatly increased her power, and in her flourishing days the Ethiopians, Libyans and others united with her and formed part of her permanent dominions.

The produce of the land was doubtless much greater in the earlier periods of its history than at the present day, owing as well to the superior industry of the people as to a better system of government, and sufficed for the support of a very dense population; yet Egypt, if well cultivated, could now maintain many more inhabitants than at any former period, owing to the increased extent of the irrigated land; and if the ancient

Egyptians enclosed those portions of the uninhabited edge of the desert which were capable of cultivation, the same expedient might still be resorted to, and a larger proportion of soil now overflowed by the rising Nile offers additional advantages. That the irrigated part of the valley was much less extensive than at present, at least wherever the plain stretches to any distance east and west, or to the right and left of the river, is evident from the fact of the alluvial deposit constantly encroaching in a horizontal direction upon the gradual slope of the desert; and as a very perceptible elevation of the river’s bed, as well as of the land of Egypt, has always been going on, it requires no argument to prove that a perpendicular rise of the water must cause it to flow to a greater distance over an open space to the east and west.

Thus the plain of Thebes, in the time of Amnoph III., or about fourteen hundred years before our era, was not more than two-thirds of its present breadth; and the statues of that monarch, around which the alluvial mud has accumulated to the height of nearly seven feet, are based on the sand that once extended some distance before them. This at once explains why the ancient Egyptians were constantly obliged to raise mounds round the old towns to prevent their being overwhelmed by the inundation of the Nile, the increased height of its rise which took place after a certain number of years keeping pace with the gradual elevation of the bed of the river. How erroneous, then, is it to suppose that the drifting sands of the encroaching desert threaten the welfare of this country or have in any way tended to its downfall! and how much more reasonable is it to ascribe the degraded condition to which Egypt is reduced to causes of a far more baneful nature—foreign despotism, the insecurity of property and the effects of that old age which is the fate of every country as well as of every individual to undergo! For though the sand has encroached in a few places on the west side, from the Libyan desert, the general encroachment is vastly in favor of the alluvial deposit of the Nile.

Besides the numerous towns and villages in the plain, many were prudently placed by the ancient Egyptians on the slope of the desert, at a short distance from the irrigated land, in order not to occupy more than was necessary of the soil so valuable for its productions, and frequently with a view of encouraging some degree of cultivation in the desert plain, which, though above the reach of the inundation, might be irrigated by artificial ducts or by water raised from inland wells. Mounds and ruined walls still mark the sites of those villages in different parts of Egypt; and in a few instances the remains of magnificent temples or the authority of ancient authors attest the existence of large cities in similar situations. Thus Abydos, Athribis, Tentyris, parts of Memphis, and Oxyrhynchus stood on the edge of the desert, and the town that once occupied the vicinity of Kasr Kharoon, at the western extremity of the Fyoom, was far removed from the fertilizing influence of the inundation. This province, formerly the nome of Crocodilopolis, or Arsinoë, was indebted entirely for its fertility to artificial irrigation, and a supply of water was conducted to it by a canal from the Nile and kept up all the year in the immense reservoir made there by King Meris.

The Egyptians seem at first to have had a hierarchical form of government, which lasted a long time, until Menes was chosen king, probably be-

tween two thousand and three thousand years before our era. Menes was of This, in Upper Egypt, and at his death, or that of his son, the country was divided into the southern and northern kingdoms, a Thinite and Memphite dynasty ruling at the same time. Other independent kingdoms or principalities also started up and reigned contemporaneously in different parts of Egypt. The Memphite kings of the third and fourth, who built the pyramids, and Osirtasen I., the leader of the twelfth, or second Theban, dynasty, were the most noted among them. The latter was the original Sesostris; but his exploits having been, many generations afterward, eclipsed by those of Remeses the Great, they were transferred, together with the name of Sesostris, to the later and more glorious conqueror, and Remeses II. became the traditional Sesostris of Egyptian history. Osirtasen, who seems to have ruled all Egypt as lord paramount, ascended the throne about 2080 B.C.; but the contemporaneous kingdoms continued till a new one arose which led to the subjugation of the country and to the expulsion of the native princes from Lower, and apparently for a time from Upper, Egypt also, when they were obliged to take refuge in Ethiopia. The dominion of the Shepherd kings lasted upward of half a century. At length, about 1530 B.C., Amosis, the leader of the eighteenth dynasty, having united in his own hands the previously divided power of the kingdom, drove the Shepherds out of the country, and Egypt was thenceforth governed by one king,

EGYPTIAN FRUIT BASKETS.

bearing the title of “Lord of the Upper and Lower Country.” Toward the latter end of this dynasty some “stranger kings” obtained the sceptre, probably by right of marriage with the royal family of Egypt—a plea on which the Ethiopian princes and others obtained the crown at different times—and Egypt again groaned under a hateful tyranny. They even introduced very heretical changes into the religion; they expelled the favorite god Amun from the Pantheon and introduced a sun worship unknown in Egypt. Their rule was not of very long duration; and having been expelled, their monuments, as well as every record of them, were purposely defaced.

The kings of the eighteenth dynasty had extended the dominion of Egypt far into Asia and the interior of Africa, as the sculptures of the Thothmes, the Amunophs and others show; but Sethos and his son Remeses II., of the nineteenth, who reigned from about 1370 to 1270 B.C., advanced them still farther. The conquests of the Egyptians had been pushed into Mesopotamia as early as the reign of Thothmes III., about 1445 B.C.; the strong fortress of Carhemish remained in their hands nearly all the time till the reign of Necho; and whenever the Egyptians boasted in after ages of the power of their country, they referred to the glorious era of the eighteenth and nineteenth dynasties. Remeses III., of the twentieth dynasty, also carried his victorious arms into Asia and Africa, about a century after his namesake, enforcing the tributes previously levied by Thothmes III. and his successors from many countries that formed part of the Assyrian empire.

But little was done by the kings who followed him until the time of Sheshonk (Shishak), who pillaged the temple of Jerusalem and laid Judea under tribute, B.C. 971. The power of the Pharaohs was on the decline, and Assyria, becoming the dominant kingdom, threatened to wrest from Egypt all the possessions she had obtained during a long career of conquest. Tirhaka (Tehrak), who with the Sabacos composed the twenty-fifth Ethiopian dynasty, checked the advance of the Assyrians, and forcing Sennacherib to retire from Judea, restored the influence of Egypt in Syria. The Saite kings of the twenty-sixth dynasty continued to maintain it, though with doubtful success, until the reign of Necho, when it was entirely lost; for soon after Necho had defeated and killed Josiah, king of Judah, the “king of Babylon” “smote” his army “in Carhemish,” and took from the Egyptians “all that pertained to the king of Egypt,” from the boundary torrent on the Syrian confines “unto the river Euphrates.”

No permanent conquests of any extent were henceforth made, “out of his land,” by the Egyptian king; and though Apries sent an expedition against Cyprus, defeated the Syrians by sea, besieged and took Gaza and Sidon, and recovered much of the influence in Syria which had been taken from Egypt by Nebuchadnezzar, these were only temporary successes; the prestige of Egyptian power had vanished; it had been found necessary to employ Greek mercenaries in the army; and in the reign of Amasis, another still greater power than Assyria, or Babylon, arose to threaten and complete the downfall of Egypt. In the reign of his son Psammenitus, B.C. 525, Cambyses invaded the country, and Egypt submitted to the arms of Persia.

Several attempts were made by the Egyptians to recover their lost liberty; and at length, the Persian garrison having been overpowered, and the troops sent to reconquer the country having been defeated, the native kings were once more established (B.C. 414). These formed the twenty-eighth, twenty-ninth and thirtieth dynasties; but the last of the Pharaohs, Nectanebo II., was defeated by Oehus, or Artaxerxes III., B.C. 340, and Egypt again fell beneath the yoke of Persia. Eight years after this, Alexander the Great liberated it from the Persians, and Ptolemy and his successors once more erected it into an independent kingdom, though governed by a foreign dynasty which lasted until it became a province of the Roman empire.

Though far better pleased with the rule of the Macedonian kings than of the Persians, the Egyptians were never thoroughly satisfied to be subject to foreigners whose manners and customs were so different from their own; and however much the Ptolemies courted their good will, consulted their prejudices and flattered their priesthood, they never ceased to be discontented, and occasionally showed their impatience by sudden and ill-judged outbreaks. To the Romans they were equally troublesome; but they had then ceased to be the Egyptians of bygone days, and oppression under the Persians, and loss of independence, had changed their character, and introduced the bad qualities of cunning, deceit, perverseness and insubordination, which a shrewd and vain people often have recourse to as their offensive and defensive weapons against an unwelcome master.

Proud of the former greatness of their nation, they could never get over the disgrace of their fallen condition; and so strong was their bias toward their own institutions and ancient form of

government that no foreign king whose habits differed from their own could reconcile them to his rule. For no people were more attached to their own country, to their own peculiar institutions and to their own reputation as a nation; and the sentiments of attachment that their ancestors had always felt for their kings, never lost an opportunity of displaying themselves, as was shown by the repeated and almost hopeless efforts they made to expel the Persians, as well as by the delight they manifested in once more re-establishing a native dynasty.

The king was to them the representative of the deity; his name, Phrah (Pharaoh), signifying "the sun," pronounced him the emblem of the god of light, and his royal authority was directly derived from the gods. He was the head of the religion and of the state; he was the judge and lawgiver; and he commanded the army and led it to war. It was his right and his office to preside over the sacrifices and pour out libations to the gods; and whenever he was present, he had the privilege of being the officiating high priest.

The sceptre was hereditary; but, in the event of a direct heir failing, the claims for succession were determined by proximity of parentage, or by right of marriage. The king was always either of the military or priestly class, and the princes also belonged to one of them. The army or the priesthood were the two professions followed by all men of rank, the navy not being an exclusive service; and the "long ships of Sesostris" and other kings were commanded by generals and officers taken from the army, as was the custom of the Turks and some others in modern Europe to a very recent time. The law too was in the hands of the priests, so that there were only two professions. Most of the kings, as might be expected, were of the military class, and during the glorious days of Egyptian history the younger princes generally adopted the same profession. Many held offices also in the royal household, some of the most honorable of which were fan-bearers on the right of their father, royal scribes, superintendents of the granaries or of the land, and treasurers of the king; and they were generals of the cavalry, archers and other corps, or admirals of the fleet.

Princes were distinguished by a badge hanging from the side of the head, which enclosed or represented the lock of hair emblematic of a "son," in imitation of the youthful god "Horus, the son of Isis and Osiris," who was held forth as the model for all princes and the type of royal virtue. For though the Egyptians shaved the head, and wore wigs and other coverings to the head, children were permitted to leave certain locks of hair; and if the sons of kings, long before they arrived at the age of manhood, had abandoned this youthful custom, the badge was attached to their head as a mark of their rank as princes, or to show that they had not, during the lifetime of their father, arrived at kinghood—on the same principle that a Spanish prince, of whatever age, continues to be styled an "infant."

When the sovereign was a military man, it was his duty, as well as his privilege, on ascending the throne, to be instructed in the mysteries of the religion and the various offices of a pontiff. He learnt all that related to the gods, the service of the temple, the laws of the country and the duties of a king; and in order to prevent any intercourse with improper persons, who might instill into his mind ideas unworthy of a prince, it was carefully provided that no slave or hired servant should hold any office about his person, and that the

children of the first families who had arrived at man's estate, and were remarkable for their ability and piety, should alone be permitted to attend him, from the persuasion that no monarch gives way to evil passions unless he finds those about him ready to serve as instruments to his caprices, and to encourage his excesses. His conduct and mode of life were regulated by prescribed rules, and care was taken to protect the community from the caprices of an absolute monarch, laws being laid down in the sacred books for the order and nature of his occupations. He was forbidden to commit excesses; even the kind and quality of his food were settled with precision; and he was constantly reminded of his duties, both in public and in private. At break of day public business commenced; all the epistolary correspondence was examined and despatched; the ablutions for prayer were then performed, and the monarch, having put on his robes of ceremony, and attended by proper officers with the insignia of royalty, repaired to the temple to superintend the customary sacrifices to the gods of the sanctuary. The victims being brought to the altar, it was usual for the high-priest to place himself close to the king, while the whole congregation present on the occasion stood round at a short distance from them, and to offer up prayers for the monarch, beseeching the gods to bestow on him "health, victory, power and all other blessings," and to "establish the kingdom unto him and his children for ever." His qualities were then separately enumerated, and the high-priest particularly noticed his piety towards the gods and his conduct toward men. He lauded his self-command, his justice, his magnanimity, his love of truth, his munificence and generosity, and, above all, his entire freedom from envy and covetousness. He exalted his moderation in awarding the most lenient punishment to those who had transgressed, and his benevolence in requiting with unbounded liberality those who had merited his favors. These and other similar encomiums having been passed on the character of the monarch, the priest proceeded to review the general conduct of kings, and to point out those faults which were the result of ignorance and misplaced confidence. And it is a curious fact that this ancient people had already adopted the principle that the king "could do no wrong," and while he was exonerated from blame, every curse and evil was denounced against his ministers, and those advisers who had given him injurious counsel. The idea, too, of the king "never dying" was contained in their common formula of "life having been given him for ever."

Love and respect were not merely shown to the sovereign during his lifetime, but were continued to his memory after his death; and the manner in which his funeral obsequies were celebrated tended to show that, though their benefactor was no more, they retained a grateful sense of his goodness and admiration for his virtues. And what, says the historian, can convey a greater testimony of sincerity, free from all color of dissimulation, than the cordial acknowledgment of a benefit, when the person who conferred it no longer lives to witness the honor done to his memory?

On the death of every Egyptian king, a general mourning was instituted throughout the country for seventy days, hymns commemorating his virtues were sung, the temples were closed, sacrifices were no longer offered, and no feasts or festivals were celebrated during the whole of that period. The people tore their garments, and covering their heads with dust and mud, formed a procession of two hundred or three hundred persons of

both sexes, who met twice a day in public to sing the funeral dirge. A general fast was also observed, and they neither allowed themselves to taste meat nor wheat bread, and abstained, moreover, from wine and every kind of luxury.

In the mean time the funeral was prepared, and on the last day the body was placed in state within the vestibule of the tomb, and an account was then given of the life and conduct of the deceased.

The Egyptians are said to have been divided into castes similar to those of India; but though a marked line of distinction was maintained between the different ranks of society, they appear rather to have been classes than castes, and a man did not necessarily follow the precise occupation of his father. Sons, it is true, usually adopted the same profession or trade as their parent, and the rank of each depended on his occupation; but the children of a priest frequently chose the army for their profession, and those of a military man could belong to the priesthood.

The priests and military men held the highest position in the country after the family of the king, and from them were chosen his ministers and confidential advisers, "the wise counselors of Pharaoh," and all the principal officers of state.

The priests consisted of various grades—as the chief priests or pontiffs; the prophets; judges; sacred scribes; the sphragistæ, who examined the victims for sacrifice; the stolistæ, dressers or keepers of the sacred robes; the bearers of the shrines, banners and other holy emblems; the sacred sculptors, draughtsmen and masons; the embalmers; the keepers of sacred animals; and various officers employed in the processions and other religious ceremonies; under whom were the beadles and inferior functionaries of the temple. There was also the king's own priest; and the royal scribes were chosen either from the sacerdotal or the military class.

Women were not excluded from certain offices in the temple; there were priestesses of the gods, of the kings and queens, and they had many employments connected with religion. They even attended in some religious processions, as well as at the funeral of a deceased relation, and an inferior class of women acted as hired mourners on this occasion. The queens, indeed, and other women of high rank held a very important post in the service of the gods; and an instance occurs of the title "pourer out of libations" being applied to a queen, which was only given to the priests of the altar. They usually accompanied their husbands as they made offerings in the temple, holding two sistra or other emblems before the statue of the deity. This was the office of those "holy women" whose duties in the temple of the Theban Jupiter led to the strange mistake respecting the "Pellices Jovis," or Pallacides, of Amun; but its dignity and importance is sufficiently shown by its having been filled by women of the first families in the country and by the wives and daughters of the kings. They were of various grades; the highest of them were the queens, princesses and the wives and daughters of the high-priests, who held the sistra. Others praised the deity with various instruments, and from being often called "minstrels" of the god their office seems to have been particularly connected with the sacred music of the temple. The institution may have been a sort of college or convent; but as married women, and even young children, might belong to it, they were evidently not immured within the precincts of any place resembling a modern nunnery; and if they were obliged to

take certain vows and attend to the duties attached to their honorable office, nothing prevented their performing all others of a public and social kind. It was not forbidden to strangers naturalized in Egypt to belong to it, and one instance occurs on a papyrus of a "foreign" woman having the same holy office in the service of Amun.

The priests enjoyed great privileges. They were exempt from taxes, they consumed no part of their own income in any of their necessary expenses, and they had one of the three portions into which the land of Egypt was divided free from all duties. They were provided for from the public stores, out of which they received a stated allowance of corn and all the other necessities of life; and we find that when Pharaoh, by the advice of Joseph, took all the land of the Egyptians in lieu of corn, the priests were not obliged to make the same sacrifice of their landed property, nor was the tax of the fifth part of the produce entailed upon it, as on that of the other people.

In the sacerdotal as among the other classes, a great distinction existed between the different grades, and the various orders of priests ranked according to their peculiar office. The chief or high priests held the first and most honorable station, but the one who offered sacrifice and libation in the temple had the highest post. He appears to have been called the prophet, and his title in the hieroglyphic legends is "Sem." He superintended the sacrifice of the victims, the processions of the sacred boats or arks, the presentation of the offerings at the altar and at funerals, and the anointing of the king, and the same office was held by the sovereign when he presented incense and libation to the gods. He was marked by a peculiar dress—a leopard skin fitting over his linen robes; and the same was worn by the king on similar occasions.

The duty of the prophet was to be fully versed in all matters relating to religion, the laws, the worship of the gods and the discipline of the whole order of the priesthood. He presided over the temple and the sacred rites, and directed the management of the priestly revenues. In the processions he bore the holy hydra or vase, which the king also carried on similar occasions; and when any new regulations were introduced in matters of religion, the prophets with the chief priests headed the conclave.

It was the great privilege of the priests to be initiated into the mysteries, though they were not all admitted indiscriminately to that honor; and "the Egyptians neither entrusted them to every one, nor degraded the secrets of divine matters by disclosing them to the profane, reserving them for the heir-apparent of the throne and for such priests as excelled in virtue and wisdom." The mysteries were also distinguished into the greater and the less, the latter preparatory to a fuller revelation of their secrets. This, and the superior knowledge they possessed, gave the priests a great ascendancy over the rest of the people; and though all might enjoy the advantages of education, some branches of learning were reserved for particular persons.

Diodorus says, "The children of the priests are taught two different kinds of writings, what is called the sacred and the more general, and they pay great attention to geometry and arithmetic. For the river, changing the appearance of the country very materially every year, causes many and various discussions among neighboring proprietors about the extent of their property; and it would be difficult for any person to decide upon their

claims without geometrical proof founded on actual observation.

They were not only scrupulous about the quantity, but the quality, of their food, and certain viands were alone allowed to appear at their table. Above all meats, that of swine was particularly obnoxious, and fish both of the sea and the Nile was forbidden them, though so generally eaten by the rest of the Egyptians. And indeed, on the ninth of the month Thoth, when a religious ceremony obliged all the people to eat a fried fish before the door of their houses, the priests were not even then expected to conform to the general custom, and they were contented to substitute the ceremony of burning theirs at the appointed time. Beans they held in utter abhorrence; and Herodotus affirms that "beans were never sown in the country; and if they grew spontaneously, they neither formed an article of food, nor even if cooked were ever eaten by the Egyptians." But this aversion, which originated in a supposed sanitary regulation, and which was afterward so scrupulously adopted by Pythagoras, did not prevent their cultivation, nor were the people obliged to abstain from them, and they were allowed to eat them in common with other pulse and vegetables which abounded in Egypt. Not only beans, but lentils, peas, garlic, leeks and onions, were forbidden to the priests, who were not permitted to eat them under any pretence. The prohibition, however, regarding them, as well as certain meats, was confined to the sacerdotal order, and even swine, if we may believe Plutarch, were not forbidden to the other Egyptians at all times, "for those who sacrificed a sow to Typho once a year at the full moon afterward ate its flesh."

It is a remarkable fact that onions, as well as the first fruits of their lentils, were admitted among the offerings placed upon the altars of the gods, together with gourds, figs, garlic, beef, goose or wild fowl, grapes, wine and the head of the victim. Onions were generally bound in a single bundle, seldom presented singly, and were sometimes arranged in a hollow circular bunch, which, descending upon the table or altar, enveloped and served as a cover to whatever was placed upon it. And the privilege of presenting them in this form appears to have been generally enjoyed by that class of priests who wore the leopard skin dress.

In general, the priests abstained from most sorts of pulse, from mutton and swine's flesh, and in their more solemn purifications even excluded salt from their meals, but some vegetables were considered lawful food, being remarkable for their wholesome nature, and many of the leguminous productions and fruits of Egypt represented on the tables placed before priests as part of the inferior offerings to the dead must have been acceptable to them while living.

In their ablutions, as in their diet, they were equally severe, and they maintained the strictest observance of numerous religious customs. They bathed twice a day and twice during the night, and some who pretended to a more rigid observance of religious duties washed themselves with water which had been tasted by the ibis, supposed in consequence to bear an unquestionable evidence of purity; and shaving the head and the whole body every third day, they spared no pains to promote the cleanliness of their persons, without indulging in the bath as a luxury. A grand ceremony of purification took place, previous and preparatory to their fasts, many of which lasted from seven to forty-two days, and sometimes even a longer period, during which time they abstained

entirely from animal food, from herbs and vegetables and from all extraordinary indulgences.

These "numerous religious observances," as well as the dependence of all classes upon them for instruction, and the possession of secrets known only to themselves, gave them that influence they so long possessed; but they had obtained a power which, while it raised their own class, could not fail to degrade the rest of the people, who, allowed to substitute superstition for religion and credulity for belief, were taught to worship the figures of imaginary beings, while they were excluded from a real knowledge of the deity and of those truths which constituted "the wisdom of the Egyptians." It was to liberate mankind from the dark superstition in which the selfish views of the priesthood of those days had kept the world that Moses received his grand and important mission. Men were by him taught to offer their prayers to the Deity, without the necessity of dependence on a frail mortal themselves for his pretended intercession with One equally accessible to all; and they learnt that heaven was not to be purchased by money paid to the cupidity of a privileged class, whose assumed right of pronouncing against a man his exclusion from future happiness was an unwarrantable assumption of divine authority and an attempt to fabricate a judgment in this world which alone belonged to the Deity.

Privilege and power the priests certainly did enjoy, when they could reach a man after his death by refusing him a passport to eternal happiness, and could still force his family to pay them for pretended prayers for their deceased relative, and nothing could be better devised to enforce obedience to their will. It must, however, be allowed that they deserved credit for setting a good example by their abstinence and moral conduct; their wisdom was shown by their tact and good policy in giving no occasion for scandal and discontent, and they did not affect to be superior to the world by disregarding all social ties. Thus, while performing the affectionate duties of fathers and husbands, they still kept up their influence over society, and ruled a flourishing country without prostrating its resources or checking the industry of the inhabitants; and though we may censure an artful piece of priestcraft, we must remember that it was established long before mankind enjoyed the advantages of a thorough revelation.

The long duration of their system, and the feeling with which it was regarded by the people, may also plead some excuse for it; and while the function of judges and the administration of the laws gave them unusual power, they had an apparent claim to those offices from having been the framers of the codes of morality and of the laws they superintended. Instead of setting themselves above the king, and making him succumb to their power, like the unprincipled Ethiopian pontiff, they acknowledged him as the head of the religion and the state; nor were they above the law; no one of them, nor even the king himself, could govern according to his own arbitrary will; his conduct was amenable to an ordeal of his subjects at his death, the people being allowed to accuse him of misgovernment and to prevent his being buried in his tomb on the day of his funeral.

But though the regulations of the priesthood may have suited the Egyptians in early times, certain institutions being adapted to men in particular states of society, they erred in encouraging a belief in legends they knew to be untrue, instead

of purifying and elevating the religious views of the people, and committed the fault of considering their unbending system perfect and suited to all times. Abuses therefore crept in; credulity, already shamefully encouraged, increased to such an extent that it enslaved the mind and paralyzed men's reasoning powers; and the result was that the Egyptians gave way to the grossest superstitions, which at length excited universal ridicule and contempt.

The religion of the Egyptians will be described at length in another section. All that need be said here is to state general principles. The fundamental doctrine was the unity of the deity, but this unity was not represented, and he was known by a sentence or an idea, being, as Jamblichus says, "worshiped in silence." But the attributes of this being were represented under positive forms; and hence arose a multiplicity of gods that engendered idolatry, and caused a total misconception of the real nature of the deity in the minds of all who were not admitted to a knowledge of the truth through the mysteries. The division of God into his attributes was in this manner. As soon as he thought to have any reference to his works or to man, he ceased to be quiescent; he became an agent; and he was no longer the one, but distinguishable and divisible, according to his supposed character, his actions and his in-

SOWING AND PLOUGHING-IN THE GRAIN.

fluence on the world. He was then the Creator, the divine goodness (or the abstract of good), wisdom, power and the like; and as we speak of him as the Almighty, the Merciful, the Everlasting, so the Egyptians gave to each of his various attributes a particular name. But they did more; they separated them, and to the uninitiated they became distinct gods. As one of these the deity was Amun, probably the divine mind in operation, the bringer to light of the secrets of its hidden will; and he had a complete human form, because man was the intellectual animal and the principal design of the divine will in the creation. As the "Spirit of God" that moved on the face of the waters, the deity was Nef, Nu or Num, over whom the asp, the emblem of royalty and of the good genius, spread itself as a canopy while he stood in his boat. As the Creator he was Pthah, and in this character he was accompanied by the figure of truth, a combination of it with the creative power which recalls this sentence in the Epistle of St. James: "Of his own will begat he us with the word of truth." As the principle of generation he was Khem, called "the father of his own father"—the abstract idea of father, as the goddess Maut was that of mother—who consequently "proceeded from herself;" and other attributes, characters and offices of the deity held a rank according to their closer or more distant relation to his essence and operations.

In order to specify and convey an impression

of these abstract notions to the eyes of men, it was thought necessary to distinguish them by some fixed representation; and the figures of Pthah, Osiris, Amun, Maut, Neith, and other gods or goddesses, were invented as the signs of the various attributes of the deity. But it did not stop there; and as the subtlety of philosophical speculation entered into the originally simple theory, numerous subdivisions of the divine nature were made; and at length anything which appeared to partake of or bear analogy to it was admitted to a share of worship. Hence arose the various grades of deities; and they were known as the gods of the first, second and third orders. But Herodotus is quite right in saying that the Egyptians gave no divine honors to heroes.

The Egyptian figures of gods were only vicarious forms, not intended to be looked upon as real personages, and no one was expected to believe that a being could exist with the head of an animal joined to a human body; but credulity will always do its work; the uneducated failed to take the same view of them as the initiated portion of the community; and mere emblems soon assumed the importance of the divine personages to which they belonged. These abuses were the natural consequences of such representations, and experience has often shown how readily the mind may be drawn away from the most spiritual worship to a

superstitious veneration for images, whether at first intended merely to fix the attention, or to represent some legendary tale or an abstract idea. The religion of the Egyptians was a pantheism rather than a polytheism, and their admitting the sun and moon to divine worship may rather be ascribed to this than to any admixture of Sabæism. The sun was thought to possess much of the divine influence in its vivifying power and its various other effects; and it was not only one of the grandest works, but was one of the direct agents, of the deity. The moon was in another similar capacity, and as the regulator of time and the messenger of heaven was figured as the Ibis-headed Thoth, the god of letters and the deity who registered man's actions and the events of his life.

They not only attributed to the sun and moon, and to other supposed agents, a participation in the divine essence, but even stones and plants were thought to have some portion of it; and certain peculiarities were often discovered in the habits or appearance of animals, which were supposed to bear a resemblance to the divine character. Even a king was sometimes represented making offerings to another figure of himself in the temples, signifying that his human did homage to his divine nature.

They also represented the same deity under different names and characters; Isis, from the number of her titles, was called "Myrionymus," or

"with ten thousand names." A god or goddess was also worshiped as residing in some particular place, or as gifted with some peculiar quality; like the Minerva Polias, and various Minervas, the several Venuses, the Jupiters and others; and modern custom has made a variety of Madonnas from the one Virgin.

Among other remarkable theories of the Egyptians was the union of certain attributes into triads, the third number of which proceeded from the other two; and in every city one of these combinations was the triad of the place. The first members were not always of the first order of gods, nor was it necessary they should be; and an attribute of the deity might be combined with some abstract idea to form a result.

This notion had been held by them at the earliest periods of the Egyptian monarchy; it is, therefore, an anachronism to derive this, and other Egyptian doctrines, from the peninsula of India, in which part of the country the Hindoos did not settle till long after the age of the eighteenth dynasty, when they gradually dispossessed, and confined to certain districts, those original populations who are supposed to be of Seythian origin; and if there is any connection between the two religions of Egypt and India, this must be ascribed to the period before the two races left Central Asia.

Certain innovations were introduced in early days into the religion of Egypt, but they were partial, and such as might be expected from the progress of superstition; and if instances occur of sudden and positive changes, there is reason to believe they were brought about by the influence of strangers; as the banishment of Amun from the Pantheon for a short time, through the usurpation of the stranger kings, toward the end of the eighteenth dynasty.

The expulsion of Seth, or Evil, seems also to have been the result of foreign influence. The children of Seb and Netpe (Saturn and Rhea) were Osiris, Seth, Aroeris, Isis and Nephtys. Osiris and Seth (or Typho) were brothers; the former represented "good," the latter "evil." In early times they were both adored as gods throughout Upper and Lower Egypt, and were considered part of the same divine system. For evil had not yet been confounded with sin or wickedness; and this last was figured as Apop (Apophis) "the giant," who, in the form of the "great serpent," the enemy of gods and of mankind, was pierced by the spear of Horus, Atmoo and other deities. Osiris and Seth were even placed synonymously in the names of some kings at the same period, and on the same monument; the latter was figured instructing the monarch in the use of the bow, being a cause of evil; and Seth's pouring from a vase, in conjunction with Horus, the emblems of life and power over the newly-crowned king, was intended to show that good and evil affected the world equally, as a necessary condition of human existence.

As soon as the change was resolved upon, the name and figure of the square-eared Seth were everywhere hammered out; he was braided as the enemy of Osiris—not merely opposed as a necessary consequence, but as if it were from his own agency, as Ahriman to Ormuzd, or the Manichæan Satan to God. The exact period when he was "expelled from Egypt" is uncertain. It may have been at the time of the twenty-second dynasty; and if Seshonk (Shishak), and the other kings of that dynasty, were Assyrians, as Mr. Birch supposes, the reason of it may be readily explained.

The conflict of wickedness and goodness was not, however, a novel theory with the Egyptians, as is shown by the most ancient representations of the snake-giant Apop, the symbol of sin; nor was the peculiar office of Osiris a late introduction, after Seth (or Typho) had been banished from the Pantheon. The unphilosophical innovation was in Seth being converted from evil into sin, and made the enemy instead of the necessary antagonistic companion of good.

The peculiar character of Osiris, his coming upon earth for the benefit of mankind, with the titles of "manifestor of good and truth," his being put to death by the malice of the evil one, his burial and resurrection and his becoming the judge of the dead are the most interesting features of the Egyptian religion. This was the great mystery; and this myth and his worship were of the earliest times, and universal in Egypt. He was to every Egyptian the great judge of the dead; and it is evident that Moses abstained from making any very pointed allusion to the future state of man, because it would have recalled the well-known Judge of the dead, and all the funeral ceremonies of Egypt, and have brought back the thoughts of the "mixed multitude," and of all whose minds were not entirely uncontaminated by Egyptian habits, to the very superstitions from which it was his object to purify them. Osiris was to every Egyptian the great deity of a future state; and though different gods enjoyed particular honors in their respective cities, the importance of Osiris was admitted throughout the country.

Certain cities and districts were appropriated to certain gods, who were the chief deities of the place; and while Amun had his principal temple at Thebes, Memphis was the great city of Pthah, as Heliopolis of Re or the Sun, and other cities of other divinities, no two neighboring districts or chief cities being given to the same god. But although Amun was the great god of Thebes, as Pthah was of Memphis, it is not to be supposed that their separate worship originated in two parts of Egypt, or that the religions of the upper and lower country were once distinct and afterward united into one. They were members of the same Pantheon.

"A balance of power," as of honor, was thus established for the principal gods—minor deities being satisfied with towns of minor importance. Other divinities shared the honors of the sanctuary; and different triads or single gods were admitted to a post in the various temples of Egypt: thus Pthah had a suitable position in the Theban adytum; Amun and Nef, or the triads of Thebes and of the cataracts, of which they were respectively the first persons, were figured on the temples at Memphis; and none were necessarily excluded, provided room could be found for them, except purely local deities. Those of a neighboring town were more readily admitted to a place among the contemplar gods; it was at least a neighborly compliment, and it suited the convenience of the priests quite as much as the gods themselves. Many minor divine beings, whose worship was ordained for some particular object, and certain emblems or sacred animals were admitted in one and excluded from another place. Thus the reverence for the crocodile, encouraged in some inland towns, in order that the canals might be properly kept up, was found unnecessary in places by the riverside, where he was probably held in abhorrence; and the same animal, which was highly regarded in one district, was a symbol of evil in another.

Still all was part of the same system; and however changed and perverted it afterward became, the original composition of the Pantheon dates from the most remote periods of Egyptian history; and the few innovations introduced in early times occasioned no real alteration in the principle of the religion itself. Changes certainly took place in the speculations of the Egyptians, as in their mode of representing them; and some foreign deities were occasionally admitted into their Pantheon; yet the original progress of their ideas may readily be traced from the one god to the deity in action under various characters, as well as numerous abstract ideas made into separate gods. Of these last, two are particularly worthy of notice from being common to many other religions, which have treated them according to their peculiar views. They are the Nature gods, sometimes represented as the sun and earth by people who were inclined to a physical rather than an ideal treatment of the subject, but which the speculative Egyptians considered as the vivifying or generative principle, the abstract idea of "father," and the producing principle of nature or "mother;" both consequent upon the creative action. Of these, the latter was originally (as one of the great deities) only the abstract idea of "mother," Maut, whose emblem was a vulture; and if another—Isis (sometimes identified with Athor, the Egyptian Venus), holding the

child Horus, her offspring—was a direct representation of the maternal office, she may be considered an offset of the myth. Two other goddesses also belonged to it, the one of parturition (Lucina), and the other of gestation; the former connected with the maternal idea by having the vulture as her emblem, the latter related to Isis as the "mother of the child;" and thus the analogies and relationships of various deities were kept up on one side, while on the other the subdivisions and minute shades of difference increased the number and complication of these ideal beings. Thus too the relationship of deities in many mythologies may be recognized, representing as they do the same original idea; and the Alitta or Mylitta—i. e., "the child-bearing" goddess—of the Arabs and Assyrians, the Anaitis of Persia, the Syrian Astarte, and Venus-Urania, Cybele and "the queen of heaven," the "mother of the child" found in Western Asia, Egypt, India, ancient Italy, and even in Mexico, the prolific Diana of Ephesus and others, are various characters of the nature goddess.

The dress of the priests was simple, but the robes of ceremony were grand and imposing, and besides the leopard-skin dress of the prophets were other peculiarities of costume that marked their respective grades. Necklaces, bracelets, garlands and other ornaments were also put on during the religious ceremonies in the temple. The material of their robes was linen, but they sometimes wore cotton garments, and it was lawful to have an upper one of wool, as a cloak, though they were not permitted to enter a temple with this last, nor to wear woolen garments next the skin. Nor could anybody be buried in bandages of that material.

Next in rank to the priests were the military. To them was assigned one of the three portions into which the land of Egypt was divided by an edict of Sesostris, in order, says Diodorus, "that those who exposed themselves to danger in the

field might be more ready to undergo the hazards of war, from the interest they felt in the country as occupiers of the soil, for it would be absurd to commit the safety of the community to those who possessed nothing which they were interested in preserving." Each soldier, whether on duty or no, was allowed twelve arouræ of land (a little more than eight English acres), free from all charge; and another important privilege was that no soldier could be east into prison for debt. Boechoris, the framer of this law, considering that it would be dangerous to allow the civil power the right of arresting those who were the chief defence of the state. They were instructed from their youth in the duties and requirements of soldiers, and trained in all the exercises that fitted them for an active career, and a sort of military school appears to have been established for the purpose.

Each man was obliged to provide himself with the necessary arms, offensive and defensive, and everything requisite for a campaign, and he was expected to hold himself in readiness for taking the field when required or for garrison duty. The principal garrisons were posted in the fortified towns of Pelusium, Marea, Eileithyas, Hieraconpolis, Syene, Elephantine and other intermediate places; and a large portion of the army was frequently called upon by their warlike mon-

SOWING AND PLOUGHING-IN THE GRAIN.

archs to invade a foreign country, or to suppress those rebellions which broke out in the conquered provinces.

Besides the native corps, they had mercenary troops, who were enrolled either from the nations in alliance with the Egyptians, or from those who had been conquered by them. They were divided into regiments, sometimes disciplined in the same manner as the Egyptians, though allowed to retain their arms and costume; but they were not on the same footing as the native troops; they had no land, and merely received pay, like other hired soldiers. Strabo speaks of them as mercenaries, and the million of men he mentions must have included these foreign auxiliaries. When formally enrolled in the army they were considered a part of it, and accompanied the victorious legions on their return from foreign conquest, and they sometimes assisted in performing garrison duty in Egypt in the place of those Egyptian troops which were left to guard the conquered provinces.

At Jacob's funeral a great number of chariots and horsemen are said to have accompanied Joseph; horsemen as well as chariots pursued the Israelites on their leaving Egypt; the song of Moses mentions in Pharaoh's army the "horse and his rider;" Herodotus also represents Amasis "on horseback" in his interview with the messenger of Apries; and Diodorus speaks of twenty-four thousand horse in the army of Sesostris, besides twenty-seven thousand war chariots.

Shishak, the Egyptian Sheshonk, had with him sixty thousand horsemen when he went to fight against Jerusalem; and mention is made of the Egyptian cavalry in other parts of sacred and profane history, as well as in the hieroglyphics, which show that the "command of the cavalry" was a very honorable and important post, and generally held by the most distinguished of the king's sons.

The Egyptian infantry was divided into regiments very similar, as Plutarch observes, to the discipline of the Greeks, and these were formed and distinguished according to the arms they bore. They consisted of bowmen, spearmen, swordsmen, clubmen, slingers and other corps, disciplined according to the rules of regular tactics; and the regiments being divided into battalions and companies, each officer had his peculiar rank and command, like the chiliarchs, hecatonarchs, decarchs and others among the Greeks, or the captains over thousands, hundreds, fifties and tens among the Jews. When in battle array, the heavy infantry, armed with spears and shields, and a falchion or other weapon, was drawn up in the form of an impregnable phalanx; and the bowmen as well as the light infantry were taught either to act in line or to adopt more open movements, according to the nature of the ground or the state of the enemy's battle. But the phalanx once formed was fixed and unchangeable, and the ten thousand Egyptians in the army of Cræsus could not be induced to oppose a larger front to the enemy, being accustomed always to form in a compact body, having one hundred men in each file. Such was the strength of this mass that no efforts of the Persians could avail against it; and Cyrus, being unable to break it, after he had defeated the rest of Cræsus' army, gave the Egyptians honorable terms, assigning them the cities of Larissa and Cyllene, near Cumæ and the sea, for an abode, where their descendants still lived in the time of Xenophon. In that battle the phalanx had adopted the huge shields, reaching to the soldiers' feet, and completely covering them from the enemy's missiles, which some of the Egyptian infantry are represented to have used at the period of the sixth dynasty.

The post of standard-bearer was at all times of the greatest importance. He was an officer and a man of approved valor, and in the Egyptian army he was sometimes distinguished by a peculiar badge suspended from his neck, which consisted of two lions, the emblems of courage, and other devices.

Besides the ordinary standards of regiments were the royal banners and those borne by the principal persons of the household near the king himself. The peculiar office of carrying these and the flabella was reserved for the royal princes or the sons of the nobility. They had the rank of generals, and were either despatched to take command of a wing or a division, and remained in attendance upon the monarch; and their post during the royal triumph, the coronation or other grand ceremonies was close to his person. Some bore the fans of state behind the throne, or supported the seat on which he was carried to the temple; others held the sceptre, and waved flabella before him; and the privilege of serving on his right or left hand depended on the grade they enjoyed. A wing was called "horn," as by the Greeks and Romans.

The troops were summoned by sound of trumpet—an instrument, as well as the long drum, used by the Egyptians at the earliest period; and the

trumpeters are represented in the battle-scenes of Thebes either standing still and summoning the troops to form or in the act of leading them to the charge.

The offensive weapons of the Egyptians were the bow, spear, two species of javelin, sling, a short and straight sword, dagger, knife, falchion, axe or hatchet, battle-axe, pole-axe, mace or club, and the lissan—a curved stick similar to that still in use among the modern Ethiopians. Their defensive arms consisted of a helmet of metal or a quilted headpiece; a cuirass, or coat of armor, made of metal plates or quilted with metal bands; and an ample shield. But they had no greaves; and the only coverings to the arms were a part of the cuirass, forming a short sleeve and extending about halfway to the elbow.

The soldier's chief defence was his shield, which in length was equal to about half his height, and generally double its own breadth. It was most commonly covered with bull's hide, having the hair outward, sometimes strengthened by one or more rims of metals, and studded with nails or metal pins, the inner part being a wooden frame. It was on this account that the shields of the Egyptians who had fallen in the battle between Artaxerxes and the younger Cyrus were collected by the Greeks for firewood, together with arrows, baggage-wagons and other things made of wood.

In shape the Egyptian shield resembled the ordinary funeral tablets found in the tombs, circular at the summit and squared at the base, frequently with a slight increase or swell toward the top, and near the upper part of the outer surface was a circular cavity in lieu of a boss, the use of which is not easily explained. To the inside of the shield was attached a thong by which they suspended it upon their shoulders, as described by Xenophon, and an incident occurs of a shield so supported, which is shown to be concave within, like that used in Assyria. It appears that the handle was so made that they might pass their arm through it and grasp a spear, but this may only be another mode of representing the shield sling at their back. The handle was sometimes placed horizontally across the shield, sometimes vertically, but the latter was its more usual position.

Some lighter bucklers, furnished with a wooden bar placed across the upper part, which was held with the hand, are represented at Beni-Hassan; but these appear to have belonged rather to foreigners than to Egyptian soldiers.

Some Egyptian shields were of extraordinary dimensions, and varied in form from those generally used, being pointed at the summit. They were of very early date, having been used before the shepherd invasion, and were the same that the Egyptian phalanx carried in the army of Cræsus, and again in that of Artaxerxes, mentioned by Xenophon. But they were not generally adopted by the Egyptian troops, who found the common shield sufficiently large and more convenient.

The Egyptian bow was not unlike that used in later times by European archers. The string was either fixed upon a projecting piece of horn or inserted into a groove or notch in the wood at either extremity, differing in this respect from that of the Koofa and some other Asiatic people, who secured the string by passing it over a small nut which projected from the circular ends of the bow.

The Ethiopians and Libyans, who were famed for their skill in archery, adopted the same method of fastening the string as the Egyptians, and their

bow was similar in form and size to that of their neighbors.

The Egyptian bow was a round piece of wood from five to five feet and a half in length, either almost straight and tapering to a point at both ends—some of which are represented in the sculptures and have even been found at Thebes—or curving inward in the middle when unstrung, as in the paintings of the tombs of the kings; and in some instances a piece of leather or wood was attached to or let into it above and below the centre.

In stringing it the Egyptians fixed the lower point in the ground; and standing, or seated the knee pressed against the inner side of the bow, they bent it with one hand, and then passed the string with the other into the notch at the upper extremity; and one instance occurs of a man resting the bow on his shoulder, and bracing it in that position. While shooting they frequently wore a guard on the left arm to prevent its being hurt by the string, and this was fastened round the wrist and secured by a thong tied above the elbow. Sometimes a groove of metal was fixed upon the fore knuckle, in which the arrow rested and ran when discharged; and the chasseur, whose bow appears to have been less powerful than those used in war, occasionally held spare arrows in his right hand while he pulled the string.

Their mode of drawing it was either with the forefinger and thumb or the two forefingers; and though in the chase they often brought the arrow merely to the breast—a sort of snap-shooting adopted in the buffalo-hunts of America—their custom in war, as with the old English archers, was to carry it to the ear, the shaft of the arrow passing very nearly in a line with the eye.

The Egyptian bow-string was generally of catgut, and so great was their confidence in the strength of it and of the bow that an archer from his car sometimes used them to entangle his opponent whilst he smote him with a sword.

Their arrows varied from twenty-two to thirty-four inches in length; some were of wood, others of reed, frequently tipped with a metal head, and winged with three feathers, glued longitudinally and at equal distances upon the other end of the shaft, as on our arrows. Sometimes, instead of the metal head, a piece of hard wood was inserted into the reed, which terminated in a long tapering point; but these were of too light and powerless a nature to be employed in war, and could only have been intended for the chase. In others the place of the metal was supplied by a small piece of flint or other sharp stone, secured by a firm black paste; and though used occasionally in battle, they appear from the sculptures to have belonged more particularly to the huntsmen. The arrows of archers are generally represented with bronze heads, some barbed, others triangular, and many with three or four projecting blades placed at right angles and meeting in a common point. Stone-tipped arrows were not confined to an ancient era, nor were they peculiar to the Egyptians; the Persians and other Eastern people frequently used them, even in war, and recent discoveries have ascertained that they were adopted by the Greeks themselves, several having been found in places unvisited by the troops of Persia, as well as on the plain of Marathon and other fields of battle where they fought.

Each Bowman was furnished with a capacious quiver; and they had also a case for the bow, intended to protect it against the sun or damp and to preserve its elasticity, which was opened by drawing

off a movable cap of soft leather sewed to the upper end. It was always attached to the war-chariots; and across it, inclined in an opposite direction, another large case, containing two spears and an extra supply of arrows; and besides the quiver he wore, the warrior had frequently three others attached to his car.

Archers of the infantry were furnished with a smaller sheath for the bow, of which it covered the centre, leaving the two ends exposed; and being of a pliable substance, probably leather, it was put around the bow as they held it in their hand during a march. Besides the bow, their principal weapon of offence, they, like the mounted archers who fought in cars, were provided with a falchion, dagger, curved stick, mace or battle-axe, for close combat when their arrows were exhausted; and their defensive arms were the helmet or quilted headpiece and a coat of the same materials; but they had no shield, that being an impediment to the free use of the bow.

The spear, or pike, was of wood, between five and six feet in length, with a metal head, into which the shaft was inserted and fixed with nails. The head was of bronze or iron, often very large, and with a double edge; but the spear does not appear to have been furnished with a metal point at the other extremity, which is still adopted in Turkish, modern Egyptian and other spears, in order to plant them upright in the ground, as the spear of Saul was fixed near his head while he "lay sleeping within the trench." Spears of this kind may sometimes come under the denomination of javelins, the metal being intended as well for a counterpoise in their flight as for the purpose above mentioned; but such an addition to those of the heavy-armed infantry was neither requisite nor convenient.

The javelin, lighter and shorter than the spear, was also of wood, and similarly armed with a strong two-edged metal head of an elongated diamond or leaf shape, either flat or increasing in thickness at the centre, and sometimes tapering to a very long point; and the upper extremity of its shaft terminated in a bronze knob surmounted by a ball with two thongs or tassels, intended both as an ornament and a counterpoise to the weight of its point. It was used like a spear, for thrusting, being held with one or with two hands; and occasionally, when the adversary was within reach, it was darted, and still retained in the warrior's grasp, the shaft being allowed to pass through his hand till stopped by the blow or by the fingers suddenly closing on the band of metal at the end, a custom still common among the modern Nubians and Ababdeh.

Another inferior kind of javelin was made of reed, with a metal head; but this can scarcely be considered a military weapon, nor would it hold a high rank among those employed by the Egyptian chasseur, most of which were of excellent workmanship.

The sling was a thong of leather or string plaited, broad in the middle and having a loop at one end by which it was fixed upon and firmly held with the hand, the other extremity terminating in a lash which escaped from the finger as the stone was thrown; and when used, the slinger whirled it two or three times over his head to steady it and increase the impetus.

It was an arm looked upon by many of the Greeks with great contempt; but when exposed to the missiles of the Persians, the "ten thousand" found the necessity of adopting it; and the leaden bullet of the Rhodian slingers proved, by

its greater range, its superiority over the large stones thrown by the enemy. Other Greeks were also skillful with the sling, as the Achæans and Acarnanians; but the people most renowned for it were the natives of the Balearic Islands, who considered the sling of so much importance that the principal care of a parent was to instruct a boy in its use, and he was not permitted to have his breakfast until he had dislodged it from a beam with the sling. This unpleasant alternative does not appear to have been imposed on the more fortunate sons of an Egyptian family, nor was the same consequence attached to the sling as to the bow and many other weapons.

The Egyptian sword was straight and short, from two and a half to three feet in length, having generally a double edge and tapering to a sharp point. It was used for cut and thrust. They had also a dagger, the handle of which, hollowed in the centre and gradually increasing in thickness at either extremity, was inlaid with costly stones, precious woods or metals, and the pommel of that worn by the king in his girdle was frequently surmounted by one or two heads of a hawk, the symbol of Phraoh or the Sun, the title given to the monarch of the Nile.

Officers as well as privates carried the falchion, and the king himself is frequently represented in close combat with the enemy armed with it, or with the hatchet, battle-axe, pole-axe or mace. A simple stick is more usually seen in the hand of officers commanding corps of infantry; but they had also other weapons, and, in leading their troops to the charge, they were armed in the same manner as the king when he fought on foot.

The axe, or hatchet, was small and simple, seldom exceeding two, or two feet and a half, in length. It had a single blade, and no instance is met with of a double axe resembling the *bipennis* of the Romans. It was of the same form as that used by the Egyptian carpenters, and served for close combat as well as for breaking down the gates of a town and felling trees to construct engines for an assault. Independent of the bronze pins which secured the blade, the handle was bound in that part with thongs of hide, in order to prevent the wood, grooved to admit the metal, from splitting when a blow was struck.

The axe was less ornamented than other weapons. Some bore the figure of an animal, a boat or fancy device engraved upon the blade; and the handle, frequently terminating in the shape of a gazelle's foot, was marked with circular and diagonal lines, representing hands, as on the projecting tors of an Egyptian temple, or like the ligature of the Roman fasces.

The blade of the battle-axe was, in form, not unlike the Parthian shield—a segment of a circle, divided at the back into two smaller segments whose three points were fastened to the handle with metal pins. It was of bronze, and sometimes (as the color of those in the paintings shows) of steel, and the length of the handle was equal to, or more than, double that of the blade. In the British Museum is a portion of one of these weapons. Its bronze blade is thirteen inches and a half long and two and a half broad, inserted into a silver tube and secured with nails of the same metal. The wooden handle once fixed into this tube is wanting; but judging from those represented at Thebes, it was considerably longer than the tube, and even protruded a little beyond the extremity of the blade, where it was sometimes

ornamented with the head of a lion or other device, receding slightly, so as not to interfere with the blow. The total length of these battle-axes may have been from three to four feet, and sometimes much less, and their blades varied slightly in shape.

The pole-axe was about three feet in length, but apparently more difficult to wield than the preceding, owing to the great weight of a metal ball to which the blade was fixed, and required, like the mace, a powerful as well as a skillful arm. The handle was generally about two feet in length—sometimes much longer; the ball four inches in its greatest diameter, and the blade varied from ten to fourteen inches, by two and three in breadth.

The mace was very similar to the pole-axe, without a blade. It was of wood, bound with bronze, about two feet and a half in length, and furnished with an angular piece of metal, projecting from the handle, which may have been intended as a guard, though in many instances they represent the hand placed above it while the blow was given.

In ancient times, when the fate of a battle was frequently decided by personal valor, the dextrous management of such arms was of great importance; and a band of resolute veterans, headed by a gallant chief, spread dismay among the ranks of an enemy.

THE MOST ANCIENT EGYPTIAN PLOUGH.

They had another kind of mace, sometimes of uniform thickness through its whole length, sometimes broader at the upper end, without either the ball or guard; and many of their allies carried a rude, heavy club; but no body of native troops was armed with this last, and it cannot be considered an Egyptian weapon.

The curved stick, or club (now called *lissan* tongue), was used by heavy- and light-armed troops as well as by archers; and if it does not appear a formidable arm, yet the experience of modern times bears ample testimony to its efficacy in close combat. To the Bisharieen it supplies the place of a sword; and the Ababdeh, content with this, their spear and shield, fear not to encounter other tribes armed with the matchlock and the *yatagan*. In length it is about two feet and a half, and is made of a hard acacia wood.

The helmet was usually quilted; and though bronze helmets are said to have been worn by the Egyptians, they generally adopted the former, which, being thick and well padded, served as an excellent protection to the head without the inconvenience of metal in so hot a climate. Some of them descended to the shoulder, others only a short distance below the level of the ear; and the summit, terminating in an obtuse point, was ornamented with two tassels. They were of a green, red or black color; and a longer one, which fitted less closely to the back of the head, was fringed at the lower edge with a broad border, and in some instances consisted of two parts, or an upper and

under fold. Another, worn by the spearmen and many corps of infantry and charioteers, was also quilted, and descended to the shoulder with a fringe; but it had no tassels, and fitting close to the top of the head, it widened toward the base, the front, which covered the forehead, being made of a separate piece and attached to the other part.

There is no representation of an Egyptian helmet with a crest; but that of the Shaietana, once enemies and afterward allies of the Pharaohs, shows they were used long before the Trojan war.

The outer surface of the corselet of mail, or coat of scale-armor, consisted of about eleven horizontal rows of metal plates, well secured by bronze pins; and at the hollow of the throat a narrower range of plates was introduced, above which were

A KA-AH, OR PRIVATE APARTMENT IN A MODERN EGYPTIAN HOUSE.

two more, completing the collar or covering of the neck. The breadth of each plate or scale was little more than an inch—eleven or twelve of them sufficing to cover the front of the body—and the sleeves, which were sometimes so short as to extend less than halfway to the elbow, consisted of two rows of similar plates. Many—indeed, most—of the corselets were without collars. In some the sleeves were rather longer, reaching nearly to the elbow, and they were worn both by heavy infantry and bowmen. The ordinary corselet may have been little less than two feet and a half in length. It sometimes covered the thighs nearly to the knees, and in order to prevent its pressing heavily upon the shoulder, they bound their girdle over it and tightened it at the waist. But the thighs and that part of the body below the girdle were usually covered by a kelt, or other robe, detached from the corselet, and many of the light and heavy infantry

were clad in a quilted vest of the same form as the coat of armor, for which it was a substitute; and some wore corselets, reaching only from the waist to the upper part of the breast, and supported by straps over the shoulder, which were faced with bronze plates. A portion of one is in Dr. Abbott's collection. It is made of bronze plates, in the form of Egyptian shields, overlapping each other, and sewed upon a leathern doublet—two of which have the name of Sheshonk (Shishak), showing it belonged either to that king or to some great officer of his court.

Among the arms painted in the tomb of Remeses III., at Thebes, is a corselet made of rich stuff, with the figures of lions and other animals worked upon it and edged with a neat border, terminating below in a fringe; evidently the same kind of corselet, "ornamented with animals embroidered upon it," which was sent by Amasis as a present to Minerva in Lindus.

Heavy-armed troops were furnished with a shield and spear; some with a shield and mace; and others, though rarely, with a battle-axe, or a pole-axe and shield. They also carried a sword, falchion, curved stick or lis-sán, simple mace or hatchet, which may be looked upon as their side-arms.

The light troops had nearly the same weapons, but their defensive armor was lighter; and the slingers and some others fought, like the archers, without shields.

The chariot corps constituted a very large and effective portion of the Egyptian army. Each car contained two persons, like the diphros of the Greeks. On some occasions it carried three, the charioteer or driver and two chiefs; but this was rarely the case, except in triumphal processions, when two of the princes accompanied the king in their chariot, bearing the regal sceptre, or the flabella, and required a third person to manage the reins. In the field each had his own car, with a charioteer; and the insignia of his office being attached behind him by a broad belt, his hands were free for the use of the bow and other arms. The driver generally stood on the off-side, in order to have the whip-hand free; and this interfered less with the use of the bow than the Greek custom of driving on the near-side, which last was adopted in Greece as being more convenient for throwing the spear. When on an excursion for pleasure, or on a visit to a friend, an Egyptian gentleman mounted alone and drove himself, footmen and other attendants running before and behind the car, and sometimes an archer used his bow and acted as his charioteer.

In the battle scenes of the Egyptian temples the king is represented alone in his car, unattended by any charioteer, with the reins fastened round his body, while engaged in bending his bow against the enemy, though it is possible that the driver was omitted in order not to interfere with the principal figure. The king had always a "second chariot," in order to provide against accidents, as Josiah is stated to have had when defeated by Necho, and the same was in attendance on state occasions.

The cars of the whole chariot corps contained each two warriors, comrades of equal rank; and the charioteer who accompanied a chief was a person of confidence, as we see from the familiar manner in which one of them is represented conversing with a son of the great Remeses.

In driving the Egyptians used a whip, like the heroes and charioteers of Homer; and this, or a short stick, was generally employed even for beasts of burden and for oxen at the plough, in preference to the goad. The whip consisted of a smooth round wooden handle, and a single or double thong; it sometimes had a lash of leather, or string, about two feet in length, either twisted or plaited; and a loop being attached to the lower end, the archer was enabled to use the bow while it hung suspended from his wrist.

When a hero encountered a hostile chief, he sometimes dismounted from his car, and substituting for his bow and quiver the spear, battle-axe or falchion, he closed with him hand to hand, like the Greeks and Trojans described by Homer; and the lifeless body of the foe, being left upon the field, was stripped of its arms by his companions. Some a wounded adversary, incapable of further resistance, having claimed and obtained the mercy of the victor, was carried from the field in his chariot; and the ordinary captives, who laid down their arms and yielded to the Egyptians, were treated as prisoners of war, and were sent bound to the rear under an escort, to be presented to the monarch, and to grace his triumph after the termination of the conflict. The hands of the slain were then counted before him; and this return of the enemy's killed was duly registered to commemorate his success and the glories of his reign.

The Egyptian chariots had no seat; but the bottom part consisted of a frame interlaced with thongs or ropes, forming a species of network, in order, by its elasticity, to render the motion of a carriage without springs more easy; and this was also provided for by placing the wheels as far back as possible, and resting much of the weight on the horses, which supported the pole.

That the chariot was of wood is sufficiently proved by the sculptures, wherever workmen are seen employed in making it; and the fact of their having more than three thousand years ago already invented and commonly used a form of pole, only introduced into our own country between forty and fifty years, is an instance of the truth of Solomon's assertion, "there is no new thing under the sun," and shows the skill of their workmen at that remote time.

The body of the car was exceedingly light, consisting of a painted wooden framework, strengthened and ornamented with metal and leather binding, like many of those mentioned by Homer; the bottom part rested on the axle-tree and lower extremity of the pole, which was itself inserted into the axle, or a socket attached to it; and some chariots are shown by the monuments to have been "inlaid with silver and gold, others painted," the latter, as might be expected, the most numerous, sixty-one of them being mentioned to nine of the former. The upper rim of its front was fastened to the pole by a couple of thongs or straps, to steady it, like the straps at the back of our modern chariots and coaches; and when the horses were taken out, the pole was supported on a crutch, or the wooden figure of a man, representing a captive or enemy who was considered fitted for this degrading office.

The greater portion of the sides and the whole of the back were open, the latter indeed entirely so, without any rim or framework above, and the hinder part of the lateral framework commenced nearly in a line with the centre of the wheel, and rising perpendicularly, or slightly inclined backward, from the base of the car, extended with a

curve, at the height of about two feet and a half, serving as well for a safeguard to the driver as a support for his quivers and bow-case. To strengthen it, three thongs of leather were attached at either side, and an upright of wood connected it with the base of the front part immediately above the pole, where the straps before mentioned were fastened.

The bow-case, frequently richly ornamented with the figure of a lion or other device, was placed in an inclined position, pointing forward, its upper edge, immediately below the flexible leather cover, being generally on a level with the summit of the framework of the chariot, so that when the bow was drawn out the leather cover fell downward and left the upper part on an uninterrupted level. In battle this was of course a matter of no importance, but in the city, where the bow-case was considered an elegant part of the ornamental hangings of a car, and continued to be attached to it, they paid some attention to the position and fall of the pendent cover, deprived, as it there was, of its bow; for as I have observed, the civilized state of Egyptian society required the absence of all arms, except when on service. The quivers and spear-cases were suspended in a contrary direction, pointing backward; sometimes an additional quiver was attached to the bow-case, with a mace and other arms, and every war-chariot containing two men was furnished with the same number of bows.

The processes of making the pole, wheels and other parts of the chariot are often represented, and even the mode of bending the wood for the purpose. In the ornamental trappings, hangings and binding of the framework and cases, leather was principally used dyed of various hues, and afterward adorned with metal edges and studs; and the wheels, strengthened at the joints of the felly with bronze or brass bands, were bound with a hoop of metal. The Egyptians themselves have not failed to point out what parts were the peculiar province of the carpenter and of the currier. The body and framework of the car, the pole, yoke and wheels, were the work of the former, the cases for the bows and other arms, the saddle and harness, the binding of the framework and the coverings of the body were finished by the currier; and lest it should not be sufficiently evident that they are engaged in cutting or bending the leather for this purpose, the artist has distinctly pointed out the nature of the substance they employed by figuring an entire skin and the soles of a pair of shoes or sandals suspended in the shop; and we find a semicircular knife used by the Egyptians to cut leather precisely similar to our own, even in the remote age of King Amunoph II., who lived fourteen centuries before our era.

In war-chariots the wheels had six spokes, generally round; in many curricles or private cars employed in towns only four; and the wheel was fixed to the axle by a small linch-pin sometimes surmounted with a fanciful head, and secured by a thong which passed through the lower end.

The harness of curricles and war-chariots was nearly similar, and the pole in either case was supported on a curved yoke fixed to its extremity by a strong pin and bound with straps or thongs of leather. The yoke, resting upon a small, well-padded saddle, was firmly fitted into a groove of metal, and the saddle, placed upon the horses' withers, and furnished with girths and a breast-band, was surmounted by an ornamental knob, and in front of it a small hook secured the bearing-rein. The other reins passed through a thong or ring at the side of the saddle, and thence over the

projecting extremity of the yoke; and the same thong secured the girths, and even appears in some instances to have been attached to them. In the war-chariots a large ball placed upon a shaft projected above the saddle, which was either intended to give a greater power to the driver by enabling him to draw the reins over a groove in its centre or was added solely for an ornamental purpose, like the fancy headdresses of the horses, and fixed to the yoke immediately above the centre of the saddle, or rather to the head of a pin which connected the yoke to the pole.

The traces were single, one only on the inner side of each horse, fastened to the lower part of the pole and thence extending to the saddle, but no exterior trace was thought necessary, and no provision was made for attaching it to the car. Indeed, the yoke sufficed for all the purposes of draught as well as for backing the chariot, and being fixed to the saddle, it kept the horses at the same distance and in the same relative position, and prevented their breaking outward from the line of draught. In order to render this more intelligible, I shall introduce a pair of horses yoked to a chariot according to the rules of European drawing, derived from a comparison of the numerous representations in the sculptures, omitting only their housings and headdress, which may be readily understood in an Egyptian picture. I have also followed the Egyptian fashion of putting a chestnut and a grey together, which was thought quite as correct in ancient Egypt as it now is in England.

On grand occasions the Egyptian horses were decked with fancy ornaments; a rich striped or checkered housing trimmed with a broad border and large pendent tassels covered the whole body, and two or more feathers inserted in lions' heads, or some other device of gold, formed a crest upon the summit of the head-stall. But this display was confined to the chariots of the monarch or the military chiefs, and it was thought sufficient in the harness of other cars and in the town curricles to adorn the bridles with rosettes, which resemble those used at the present day.

The traveling carriage drawn by two oxen was very like the common chariot, but the sides appear to have been closed. It had also one pair of wheels with six spokes and the same kind of pole and harness. An umbrella was sometimes fixed over it when used for women of rank, as over the king's chariot on certain occasions; and the how-case with the bow in it shows that a long journey from Ethiopia required arms, the lady within being on her way to pay a visit to the Egyptian king. She has a very large retinue with her, bringing many presents, and the whole subject calls to mind the visit of the queen of Sheba to Solomon.

The chariots used by contemporary Eastern nations with whom the Egyptians were at war were not dissimilar in their general form, or in their mode of yoking the horses (even if they differed in the number of persons they contained, having usually three instead of the two in Egyptian and Greek cars), as may be seen from that which is brought with its two unyoked horses as a present to the Egyptian monarch by the conquered people of Ret-n-n, and one found in Egypt and now in the museum at Florence. This last is sup-

posed to have been taken in war from the Scythians; but it appears rather to be one of those brought to Egypt with the rest of a tribute as a token of submission, being too slight for use.

In Solomon's time chariots and horses were exported from Egypt and supplied Judæa, as well as "the kings of the Hittites and of Syria," but in early times they appear not to have been used in Egypt, and they are not found on the monuments before the eighteenth dynasty. For though the Egyptian name of the horse was lithor, the mare was called, as in Hebrew, "sus" (pl. "susim"), which argues its Semitic origin, faras, "the mare," being still the generic name of the Arab horse; and if its introduction was really owing to the invasion of the Shepherds, they thereby benefited Egypt as much as by causing the union of the whole country under one king.

INTERIOR OF A MOSQUE OF MODERN EGYPT.

The Egyptians sometimes drove a pair of mules instead of horses in the chariots used in towns or in the country, an instance of which occurs in a painting now in the British Museum.

The Egyptian chariot corps, like the infantry, were divided into light and heavy troops, both armed with bows, the former chiefly employed in harassing the enemy with missiles, and in evolutions requiring rapidity of movement; the latter called upon to break through opposing masses of infantry, after having galled them during their advance with a heavy shower of arrows; and in order to enable them to charge with greater security, they were furnished with a shield, which was not required for the other mounted archers, and a long spear was substituted on these occasions for the missiles they had previously employed. The light-armed chariot corps were also supplied with weapons adapted to close combat, as the

sword, club and javelin; but they had neither spear nor shield. The heavy infantry and light troops employed in the assault of fortified towns were all provided with shields, under cover of which they made approaches to the place; and so closely was the idea of a siege connected with this arm, that a figure of a king, who is sometimes introduced in the sculptures as the representative of the whole army, advancing with the shield before him is intended to show that the place was taken by assault.

In attacking a fortified town they advanced under cover of the arrows of the bowmen, and either instantly applied the scaling-ladder to the ramparts, or undertook the routine of a regular siege, in which case, having advanced to the walls, they posted themselves under cover of testudos, and shook and dislodged the stones of the parapet with a species of battering-ram, directed and impelled by a body of men expressly chosen for this service; but when the place held out against these attacks, and neither a coup de main, the ladder nor the ram was found to suc-

A MODERN EGYPTIAN DINNER.

ceed, they used the testudo for concealing and protecting the sappers while they mined the place; and certainly, of all people, the Egyptians were the most likely to have recourse to this stratagem of war from the great practice they had in underground excavations, and in directing shafts through the solid rock.

The testudo was a frame-work, sometimes supported by poles having a forked summit, and covered in all probability with hides; it was sufficiently large to contain several men, and so placed that the light troops might mount upon the outside, and thus obtain a footing on more elevated ground, apply the ladders with greater precision, or obtain some other important advantage; and each party was commanded by an officer of skill, and frequently by those of the first rank.

They also endeavored to force open the gates of the town or hew them down with axes; and when the fort was built upon a rock, they escalated the precipitous part by means of the testudo, or by short spikes of metal, which they forced into the crevices of the stone, and then applied the ladder to the ramparts.

They had several other engines for sieges not

represented in the sculptures; and the bulwarks used by the Jews on their march to the promised land were doubtless borrowed from those of Egypt, where they had lived until they became a nation. The bulwarks, or movable towers, were of wood, and made on the spot during the siege, the trees of the neighboring country being cut down for the purpose; but the Jews were forbidden to fell the fruit-tree for the construction of warlike engines, or any except those which grew wild or in an uncultivated spot.

The northern and eastern tribes, against whom the Egyptians fought, were armed in many instances with the same weapons as the disciplined troops of the Pharaohs, as bows and spears; they had besides long swords, rude massive clubs and knives; and their coats of mail, helmets and shields varied in form according to the custom of each nation. They also used stones, which were thrown with the hand while defending the walls of a besieged town; but it does not appear that either the Egyptians or their enemies threw them on any other occasions except with a sling.

After the accession of the eighteenth dynasty the practice of fortifying towns seems to have been discontinued, and fortresses or walled towns were not then used, except on the edge of the desert and on the frontiers where large garrisons were required. To supply their place the temples were provided with lofty pyramidal stone towers, which, projecting beyond the walls, enabled the besieged to command and rake them, while the parapet-wall over the gateway shielded the soldiers who defended the entrance; and the whole plan of an outer wall of circumvallation was carried out by the large crude brick enclosure of the temenos, within which the temple stood. Each temple was thus a detached fort, and was thought as sufficient a protection for itself and for the town as a continuous wall, which required a large garrison to defend it; and neither Thebes nor Memphis, the two capitals, were walled cities.

The field encampment was either a square or a parallelogram, with a principal entrance in one of the faces; and near the centre was the general's tent and those of the principal officers. The general's tent was sometimes surrounded by a double rampart or fosse, enclosing two distinct areas, the outer one containing three tents, probably of the next in command, or of the officers on the staff; and the guards slept or watched in the open air. Other tents were pitched outside these enclosures; and near the external circuit a space was set apart for feeding horses and beasts of burthen, and another for ranging the chariots and baggage. It was near the general's tent, and within the same area, that the altars of the gods, or whatever related to religious matters, the standards and the military chest were kept; and the sacred emblems were deposited beneath a canopy, within an enclosure similar to that of the general's tent.

When compared with the Assyrians and other Asiatic conquerors, the Egyptians hold a high position among the nations of antiquity from their conduct to their prisoners; and the cruel custom of flaying them alive, and the tortures represented in the sculptures of Nineveh, show the Assyrians were guilty of barbarities at a period long after the Egyptians had been accustomed to the refinements of civilized communities.

The captives, too, represented on the façades of

their temples, bound at the feet of the king, who holds them by the hair of the head, and with an uplifted arm appears about to immolate them in the presence of the deity, are merely an emblematical record of his successes over the enemies of Egypt, as is shown by the same subject being represented on monuments erected by the Ptolemies and Cæsars.

The sailors of the "king's ships," or royal navy, were part of the military class, a certain number of whom were specially trained for the sea, though all the soldiers were capable of handling galleys, from their constant practice at the oar on the Nile. The Egyptian troops were therefore employed on board ship by Xerxes in his war against Greece, "being," as Herodotus says, "all sailors." And as ships of war then depended on the skill of their crews in the use of the oar, the employment of the Egyptian soldiers in a sea-fight is not so extraordinary. Many, too, of the Nile boats were built purposely for war, and were used in the expeditions of the Pharaohs into Ethiopia; officers who commanded them are often mentioned on the monuments; and chief or captain of the king's ships is not an uncommon title.

Herodotus and Diodorus both mention the fleet of long vessels or ships of war fitted out by Sesostris on the Arabian Gulf. They were four hundred in number; and there is every reason to believe that the trade, and the means of protecting it by ships of war, existed there at least as early as the twelfth dynasty, about two thousand years before our era.

The galleys or ships of war used in their wars out of Egypt differed from those of the Nile. They were less raised at the head and stern; and on each side, throughout the whole length of the vessel, a wooden bulwark, rising considerably above the gunwale, sheltered the rowers, who sat behind it, from the missiles of the enemy, the handles of the oars passing through an aperture at the lower part.

The ships in the sea-fight represented at Thebes fully confirm the statement of Herodotus that the Egyptian soldiers were employed on board them, as their arms and dress are exactly the same as those of the heavy infantry and archers of the army, and the quilted helmet of the rowers shows they also were part of the same corps. Besides the archers in the raised poop and fore-castle, a body of slingers was stationed in the tops, where they could with more facility manage that weapon and employ it with effect on the enemy.

On advancing to engage a hostile fleet, the sail was used till they came within a certain distance, when the signal or order having been given to clear for action, it was reefed by means of ropes running in pulleys or loops upon the yard. The ends of these ropes, which were usually four in number, dividing the sail as it rose into five folds, descended and were attached to the lower part of the mast, so as to be readily worked when the sail required to be pulled up at a moment's notice, either in a squall of wind or any other occasion; and in this respect, and in the absence of a lower yard, the sail of the war galley greatly differed from that of the boats on the Nile. Having prepared for the attack, the rowers, whose strength had been hitherto reserved, plied their oars; the head was directed toward an enemy's vessel, and showers of missiles were thrown from the fore-castle and tops as they advanced. It was of great importance to strike their opponent on the side; and when the steersman, by a skillful manœuvre, could

succeed in this, the shock was so great that they sank it, or obtained a considerable advantage by crippling the oars.

The small Egyptian galleys do not appear to have been furnished with a beak, like those of the Romans, which, being of bronze sharply pointed, and sometimes below the water's surface, often sank a vessel at once; but a lion's head fixed to the prow supplied its place, and being probably covered with metal, was capable of doing great execution when the galley was impelled by the force of sixteen or twenty oars. This head occasionally varied in form, and perhaps served to indicate the rank of the commander, the name of the commander, the name of the vessel or the deity under whose protection they sailed, unless indeed the lion was always chosen for their war-galleys, and the ram, oryx and others confined to the boats connected with the service of religion.

Some of the war-galleys on the Nile were furnished with forty-four oars, twenty-two being represented on one side, which, allowing for the steerage and prow, would require their total length to be about one hundred and twenty feet. They were furnished, like all the others, with one large square sail; but the mast, instead of being single, was made of two limbs of equal length, sufficiently open at the top to admit the yard between them, and secured by several strong stays, one of which extended to the prow and others to the steerage of the boat. Over the top of the mast a light rope was passed, probably intended for furling the sail, which last, from the horizontal lines represented upon it, appears to have been like those of the Chinese, and is a curious instance of a sail apparently made of the papyrus.

This double mast was common of old, during the fourth and other early dynasties, but it afterward gave place entirely to the single one, with bars or rollers at the upper part serving for pulleys, over which the ropes passed; and sometimes rings were fixed to it, in which the halliards worked.

In this, as in other Egyptian boats, the braces were fixed to the end of the yard, which, being held by a man seated in the steerage or upon the cabin, served to turn the sail to the right and left; they were common to all boats, and at the lower end of the sail (which in these boats had no yard) were the sheets, which were secured within the gunwale. The mode of steering is different from that usually described in the Egyptian paintings; and instead of a rudder in the centre of the stern or at either side, it is furnished with three on the same side, a peculiarity which, like the double mast and the folding sail, was afterward abandoned as cumbersome and imperfect. This boat shows satisfactorily their mode of arranging the oars while not required during a favorable wind; they were drawn up through the ring or band in which they turned, and they were probably held in that position by a thong or loop passing over the handle.

#### VI. The Different Classes of Egyptians. —Agriculture.—Productions of Egypt. —Festivals of the Peasants.—Gardeners, Huntsmen, Boatmen of the Nile.

The high estimation in which the priestly and military professions were held in Egypt placed them far above the rest of the community, but the other classes had also their degrees of consequence, and individuals enjoyed a position and importance in proportion to their respectability, their talents or their wealth.

236

According to Herodotus, the whole Egyptian community was divided into seven tribes, one of which was the sacerdotal, another of the soldiers, and the remaining five of the herdsmen, swineherds, shopkeepers, interpreters and boatmen. Diodorus states that, like the Athenians, they were distributed into three classes—the priests, the peasants or husbandmen, from whom the soldiers were levied, and the artisans, who were employed in handicraft and other similar occupations, and in common offices among the people—but in another place he extends the number to five, and reckons the pastors, husbandmen and artificers independent of the soldiers and priests. Strabo limits them to three, the military, husbandmen and priests; and Plato divides them

into six bodies, the priests, artificers, shepherds, huntsmen, husbandmen and soldiers, each peculiar art or occupation, he observes, being confined to a certain subdivision of the caste, and every one being engaged in his own branch without interfering with the occupation of another. Hence it appears that the first class consisted of the priests, the second of the soldiers, the third of the husbandmen, gardeners, huntsmen, boatmen of the Nile and others, the fourth of artificers, tradesmen and shopkeepers, carpenters, boatbuilders, masons, and probably potters, public weighers and notaries, and in the fifth may be reckoned pastors, poulterers, fowlers, fishermen, laborers and, generally speaking, the common people. Many of these were again subdivided, as the artificers and tradesmen, according to their peculiar trade or occupation; and as the pastors, into oxherds, shepherds, goat herds and swineherds, which last were, according to Herodotus, the lowest grade, not only of the class, but of the whole community, since no one would either marry their daughters or establish any family connection with them. So degrading was the occupation of tending swine that they were looked upon as impure, and were even forbidden to enter a temple without previously undergoing a purification, and the prejudices of the Indians against this class of persons almost justify our belief in the statement of the historian.

Without stopping to inquire into the relative rank of the different subdivisions of the third class, the importance of agriculture in a country like Egypt, where the richness and productiveness of the soil have always been proverbial, suffices to claim the first place for the husbandmen.

The abundant supply of grain and other produce gave to Egypt advantages which no other country possessed. Not only was her dense population supplied with a profusion of the necessities of life, but the sale of the surplus conferred considerable benefits on the peasant, in addition to the profits which thence accrued to the state, for Egypt was a granary where from the earliest times all people felt sure of finding a plentiful store of corn; and some idea may be formed of the quantity produced from the circumstance of "seven plentiful years" affording, from the superabundance of the crops, a sufficiency of corn to supply the whole population during seven years of dearth, as well as "all countries" which sent to Egypt "to buy" it, when Pharaoh, by the advice of Joseph, laid up the annual surplus for that purpose.

The right of exportation and the sale of superfluous produce to foreigners belonged exclusively to the government, as is distinctly shown by the sale of corn to the Israelites from the royal stores, and the collection having been made by Pharaoh only; and it is probable that even the rich landowners were in the habit of selling to government whatever quantity remained on hand at the approach of each successive harvest, while the agricultural laborers, from their frugal mode of living, required very little wheat and barley, and were generally contented, as at the present day, with bread made of the doora flour, children, and even grown persons, according to Diodorus, often living on roots and esculent herbs, as the papyrus, lotus and others, either raw, roasted or boiled.

A MODERN EGYPTIAN BAZAAR, OR MARKET SHOP.

The government did not interfere directly with the peasants respecting the nature of the produce they intended to cultivate, and the vexations of later times were unknown under the Pharaohs. They were thought to have the best opportunities of obtaining from actual observation an accurate knowledge on all subjects connected with husbandry; and as Diodorus observes, "being from their infancy brought up to agricultural pursuits, they far excelled the husbandmen of other countries, and had become acquainted with the capabilities of the land, the mode of irrigation, the exact season for sowing and reaping, as well as all the most useful secrets connected with the harvest, which they had derived from their ancestors and had improved by their own experience." "They rented," says the same historian, "the arable lands belonging to the kings, the priests and the military class, for a small sum, and employed their whole

time in the tillage of their farms;" and the laborers who cultivated land for the rich peasants or other landed proprietors were superintended by the steward or owner of the estate, who had authority over them, and the power of condemning delinquents to the bastinado. This is shown by the paintings of the tombs, which frequently represent a person of consequence inspecting the tillage of the field, either seated in a chariot, walking or leaning on his staff, accompanied by a favorite dog.

Their mode of irrigation was the same in the field of the peasant as in the garden of the villa, and the principal difference in the mode of tilling the former consisted in the use of the plough.

The usual contrivance for raising water from the Nile for watering the crops was the shadoof, or pole and bucket, so common still in Egypt, and even the water-wheel appears to have been employed in more recent times.

The sculptures of the tombs frequently represent canals conveying the water of the inundation into

MODERN EGYPTIAN FISHERMAN.

the fields; and the proprietor of the estate is seen, as described by Virgil, plying in a light painted skiff or papyrus punt, and superintending the maintenance of the dykes or other important matters connected with the land. Boats carry the grain to the granary or remove the flocks from the lowlands; as the water subsides the husbandman ploughs the soft earth with a pair of oxen; and the same subjects introduce the offering of first-fruits to the gods, in acknowledgment of the benefits conferred by "a favorable Nile." The main canal was usually carried to the upper or southern side of the land, and small branches leading from it at intervals traversed the fields in straight or curving lines, according to the nature or elevation of the soil.

The inundation began about the end of May, sometimes rather later; but about the middle of June the gradual rise of the river was generally perceived; and the comparatively clear stream assumed a red and turbid appearance, caused by the floods of the rainy season in Abyssinia, the annual cause of the inundation. It next assumed a green appearance; and being unwholesome during that short period, care was taken to lay up in jars a sufficient supply

of the previous turbid but wholesome water, which was used until it reassumed its red color. This explains the remark of Aristides, "that the Egyptians are the only people who preserve water in jars, and calculate its age as others do that of wine;" and may also be the reason of water-jars being an emblem of the inundation, though the calculation of the "age" of the water is an exaggeration. Perhaps, too, the god Nilus being represented of a blue and a red color may allude to the two different appearances of the low and high Nile.

In the beginning of August the canals were opened and the waters overflowed the plain. That part nearest the desert, being the lowest level, was first inundated, as the bank itself, being the highest, was the last part submerged, except in the Delta, where the levels were more uniform, and where, during the high inundations, the whole land, with the exception of its isolated villages, was under water. As the Nile rose the peasants were careful to remove the flocks and herds from the lowlands; and when a sudden irruption of the water, owing to the bursting of a dyke, or an unexpected and unusual increase of the river, overflowed the fields and pastures, they were seen hurrying to the spot, on foot or in boats, to rescue the animals and to remove them to the high grounds above the reach of the inundation. Some, tying their clothes upon their heads, dragged the sheep and goats from the water and put them into boats; others swam the oxen to the nearest high ground; and if any corn or other produce could be cut or torn up by the roots in time to save it from the flood, it was conveyed on rafts or boats to the next village. And though some suppose the inundation does not now attain the same height as of old, those who have lived in the country have frequently seen the villages of the Delta standing, as Herodotus describes them, like islands in the Ægean Sea, with the same scenes of rescuing the cattle from the water.

Guards were placed to watch the dykes which protected the lowlands, and the utmost care was taken to prevent any sudden influx of water which might endanger the produce still growing there, the cattle or the villages. And of such importance was the preservation of the dykes that a strong guard of cavalry and infantry was always in attendance for their protection; certain officers of responsibility were appointed to superintend them, being furnished with large sums of money for their maintenance and repairs; and in the time of the Romans, any person found destroying a dyke was condemned to hard labor in the public works or in the mines, or was branded and transported to the oasis. According to Strabo, the system was so admirably managed "that art contrived sometimes to supply what nature denied, and, by means of canals and embankments, there was little difference in the quantity of land irrigated, whether the inundation was deficient or abundant." "If," continues the geographer, "it rose only to the height of eight cubits, the usual idea was that a famine would ensue, fourteen being required for a plentiful harvest; but when Petronius was prefect of Egypt, twelve cubits gave the same abundance, nor did they suffer from want even at eight;" and it may be supposed that long experience had taught the ancient Egyptians to obtain similar results from the same means, which, neglected at a subsequent period, were revived rather than, as Strabo thinks, first introduced by the Romans.

In some parts of Egypt the villages were liable

to be overflowed when the Nile rose to a more than ordinary height, by which the lives and property of the inhabitants were endangered; and when their crude brick houses had been long exposed to the damp, the foundations gave way, and the fallen walls, saturated with water, were once more mixed with the mud from which they had been extracted. On these occasions the blessings of the Nile entailed heavy losses on the inhabitants; for according to Pliny, "if the rise of the water exceeded sixteen cubits, a famine was the result, as when it only reached the height of twelve." In another place he says: "A proper inundation is of sixteen cubits; . . . in twelve cubits, the country suffers from famine, and feels a deficiency even in thirteen; fourteen cause joy, fifteen security, sixteen delight; the greatest rise of the river to this period being of eighteen cubits, in the reign of Claudius, the least during the Pharsalic war."

From all that can be learnt respecting the rise of the Nile, it is evident that the actual height of the inundation is the same now as in former times, and maintains the same proportion with the land it irrigates; and that, in order to arrive at great accuracy in its measurement, the scales of the Nilometers ought, after certain periods, to be raised in an equal ratio, as may be seen by any one who visits those of Cairo and Elephantine; for the bed of the river gradually rises from time to time, and the level of the land, which always keeps pace with that of the river, increases in a ratio of six inches in a hundred years in some places (as about Elephantine), and in others less, varying according to the distance down the stream. The consequence, and indeed the proof, of which is that the highest scale in the Nilometer at the island of Elephantine, which served to measure the inundation in the reigns of the early Roman emperors, is now far below the level of the ordinary high Nile; and the obelisk of Matareah or Heliopolis, the Colossi of the Theban plain, and other similarly situated monuments, are flooded to a certain height by the waters of the inundation and imbedded in a stratum of alluvial soil deposited around their base.

The continual increase in the elevation of the bed of the river naturally produced those effects mentioned by Herodotus and other writers, who state that the Egyptians were obliged from time to time to raise their towns and villages in order to secure them from the effects of the inundation; and that the same change in the levels of the Nile and the land took place in former ages as at the present day is shown by the fact of Sabaco having found it necessary to elevate the towns throughout the country, which had been previously protected by similar means in the reign of Sesostris. This was done by the inhabitants of each place who had been condemned for great crimes to the public works. Bubastis was raised more than any other city; and the lofty mounds of Tel Basta which mark its site fully confirm the observation of Herodotus, and show, from the height of those mounds above the present plain, after a lapse of seven hundred and seventy years, that "the Ethiopian monarch elevated the sites of the towns much more than his predecessor Sesostris had done" when that conqueror employed his captives in making the canals of Egypt. And if its height was in proportion to the number of its criminals, Bubastis could not boast of the morality of its inhabitants.

On a rough calculation, it may be said that the land about Elephantine has been raised about nine

feet in seventeen hundred years; at Thebes, about seven; and in a less degree toward the Delta and the sea, where the extensive surface of the land, compared to the narrow valley above Memphis, alters the proportions in its elevation until, at the mouths of the Nile, there is no perceptible rise of the soil from alluvial deposit.

There is another singular fact connected with the inundation in different places—that throughout the valley lying to the south of the Delta the actual banks of the Nile are much more elevated than the land of the interior at a distance from the river, and are seldom quite covered with water even during the highest inundations, though the bank then projects very little above the level of the stream; and in some places the peasant is obliged to keep out the water by temporary embankments. This difference of level may be accounted for partly by the continued cultivation of the soil by the river side, which, being more conveniently situated for artificial irrigation, has a constant succession of crops; for it is known that tillage has the effect of raising land, from the accumulation of decayed vegetable substances, the addition of dressing and other causes; and the greater depression of the plain in the interior is owing, in some degree, to the numerous channels in that direction and to the effect of the currents which pass over it as the water covers the land, though they are not sufficient to account for the great difference between the height of the bank and the land near the edge of the desert, which is often twelve or fifteen feet, as may be seen from the comparative height of the same horizontal dyke at those two points.

These elevated roads, the sole mode of communication by land from one village to another during the inundation, commence on a level with the bank of the river, and as they extend to the interior are there so much higher than the fields that room is afforded for the construction of arches to enable the water to pass through them, though the larger bridges are only built on those parts where ancient or modern canals have caused a still greater depression of the land.

The canals, like the dykes, were the constant care of the magistrates in old times, and they were furnished with sluices and other appliances to regulate the supply of water and to turn the fisheries to good account.

The water of the inundation was differently managed in various districts. This depended either on the relative levels of the adjacent lands or on the crops they happened to be cultivating at the time. When a field lay fallow or the last crop had been gathered, the water was permitted to overflow it as soon as its turn came to receive it from the nearest sluices, or in those parts where the levels were low and open to the ingress of the rising stream as soon as the Nile had arrived at a sufficient height; but when the last autumn crop was in the ground every precaution was taken to keep the field from being inundated; and "as the water rose gradually, they kept it out by small dams, which could be opened if required and closed again without much trouble."

As the Nile subsided the water was retained in the fields by proper embankments; and the mouths of the canals being again closed, it was prevented from returning into the falling stream. By this means the irrigation of the land was prolonged considerably, and the fertilizing effects of the inundation continued until the water was absorbed. And so rapidly does the hot sun of Egypt, even at this late period of the season—in

the months of November and December—dry the mud when once deprived of its covering of water, that no fevers are generated, and no illness visits those villages which have been entirely surrounded by the inundation.

The land being cleared of the water and presenting in some places a surface of liquid mud, in others nearly dried by the sun and the strong north-west winds (that continue at intervals to the end of autumn and the commencement of winter), the husbandman prepared the ground to receive the seed, which was either done by the plough and hoe or by more simple means, according to the nature of the soil, the quality of the produce they intended to cultivate, or the time the land had remained under water.

When the levels were low, and the water had continued long upon the land, they often dispensed with the plough, and, like their successors, broke up the ground with hoes, or simply dragged the moist mud with bushes after the seed had been thrown upon the surface; and then merely drove a number of cattle, asses, pigs or goats into the field to tread in the grain. "In no country," says Herodotus, "do they gather their seed with so little labor. They are not obliged to trace deep furrows with the plough and break the clods, nor to partition out their fields into numerous forms as other people do; but when the river of itself overflows the land, and the water retires again, they sow their fields, driving the pigs over them to tread in the seed; and this being done, every one patiently awaits the harvest." On other occasions they used the plough, but were contented, as we are told by Diodorus and Columella, with "tracing slight furrows with light ploughs on the surface of the land;" and others followed with wooden hoes to break the clods of the rich and tenacious soil.

The modern Egyptians sometimes substitute for the hoe a machine called khon-fud, "hedghog," which consists of a cylinder studded with projecting iron pins, to break the clods after the land has been ploughed; but this is only used when great care is required in the tillage of the land, and they frequently dispense with the hoe, contenting themselves, also, with the same slight furrows as their predecessors, which do not exceed the depth of a few inches, measuring from the lowest part to the summit of the ridge. It is difficult to say if the modern Egyptians derived the hint of the "hedghog" from their predecessors; but it is a curious fact that a clod-crushing machine, not very unlike that of Egypt, has only lately been invented in England, which was shown at the great exhibition of 1851.

The ancient plough was entirely of wood, and of as simple a form as that of modern Egypt. It consisted of a share, two handles and the pole or beam, which last was inserted into the lower end of the stilt, or the base of the handles, and was strengthened by a rope connecting it with the heel. It had no coulter, nor were wheels applied to any Egyptian plough; but it is probable that the point was shod with a metal sock, either of bronze or iron. It was drawn by two oxen; and the ploughman guided and drove them with a long goad, without the assistance of reins, which are used by the modern Egyptians. He was sometimes accompanied by another man who drove the animals,

while he managed the two handles of the plough; and sometimes the whip was substituted for the more usual goad.

Cows were occasionally put to the plough, and it may not have been unknown to them that the cow ploughs quicker than the ox.

The mode of yoking the beasts was exceedingly simple. Across the extremity of the pole a wooden yoke or cross-bar, about fifty-five inches or five feet in length, was fastened by a strap lashed backward and forward over a prominence projecting from the centre of the yoke, which corresponded to a similar peg or knob at the end of the pole; and occasionally, in addition to these, was a ring passing over them, as in some Greek chariots. At either end of the yoke was a flat or slightly concave projection, of semicircular form, which rested

A TOMB OF MODERN EGYPT.

on a pad placed upon the withers of the animal, and through a hole on either side of it passed a thong for suspending the shoulder-pieces which formed the collar. These were two wooden bars, forked at about half their length, padded so as to protect the shoulder from friction, and connected at the lower end by a strong, broad band passing under the throat.

Sometimes the draught, instead of being from the withers, was from the head, the yoke being tied to the base of the horns; and in religious ceremonies oxen frequently drew the bier, or the sacred shrine, by a rope fastened to the upper part of the horns, without either yoke or pole.

From a passage in Deuteronomy, "Thou shalt not plough with an ox and an ass together," it might be inferred that the custom of yoking two different animals to the plough was common in Egypt; but it was evidently not so, and the He-

brew lawgiver had probably in view a practice adopted by some of the people of Syria, whose country the Israelites were about to occupy.

The hoe was of wood, like the fork and many other implements of husbandry, and in form was not unlike our letter A, with one limb shorter than the other and curving inward. The longer limb, or handle, was of uniform thickness, round and smooth, sometimes with a knob at the end, and the lower extremity of the blade was of increased breadth, and either terminated in a sharp point or was rounded at the end. The blade was frequently inserted into the handle, and they were bound together, about the centre, with a twisted rope. Being the most common tool—answering for hoe, spade and pick—it is frequently represented in the sculptures, and several, which have been found in the tombs of Thebes, are preserved in the museums of Europe.

The hoe in hieroglyphics stands for the letter M, though the name of this instrument was in Egyptian, as in Arabic, *ṭiré*. It forms the commencement of the word *mai*—"beloved"—and enters into numerous other combinations.

There are no instances of hoes with metal blades, except of very late time, nor is there any proof of the ploughshare having been sheathed with metal.

The axe had a metal blade, either bronze or iron, and the peasants are sometimes represented felling trees with this implement, while others are employed in hoeing the field preparatory to its being sown, confirming what I before observed—that the ancient, as well as the modern, Egyptians frequently dispensed with the use of the plough.

The admission of swine into the fields, mentioned by Herodotus, should rather have been before than after they had sowed the land, since their habits would do little good to the farmer, and other animals would answer as well for "treading in the grain;" but they may have been used before for clearing the fields of the roots and weeds encouraged by the inundation. And this seems to be confirmed by the herd of pigs with water plants represented in the tombs.

They sometimes used a top dressing of nitrous soil, which was spread over the surface—a custom continued to the present day. But this was confined to certain crops, and principally to those reared late in the year, the fertilizing properties of the alluvial deposit answering all the purposes of the richest manure. Its peculiar quality is not merely indicated by its effects, but by the appearance it presents; and when left upon rock and dried by the sun, it resembles pottery, from its brittleness and consistence.

The same quality of soil and alluvial deposit seems to accompany the Nile in its course from Abyssinia to the Mediterranean; and though the White River is the principal stream, being much broader, bringing a larger supply of water and coming from a greater distance than the Blue (Black) River, or Abyssinian branch, which rises a little beyond the Lake Dembea, still this last claims the merit of possessing the real peculiarities of the Nile, and of supplying those fertilizing properties which mark its course to the sea. The White River, or western branch, likewise overflows its banks, but no rich mud accompanies its inundation; and though, from the force of its stream (which brings down numbers of large fish and shells at the commencement of its rise, probably from passing through some large lakes), there is evidence of its being supplied by an abundance of heavy rain, we may conclude that the nature

of the soil, along the whole of its course, differs considerably from that of the Abyssinian branch.

And here I may mention that the name Bahr el Azrek, opposed to Bahr el Abiad, or "White River," should be translated Black (not Blue) River, azrek, though signifying "blue," being also used in the sense of our "jet black;" and *hossán azrek* is a "black (not a blue) horse."

Besides the admixture of nitrous earth, the Egyptians made use of other kinds of dressing, and sought for different productions the soils best suited to them. They even took advantage of the edge of the desert, for growing the vine and some other plants, which, being composed of clay and sand, was peculiarly adapted to such as required a light soil; and the cultivation of this additional tract, which only stood in need of proper irrigation to become highly productive, had the advantage of increasing considerably the extent of the arable land of Egypt. In many places we still find evidence of its having been tilled by the ancient inhabitants, even to the late time of the Roman empire; and in some parts of the Fyoom the vestiges of beds and channels for irrigation, as well as the roots of vines, are found in sites lying far above the level of the rest of the country.

The occupation of the husbandman depended much on the produce he had determined on rearing. Those who solely cultivated corn had little more to do than to await the time of harvest; but many crops required constant attention, and some stood in need of frequent artificial irrigation.

In order to give a general notion of the quality of the crops, and other peculiarities relating to their agriculture, I shall here state the principal productions of Egypt, the times of planting and the season of harvest:

Wheat—sown in November, reaped in beginning of April, a month later than barley; comp. Ex. ix. 32.

Barley—sown at the same time; reaped some in ninety days, some in the fourth month.

Beans—sown in October or November; cut in about four months.

Peas—sown in the middle of November; ripen in ninety or one hundred days.

Lentils and vetches—sown in the middle or end of November; ripen in one hundred or one hundred and ten days.

Lupins—called *ḥapūq* in Coptic, which is still retained in the modern Arabic name *Terminus*.

Clover—sown in the beginning of October; first crop after sixty days, second after fifty more days, third left for seed; if a fourth crop is raised by irrigation, it produces no seed.

A sort of French bean—sown at the same time as wheat in November; ripens in four months. A crop raised by the shadoof in August gathered in about three months; its beans for cooking in sixty days.

Safflower—the flowers used for dyeing, the seeds giving an oil. Sown in the middle of November, seeds ripen in five months.

Lettuce—cultivated for oil. Sown in the middle of November; seeds ripen in five months.

Flax—sown in the middle of November; plucked in one hundred and ten days.

Coleseed and hemp—yields an oil; sown middle of November; cut in one hundred and ten days.

Cummin and coriander—sown in middle of December; cut in four months.

Poppy—sown end of November; seeds ripen in April. The Arabic name signifies father (of) sleep.

Watermelon, and several other Cucurbitæ—sown middle of December; cut in ninety days.

Cucumber and other Cucumis—cut in sixty days.

Doora—-independent of the crop raised by the shadoof and that during the inundation; sown middle of November; ripens in five and a half months.

All these, the ordinary productions of modern Egypt, appear to have been known and cultivated in old times; and according to Dioscorides, from the Helbeh or Trigonella was made the ointment called by Athenæus "Telinon." The Carthamus tinctorius and the pea are now proved, by the discovery of their seeds in a tomb at Thebes, to have been ancient Egyptian plants. The coleseed appears also to have been an indigenous production, and hemp is supposed to have been used of old for its intoxicating qualities.

The castor-berry tree is called by Herodotus *silicyprium*, and the oil *kiki*, which he says is not inferior to that of the olive for lamps, though it has the disadvantage of a strong, unpleasant smell. Pliny calls the tree *cici*, which he adds, "grows abundantly in Egypt, and has also the names of *croton*, *trixis*, tree *seasamum* and *ricinus*;" and he records his very natural dislike to castor-oil. The mode he mentions of extracting the oil by putting the seeds into water over a fire and skinning the surface is the manner now adopted in Egypt, though he says the ancient Egyptians merely pressed them after sprinkling them with salt. The press indeed is employed for this purpose at the present day, when the oil is only wanted for lamps, but by the other method it is more pure; and the coarser qualities not being extracted, it is better suited for medicinal purposes.

Strabo says, "Almost all the natives of Egypt used its oil for lamps, and workmen, as well as the poorer classes, both men and women, anointed themselves with it," giving it the same name, *kiki*, as Pliny, which he does not confine, like Herodotus, to the oil; and of all those by which it was formerly known in Egypt or Greece, no one is retained by the modern Egyptians. It grows in every part of Upper and Lower Egypt, but the oil is now little used in consequence of the extensive culture of the lettuce, the coleseed, the olive, the carthamus and the *simsim*, which afford a better quality for burning. It is therefore seldom employed except for the purpose of adulterating the lettuce and other oils; and the *ricinus*, though a common plant, is rarely cultivated in any part of the country.

The enicon, a plant unknown in Italy, according to Pliny was sown in Egypt for the sake of the oil its seed afforded; the chorticon, *utrica* and *amaracus* were cultivated for the same purpose, and the cypros, a tree resembling the *ziziphus* in its foliage, with seeds like the coriander, was noted in Egypt, particularly on the Canopic branch of the Nile, for the excellence of its oil. Egypt was also famed for its oil of bitter almonds, and many other vegetable productions were encouraged for the sake of their oil, for making ointments or for medicinal purposes.

The trees of ancient Egypt represented on the monuments are the date, *dôm*, sycamore, pomegranate, persea, tamarisk and *Periploca sea-mone*; and the fruit, seeds or leaves of the *nebk*, vine, fig, olive, *mokhayt* (*Cordia myxa*), *khuroob* or locust tree, palma Christi or *cici*, *sont* or acanthus, bay, and *egleeg* or *balanites*, have been found in the tombs of Thebes; as well as of the areca, tamarind, myrobalanus and others, which are the produce either of India or the interior of Africa. And

though these last are not the actual productions of Egypt, they are interesting, as they show the constant intercourse maintained with those distant countries. One instance has been met with of the pine-apple in glazed pottery. The sculptures also represent various flowers, some of which may be recognized, while others are less clearly defined and might puzzle the most expert botanist.

Little attention is paid by the inhabitants of modern Egypt to the cultivation of plants beyond those used for the purpose of food, or to the growth of trees, excepting the palm, large groves of which are met with in every part of the country; and if the statement of Strabo be true, that "in all (Lower) Egypt the palm was sterile or bore an uneatable fruit, though of excellent quality in the Thebaid," this tree is now cultivated with more success in Lower Egypt than in former times, some of the best quality of dates being produced there, particularly at Korayn, to the east of the Delta, where the kind called *Anaree* is superior to any produced to the north of Nubia.

Few timber trees are reared in these days either in Upper or Lower Egypt. Some sycamores, whose wood is required for water-wheels and other purposes, a few groups of *athals*, or Oriental tamarisks, used for tools and other implements requiring a compact wood, and two or three groves of *sont*, or mimosa Nilotica, valuable for its hard wood and for its pods used in tanning, are nearly all that the modern inhabitants retain of the many trees grown by their predecessors. But their thriving condition, as that of the mulberry trees (planted for the silk-worms), which form, with the mimosa Lebbeck, some shady avenues in the vicinity of Cairo, and of the cassia fistula (bearing its dense mass of blossoms in the gardens of the metropolis), shows that it is not the soil, but the industry of the people, which is wanting to encourage the growth of trees.

The thickets of acanthus, alluded to by Strabo, still grow above Memphis, at the base of the low Libyan hills. In going from the Nile to Abydos, you ride through the grove of acacia once sacred to Apollo, and see the rising Nile traversing it by a canal, as when the geographer visited that city, even then reduced to the condition of a small village; and groves of the same tree may here and there be traced in other parts of the Thebaid, from which it obtained the name of the Thebaic thorn.

Above the cataracts the *sont* grew in profusion a few years ago upon the banks of the Nile, enabling the poor Nubians to send abundance of charcoal for sale to Cairo; and its place is supplied in the desert by the *scâleh* and other of the mimosa tribe, which are indigenous to the soil.

The principal woods used by the Egyptians were the date, *dôm*, sycamore, several acacias, the two tamarisks, the *egleeg* or *balanites*, ebony, fir and cedar. The various purposes to which every part of the palm or date tree was applied have been already noticed, as well as of the *dôm*, or Theban palm. Sycamore wood was employed for coffins, boxes, small idols, doors, window-shutters, stools, chairs and cramps for building; for handles of tools, wooden pegs or nails, cramps, idols, small boxes and those parts of cabinet-work requiring hard, compact wood the *sont* (acacia Nilotica) was usually preferred; and spears were frequently made of other acacias which grew in the interior or on the confines of the desert.

For cramps in walls and tools of various kinds the wood of the Tamarix Orientalis was much used, and even occasionally for pieces of furniture, for which purpose the *egleeg* was also em-

ployed; but the principal woods adopted by the cabinet-maker for fine work were ebony, fir and cedar. Of these three the first came from Africa, and formed, with ivory, gold, ostrich feathers, dried fruits and skins, the principal object of the annual tribute brought to Egypt by the conquered tribes of Ethiopia and the Soodân; but fir and cedar were imported from Syria, the last two being in great demand for common furniture, small boxes, coffins and various objects connected with the dead.

Other woods of a rare and valuable kind were brought to Egypt by the people of Asia tributary to the Pharaohs; and the importance attached to them may be estimated by their being frequently imitated, for the satisfaction of those who could not afford to purchase furniture or trinkets of so expensive a material.

Egypt also produced some fungi useful for dyeing; the pods of the *Acacia Nilotica*, the bark of the *scâleh* acacia and the wood and bark of the *errin*, or *Rhus oxyacanthoides*, for tanning; and the *Periploca sea-mone* for euring skins.

White crops were of course the principal cultivated productions in the valley of the Nile, and wheat and barley were grown in every part of Egypt.

Like the Romans, they usually brought the seed in a basket, which the sower held in his left hand or suspended on his arm (sometimes with a strap around his neck), while he scattered the seed with his right; and he sometimes followed the plough in those fields which required no further preparation with the hoe or were free from the roots of noxious weeds. The mode of sowing was what we term broadcast; the seed was scattered loosely over the surface, whether ploughed or allowed to remain in its unbroken muddy state; and in no agricultural scene is there any evidence of drilling or dibbling.

Corn and those productions which did not require constant irrigation were sown in the open field, as in other countries; but for indigo, esculent vegetables and herbs the fields were portioned out into the usual square beds, surrounded by a raised border of earth to keep in the water, which was conducted into them by channels from the *shadoof* or poured in with buckets.

Wheat was cut in about five, barley in four, months; the best quality, according to Pliny, being grown in the Thebaid. The wheat, as at the present day, was all bearded, and the same varieties, doubtless, existed in ancient as in modern times, among which may be mentioned the seven-eared quality described in Pharaoh's dream. This is the kind which has been lately grown in England, and which is said to have been raised from grains found in the tombs of Thebes. It is no longer cultivated in Upper Egypt, being only grown in small quantities in the Delta; and this is the more remarkable as it renders the substitution of modern for ancient wheat at Thebes very improbable.

The wheat was cropped a little below the ear with a toothed sickle, and carried to the threshing-floor in wicker paniers upon asses or in rope nets, the gleaners following to collect the fallen ears in hand-baskets. The rope net, answering to the *Shenfeh* of modern Egypt, was borne on a pole by two men, and the threshing-floor was a level circular area near the field or in the vicinity of the granary, where, when it had been well swept, the ears were deposited, and cattle were driven over it to tread out the grain. While superintending the animals so employed the Egyptian peasants,

like their modern successors, relieved their labors by singing; and in a tomb at Eileithias this song of the threshers is written in hieroglyphics over oxen treading out the grain: "(1) Thresh for yourselves (*twice*, a), (2) O oxen, (3) thresh for yourselves (*twice*, b), (4) measures for yourselves, (5) measures for your masters." The discovery and translation of this are due to Champollion, to whom all who study hieroglyphics are under such infinite obligations, and whose talents were beyond all praise.

A certain quantity was first strewed in the centre of the area; and when this had been well triturated by the animals' feet, more was added by means of large wooden forks, from the main heap, raised around, and forming the edge of, the threshing-floor; and so on till all the grain was trodden out. This process, called *trituration*, was generally adopted by ancient, as by some modern, people. Sometimes the cattle were bound together by a piece of wood or a rope fastened to their horns or necks, in order to force them to go round the heap and tread it regularly, the driver following behind them with a stick.

After the grain had been trodden out, they winnowed it with wooden shovels; it was then carried to the granary in sacks, each containing a fixed quantity, which was determined by wooden measures, a scribe noting down the number, as called by the teller who superintended its removal. Sweepers with small hand-brooms were employed to collect the scattered grain that fell from the measure; and the "innumerable heaps of corn" mentioned by Diodorus, collected from "the field which was round every city," accord well with the representation of the paintings in the tombs, and with those seen at the present day in the villages of the Nile. Sometimes two scribes were present, one to write down the number of measures taken from the heap of corn, and the other to check them by entering the quantity removed to the granary, as well as the number of sacks actually housed—a precaution quite in character with the circumspect habits of the Egyptians.

Oxen, as Herodotus says, were generally used for treading out the grain; and sometimes, though rarely, asses were employed for that purpose.

The Jews had the same custom, and, like the Egyptians, they suffered the ox to tread out the corn unmuzzled, according to the express order of their lawgiver. In later times, however, it appears that the Jews used "threshing instruments;" though, from the offer made to David by Ornan, of "the oxen also," and the use of the word *dus*, "treading," in the sentence, "Ornan was threshing wheat," it is possible that the *trituration* is here alluded to, and that the threshing instruments only refer to the winnowing-shovels, or other implements used on those occasions; though the "new sharp threshing instrument having teeth," mentioned in Isaiah, seems to be the *noreg* or corn-drag, still employed in Egypt, which the Hebrew name "*moreg*," so closely resembles; and this same word is applied to the "threshing instruments" of Ornan. The Jews, like the Greeks, bound up the wheat when cut into sheaves, which was sometimes done by the Egyptians, though their usual custom was to put it into baskets or rope nets, and to carry it loose to the threshing-floor.

The modern Egyptians cut the wheat close to the ground, barley and doora being plucked up by the roots, and having bound it in sheaves, carry it to a level and cleanly swept area near the field, in the centre of which they collect it in a

heap, and then, taking a sufficient quantity, spread it upon the open area, and pass over it the noreg drawn by two oxen, the difference in the modern and ancient method being that in the former the noreg is used, and the oxen go round the heap, which is in the centre, and not at the circumference, of the threshing-floor. Some instances, however, occur of the heap being in the centre, as at the present day.

The noreg is a machine consisting of a wooden frame, with three cross-bars or axles, on which are fixed circular iron plates, for the purpose of bruising the ears of corn and extracting the grain, at the same time that the straw is chopped up; the first and last axles having each four plates, and the central one three; and at the upper part is a seat on which the driver sits, his weight giving additional effect to the machine. Indeed, the Roman tribulum, described by Varro, appears not to have been very unlike the noreg. It was "a frame made rough by stones or pieces of iron, on which the driver or a great weight was placed; and this, being drawn by beasts yoked to it, pressed out the grain from the ear."

While some were employed in collecting the grain and depositing it in the granary, others gathered the long stubble from the field, and prepared it as provender to feed the horses and cattle; for which purpose it was used by them as by the Romans and the modern Egyptians. They probably preferred reaping the corn close to the ear, in order to facilitate the trituration; and afterward cutting the straw close to the ground, or plucking it by the roots, they chopped it up for the cattle; and this, with dried clover (the drees of modern Egypt), was laid by for autumn, when, the pastures were overflowed by the Nile, the flocks and herds were kept in sheds or pens on the higher grounds, or in the precincts of the villages.

This custom of feeding some of their herds in sheds accords with the Scriptural account of the preservation of the cattle which had been "brought home" from the field; and explains the apparent contradiction of the destruction of "all the cattle of Egypt" by the murrain, and the subsequent destruction of the cattle by the hail, those which "were in the field" alone having suffered from the previous plague, and those in the stalls or "houses" having been preserved.

An instance of stall-fed oxen from the sculptures has been given in the account of the farm-yard and villas of the Egyptians.

The first crop of wheat having been gathered, they prepared the land for whatever produce they next intended to rear; the field was ploughed and sowed, and, if necessary, the whole was inundated by artificial means, as often as the quality of the crop or other circumstances required. The same was repeated after the second and third harvest, for which the peasant was indebted to his own labors in raising water from the Nile—an arduous task, and one from which no showers relieved him throughout the whole season. For in Upper Egypt rain may be said to be unknown, five or six slight showers that annually fall there scarcely deserving that name; and in no country is artificial irrigation so indispensable as in the valley of the Nile.

In many instances, instead of corn they reared clover or leguminous herbs, which were sown as soon as the water began to subside, generally about the commencement of October; and at the same time that corn or other produce was raised on the land just left by the water, another crop was procured by artificial irrigation. This, of course, depended on the choice of each individual, who con-

sulted the advantages obtained from certain kinds of produce, the time required for their succession, or the benefit of the land; for though no soil recovers more readily from the bad effects arising from a repetition of similar crops, through the equalizing influence of the alluvial deposit, it is at length found to impoverish the land, and the Egyptian peasant is careful not to neglect the universal principle in husbandry of varying the produce on the same ground.

Besides wheat, other crops are represented in the paintings of the tombs, one of which, a tall grain, is introduced as a production both of Upper and Lower Egypt. From the color, the height to which it grows compared with the wheat, and the appearance of a round yellow head it bears on the top of its bright green stalk, it is evidently intended to represent the doora or Holcus Sorghum. It was not reaped by a sickle, like the wheat and barley, but men, and sometimes women, were employed to pluck it up; which being done, they struck off the earth that adhered to the roots with their hands, and having bound it in sheaves, they carried it to what may be termed the threshing-floor, where, being forcibly drawn through an instrument armed at the summit with metal spikes, the grain was stripped off and fell upon the well-swept area below. This ancient contrivance is the more remarkable as something of the kind has lately been proposed in England for a similar purpose.

At the end of summer the peasant looked anxiously for the return of the inundation, upon which all his hopes for the ensuing year depended. He watched with scrupulous attention the first rise of the river; the state of its daily increase was noted down and proclaimed by the curators of the Nilometers at Memphis and other places, and the same anxiety for the approaching inundation was felt on each succeeding year. But during this interval he was not idle, and the quantity of water required for artificial irrigation entailed on the peasant incessant labor, except when the Nile was at its highest; and even while watching his water-melons and various cucurbitaceous plants (like the modern fellah, under the shade of a rude "lodge in a garden of cucumbers"), he occupied himself in preparing something that might be serviceable on a future occasion.

During the inundation, when the Nile had been admitted by the canals into the interior and the fields were covered with water, the peasantry indulged in various amusements which this leisure period gave them time to enjoy. Their cattle were housed and supplied with dry food, which had been previously prepared for the purpose; the tillage of the land and all agricultural occupations were suspended, and this season was celebrated as a harvest home, with recreations of every kind. They indulged in feasting and all the luxuries of the table that they could afford; they attended the public games held in some of the principal towns, where the competitors contended for prizes of cattle, skins and other things well suited to the taste or wants of the peasant; and they amused themselves with wrestling-matches, bull-fights and various sports. Many a leisure hour was passed in singing and dancing; and among the songs of the Egyptian peasant, Julius Pollux mentions that of Maneros, who was even celebrated as the inventor of husbandry, an honor generally given to the still more mysterious Osiris. But some songs and games were exclusively appropriated to certain festivals; and this adaptation of peculiar ceremonies to particular occa-

sions is quite consistent with the character of the Egyptians.

They had many festivals connected with agriculture and the produce of the soil, which happened at different periods of the year. In the month Mesore they offered the first-fruits of their lentils to the god Harpocrates, "calling out at the same time, The tongue is Fortune, the tongue is God;" and the allegorical festival of "the delivery of Isis was celebrated immediately after the vernal equinox" to commemorate the beginning of harvest. "Some," says Plutarch, "assimilate the history of those gods to the various changes which happen in the air during the several seasons of the year, or to those accidents which are observed in the production of corn in its sowing and ripening, 'for,' they observe, 'what can the burial of Osiris more aptly signify than the first covering the seed in the ground after it is sown? or his reviving and reappearing, than its first beginning to shoot up? and why is Isis said, upon perceiving herself to be with child, to have hung an amulet about her neck on the sixth of the month Phaophi, soon after sowing-time, but in allusion to this allegory? and who is that Harpocrates, whom they tell us she brought forth about the time of the winter tropic, but those weak and slender shootings of the corn, which are yet feeble and imperfect?'—for which reason it is that the first-fruits of their lentils are dedicated to this god, and they celebrate the feast of his mother's delivery just after the vernal equinox." From this it may be inferred that the festival of the lentils was instituted when the month Mesore coincided with the end of March; for since they were sown at the end of November, and ripened in about one hundred or one hundred and ten days, the first-fruits might be gathered in three months and a half, or "just after the vernal equinox," or the last week in March, which would carry back the original institution of the festival to about two thousand six hundred and fifty years before our era, or some time after the reign of Menes.

"On the 19th day of the first month (Thoth), which was the feast of Hermes, they ate honey and figs, saying to each other, 'How sweet a thing is truth!'—a satisfactory proof that the month itself, and not the first day alone, was called after and dedicated to Thoth, the Egyptian Hermes; and another festival, answering to the "Thesmophoria of the Athenians," was established to commemorate the period when "the husbandmen began to sow their corn in the Egyptian month Athyr."

The boatmen of the Nile belonged to the third class.

They were of different grades, some belonging to the private sailing- or pleasure-boats of the grandees, others to those of burden. They also differed from the sailors of the "long ships" employed at sea, and even from those of the war-galleys on the Nile, which acted as guard-boats, and were also used in the expeditions undertaken by the Pharaohs into Ethiopia. These government boatmen were sometimes employed by the kings in transporting large blocks of stone to ornament the temples; and the immense monolith of granite, brought by Amasis from the first cataract to Saïs, was dragged overland by two thousand boatmen; but those who carried stones in lighters from the quarries were an inferior order and ranked among the common boatmen of the Nile. Even among them the office of steersman seems always to have been very important; and as the pilots of the ships of war had a high rank above the "able seamen"

of the fleet, so the helmsman in the ordinary boats of the Nile was looked upon as little inferior to the captain, standing in the same relative position as the Mestamel to the Ryis of the modern Canga.

VII. Fourth Class: Artificers, Tradesmen or Shopkeepers, Musicians, Builders, Carpenters, Boat-Builders, Masons, Potters, Public Weighers and Notaries, Pounders.—Glass.—False Stones.—Lamps.—Fine Linen.—Looms.—Flax.—Leather.—Papyrus.—Potters.—Carpenters.—Boxes.—Boats.—Metals.—Tin.—Gold Mines.—Iron.—Bronze.—Casting.—Stone Knives.—Pounding in Mortars.

In the fourth class were included the workers in glass, metals, wood and leather, the manufacturers of linen and various stuffs, dyers, tanners, carpenters, cabinet-makers, masons, and all who followed handicraft employments or any kind of trade. The musicians, who gained their livelihood by singing and playing, the leather-cutters and the carvers in stone, and ordinary painters (distinct of course from sculptors and artists), were included in the same class, which was mostly composed of people living in towns. Each craft (as is generally the case in modern Egypt also) had its quarter of the town called after it, as the quarter of the goldsmiths, of the leather-cutters and others, and no one presumed to interfere with the occupation of a different trade from his own. It is even said that every one was obliged by law to follow the same trade as his father; at all events, whether allowed in the beginning of his career to choose for himself or no, he was forced to continue in the one he first belonged to, and each vied with his neighbor in improving his own branch.

According to Diodorus, "no tradesman was permitted to meddle in political affairs or to hold any civil office in the State, lest his thoughts should be distracted by the inconsistency of his pursuits or by the jealousy and displeasure of the master in whose business he was employed. They feared that, without such a law, constant interruptions would take place in consequence of the necessity or desire of becoming conspicuous in a public station, that their proper occupations would be neglected, and that many would be led, by vanity and self-sufficiency, to interfere in matters out of their sphere. They also considered that to follow more than one occupation would be detrimental to their own interests and to those of the community, and that when men, from a motive of avarice, are induced to engage in numerous branches of art, the result generally is that they are unable to excel in any. Such," he adds, "is the case in some countries, where artisans engage in agricultural pursuits or in commercial speculations, and frequently in two or three different arts at once. Many, again, in those communities which are governed on democratic principles, are in the habit of frequenting popular assemblies, and dreaming only of their own interests, receive bribes from the leaders of parties and do ineradicable mischief to the State. But with the Egyptians, if any artisan meddled with political affairs, or engaged in any other employment than the one to which he had been brought up, a severe punishment was instantly inflicted upon him, and it was with this view that the regulations respecting their public and private occupations were instituted by the early legislators of Egypt."

Many arts and inventions were in common use in Egypt for centuries before they are generally supposed to have been known; and we are now and then as much surprised to find that certain things were old three thousand years ago as the Egyptians would be if they could hear us talk of them as late discoveries. One of them is the use of glass, with which they were acquainted at least as early as the reign of the first Osirtasen, more than three thousand eight hundred years ago; and the process of glass-blowing is represented during his reign in the paintings of Beni Hassan, in the same manner as it is on later monuments in different parts of Egypt to the time of the Persian conquest.

The form of the bottle and the use of the blow-pipe are unequivocally indicated in those subjects; and the green hue of the fused material, taken from the fire at the point of the pipe, sufficiently proves the intention of the artist. But even if we had not this evidence of the use of glass, it would be shown by those well-known images of glazed pottery which were common at the same period, the vitrified substance that covers them being of the same quality as glass, and containing the same ingredients fused in the same manner. And besides the many glass ornaments known to be of an earlier period is a bead, found at Thebes, bearing the name of a Pharaoh who lived about 1450 B. C., the specific gravity of which, 25° 23', is precisely the same as of crown glass, now manufactured in Europe and in this country.

Glass bottles are even met with on monuments of the fourth dynasty, dating long before the Osirtasens, or more than four thousand years ago. The transparent substance shows the red wine they contained; and this kind of bottle is represented in the same manner among the offerings to the gods and at the fêtes of individuals, wherever wine was introduced, from the earliest to the latest times. Bottles and other objects of glass are commonly found in the tombs; and though they have no kings' names or dates inscribed upon them (glass being seldom used for such a purpose), no doubt exists of their great antiquity, and we may consider it a fortunate chance that has preserved one bead with the name of a sovereign of the eighteenth dynasty. Nor is it necessary to point out how illogical is the inference that because other kinds of glass have not been found bearing a king's name they were not made in Egypt at, or even before, the same early period.

Pliny ascribes the discovery of glass to some Phœnician sailors accidentally lighting a fire on the sea-shore; but if an effect of chance, the secret is more likely to have been arrived at in Egypt, where natron (or subcarbonate of soda) abounded, than at the seaside, and if the Phœnicians really were the first to discover it on the Syrian coast, this would prove their migration from the Persian gulf to have happened at a very remote period. Glass was certainly one of the great exports of the Phœnicians, who traded in beads, bottles and other objects of that material, as well as various manufactures, made either in their own or other countries, but Egypt was always famed for its manufacture. A peculiar kind of earth was found near Alexandria, without which, Strabo says, it was impossible to make certain kinds of glass of many colors, and of a brilliant quality, and some vases presented by an Egyptian priest to the emperor Hadrian were considered so curious and valuable that they were only used on grand occasions.

Glass bottles of various colors were eagerly

brought from Egypt and exported into other countries, and the manufacture as well as the patterns of many of those found in Greece, Etruria and Rome show that they were of Egyptian work; and though imitated in Italy and Greece, the original art was borrowed from the workmen of the Nile.

Such, too, was their skill in making glass, and in the mode of staining it of various hues, that they counterfeited with success the emerald, the amethyst and other precious stones, and even arrived at an excellence in the art of introducing numerous colors into the same vase, to which our European workmen, in spite of their improvements in many branches of this manufacture, are still unable to attain. A few years ago the glass-makers of Venice made several attempts to imitate the variety of color found in antique cups; but as the component parts were of different densities, they did not all cool or set at the same rapidity, and the vase was unsound. And it is only by making an inner foundation of one color, to which those of the outer surface are afterward added, that they have been able to produce their many-colored vases, some of which were sent to the great exhibition of 1851.

Not so the Egyptians, who combined all the colors they required in the same cup without the interior lining, those which had it being of inferior and cheaper quality. They had even the secret of introducing gold between two surfaces of glass, and in their bottles a gold band alternates within a set of blue, green and other colors. Another curious process was also common in Egypt in early times, more than three thousand years ago, which has only just been attempted at Venice, whereby the pattern on the surface was made to pass in right lines directly through the substance; so that if any number of horizontal sections were made through it each one would have the same device on its upper and under surface. It is in fact a mosaic in glass, made by fusing together as many delicate rods of an opaque glass of the color required for the picture, in the same manner as the woods in Tunbridge-ware are glued together to form a larger and coarser pattern. The skill required in this exquisite work is not only shown by the art itself, but the fineness of the design; for some of the feathers of birds and other details are only to be made out with a lens, which means of magnifying was evidently used in Egypt when this mosaic glass was manufactured. Indeed the discovery of a lens of crystal by Mr. Layard, at Nimroud, satisfactorily proves its use at an early period in Assyria, and we may conclude that it was neither a recent discovery there nor confined to that country.

Winckelmann mentions two pieces of glass mosaic, "one of which, though not quite an inch in length and a third of an inch in breadth, exhibits on a dark and variegated ground a bird resembling a duck, in very bright and varied colors, rather in the manner of a Chinese painting than a copy of nature. The outlines are bold and decided, the colors beautiful and pure, and the effect very pleasing, in consequence of the artist having alternately introduced an opaque and a transparent glass. The most delicate pencil of a miniature-painter could not have traced with greater sharpness the circle of the eyeball or the plumage of the neck and wings, at which part this specimen has been broken. But the most surprising thing is that the reverse exhibits the same bird, in which it is impossible to discover any difference in the smallest details, whence it may be concluded that

the figure of the bird continues through its entire thickness. The picture has a granular appearance on both sides, and seems to have been formed of single pieces, like mosaic work, united with so much skill that the most powerful magnifying glass is unable to discover their junction. From the condition of this fragment it was at first difficult to form any idea of the process employed in its manufacture, and we should have remained entirely ignorant of it had not the fracture shown that filaments of the same colors as on the surface of the glass and throughout its whole diameter passed from one side to the other, whence it has been concluded that the picture was composed of different cylinders of colored glass, which, being subjected to a proper degree of heat, united by partial fusion. I cannot suppose they would have taken so much trouble, and have been contented to make a picture only the sixth of an inch thick, while by employing longer filaments they might have produced one many inches in thickness without occupying any additional time in the process. It is therefore probable this was cut from a larger or thicker piece, and the number of the pictures taken from the same depended on the length of the filaments and the consequent thickness of the original mass. The other specimen, also broken, and about the size of the preceding one, is made in the same manner. It exhibits ornaments of a green, yellow and white color on a blue ground, which consist in volutes, strings of beads and flowers, ending in pyramidal points. All the details are perfectly distinct and unconfused, and yet so very minute that the keenest eye is unable to follow the delicate lines in which the volutes terminate; the ornaments, however, are all continued without interruption through the entire thickness of the piece."

Winckelmann is quite right respecting the mode of forming these glass mosaics, which was made more intelligible by a specimen found in Egypt. It consisted of separate squares, whose original division was readily discovered in a bright light, as well as the manner of adjusting the different parts and of uniting them in one mass, and here and there the heat applied to cement the squares had caused the colors to run between them in consequence of partial fusion from too strong a fire.

Not only were these various parts made at different times, and afterward united by heat, rendered effective on their surfaces by means of a flux applied to them, but each colored line was at first separate, and when adjusted in its proper place was connected with those around it by the same process.

The immense emeralds mentioned by ancient authors were doubtless glass imitations of those precious stones. Such were the colossal statue of Serapis, in the Egyptian labyrinth, nine cubits, or thirteen feet and a half, in height; an emerald presented by the king of Babylon to an Egyptian Pharaoh, which was four cubits, or six feet, long, and three cubits broad; and an obelisk in the temple of Jupiter, which was forty cubits, or sixty feet, in height, and four cubits broad, composed of four emeralds; and to have formed statues of glass of such dimensions, even allowing them to have been of different pieces, was a greater triumph of skill than imitating the stones.

That the Egyptians more than three thousand years ago were well acquainted not only with the manufacture of common glass for beads and bottles of ordinary quality, but with the art of staining it of divers colors, is sufficiently proved by the fragments found in the tombs of Thebes; and

so skillful were they in this complicated process that they imitated the most fanciful devices and succeeded in counterfeiting the rich hues and brilliancy of precious stones. The green emerald, the purple amethyst and other expensive gems were successfully imitated; a necklace of false stones could be purchased at an Egyptian jeweler's to please the wearer or deceive a stranger by the appearance of reality; and some mock pearls found by me at Thebes have been so well counterfeited that even now it is difficult with a strong lens to detect the imposition.

Pliny says the emerald was more easily counterfeited than any other gem, and considers the art of imitating precious stones a far more lucrative piece of deceit than any devised by the ingenuity of man. Egypt was, as usual, the country most noted for this manufacture, and we can readily believe that in Pliny's time they succeeded so completely in the imitation as to render it "difficult to distinguish false from real stones."

Many, in the form of beads, have been met with in different parts of Egypt, particularly at Thebes; and so far did the Egyptians carry this spirit of imitation that even small figures, scarabei and other objects made of ordinary porcelain were counterfeited, being composed of still cheaper materials. A figure which was entirely of earthenware, with a glazed exterior, underwent a somewhat more complicated process than when cut out of stone and simply covered with a vitrified coating. This last could, therefore, be sold at a low price; it offered all the brilliancy of the former, and its weight alone betrayed its inferiority; by which means whatever was novel or pleasing from its external appearance was placed within reach of all classes, or at least the possessor had the satisfaction of seeming to partake in each fashionable novelty.

Such inventions and successful endeavors to imitate costly ornaments by humbler materials not only show the progress of art among the Egyptians, but strongly argue the great advancement they had made in the customs of civilized life; since it is certain that until society has arrived at a high degree of luxury and refinement artificial wants of this nature are not created, and the poorer classes do not feel the desire of imitating the rich in the adoption of objects dependent on taste or accidental caprice.

Glass bugles and beads were much used by the Egyptians for necklaces, and for a sort of network with which they covered the wrappers and cartonnage of mummies. They were arranged so as to form, by their varied hues, numerous devices or figures, in the manner of our bead purses; and women sometimes amused themselves by stringing them for ornamental purposes, as at the present day.

The principal use to which glass was applied by the Egyptians, besides the beads and fancy work already noticed, was for the manufacture of bottles, vases and other utensils; wine was frequently brought to table in a bottle or handed to a guest in a cup of this material, and a body was sometimes buried in a glass coffin. Occasionally a granite sarcophagus was covered with a coating of vitrified matter, usually of a deep green color, which displayed by its transparency the sculptures or hieroglyphic legends engraved upon the stone, a process well understood by the Egyptians, and the same they employed in many of the blue figures of pottery and stone commonly found in their tombs.

In their glass mosaics the colors have a wonder-

ful brilliancy; the blues which are given by copper are vivid and beautifully clear, and one of the reds has all the intenseness of rosso antico, with the brightness of the glassy material in which it is found, thus combining the qualities of a rich enamel.

Many of the porcelain cups discovered at Thebes present a tasteful arrangement of varied hues, and show the skill of the Egyptians and the great experience they possessed in this branch of art. The manner in which the colors are blended and arranged, the minuteness of the lines frequently tapering off to an almost imperceptible fineness, and the varied directions of twisted curves, traversing the substance, but strictly conforming to the pattern designed by the artist, display no ordinary skill, and show that they were perfect masters of the means they employed.

The Egyptian porcelain should perhaps be denominated glass-porcelain, as partaking of the quality of the two, and not being altogether unlike the porcelain-glass invented by the celebrated Réaumur, who discovered, during his curious experiments on different qualities of porcelain, the method of converting glass into a substance very similar to chinaware.

The ground of Egyptian porcelain is generally of one homogeneous quality and hue, either blue or green, traversed in every direction by lines or devices of other colors—red, white, yellow, black, light or dark blue and green, or whatever the artist chose to introduce; and these are not always confined to the surface, but frequently penetrate into the ground, sometimes having passed half or entirely through the fused substance, in which respect they differ from the porcelain of China, where the flowers or patterns are applied to the surface, and justify the use of the term glass-porcelain. In some instances the yellows were put on after the other colors upon the surface of the vase, which was then again subjected to a proper degree of heat, and after this the handles, the rim and the base were added, and fixed by a repetition of the same process. It was not without considerable risk that these additions were made to their porcelain and glass vases, and many were broken during the operation, to which Martial alludes in an epigram on these fragile cups of the Egyptians.

That the Egyptians possessed considerable knowledge of chemistry and the use of metallic oxides is evident from the nature of the colors applied to their glass and porcelain; and they were even acquainted with the influence of acids upon color, being able, in the process of dyeing or staining cloth, to bring about certain changes in the hues by the same means adopted in our own cotton-works, as I shall show in describing the manufactures of the Egyptians.

The art of cutting glass was known to them at the most remote periods, hieroglyphics and various devices being frequently engraved upon vases and beads; they also ground glass; and some, particularly that which bears figures or ornaments in relief, was cast in a mould. Some have supposed that the method of cutting glass was unknown to the ancients, and have limited the period of its invention to the commencement of the seventeenth century of our era, when Gaspar Lehmann, at Prague, first succeeded in it, and obtained a patent from the emperor Rodolph II.; but the specimens of ancient glass, cut, engraved and ground, discovered in Egypt, suffice to prove the art was practiced there of old.

We find that in Rome the diamond was used for

cutting hard stones; for Pliny tells us that diamonds were eagerly sought by lapidaries, who set them in iron handles, having been found to penetrate anything, however hard. He also states that emeralds and other hard stones were engraved, though in early times it was "considered wrong to violate gems with any figures or devices;" and "all gems could be engraved by the diamond." And though we do not know the precise method adopted by the Egyptians for cutting glass and hard stones, we may reasonably conclude they were acquainted with the diamond, and adopted it for engraving them. Emery powder and the lapidary's wheel were also used in Egypt; and there is little doubt that the Israelites learnt the art of cutting and engraving stones in that country.

Some glass bottles were enclosed in wicker-work very nearly resembling what is now called by the Egyptians a damagan, which holds from one to two gallons of fluid; and some of a smaller size, from six to nine inches in height, were protected by a covering made of the stalks of the papyrus or cyperus rush, like the modern bottles containing Florence oil; others again appear to have been partly cased in leather sewed over them, much in the same manner as some now made for carrying liquids on a journey.

Among the many bottles found in the tombs of Thebes and other places, none have excited greater curiosity and surprise than those of Chinese manufacture, presenting inscriptions in that language. Their number is considerable; but though found in ancient tombs, there is no evidence of their having really been deposited there in early Pharaonic or even Ptolemaic times; and so many of the tombs have been occupied till a recent period by the Moslem population that they may have been left there by these their more recent inmates. Professor Rosellini, however, mentions one he met with "in a previously unopened tomb of uncertain date, which" he refers, "from the style of the sculptures, to a Pharaonic period, not much later than the eighteenth dynasty;" and were it not for this, we might suppose them brought from India by Arab traders. They are about two inches in height; one side presents a flower, and the other an inscription, containing, according to Sir J. Davis (in three out of eight he examined), the following legend: "The flower opens, and, lo! another year;" and another has been translated by Mr. Thoms: "During the shining of the moon the fir tree sends forth its sap" (which in a thousand years becomes amber).

The intercourse between Egypt and Greece had been constantly kept up after the accession of Psammitichus and Amasis; and the former country, the parent of the arts at that period, supplied the Greeks and some of the Syrian tribes with numerous manufactures. The Etruscans, too, a commercial people, appear to have had an extensive trade with Egypt, and we repeatedly find small alabaster as well as colored glass bottles in their tombs, which have all the character of the Egyptian; and not only does the stone of the former proclaim by its quality the quarries from which it was taken, but the form and style of the workmanship leave no doubt of the bottles themselves being the productions of Egyptian artists. The same remark applies to many objects found at Nineveh.

It is difficult to say whether the Egyptians employed glass for the purpose of making lamps or lanterns; ancient authors give us no direct information on the subject, and the paintings offer few

representations of lamps, torches or any other kind of light.

Herodotus mentions a "fête of burning lamps," which took place at Saïs, and indeed throughout the country, at a certain period of the year, and describes the lamps used on this occasion as "small vases filled with salt and olive oil, on which the wick floated, and burnt during the whole night;" but he does not say of what materials those vases were made, and they may have been either of glass or of earthenware.

The sculptures of Tel-el-Amarna, again, represent a guard of soldiers, one of whom holds before him what appears to be a lamp, and resembles the cloth or paper lanterns so common in Egypt at the present day.

The Egyptians were always celebrated for their manufacture of linen and other cloths, and the product of their looms was exported to and eagerly purchased by foreign nations. The fine linen and embroidered work, the yarn and woolen stuffs, of the upper and lower country are frequently mentioned and were highly esteemed. Solomon purchased many of these commodities, as well as chariots and horses, from Egypt; and Chemmis, the city of Pan, retained the credit it had acquired in making linen stuffs till about the period of the Roman conquest.

Woolen garments were chiefly used by the lower orders; sometimes also by the rich, and even by the priests, who were permitted to wear an upper robe in the form of a cloak of this material; but undergarments of wool were strictly forbidden them upon a principle of cleanliness; and as they took so much pains to cleanse and shave the body, they considered it inconsistent to adopt clothes made of the hair of animals. No one was allowed to be buried in a woolen garment, in consequence of its engendering worms which would injure the body; nor could any priest enter a temple without taking off this part of his dress.

The quantity of linen manufactured and used in Egypt was very great; and independent of that made up into articles of dress, the numerous wrappers required for enveloping the mummies, both of men and animals, show how large a supply must have been kept ready for the constant demand at home, as well as for that of the foreign market.

That the bandages employed in wrapping the dead are of linen, and not, as some have imagined, of cotton, has been already ascertained by the most satisfactory tests; and though no one among the unscientific inhabitants of modern Egypt ever thought of questioning the fact, received opinion in Europe had till lately decided that they were cotton; and it was forbidden to doubt that "the bands of byssine linen," said by Herodotus to have been used for enveloping the mummies, were cotton.

The accurate experiments made, with the aid of powerful microscopes, by Mr. Bauer, Mr. Thomson, Dr. Ure and others, on the nature of the fibres of linen and cotton threads, have shown that the former invariably present a cylindrical form, transparent and articulated, or jointed like a cane, while the latter offer the appearance of a flat riband, with a hem or border at each edge, so that there is no possibility of mistaking the fibres of either, except perhaps when the cotton is in an unripe state and the flattened shape of the centre is less apparent. The results having been found similar in every instance, and the structure of the fibres thus unquestionably determined, the threads of mummy cloths were submitted to the same test,

and no exception was found to their being linen, nor were they even a mixture of linen and cotton thread.

The fact of the mummy cloths being linen is therefore decided. The name byssus, it is true, presents a difficulty, owing to the Hebrew shash being translated "byssus" in the Septuagint version, and in our own "fine linen," and to shash being the name applied at this day by the Arabs to fine linen, which is of cotton and not of linen; but as the mummy cloths said by Herodotus to be "of byssine sindon" are known to be invariably linen, the byssus cannot be cotton. Herodotus, indeed, uses the expression "tree wool" to denote cotton; and Julius Pollux adopts the same name, distinguishing it also from byssus, which he calls a species of Indian flax. The use of the two words byssus and linen presents no difficulty, since they might be employed, like our flax and linen, to signify the plant and the substance made from it.

Cotton cloth, however, was among the manufactures of Egypt, and dresses of this material were worn by all classes. Pliny states that the Egyptian priests, though they used linen, were particularly partial to cotton robes; and "cotton garments," supplied by the government for the use of the temples, are distinctly mentioned in the Rosetta Stone. Herodotus and Plutarch affirm that linen was preferred, owing as well to its freshness in a hot climate as to its great tendency to keep the body clean, and that a religious prejudice forbade the priests to wear vestments of any other quality; this, however, refers to the inner portion of the dress; and the prohibition of entering a temple with cotton or woolen garments led to the notion that none but linen were worn by them at any time. The same custom was adopted by the votaries of Isis when her rites were introduced by the Greeks and Romans, and linen dresses were appropriated to those who had been initiated in the sacred mysteries.

Whatever restrictions may have been in force respecting the use of cotton among the priesthood, other individuals were permitted to consult their own choice on this point; and it was immaterial whether they preferred during life the coolness of flax or the softness of cotton raiment, provided the body after death was enveloped in bandages of linen, and this regulation accounts for the mummy cloths of the poorest individuals being also found of that material.

It was not only for articles of dress that cotton was manufactured by the Egyptians; a great quantity was used for the furniture of their houses, the coverings of chairs and couches and various other purposes, and a sort of cloth was made of the united filaments of flax and cotton. This is mentioned by Julius Pollux, who, after describing the cotton-plant as an Egyptian production, and stating that cloth was manufactured of the "wool of its nut," says they sometimes "make the wool of it, and the warp of linen"—a quality of cloth still manufactured by the modern Egyptians.

From the few representations which occur in the tombs of Thebes, it has been supposed that the Egyptian looms were of rude construction, and totally incapable of producing the fine linen so much admired by the ancients; and as the paintings in which they occur were executed at a very early period, it has been conjectured that in after times great improvements took place in their construction. But when we consider with what simple means Oriental nations are in the habit of executing the most delicate and complicated work, we

cease to feel surprised at the apparent imperfection of the mechanism or instruments used by the Egyptians; and it is probable that their far-famed "fine linen," mentioned in Scripture and by ancient writers, was produced from looms of the same construction as those represented in the paintings of Thebes and Eileithyas. Nor was the praise bestowed upon that manufacture unmerited; and the quality of one piece of linen found near Memphis fully justifies it, and excites equal admiration at the present day, being to the touch comparable to silk, and not inferior in texture to our finest cambric.

The mummy cloths are generally of a very coarse quality; and little attention was bestowed on the disposition of the threads in the cloths of ordinary manufacture. Mr. Thomson, who examined many specimens of them, is of opinion that the number of threads in the warp invariably exceeded those of the woof, occasionally even by four times the quantity; and as his observations are highly interesting, I shall introduce an extract from his pamphlet on the subject:

"Of the products of the Egyptian loom we know scarcely more than the mummy pits have disclosed to us; and it would be as unreasonable to look through modern sepulchres for specimens and proofs of the state of manufacturing art amongst ourselves as to deduce an opinion of the skill of the Egyptians from those fragments of cloth which envelop their dead, and have come down almost unchanged to our own time. The curious or costly fabrics which adorned the living, and were the pride of the industry and skill of Thebes, have perished ages ago. There are, however, amongst these remains, some which are not unworthy of notice, which carry us back into the workshops of former times, and exhibit to us the actual labors of weavers and dyers of Egypt more than two thousand years ago.

"The great mass of the mummy cloth employed in bandages and coverings, whether of birds, animals or the human species, is of coarse texture, especially that more immediately in contact with the body, which is generally impregnated with resinous or bituminous matter. The upper bandages nearer the surface are finer. Sometimes the whole is enveloped in a covering coarse and thick, and very like the sack of the present day; sometimes in cloth coarse and open, like that used in our cheese-presses, for which it might easily be mistaken. In the college of surgeons are various specimens of these cloths, some of which are very curious.

"The beauty of the texture and peculiarity in the structure of a mummy cloth given to me by Mr. Belzoni were very striking. It was free from gum or resin, or impregnation of any kind, and had evidently been originally white. It was close and firm, yet very elastic. The yarn of both warp and woof was remarkably even and well spun. The thread of the warp was double, consisting of two fine threads twisted together. The woof was single. The warp contained ninety threads in an inch; the woof or weft only forty-four. The fineness of these materials, estimated after the manner of cotton yarn, was about thirty hanks in the pound.

"The subsequent examination of a great variety of mummy cloths showed that the disparity between the warp and woof belonged to the system of manufacture, and that the warp generally had twice or thrice, and not seldom four times, the number of threads in an inch that the woof had; thus, a cloth containing eighty threads of warp in

the inch, of a fineness of about twenty-four hanks in the pound, had forty threads in the woof; another, of one hundred and twenty threads of warp of thirty hanks, had forty; and a third specimen only thirty threads in the woof. These have each respectively double, treble and quadruple the number of threads in the warp that they have in the woof. This structure, so different from modern cloth, which has the proportions nearly equal, originated probably in the difficulty and tediousness of getting in the woof when the shuttle was thrown by hand, which is the practice in India at the present day, and there are weavers still living old enough to remember the universal practice in this country."

Mr. Thomson then mentions some fragments of mummy cloths sent to England by the late Mr. Salt, which he saw in the British Museum. They were "of different degrees of fineness, some fringed at the ends and some striped at the edges." "My first impression," he continues, "on seeing these cloths was that the finest kinds were muslin and of Indian manufacture, since we learn from the 'Periplus of the Erythraean Sea,' ascribed to Arian, but more probably the work of some Greek merchant himself engaged in the trade, that muslins from the Ganges were an article of export from India to the Arabian Gulf; but this suspicion of their being cotton was soon removed by the microscope of Mr. Bauer, which showed that they were all, without exception, linen. Some were thin and transparent, and of very delicate texture. The finest appeared to be made of yarns of near one hundred hanks in the pound, with one hundred and forty threads in the inch in the warp and about sixty-four in the woof. A specimen of muslin in the museum of the East India House, the finest production of the dacca loom, has only one hundred threads in an inch in the warp, and eighty-four in the woof; but the surprising fineness of the yarns, which, though spun by hand, is not less than two hundred and fifty in the pound, gives to this fabric its unrivaled tenuity and lightness.

"Some of the cloths were fringed at the ends, and one, a sort of scarf, about four feet long and twenty inches wide, was fringed at both ends. Three or four threads twisted together with the fingers to form a strong one, and two of these again twisted together, and knotted at the middle and at the end to prevent unraveling, formed the fringe, precisely like the silk shawls of the present day.

"The selvages of the Egyptian cloths are generally formed with the greatest care, and are well calculated by their strength to protect the cloth from accident. Fillets of strong cloth or tape also secure the ends of the pieces from injury, showing a knowledge of all the little resources of modern manufacture. Several of the specimens, both of fine and coarse cloth, were bordered with blue stripes of various patterns, and in some alternating with narrow lines of another color. The width of the patterns varied from half an inch to an inch and a quarter. In the latter were seven blue stripes, the broadest about half an inch wide nearest the selvege, followed by five very narrow ones, and terminated by one an eighth of an inch broad. Had this pattern, instead of being confined to the edge of the cloth, been repeated across its whole breadth, it would have formed a modern gingham, which we can scarcely doubt was one of the articles of Egyptian industry.

"A small pattern about half an inch broad formed the edging of one of the finest of these cloths,

and was composed of a stripe of blue, alternating with three lines of a fawn color, forming a simple and elegant border. These stripes were produced in the loom by colored threads previously dyed in the yarn. The nature of the fawn color I was unable to determine. It was too much degraded by age, and the quantity too small, to enable me to arrive at a satisfactory conclusion. Though I had no doubt the coloring matter of the blue stripes was indigo, I subjected the cloth to the following examination: Boiled in water for some time, the color did not yield in the least, nor was it at all affected by soap nor by strong alkalies; sulphuric acid, diluted only so far as not to destroy the cloth, had no action on the color. Chloride of lime gradually reduced and at last destroyed it. Strong nitric acid, dropped upon the blue, turned it orange, and in the same instant destroyed it. These tests prove the coloring matter of the stripes to be indigo."

Pliny cites four qualities of linen particularly noted in Egypt, the Tanitic and Pelusiac, the Butine and the Tentyritic; and mentions in the same place the cotton tree of Egypt, which he confines to the upper country. He also states that the quantity of flax cultivated in Egypt was accounted for by their exporting linen to Arabia and India; and the quality of that produced by the Egyptian looms was far superior to any other.

The threads used for nets were remarkable for their fineness; and Pliny says "some of them were so delicate that they would pass through a man's ring, and a single person could carry a sufficient number of them to surround a whole wood." Julius Lupus, who died while governor of Egypt, had some of these nets, each string of which consisted of one hundred and fifty threads; a fact perfectly surprising to those who are not aware that the Rhodians preserve to this day in the temple of Minerva the remains of a linen corselet presented to them by Amasis, king of Egypt, whose threads are composed each of three hundred and sixty-five fibres; and in proof of the truth of this, Mutianus, who was thrice consul, lately affirmed at Rome that he had examined it; and the reason of so few fragments remaining was attributable to the curiosity of those who had frequently subjected it to the same scrutiny."

Their nets were made of flax-string, both for fishing and fowling; and portions of them have been discovered at Thebes. The netting-needles were of wood, very like our own, split at each end, and between ten and eleven inches in length, and others were of bronze with the point closed.

Sieves were often made of string, but some of an inferior quality, and for coarse work, were constructed of small thin rushes or reeds (very similar to those used by the Egyptians for writing, and frequently found in the tablets of the scribes); a specimen of which kind of sieve is in the Paris museum. The paintings also represent them made of the same materials; and the first they used were evidently of this humble quality, since the hieroglyphic indicating a sieve is borrowed from them. Horseshair sieves are ascribed by Pliny to the Gauls; the Spaniards, he says, made them of string, and the Egyptians of papyrus stalks and rushes.

The Egyptians were not less famed for their manufacture of paper than for the delicate texture of their linen. The plant from which it was made, the cyperus papyrus of modern botanists, mostly grew in Lower Egypt, in marshy land or in shallow brooks and ponds formed by the innu-

nation of the Nile, where they bestowed much pains on its cultivation.

The right of growing and selling it belonged to the government, who made a great profit by its monopoly; and though we frequently read of the byblus or papyrus being used for constructing canoes or rude punts for making baskets, parts of sandals, sails, and for numerous other common purposes, it is evident that we are to understand in these instances some other species of the numerous family of Cyperus; which is also shown by Strabo's distinguishing the common from "the hieratic byblus."

The real papyrus or hieratic byblus was particularly cultivated in the Sebennytic nome; other parts of the Delta also produced it, and probably even some districts in Upper Egypt. The paper made from it differed in quality, being dependent upon the growth of the plant, and the part of the stalk whence it was taken; and we find many of the papyri which have been preserved vary greatly in their texture and appearance. They are generally fragile and difficult to unroll until rendered pliant by gradual exposure to steam, or the damp of our climates; and some are as brittle as if they had been purposely dried.

We are, however, less surprised at the effect of the parched climate of Upper Egypt, when we consider the length of time they have been kept beyond the reach of moisture; and our drawing-paper, after a very few years, becomes so dry in that country that it is too brittle to fold without breaking. Indeed, those papyri which have not been exposed to the same heat, being preserved in the less arid climate of Lower Egypt, still keep their pliability; and I have a fragment of one from Memphis, which may be bent, and even twisted in any way, without breaking, or without being more injured than a piece of common paper. The hieroglyphics from their style show it to be of an ancient Pharaonic age, and they contain the name of the city where the papyrus was found, "Menofr (or Memphis), the land of the pyramid."

The mode of making papyri was this: The interior of the stalks of the plant, after the rind had been removed, was cut into thin slices in the direction of their length, and these being laid on a flat board, in succession, similar slices were placed over them at right angles; and their surfaces being cemented together by a sort of glue, and subjected to a proper degree of pressure, and well dried, the papyrus was completed. The length of the slices depended of course on the breadth of the intended sheet, as that of the sheet on the number of slices placed in succession beside each other, so that, though the breadth was limited, the papyrus might be extended to an indefinite length.

The papyrus is now no longer used, paper from linen rags and other materials having superseded it; but some few individuals continue to make it in Sicily as a curiosity; and sheets from the plant, which still grows in the Anapus, near Syracuse, are offered to travelers as curious specimens of an obsolete manufacture. I have seen many of these small sheets of papyrus; the manner of placing the pieces is the same as that practiced in former times; but the quality of the paper is very inferior to that of ancient Egypt, owing either to the preparation of the slices of the stalk, before they are glued together, or to the coarser texture of the plant itself, certain spots occurring here and there throughout the surface, which are never seen on those discovered in the Egyptian tombs. The plant is now unknown in Egypt; and the only streams that produce it are the Anapus in Sicily,

and a small one two miles north of Jaffa, where it was found by the Rev. S. Malan.

Pliny thus describes the plant and the mode of making paper: "The papyrus grows in the marsh lands of Egypt, or in the stagnant pools left inland by the Nile, after it has returned to its bed, which have not more than two cubits in depth. The root of the plant is the thickness of a man's arm; it has a triangular stalk, growing not higher than ten cubits (fifteen feet), and decreasing in breadth toward the summit, which is crowned as with a thyrus, containing no seeds, and of no use except to deck the statues of the gods. They employ the roots as fire-wood, and for making various utensils. They even construct small boats of the plant; and out of the rind, sails, mats, clothes, bedding and ropes; they eat it either crude or cooked, swallowing only the juice; and when they manufacture paper from it, they divide the stem, by means of a kind of needle, into thin plates, or laminae, each of which is as large as the plant will admit. . . ."

"All the paper is woven upon a table, and is continually moistened with Nile water, which, being thick and slimy, furnishes an effectual species of glue. In the first place, they form upon a table perfectly horizontal a layer the whole length of the papyrus; which is crossed by another placed transversely, and afterward enclosed within a press. The different sheets are then hung in a situation exposed to the sun, in order to dry, and the process is finally completed by joining them together, beginning with the best. There are seldom more than twenty slips or stripes produced from one stem of the plant."

Pliny makes a strange mistake when he supposes that the papyrus was not used for making paper before the time of Alexander the Great, as papyri are of the most remote Pharaonic periods; and the same mode of writing on them is shown from the sculptures to have been common in the age of Saphis, or Cheops, the builder of the Great Pyramid, two thousand years before Alexander's conquest of Egypt.

It is uncertain until what period paper made of the papyrus continued in general use; there are some deeds and other documents in the Vatican of the fifth and sixth centuries, and in the Munich Library of the seventh, in minuscules; and there is evidence of its having been occasionally employed to the end of the seventh century, when it was superseded by parchment. All public documents, under Charlemagne and his dynasty, were written on this last, and the papyrus was then entirely given up.

Parchment, indeed, had been invented long before, and is supposed to have been first used for writing in the year two hundred and fifty before our era, by Eumenes, king of Pergamus; who, being desirous of collecting a library which should vie with that of Alexandria, and being prevented by the jealousy of the Ptolemies from obtaining a sufficient quantity of papyrus, had recourse to this substitute; and this adoption of it at Pergamus obtained for it the lasting name of Pergamena (parchment). It was made of the skins of sheep and of calves; but to the former the name of parchment is more correctly applied, as to the latter that of vellum. The use of parchment, or of prepared skins, for writing upon, was not, however, first suggested at Pergamus; it had been known ages before in Egypt; and "records kept in the temple" are mentioned in the time of the eighteenth dynasty, twelve hundred years before Eumenes, written upon skins called *Thir*, or

Tahar—a name which, as Mr. Birch thinks, resembles the Chaldee Tzar. Rolls of leather are also found in the tombs, buried with the deceased in lieu of papyri, which are of a very early period, and were adopted in consequence of the high price of the papyrus paper.

The monopoly of the papyrus in Egypt so increased the price of the commodity that persons in humble life could not afford to purchase it for ordinary purposes. Few documents, therefore, are met with written on papyrus, except funeral rituals, the sales of estates and official papers, which were absolutely required, and so valuable was it that they frequently obliterated the old writing and inscribed another document on the same sheet. The same happened afterward with those on parchment. Cicero mentions palimpsests in his time, and one of his own treatises was subjected to this treatment.

For common purposes, pieces of broken pottery, stone, board and leather were used; an order to visit some monument, a soldier's leave of absence, accounts and various memoranda were often written on the fragments of an earthenware vase. An artist sketched a picture which he was about to introduce in a temple or sepulchre on a large flat slab of limestone or on a wooden panel prepared with a thin coating of stucco; and even parts of funeral rituals were inscribed on square pieces of stone, on stuccoed cloth or on leather. But though a rigid monopoly secured the value of the paper, it did not ensure the employment of the plant in its manufacture. Other and better materials were at length discovered for making paper; and the remarkable prophecy of Isaiah, Isa. xix. 7, has come to pass, which foretold the papyrus should "be no more" in Egypt: "The paper reeds by the brooks, by the mouth of the brooks, . . . shall wither, be driven away, and be no more;" and this Egyptian plant no longer grows in Egypt. Yet its name is destined to survive; the Bible or book is so called from the byblus, and its other name, papyrus, will be perpetuated in paper.

It was perhaps the desire to increase its value that caused its disappearance from Egypt, having been rooted out from every spot except where its cultivation was permitted by the government; and Pliny either says, "it only grew in the nome of Sebennytus," or that "nothing was grown in that district but the papyrus."

In the infancy of society various materials were employed for writing, as stones, bricks, tiles, plates of bronze, lead and other metals, wooden tablets, the inner bark and leaves of trees, and the shoulder-bones of animals. Wooden tablets covered with wax were long in use among the Romans, as well as the papyrus, and the inner bark of trees and pieces of linen had been previously adopted by them about B. C. 440.

Many Eastern people still write on the leaves of trees or on wooden tablets, and "waraka" continues to signify in Arabic both "paper" and a "leaf."

The early Arabs committed their poetry and compositions to the shoulder-bones of sheep. They afterward obtained the papyrus paper from Egypt, on which the poems called Moallaqat were written in gold letters; and after their conquest in Asia and Africa, these people so speedily profited by the inventions of the nations they subdued that parchment was manufactured in Syria, Arabia and Egypt, which in color and delicacy might vie with our modern paper. It speedily superseded the use of the papyrus, and continued to be employed until the discovery of the method of mak-

ing paper from cotton and silk, which is proved by Montfaucon to have been known at least as early as A. D. 1100, and is supposed to have been invented about the beginning of the ninth century. Being introduced into Spain from Syria, it was denominated Carta Damascena, and manuscripts on cotton paper are said to exist in the Escorial written in the eleventh century. There are also some on cotton paper in the Munich library of the eleventh century, and of linen at the beginning of the fourteenth century.

It is a matter of doubt to what nation and period the invention of paper manufactured from linen ought to be ascribed. The Chinese were acquainted with the secret of making it from various vegetable substances long before it was known in Europe. The perfection to which they have carried this branch of art continues to excite our admiration, and "the librarian Casiri relates," according to Gibbon, "from credible testimony, that paper was first imported from China to Samarcand A. H. 30 (A. D. 652), and invented, or rather introduced, at Mecca, A. H. 88 (A. D. 710)."

It may, however, be questioned whether it was made from linen at that early period, and we have no positive proof of linen paper being known even by the Saracens prior to the eleventh century. The Moors, as might be expected, soon introduced it into Spain, and the Escorial library is said to contain manuscripts written on this kind of paper as old as the twelfth century.

But paper of mixed cotton and linen, which was made at the same time, appears to have been in more general use, and linen paper continued to be rare in most European countries till the fifteenth century. That it was known in Germany as early as the year 1312 has been satisfactorily ascertained by existing documents, and a letter on linen paper, written from Germany to Hugh Despencer about the year 1315, is preserved in the chapter-house at Westminster, which, even to the water-mark, resembles that made at the present day.

It was not till the close of the sixteenth century that paper was manufactured in England. The first was merely of a coarse brown quality, very similar to that of the modern Arabs, whose skill in this, as in many arts and sciences, has been transferred to people once scarcely known to them and then greatly their inferiors, and writing or printing paper was not made in London before 1690, France and Holland having till that time supplied us with an annual importation to the amount of nearly one hundred thousand pounds.

The tanning and preparation of leather was also a branch of art in which the Egyptians evinced considerable skill; the leather-cutters constituted one of the principal subdivisions of the fourth class, and a district of the city was exclusively appropriated to them in the Libyan part of Thebes, where they were known as "the leather-cutters of the Memnonia."

Leather is little capable of resisting the action of damp and other causes of destruction, so that we cannot reasonably expect to find much of it in a good state of preservation, but the fine quality of the straps placed across the bodies of mummies discovered at Thebes, and the beauty of the figures stamped upon them, satisfactorily prove the skill of the leather-cutters, as well as the antiquity of embossing; and those bearing the names of Sheshonk (Shishak), the contemporary of Solomon, and the other kings of that dynasty, are perfectly preserved.

Many of the occupations of their trade are portrayed on the painted walls of the tombs at Thebes. They made shoes, sandals, the coverings and seats

of chairs or sofas, bow-cases and most of the ornamental furniture of the chariot; harps were also adorned with colored leather, and shields and numerous other things were covered with skin prepared in various ways. They also made skins for carrying water, wine and other liquids, coated within with a resinous substance, as is still the custom in Egypt.

The Arabs prefer the acrid juice of a plant growing in the desert for the purpose, as its effect is still more rapid, and as it has the advantage of making the skin better and more durable.

This plant is the *Periploca seaeamone*; its stalks contain a white milky juice, which exudes from it when bruised, and which is so acrid as to be highly injurious to the eye or to the wounded skin. It supports itself by winding around every neighboring shrub, and its not ungraceful stalks appear to have been occasionally used by the ancient Egyptians for the same ornamental purpose as the ivy, the nightshade and the convolvulus, in forming festoons. But though there is no proof of its having been employed by them in curing skins, it is very probable, as they were so well acquainted with the properties of the plants of the desert and the valley of the Nile; and curriers are represented in the sculptures of Thebes pounding something in a mortar, which is either the *periploca*, lime or some other substance required for the purpose.

According to the Arabs, the method of preparing skins with the *periploca* (their *ghulga*) is as follows: "The skins are first put into flour and salt for three days, and are cleansed of all the fat and impurities of the inside. The stalks of the plant, being rounded between large stones, are then put into the water, which is applied to the inner side of the skin for one day; and the hair having fallen off, the skin is left to dry for two or three days, and the process is completed."

The mode of stretching or bending leather over a form is frequently represented at Thebes; and the semicircular knife, similar to that of our modern curriers, is commonly used by them. The curriers and shoemakers had also a sort of chisel, the common awl (specimens have been found at Thebes similar to our own), a stone for polishing the leather, the cutting-table, the bending form, the horn and a few other utensils; and a prepared skin, the emblem of their trade, was suspended, together with ready-made shoes and other articles, to indicate their skill and to invite a customer.

The shops of an Egyptian town were probably similar to those of Cairo and other Eastern cities, which consist of a square room, open in front, with falling or sliding shutters to close it at night; and the goods, ranged on shelves or suspended against the walls, are exposed to the view of those who pass. In front is generally a raised seat where the owner of the shop and his customers sit during the long process of concluding a bargain previous to the sale and purchase of the smallest article; and here an idle lounge frequently passes whole hours, less intent on benefiting the shopkeeper than in amusing himself with the busy scene of the passing crowd.

Among the many curious customs introduced in the paintings, and still retained in the East, is that of holding a strap of leather or other substance with the toes, which, if always free and unincumbered with tight shoes, retain their full power and pliability; and the singular, I may say primitive, mode of tightening a thong with the teeth while sewing a shoe is also portrayed in the paintings of the same time.

It is probable that, as at the present day, they ate in the open front of their shops, exposed to the view of every one who passed; and to this custom Herodotus may allude when he says, "The Egyptians eat in the street."

There is no direct evidence that the ancient Egyptians affixed the name and trade of the owner of the shop, though the presence of hieroglyphics denoting this last, together with the emblem which indicated it, may seem to argue in favor of the custom; and the absence of many individuals' names in the sculptures is readily accounted for by the fact that these scenes refer to the occupation of the whole trade, and not to any particular person.

Some of the Egyptian vessels were of very great size. Diodorus mentions one of cedar wood dedicated by Sesostrius to the god of Thebes, two hundred and eighty cubits, or four hundred and twenty feet, long; another, built in much later times by Caligula in Egypt to transport one of the obelisks to Rome, carried one hundred and twenty thousand pecks of lentils as ballast; and Ptolemy Philopater built one of forty banks of oars, which was two hundred and eighty cubits (about four hundred and twenty feet) long and forty-eight cubits (about seventy-two feet) in height, or fifty-three (eighty feet) from the keel to the top of the poop, with a crew of four hundred sailors, besides four thousand rowers and near three thousand soldiers. Philopater had another he used on the Nile upward of three hundred feet in length and thirty cubits (forty-five feet) in breadth, and nearly forty (sixty feet) high; and Ptolemy Philadelphus had two of thirty banks, one of twenty, four of fourteen, two of twelve, fourteen of eleven, thirty of nine, thirty-seven of seven, five of six, seventeen of five and more than twice that number of four and three banks, with others of smaller size.

Of the origin of navigation no satisfactory conjecture can be offered, nor do we know to what nation to ascribe the merit of having conferred so important a benefit on mankind.

It is evident that the first steps were slow and gradual, and that the earliest attempts to construct vessels on the sea were rude and imperfect.

Ships of burden were originally mere rafts, made of the trunks of trees bound together, over which planks were fastened, which Pliny states to have been first used on the Red Sea; but he is wrong in limiting the era of shipbuilding to the age of Danaus, and in supposing that rafts alone were employed until that period. Rafts were adopted, even to carry goods, long after the invention of ships, as they still are for some purposes on rivers and other inland waters; but boats, made of hollow trees and various materials, covered with hides or pitch, were also of very early date, and to these may be ascribed the origin of planked vessels. Improvement followed improvement, and in proportion as civilization advanced the inventive genius of man was called forth to push on an invention so essential to those communities where the advantages of commerce were understood, and numerous causes contributed to the origin of navigation and the construction of vessels for traversing the sea.

Whatever may have been the date of those expeditions which colonized various parts of Greece and other countries, the people to whom the art of navigation was most indebted, who excelled all others in nautical skill, and who carried the spirit of adventure far beyond any nation of antiquity, were the Phœnicians; and those bold navigators even visited the coast of Britain in quest of tin.

The fleets of Sesostrius, Amosis and the Remeses certainly date at a very remote age, and some Phœnician sailors, sent by Necho on a voyage of discovery to ascertain the form of the African continent, actually doubled the Cape of Good Hope about twenty-one centuries before the time of Bartholomew Diaz and Vasco da Gama; but it was not till the discovery of the compass that navigation became perfected and the uncertain method of ascertaining the course by the stars gave place to the more accurate calculations of modern times.

After the fall of Tyre and the building of Alexandria, Egypt became famous as a commercial country and the emporium of the East; the riches of India, brought to Berenice, Myos Hormos and other ports on the Red Sea, passed through it to be distributed over various parts of the Roman empire; and it continued to benefit by these advantages until a new route was opened to India by the Portuguese around the Cape of Good Hope.

It is difficult to explain how, at that early period, so great a value came to be attached to tin that the Phœnicians should have thought it worth while to undertake a voyage of such a length, and attended with so much risk, in order to obtain it, even allowing that a high price was paid for this commodity in Egypt and other countries, where, as at Sidon, the different branches of metallurgy were carried to great perfection. It was mixed with other metals, particularly copper, which was hardened by this alloy; it was employed, according to Homer, for the raised work on the exterior of shields, as in that of Achilles; for making greaves and binding various parts of defensive armor, as well as for household and ornamental purposes; and it is remarkable that the word *kassiteros*, used by the poet, is the same as the Arabic name *kasdeer*, by which the metal is still known in the East. It is also called *kastira* in Sanscrit.

We have no means of ascertaining the exact period when the Phœnicians first visited our coasts in search of tin. Some have supposed about the year 400 or 450 before our era; but that this metal was employed many ages previously is shown from the bronze vessels and implements discovered at Thebes and other parts of Egypt. It cannot, however, be inferred that the mines of Britain were known at that remote period, since Spain and India may have furnished the Egyptians with tin; and the Phœnicians probably obtained it from those countries long before they visited our distant coasts and discovered the richness of our productive mines. It is still produced in small quantities in Galicia and another part of Northern Spain. Ezekiel says that the Tyrians received tin, as well as other metals, from Tarshish; and whether this was in India or not, there is sufficient evidence of the productions of that country having been known at the earliest times, as is proved by the gold of Ophir being mentioned in Job. For if Phœnician ships did not actually sail to India, its productions arrived partly by land through Arabia, partly through more distant marts established midway from India by the merchants of those, as of later, days; and we have evidence of their having already found their way to Egypt at the early period of Joseph's arrival in that country from the spices which the Ishmaelites were carrying to sell there. And the amethyst, hematite, lapis lazuli and other objects discovered at Thebes, of the time of the third Thothmes and succeeding Pharaohs, argue that the intercourse was constantly kept up.

The first mention of tin, though not the earliest

proof of its use, is in connection with the spoils taken by the Israelites from the people of Midian, in the year 1452 B. C., where they are commanded by Moses to purify the gold and the silver, the brass, the iron, the tin and the lead by passing it through the fire. Its combination with other metals is noticed by Isaiah, in the year 760 before our era, who alludes to it as an alloy mixed with a more valuable substance; Ezekiel shows that it was used for this purpose in connection with silver; and bronze, a compound of tin and copper, is found in Egypt of the time of the sixth dynasty, more than two thousand years before Christ.

Strabo, Diodorus, Pliny and other writers mention certain islands discovered by the Phœnicians which, from the quantity of tin they produced, obtained the name *Cassiterides*. Though their locality is not given correctly by them, it is evident they all allude to the cluster now known as the Scilly Isles; but these never produced tin, and the Phœnicians invented this story in order to conceal the fact of the mainland of Cornwall being the spot whence they obtained it; for as Strabo says, the secret of their discovery was carefully concealed, and the Phœnician vessels continued to sail from Gades (Cadiz) in quest of this commodity without its being known from whence they obtained it, though many endeavors were made by the Romans at a subsequent period to ascertain the secret and to share the benefits of this lucrative trade.

So anxious, indeed, were the Phœnicians to retain their monopoly that on one occasion, when a Roman vessel pursued a trader bound to the spot, the latter purposely steered his vessel on a shoal, preferring to suffer shipwreck, provided he involved his pursuers in the same fate, rather than disclose his country's secret; for which he was rewarded from the public treasury.

Pliny mentions a report of "white lead" or tin being brought from certain islands of the Atlantic; yet he treats it as a "fable," and proceeds to state that it was found in Lusitania and Galicia, and was the same metal known to the Greeks in the days of Homer by the name "*kassiteros*." Diodorus and Strabo, after noticing the tin of Spain and the Cassiterides, affirm that it was also brought to Massilia (Marseilles) from the coast of Britain; but this was probably after it had been long known to the Phœnicians, who still kept their secret; and it was doubtless through their means that the natives of Britain prevented other foreigners going direct to the mines, supplying them, as they did, with pigs of tin, carried to Veetis or the Isle of Wight, the established dépôt where the traders from the Continent were accustomed to purchase the metal. And this having become the established line of commerce probably led to the choice of the neighboring port of Southampton as the place whence the pilgrims in later times crossed over the Seine.

Spain, in early times, was to the Phœnicians what America, at a later period, was to the Spaniards; and no one can read the accounts of the immense wealth derived from the mines of that country, in the writings of Diodorus and other authors, without being struck by the relative position of the Phœnicians toward the ancient Spaniards, and the followers of Cortez or Pizarro toward the inhabitants of Mexico or Peru.

"The whole of Spain," says Strabo, "abounds with mines, . . . and in no country are gold, silver, copper and iron in such abundance or of such good quality: even the rivers and torrents bring down gold in their beds, and some is found in the

sand;" and the fanciful assertion of Posidonius regarding the richness of the country in precious metals surpassed the phantoms created in the mind of the conquerors of America.

The Phœnicians purchased gold, silver, tin and other metals from the inhabitants of Spain and the Cassiterides by giving in exchange earthenware vessels, oil, salt, bronze manufactures and other objects of little value, like the Spaniards on their arrival at Hispaniola; and such was the abundance of silver that after loading their ships with full cargoes they stripped the lead from their anchors and substituted the same weight of silver.

Among those bronze implements were very probably the beautiful swords, daggers and spear-heads found in this country, buried with the ancient Britons, which are of such excellent workmanship and form that they could only be the work of a highly civilized and skillful people; and as they are neither of a Greek nor Roman type, it is difficult to attribute them to any other people than the Phœnicians.

A strong evidence of the skill of the Egyptians in working metals, and of the early advancement they made in this art, is derived from their success in the management of different alloys, which, as M. Goguet observes, is further argued from the casting of the golden calf, and still more from Moses being able to burn the metal and reduce it to powder, a secret which he could only have learnt in Egypt. It is said in Exodus that "Moses took the calf which they had made, and burnt it in the fire, and ground it to powder, and strewed it upon the water, and made the children of Israel drink of it;" an operation which, according to the French *savant*, "is known by all who work in metals to be very difficult."

"Commentators' heads," he adds, "have been much perplexed to explain how Moses burnt and reduced the gold to powder. Many have offered vain and improbable conjectures, but an experienced chemist has removed every difficulty upon the subject, and has suggested this simple process. In the place of tartaric acid, which we employ, the Hebrew legislator used natron, which is common in the East. What follows respecting his making the Israelites drink this powder proves that he was perfectly acquainted with the whole effect of the operation. He wished to increase the punishment of their disobedience, and nothing could have been more suitable; for gold reduced and made into a draught, in the manner I have mentioned, has a most nauseous taste."

The use of gold for jewelry and various articles of luxury dates from the most remote ages. Pharaoh, having "arrayed" Joseph in "vestures of fine linen, put a gold chain about his neck;" and the jewels of silver and gold borrowed from the Egyptians by the Israelites at the time of their leaving Egypt (out of which the golden calf was afterward made) suffice to prove the great quantity of precious metals wrought at that time into female ornaments. It is not from the Scriptures alone that the skill of the Egyptian goldsmiths may be inferred: the sculptures of Thebes and Beni Hassan afford their additional testimony, and the numerous gold and silver vases, inlaid work and jewelry, represented in common use, show the great advancement they had made in this branch of art.

But gold was known in Egypt, and made into ornaments long before, and the same mode of washing and working it is figured on the monuments of the fourth dynasty.

The engraving of gold, the mode of casting it

and inlaying it with stones, were evidently known at the same time; they are mentioned in the Bible, and numerous specimens of this kind of work have been found in Egypt.

From the mention of earrings and bracelets and jewels of silver and gold in the days of Abraham, it is evident that in Asia, as well as in Egypt, the art of metallurgy was known at a very remote period; and workmen of the same countries are noticed by Homer as excelling in the manufacture of arms, rich vases and other objects inlaid or ornamented with metals. His account of the shield of Achilles proves the art of working the various substances of which it was made, copper, tin, gold and silver, to have been well understood at that time; and the skill required to represent the infinity of subjects he mentions was such as no ordinary artisan could possess.

The ornaments in gold found in Egypt consist of rings, bracelets, armlets, necklaces, earrings and numerous trinkets belonging to the toilet, many of which are of the time of Osirtasen I. and Thothmes III., about thirty-nine hundred and thirty and thirty-two hundred and ninety years ago. Gold and silver vases, statues and other objects of gold and silver, of silver inlaid with gold, and of bronze inlaid with the precious metals, were also common at the same time; and besides those manufactured in the country from the produce of their own mines, the Egyptians exacted an annual tribute from the conquered provinces of Asia and Africa, in gold and silver, and in vases made of those materials.

The whole of Egypt was divided into nomes, or districts, the total of which, in the time of Sesostri, amounted to thirty-six—afterward increased to fifty-three.

The limits of Egypt were the Mediterranean to the north, and Syene, or the cataracts, to the south; and the cultivated land east and west of the Nile, contained within this space, or between the latitude 31° 37' and 24° 3', was all that constituted the original territory of the Pharaohs, though the Marcotis, the oases, the Nitriotis and even part of Libya were attached to their dominions, and were considered part of the country.

The main divisions of Egypt were "the Upper and Lower regions," and this distinction, which had been maintained from the earliest times, was also indicated by a difference in the dialects of the language. Thebes and Memphis enjoyed equal rank as capitals of Egypt; and every monarch at his coronation assumed the title of "lord of the two regions," or "the two worlds." But a change afterward took place in the division of the country, and the northern portion was subdivided into the two provinces of Heptanomis and Lower Egypt. The latter extended from the sea to the head of the Delta; and advancing to the natural boundary of the low lands, which is so strongly marked by the abrupt ridge of the modern Mokuttum, it included the city of Heliopolis within its limits.

Heptanomis, or Middle Egypt, extended thence to the Theban castle, which marked the frontier a few miles above Tanis, and which appears to have occupied the site of the present town of Dahroot; and its name, Heptanomis, was derived from the seven nomes or districts it contained, which were those of Memphis, Aphroditopolis, Crocodiopolis or Arsinoe, Heracleopolis, Oxyrhynchus, Cynopolis and Hermopolis.

The limits of the Thebaid remained the same, and extended to the cataracts of Syene; but it appears that the oases were all attached to the

province of Heptanomis. The chief towns of the three provinces were Thebes, Memphis and Heliopolis; the same from which the bench of judges was elected.

According to Diodorus, the celebrated Sesostri was the first who divided the country into nomes; but it is more reasonable to suppose that long before his time, or at least before that of Remeses the Great, or even of Osirtasen, all necessary arrangements for the organization of the provinces had already been made, and that this was one of the first plans suggested for the government of the country.

The office of nomarch was at all times of the highest importance, and to his charge were committed the management of the lands, and all matters relating to the internal administration of the district. He regulated the assessment and levying of the taxes, the survey of the lands, the opening of the canals, and all other agricultural interests of the country, which were under the immediate superintendence of certain members of the priestly order; and as his residence was in the chief town of the nome, all causes respecting landed property, and other accidental disputes, were referred to him, and adjusted before his tribunal. The division of the country into thirty-six parts or nomes continued to be maintained till a late period, since in Strabo's time the number was still the same, ten, says the geographer, being assigned to the Thebaid, ten to the Delta, and sixteen to the intermediate province; though some changes were afterward introduced both in the nomes and provinces of Egypt. The nomes, he adds, were subdivided into local governments, and these again into minor jurisdictions; and we may conclude that the three offices of nomarchs, toparchs, and the third or lowest grade, answered to those of bey, kashef and kymakam of the present day. The distinctive appellation of each nome, in later times at least, was derived from the chief town, where the governor resided, and the rank of each nomarch depended on the extent of his jurisdiction. But of the condition of Egypt in the early period of its history little is known, owing to the scanty information obtained by those Greeks who visited it, or to the loss of their writings, as well as to the jealousy of the Egyptians toward foreigners, to whom little or nothing was imparted respecting the institutions and state of the country.

They prevented all strangers from penetrating into the interior; and if any Greek was desirous of becoming acquainted with the philosophy of their schools, he was tolerated, rather than welcomed, in Egypt; and those who traded there were confined to the town of Naucratis, in the same manner that Europeans are now obliged to live in the Frank quarter of a Turkish or a Chinese city. And when, after the time of Amasis and the Persian conquest, foreigners became better acquainted with the country, its ancient institutions had begun to lose their interest, and the Egyptians mourned under a victorious and cruel despot. Herodotus, it is true, had ample opportunity of examining the state of Egypt during his visit to the country, but he has failed to give us much insight into its laws and institutions.

Strabo mentions some of the offices which existed in Egypt in his time; but though he asserts that many of them were the same as under the Ptolemies, we are by no means certain that they answer to those of an earlier period. "Under the eparch," says the geographer, "who holds the rank of a king, is the diceodotes—that is, the law-

giver or chancellor—and another officer, who is called the privy-purse or private accountant, whose business it is to take charge of everything that is left without an answer, and which falls of right to the emperor. These two are also attended by freedmen and stewards of Caesar, who are entrusted with affairs of greater or less magnitude. . . . But of the natives who are employed in the government of the different cities, the principal is the exegetes or expounder, who is dressed in purple, and is honored according to the usages of the country, and takes care of what is necessary for the welfare of the city; the register or writer of commentaries; the archidicastes or chief judge; and fourthly, the captain of the night."

From all that can be collected on this subject, we may conclude that in early times, after the king, the senate, and others connected with the court, the principal persons employed in the management of affairs were the judges of different grades, the rulers of provinces and districts, the government accountants, the chief of the police, and those officers immediately connected with the administration of justice, the levying of taxes and other similar employments, and that the principal part of them were chosen either from the sacerdotal or the military class.

During the reigns of the latter Ptolemies considerable abuses crept into the administrative system; intrigues, arising out of party spirit and conflicting interests, corrupted men's minds, integrity ceased to be esteemed, every patriotic feeling became extinguished, the interests of the community were sacrificed to the ambition of a successful candidate for a disputed throne, and the hope of present advantages blinded men to future consequences. New regulations were adopted to suppress the turbulent spirit of the times, the government, no longer content with the mild office of protector, assumed the character of chastiser of the people, and Egypt was ruled by a military force, rendered doubly odious from being in a great measure composed of foreign mercenaries. The military class had lost its consequence; its privileges were abolished, and the harmony once existing between it and the people was entirely destroyed. Respect for the wisdom of the sacerdotal order and the ancient institutions of Egypt began to decline, and the influence once possessed by the priests over the public mind could only be traced in the superstitious reverence shown by fanatics to the rites of a religion now so much corrupted and degraded by fanciful doctrines; and if they retained a portion of their former privileges, by having the education of youth entrusted to them, as well as the care of the national records, the superintendence of weights and measures, the surveying of the lands and the equal distribution of the annual payments, they lost their most important offices—the tutelage and direction of the councils of government and the right of presiding at the courts of justice.

The provincial divisions of Egypt varied at different times, particularly after the Roman conquest. The country, as already stated, consisted originally of two parts, Upper and Lower Egypt; afterward of three, the Thebaid, Heptanomis or Middle Egypt, and the Delta or Lower Egypt; but Heptanomis, in the time of Arcadius, the son of Theodosius the Great, received the name of Arcadia; and the eastern portion of the Delta, about the end of the fourth century, was formed into a separate province called Augustamnica, itself divided into two parts. The Thebaid was also made to consist of Upper and Lower, the line of separa-

tion passing between Panopolis and Ptolemais Hermii.

Under the Romans, Egypt was governed by a prefect or eparch, aided by three officers, who superintended the departments of justice, revenue and police throughout the country, the inferior charges being chiefly filled by natives; and over each of the provinces a military governor was appointed, who was subordinate to the prefect in all civil affairs, though frequently intruding on his jurisdiction when it was necessary to use military coercion in the collection of the taxes. But as the condition of Egypt under the Ptolemies and Romans is not directly connected with the manners and customs of the ancient Egyptians, it is unnecessary to describe the changes that took place during their rule.

Judging from the sculptures of Thebes, the tribute annually received in early times by the Egyptians from nations they had subdued in Asia and Northern Ethiopia was of immense value, and tended greatly to enrich the coffers of the State; and the quantity of gold in dust, rings and bars, and silver in rings and ingots, copper, iron, lead and tin (?), the various objects of luxury, vases of glass, porcelain, gold, silver and other metals, ivory, ebony and different woods, precious stones, horses, dogs, oxen, wild animals, trees, seeds, fruits, bitumen, incense, gums, perfumes, spices and other foreign productions there described, perfectly accord with the statements of ancient authors. And though they are presented to the king, as chief of the nation, we may conclude they formed part of the public revenue, and were not solely intended for his use, and especially in a country where royalty was under the restraint and guidance of salutary laws, and where the welfare of the community was not sacrificed to the caprice of a monarch.

According to Strabo, the taxes, even under Ptolemy Auletes, the father of Cleopatra, the most negligent of monarchs, amounted to twelve thousand five hundred talents, or between three and four millions sterling; and the constant influx of specie resulting from commercial intercourse with foreign nations, who purchased the corn and manufactures of Egypt during the very careful administration of its native sovereigns, necessarily increased the riches of the country and greatly augmented the revenue at that period.

Among the exports were yarn, fine linen cloth and embroidered work, purchased by the Tyrians and Jews; chariots and horses, bought by the merchants of Judea in the time of Solomon at six hundred and one hundred and fifty shekels of silver, and other commodities, produced or manufactured in the country.

The Egyptians also derived important advantages from their intercourse with India and Arabia; and the port of Philoteris, which, there is reason to believe, was constructed at a very remote period, long before the exodus of the Israelites, was probably the emporium of that trade. It was situated on the western coast of the Red Sea, in latitude 26° 9'; and though small, the number of ships its basin would contain sufficed for a constant traffic between Egypt and Arabia, no periodical winds there interfering with the navigation at any season of the year.

It is not probable that they had a direct communication with India at the same early epoch, but they were supplied through Arabia with the merchandise of that country; and even an indirect trade was capable of opening to them a source of immense wealth. And that the productions of

India did actually reach Egypt we have positive testimony from the tombs of Thebes.

The Scripture history shows the traffic established by Solomon with India, through the Red Sea, to have been of very great consequence, producing in one voyage no less than four hundred and fifty talents of gold; and to the same branch of commerce may be ascribed the main cause of the flourishing condition of Tyre itself. And if the Egyptian trade was not so direct as that of Solomon and the Tyrians, it must still be admitted that any intercourse with India at so remote a period would have been highly beneficial to the country, since it was enjoyed with little competition, and consequently afforded increased advantages.

The other harbors in this part of the Arabian Gulf—Myos Hormos, Berenice, Arsinoe, Nechesia and Leucos Portus—were built in later times; and the lucrative trade they enjoyed was greatly increased after the conquest of Egypt by the Romans, one hundred and twenty vessels annually leaving the coast of Egypt for India at midsummer, about the rising of the dog-star, and returning in the month of December or January. "The principal objects of Oriental traffic," says Gibbon, "were splendid and trifling: silk (a pound of which was esteemed not inferior in value to a pound of gold), precious stones and a variety of aromatics." When Strabo visited Egypt, the Myos Hormos seems to have superseded Berenice and all the other maritime stations on the coast; and indeed it possessed greater advantages than any other, except Philoteris and Arsinoe, in its overland communication with the Nile. Yet Berenice, in the later age of Pliny, was again preferred to its rival. From both ports the goods were taken on camels by an almost level road across the desert to Coptos, and then distributed over different parts of Egypt; and in the times of the Ptolemies and Cæsars, those particularly suited for exportation to Europe went down the river to Alexandria, where they were sold to merchants who resorted to that city at a stated season.

At a subsequent period, during the reigns of the Arab caliphs, Apollinopolis, Parva and Kos succeeded Coptos as the rendezvous of caravans from the Red Sea; and this town flourished so rapidly, in consequence of the preference it enjoyed, that in Aboulfeda's time it was second only to Fostat, the capital of Egypt, until it ceded its place to Keneli, as Myos Hormos was destined to do in favor of Kossayr. Philoteris, however, continued to be resorted to after the Arab conquest; and it was during the reigns of the Egyptian caliphs that the modern Kossayr took the place of that ancient port.

The Myos Hormos, called also Aphrodite, stood in latitude 27° 22', upon a flat coast, backed by low mountains, distant from it about three miles, where a well, the Fons Tadmor, supplied the town and ships with water. The port was more capacious than those of Berenice and Philoteris; and though exposed to the winds, it was secure against the force of a boisterous sea. Several roads united at the gates of the town from Berenice and Philoteris on the south, from Arsinoe on the north, and from Coptos on the west; and stations supplied those who passed to and from the Nile with water and other necessities.

Berenice owed its foundation to Ptolemy Philadelphus, who called it after the name of his mother, the wife of Lagos or Soter. The town was extensive, and was ornamented with a small but elegant temple of Sarapis; and though the har-

bor was neither deep nor spacious, its position in a receding gulf tended greatly to the safety of the vessels lying within it, or anchored in the bay. A road led thence direct to Coptos, furnished with the usual stations or hydreumas; and another, which also went to the emerald mines, joined, or rather crossed it, from Apollinopolis Magna.

Arsinoe, which stood at the northern extremity of the Red Sea, near the modern town of Soocz, was founded by the second Ptolemy, and so named after his sister. Though vessels anchored there rode secure from the violence of the sea, its exposed situation and the dangers they encountered in working up the narrow extremity of the gulf rendered its position less eligible in the Indian trade than either Myos Hormos or Berenice; and had it not been for the convenience of establishing a communication with the Nile by a canal, and the shortness of the journey across the desert in that part, it is probable it would not have been chosen for a seaport.

The small towns of Nechesia and the Leucos Portus were probably of Roman date, though the natural harbors they possess may have been used at a much earlier period. Their positions are still marked by the ruins on the shore in latitude 24° 54' and 25° 37', where I discovered them in 1826, while making a survey of this part of the coast from Soocz to Berenice. The former stands in, and perhaps gave the name to, the Wadee Nuk-karee; the latter is called E'Shoona or "the Magazine," and from being built of very white limestone was readily indicated by the Arabs when I inquired of them the site of the White Harbor.

Many other ports, the "Portus multi" of Pliny, occur along the coast, particularly between Berenice and Kossayr; but though they all have landmarks to guide boats in approaching their rocky entrances, which are openings in the coral reefs, none of them have any remains of a town or the vestiges of habitations.

The principal objects introduced in early times into Egypt, from Arabia and India, were spices and various Oriental productions, required either for the service of religion or the purposes of luxury; and a number of precious stones, lapis lazuli, and other things brought from those countries, are frequently discovered in the tombs of Thebes, bearing the names of Pharaohs of the eighteenth dynasty. The mines of their own desert did, indeed, supply the emeralds they used; and these were worked as early, at least, as the reign of Amunoph III., at the beginning of the fifteenth century B. C., but many other stones must have come from India; and some plants, as the Nymphaea Nelumbo, seem to have been introduced from that country.

Though we cannot ascertain the amount or exact quality of the various imports of the goods re-exported from Egypt, or the proportion which these last bore to the internal consumption, it is reasonable to conclude that every article of luxury was a source of revenue to the government, and that both native and foreign productions coming under this denomination, whether exported or sold in Egypt, tended to enrich the State to which they belonged or paid a duty.

That the riches of the country were immense is proved by the appearance of the furniture and domestic utensils, and by the great quantity of jewels of gold and silver, precious stones and other objects of luxury in use among them in the earliest times; their treasures became proverbial throughout the neighboring States, and a love of pomp and splendor continued to be the ruling passion of the

Egyptians till the latest period of their existence as an independent State.
